The reason for my having access to a news release is that we get U. of I. radio news here at WKTY. I've been working in radio as a farm director since the first of the year. The big reason for my getting into radio was my Rural Youth and Farm Bureau activity. That's why I've wanted to write. I feel that I owe something to the people who were so nice to me and did so much for me in Illinois Rural Youth. I've always heard that you get out of a thing just what you put into it, and that's just how it worked with Rural Youth. Rural Youth got me my job. I worked for WLPO in LaSalle, Illinois, first and then came here July 1. The only way I could be happier would be to be closer to home.

I'd like to make Rural Youth camp this year, but that's impossible. I do hope though to get to the IAA convention in Chicago next winter.

Wisconsin has no Rural Youth and it's certainly a shame. I think you should bring some Illinois Rural Youthers up here and do some missionary work. It would make a grand tour.

I'd better close now as I have a news cast coming up.

Bill Mason, Farm Director
Station WKTY
La Crosse, Wisconsin

WANTS COUNTRY SCHOOL

AFTER reading about the rural school bus on page 12 in July's RECORD I sort of agree with the mother who doesn't want her six year old meeting the 6 o'clock bus.

After all a child of six is just a baby and needs those extra hours of sleep. Of course a school bus is safe.

But does that give the child that extra shut eye? No!

I used to go to a city school and I've gone to country schools. It may seem strange to you but I say: "Give us back our country schools". And to make your book more interesting lets have a poem page too. I love to write poems. I enjoy THE RECORD very much.

Mrs. Elmer Lyons
Montgomery County

RURAL YOUNG MARRIEDS

I'M SORRY that I have not written before concerning our Edwards County Rural Young Married Couples organization.

This is our second year of being organized. At the present time we have 32 members and the prospects of 28 more. A couple must attend our meetings two times to become a member. Our committee for a meeting is selected by drawing the names of three couples from the "hat." There have been 33 different children attending the meetings this year.

So far this year we have had four outdoor meetings, a wiener roast, swimming, a picnic supper, and our June meeting's big hit was a mock wedding. Some of our other meetings have been a Valentine party, St. Patrick's day party, and our May meeting was as guests of Rural Youth.

We have had several very interesting educational features given by local people. At our last meeting, our local dentist, Dr. Clyde Straup, enlightened our group on a new tooth powder which is being used in several school programs this year. Some of our other speakers have spoken on insurance and the showing of moving pictures of a trip through Alaska.

I hope you have some idea from this letter as to how our group works.

Mrs. Don Cowling
Edwards County

LIKES COVER

I'VE been enjoying and appreciating your cover pictures and keep looking forward for new surprises. Several of the small (inside) descriptive pictures have been saved for my scrap book — where, by the way, only choice material is considered. I hope the old state house at Kaskaskia is coming up — and how about the present one?

Mrs. Blanche Wilhelm
Fulton County

RECEIVE SCHOLARSHIPS

Above are two of three medical students awarded IAA-Illinois Medical Society loans. Right is Burton Bagby, 35, Mounds, and, left, L. C. Fiene, 21, Sparta. They have agreed to practice five years in community of 5000 or less after internship.

TWO FROM IAA JOIN ILL. FARM SUPPLY STAFF

TWO men from the staff of the Illinois Agricultural Association have transferred to the Illinois Farm Supply Company, the IAA's largest affiliate.

C. E. Strand, for the past 10 years manager of the Illinois Agricultural Auditing Association, will become Farm Supply Company comptroller starting Sept. 1.

W. W. Whitlock, IAA director of public health and safety for the past two years, has become director of safety for Farm Supply.

A. F. Schuck Joins Treasurer's Staff

ARTHUR F. SCHUCK, who was associated with Sears, Roebuck and Company, in many positions for 12 years, has joined the staff of the treasurer's office of the Illinois Agricultural Association.

A. F. Schuck

Just prior to coming with the IAA, Schuck was associated with one of the larger mortgage investment organizations of Chicago.

A veteran of World War I, Schuck held responsible positions during World War II in several ordnance plants.

Schuck had a wide variety of business experience with Sears starting in 1928 and continuing until 1940. He was first assigned to the staff of the vice-president of finance and his major work was with the factory organizations. Later, he was made assistant to the vice-president in charge of retail administration. He then was called upon to serve as operating manager of the company's rock wool plant at Wabash, Ind. His next assignment placed him in the position of president and general manager of Sears' three sporting goods manufacturing companies. Just prior to the outbreak of World War II, Schuck was named comptroller and treasurer of Encyclopedia Britannica.

Born in Washington, Ind., May 11, 1896, Schuck attended grade and high schools in that community and worked on the family's farms during the summer months. He entered the University of Illinois in 1915. His engineering and commercial studies were interrupted in May, 1917, when he enlisted in the army. After his discharge from the service March 3, 1919, he went with the Bedford Stone and Construction Co., Indianapolis, as assistant secretary and treasurer, and remained until 1921.

Following a short term of service in the Springfield division of the Bureau of Internal Revenue, Schuck went with Corporation Service Co., financial counselors.

Schuck has a 183-acre fruit farm northeast of LaPorte, Ind. Mr. and Mrs. Schuck have two children, Arthur F. Jr., 15, and daughter, Dorothy Ann, 13.

School Bus Should Operate on Well Defined Schedule

By JOHN COX
Director, IAA Rural School Relations

This is the third of a series of three articles on school bus transportation.

THE school bus should travel on a well defined schedule. A copy of this schedule should be filed in the administrator's office. He should be able to pull from his file the bus schedule for any bus engaged in transporting pupils, check the time, and tell approximately where any driver is on his route. The variation should not be more than five minutes and never ahead of schedule.

Bus drivers should not be asked to wait on pupils who are not ready and waiting except in unusual cases. Tardy pupils keep the bus on the road longer than necessary and make the service less efficient.

In bad weather parents should take steps to protect the health and safety of their small children. However, it is possible in bad weather for children living up lanes or impassable roads to walk to the bus line and along the route of the bus to a neighbor's house to be picked up with the neighbor's children. Before long the bus driver becomes familiar with his route and where to expect the pupils, depending on the weather.

"It is not legally required that the vehicle used in transporting pupils shall go to the home of each child in the district," says Circular 309, "Safe Transportation," published by the office of the State Superintendent of Public Instruction. Continuing it says, "It is recommended that the vehicle go to the nearest entrance along the route of travel .... If the distance (for the pupil to walk to the bus route) is too great, the board may employ the parent or some other person (under contract) to transport the children to the transportation line." It adds that such supplementary service is not compulsory.

Most people who have had experience with pupil transportation agree that the 28 or 36 passenger buses can be operated more successfully on most rural roads than the large 48, 52, or 60 passenger buses.

The responsibility of the school board and principal are roughly as follows:

1. Provide the very best pupil transportation service possible.

2. Arrange bus routes to eliminate unnecessary stops so that pupils can be transported in a reasonable time. The state recommends 30 minutes as the maximum time a grade school youngster should be required to stay on the bus and 60 minutes for a high school student.

3. Protect the buses which usually are the property of the school district from uneconomical use and untimely deterioration on bad roads.

No one other than pupils or teachers regularly assigned to the bus should be allowed to ride unless given a special permit from the school board.

Liability insurance is not necessary. School boards are not liable in case of school bus accidents while transporting resident pupils. Although school boards

How to lose a Hired Hand!

(AND A CORN CROP, TOO!)

Your hired man is reaching down to clean his corn picker WHILE IT'S STILL RUNNING! A loose sleeve or glove . . . pulled into the machinery . . . would mean loss of a hand, or an arm. There could go the profits from your corn crop should you have to pay a costly damage suit resulting from a corn picking accident such as this. Guard your hired help, your profits, with SAFETY PRECAUTIONS and INSURANCE PROTECTION, as offered by Country Mutual Casualty's employers liability coverage.

Fourteen per cent of farmers questioned in a recent poll named the CORN PICKER their MOST DANGEROUS THREAT to life and limb. Protect your investment with these two precautions of the *careful* farmer.

(1) NEVER clean the corn picker while it's running.

(2) Consult your Country Mutual Casualty representative on inexpensive liability insurance available to you as a Farm Bureau member BEFORE YOU CHANGE THE RISKS OF CORN PICKING SEASON.

COUNTRY MUTUAL Casualty COMPANY

Get Aboard Convention Special

This is the reconstructed palace which housed the British royal colonial governors at Williamsburg, Va. It will be visited on the eastern IAA trip. It was built from 1706 to 1718 and was the center of fashion and social life in the Virginia colony.

REQUESTS are rolling in from every corner of the state for berths on one of the IAA convention trains. It looks like a "smash hit" sellout. And even though December may seem like a long way off, we suggest you clip the reservation request on this page and send it along, if you're planning to go.

As you know, we're planning two trips and have chartered two trains for those who plan to go to the annual meeting of the American Farm Bureau Federation. It will be held this year Dec. 13-16 in Atlantic City, N. J. One train will go an eastern route with stops in the east at Washington, D. C., Williamsburg, Beltsville, New York City and other cities. A second train will travel a southern route through vacation spots in Florida and up the Atlantic seaboard to Washington and Atlantic City.

The IAA is arranging a special visit to the United Nations headquarters at Lake Success, N. Y., where those who take the eastern trip will be able to see diplomats from foreign countries at work in the general assembly or in smaller conference groups.

The beauty spots of Florida will be visited by the Farm Bureau folks who go on the southern route. The railroad has just sent us some very alluring travel folders on Florida. It makes you wish it were cold so you could take the IAA train trip to Florida and forget the weather.

A complete booklet on each trip has been printed by each railroad. They should answer your questions. For one of the booklets or any questions you may have about either trip address your inquiries to: Roy Johnson, Illinois Agricultural Association, 43 E. Ohio Street, Chicago 11, Illinois.

We have made plans for 500 Farm Bureau folks to take the trip. Johnson says that of the first 200 requests to come in, a big share were from those who went to San Francisco two years ago. They had a good time. They want to go again.

For that matter, we wish all our 155,000 Farm Bureau members in Illinois could go. We know you'd enjoy it!

Below is the skyline of America's winter playground city of Miami which will be visited on the Southern tour being sponsored by the Illinois Agricultural Association on route to the AFBF convention in Atlantic City.

RESERVATION REQUEST

Dear Sir:

Here's my request for reservations on the IAA special train. Please make train reservations for the following number of persons: ..... These train reservations are for the following route: (Check route desired) (a). Eastern trip on Pennsylvania Railroad ..... (b). Southern trip on Illinois Central Railroad .....

I want my reservation for the following type of Pullman car: (Check type desired) (a). Intermediate Pullman car: ..... (b). Standard Pullman car: ..... (Standard Pullman cars are newer and more expensive but both types of cars provide the same travel comforts).

I wish the following type of berth:

(a). Lower for one .....
(b). Upper for one .....
(c). Lower for two .....
(d). Compartment for two .....
(e). Compartment for three .....
(f). Drawing room for two .....
(g). Drawing room for three .....
(h). Drawing room for four .....
(i). Coach seat .....

I also wish to reserve hotel reservations while at Atlantic City for the following number of persons: ..... Following are the names and addresses of members of my party:

Name: ..... Address: .....
Name: ..... Address: .....
Name: ..... Address: .....

.....
(my name)

(my address)

Cow is Loss Unless It Produces 4000 lbs of Four Per Cent Milk

ANY COW in a dairy herd which cannot yield at least 4,000 pounds of four per cent milk per year is a low producer and therefore unprofitable, according to Alex Reed, assistant professor of agriculture at Southern Illinois University.

Moreover, he said, according to the 1945 U. S. Census, the average production of all cows in the 16 southernmost counties of Illinois was only 3,536 pounds per year.

"This proves that there are a number of cows producing much less than 4,000 pounds of milk per year," Reed said.

Any cow in the farmer's dairy herd which cannot produce enough milk to show a good profit over and above all expenses — including feeding, housing, milking and handling the product — should not be kept on the farm, Reed believes.

A cow must produce about 4,000 pounds of four per cent milk or 160 pounds of butterfat per year to pay all expenses, he explained. Cows producing less than this are kept at an actual loss.

Besides, he added, the margin of profit widens as production goes up, for the value of the product increases about three times as fast as the increased cost of keep.

For example, the average return above feed costs of cows producing only 200 pounds of butterfat per year was $80, out of which other production costs — housing, labor and management — must be paid, Reed said, using figures from the Dairy Herd Improvement Association of Illinois. Cows producing an average of 300 pounds of butterfat per year returned $162 above feed costs.

In other words, the 300-pound producer required $12 more feed, but yielded $82 more milk. Moreover, a 400-pound producer required $16 more feed and returned an additional $78 in products.

Reed advises checking the production of each individual cow, and the disposal of any animal yielding less than 4000 pounds of four per cent milk.

"You can save feed and actually realize a greater profit per herd with fewer cows," he asserts.

"The only method of determining the profitable and unprofitable cows in the herd is by weighing and testing the milk of each cow," he says. "Some dairymen are in a dairy herd improvement association but many do not have large enough herds to feel justified in joining such an association.

"It is a very simple job to weigh the night and morning milk of each cow once a month and calculate her production on that basis. In many communities the vocational agriculture departments in schools will cooperate with the farmer by making the butterfat tests for him."

No Changes to be Made in Official Soybean Standards At Present

THE U. S. Department of Agriculture announced early in August that no changes will be made at present in the official grain standards of the United States for soybeans.

Proposals had been made by elevator and producer groups in Illinois and other soybean states to amend standards relating to dockage, foreign material, moisture and "splits."

Informal hearings were held in June in Chicago and Decatur, Ill., Toledo, Ohio, and Cedar Rapids, Iowa, to afford interested parties a chance to express their views on the proposed changes.

George Iftner, IAA director of grain marketing, represented the Illinois Agricultural Association at the Chicago hearing.

The IAA proposed to combine dockage and foreign material, and to allow a three per cent tolerance for this factor. Under present law, dockage is anything that passes an 8/64 inch diameter sieve and foreign material anything other than soybeans that would not go through the sieve.

Under present grade standards, a certain amount of dockage material goes through the sieve at the time the beans are brought to the elevator. The farmer is not paid for this material.

If the beans are put in storage at the country elevator, material that does not go through the sieve will dry out and shrink, and will pass through the sieve when the beans are loaded out of the elevator and sent on to the terminal market.

Processors settle on the basis of the dockage removed. This means that with the present high prices for beans, elevators might easily lose more money on dockage than is received for storage and handling charges.

The Illinois Agricultural Association also believes that there should be a reduction in the moisture content for No. 2 beans. This grade is bought on the basis of 14 per cent moisture and no premium is allowed where the moisture content is below 14 per cent.

In its announcement the USDA said that careful attention will be given the grading of the '48 crop to permit an appraisal of the results which may be expected if any or all of the changes are adopted later.

The chief reason given by the USDA for making no changes in soybean standards this year was that most soybeans are marketed before Nov. 1. No changes in the standards could be made before this date.

George Iftner, Illinois Agricultural Association director of grain marketing, speaks on behalf of the IAA and county Farm Bureaus on proposed changes in soybean grading standards. The hearing, in Chicago, was one of several held throughout the nation under the direction of the United States Department of Agriculture. Man at right, seated, was in charge of the hearing for the USDA.

Above is the cheerful group of more than 100 Rural Youthers and leaders at the Rural Youth State Camp held in July at Camp Shaw-waw-nas-see on Rock creek near Kankakee.

Resting at the half-way point on a Rural Youth hike, H. W. Gilbert (left) and E. H. Regnier of the University of Illinois lean on the stone which marks the original burial place of Indian Chief Shaw-waw-nas-see for whom the Camp at Kankakee is named. Note difference in spelling.

RURAL YOUTH

By ELLSWORTH D. LYON, Director
Young People's Activities

SINCE conservation is an all important subject of today, Rural Youth of Illinois will again study wild life conservation at the state conservation school, Lake Villa, in Lake county. There will be room for just 50 people. Reservations must be made with the Illinois Agricultural Association at an early date. Both young men and young women may take part in this three-day school which begins at 3 p.m. on Friday, Sept. 24, and ends on the afternoon of Sunday, Sept. 26. The first people to make reservations will be accepted. However, a county's reservation is limited to two people.

4-H CLUB FAIRS

For the past month county 4-H fairs have been held over the state. According to reports, Rural Youthers throughout the state have assisted in these fairs. Resulting partly from the interest which Rural Youth is taking in 4-H Club work in some counties Rural Youth has sponsored or cooperated with 4-H in sponsoring refreshment stands at the county fairs. In some counties Rural Youth members have assisted 4-H in square and folk dance activities under the district sports festivals being held in connection with county fairs. Members of Rural Youth are to be congratulated upon their active interest in all these activities for 4-H.

DISTRICT TALK FESTS

District talk fests have been scheduled for the two-week period from Oct. 18 to Oct. 28. The district schedule covering the state is as follows: Oct. 18, Oregon; Oct. 19, Cambridge; Oct. 20, Rushville; Oct. 21, Petersburg; Oct. 22, Streator; Oct. 25, Champaign; Oct. 26, Greenville; Oct. 27, Louisville; and Oct. 28, Benton.

This year more than one thousand young people are expected to enter county talk fests in order to receive the training which experience in talk festing provides. Three members of Rural Youth from each county may participate in the district talk fests. In each district talk fest Rural Youth participants will choose two of their own members to go to the state talk fest to be held in connection with the Annual meeting of the Illinois Agricultural Association in Chicago on Tuesday, Nov. 16.

SKILLED DRIVERS

Skilled Drivers' contests are already underway on the county level. In addition to written tests in the counties, this year an actual driving contest will be held. This part of the work has already been done in some of the counties. Three participants may go from the county to the district driver contest. In the district contests, one skilled driver will be chosen to enter the state skilled drivers' contest. All district contests will be held at 3 p.m. on the afternoon of the date of the Rural Youth talk fest. The state skilled drivers' contest will be held in connection with the annual meeting of the Illinois Agricultural Association as part of the Rural Youth activity on Rural Youth Day, Tuesday, Nov. 16.

COUNTY ACTIVITIES

Peoria, Knox, Madison, Schuyler, and Menard are proud to be among the groups preparing for the annual skilled drivers' contest. County activity has already begun or been completed.

North Cook showed its fine spirit of cooperation by sponsoring an exhibition folk dance for the 4-H fair held at Arlington Heights Aug. 27 and 28.

Rock Island's square dance team danced to a first place in Moline's Centennial celebration in July. The Henry Rural Youth teams took second and fifth places. Congratulations to both counties for participation and placing.

Bond recently heard Glenn Miller on insurance. Miller is general agent for IAA insurance in Fayette.

Battling Brucellosis and Know Your Community were featured as two summer educational features for the Fairfield group in Wayne.

Richland made themselves comfortable on a hot day by visiting and learning about a local locker plant at Olney.

It was a big day in La Salle July 18 when the annual all-day picnic was held at Matthiessen Park. Nearby counties represented were Kankakee, Iroquois, Lee, Marshall-Putnam, Bureau, Grundy, Livingston, Carroll, and Knox. A program of get-acquainted mixers, a nature hike, photography, folk songs, relays, softball, and other active games provided entertainment for 125 Rural Youthers from 9 a. m. to the time of the dying embers of the evening campfire. Committee members were: Bob Ashley and Erna Lou Walling, co-chairman, assisted by Betty Barr, Mae Pitstick, Don Freebairn, Lois Wise, Quintin Elliott, Harold Severson, Bill Knoll, Paula Pitstick and Betty Miller.

Three rules of good milk production include sanitation, cooling and transportation. Keep equipment clean and sterile. Cool milk quickly to 60 degrees. Get the milk to the creamery or milk plant as soon as possible.

Illinois dairy herd improvement association records show that it takes 3.1 hours of labor for every 100 pounds of milk produced from cows with an average production of 3,900 pounds of milk a year compared with 2.1 hours to obtain 100 pounds of milk from cows that averaged 7,400 pounds of milk a year.

Now, Let's "SAY IT WITH SALES"

THANKS TO YOU!

READY TO BUILD A BETTER BUSINESS

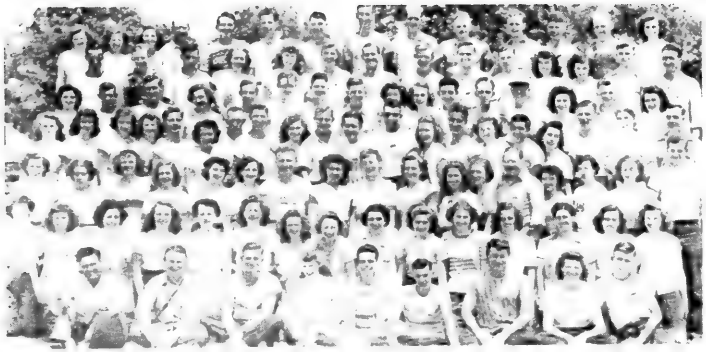
Thanks to the Illinois dairy farmer and his neighbor producers in other states who contributed in June to the ADA advertising set aside — the industry is ready with a mighty program of national advertising and merchandising for the year.

The American Dairy Association is an association for nation-wide promotion, advertising and research supported by the dairy farmers of the nation. Illinois farmers contribute to the ADA program through their Dairy, Creamery, Processing Plant, or Bargaining Association.

Through the ADA program millions of consumers will see and read about the goodness of dairy products in the coming months.

The ADA program is aimed at building a better public understanding of the dairy industry . . . and a continued good demand and outlets for dairy products which in turn means better returns to you as a producer.

ILLINOIS MILK PRODUCERS ASSOCIATION AND PRAIRIE FARMS CREAMERIES



Above is the cheerful group of more than 100 Rural Youthers and leaders at the Rural Youth State Camp held in July at Camp Shaw-waw-nas-see on Rock creek near Kankakee.

SINCE conservation is an all important subject of today, Rural Youth of Illinois will again study wild life conservation at the state conservation school, Lake Villa, in Lake county. There will be room for just 50 people. Reservations must be made with the Illinois Agricultural Association at an early date. Both young men and young women may take part in this three-day school which begins at 3 p.m. on Friday, Sept. 24, and ends on the afternoon of Sunday, Sept. 26. The first people to make reservations will be accepted. However, a county's reservation is limited to two people.

4-H CLUB FAIRS

For the past month county 4-H fairs have been held over the state. According to reports, Rural Youthers throughout the state have assisted in these fairs. Resulting partly from the interest which Rural Youth is taking in 4-H Club work in some counties Rural Youth has sponsored or cooperated with 4-H in sponsoring refreshment stands at the county fairs. In some counties Rural Youth members have assisted 4-H in square and folk dance activities under the district sports festivals being held in connection with county fairs. Members of Rural Youth are to be congratulated upon their active interest in all these activities for 4-H.

DISTRICT TALK FESTS

District talk fests have been scheduled for the two-week period from Oct. 18 to Oct. 28. The district schedule covering the state is as follows: Oct. 18, Oregon; Oct. 19, Cambridge; Oct. 20, Rushville; Oct. 21, Petersburg; Oct. 22, Streator; Oct. 25, Champaign; Oct. 26, Greenville; Oct. 27, Louisville; and Oct. 28, Benton.

This year more than one thousand young people are expected to enter county talk fests in order to receive the training which experience in talk festing provides. Three members of Rural Youth from each county may participate in the district talk fests. In each district talk fest Rural Youth participants will choose two of their own members to go to the state talk fest to be held in connection with the Annual meeting of the Illinois Agricultural Association in Chicago on Tuesday, Nov. 16.

SKILLED DRIVERS

Skilled Drivers' contests are already underway on the county level. In addition to written tests in the counties, this year an actual driving contest will be held. This part of the work has already been done in some of the counties. Three participants may go from the county to the district driver contest. In the district contests, one skilled driver will be chosen to enter the state skilled drivers' contest. All district contests will be held at 3 p.m. on the afternoon of the date of the Rural Youth talk fest. The state skilled drivers' contest will be held in connection with the annual meeting of the Illinois Agricultural Association as part of the Rural Youth activity on Rural Youth Day, Tuesday, Nov. 16.

COUNTY ACTIVITIES

Peoria, Knox, Madison, Schuyler, and Menard are proud to be among the groups preparing for the annual skilled drivers' contest. County activity has already begun or been completed.

North Cook showed its fine spirit of cooperation by sponsoring an exhibition folk dance for the 4-H fair held at Arlington Heights Aug. 27 and 28.

Rock Island's square dance team danced to a first place in Moline's Centennial celebration in July. The Henry Rural Youth teams took second and fifth places. Congratulations to both counties for participation and placing.

Bond recently heard Glenn Miller on insurance. Miller is general agent for IAA insurance in Fayette.

Battling Brucellosis and Know Your Community were featured as two summer educational features for the Fairfield group in Wayne.

Richland made themselves comfortable on a hot day by visiting and learning about a local locker plant at Olney.

It was a big day in La Salle July 18 when the annual all-day picnic was held at Matthiessen Park. Nearby counties represented were Kankakee, Iroquois, Lee, Marshall-Putnam, Bureau, Grundy, Livingston, Carroll, and Knox. A program of get-acquainted mixers, a nature hike, photography, folk songs, relays, softball, and other active games provided entertainment for 125 Rural Youthers from 9 a. m. to the time of the dying embers of the evening campfire. Committee members were: Bob Ashley and Erna Lou Walling, co-chairman, assisted by Betty Barr, Mae Pitstick, Don Freebairn, Lois Wise, Quintin Elliott, Harold Severson, Bill Knoll, Paula Pitstick and Betty Miller.

Three rules of good milk production include sanitation, cooling and transportation. Keep equipment clean and sterile. Cool milk quickly to 60 degrees. Get the milk to the creamery or milk plant as soon as possible.

Illinois dairy herd improvement association records show that it takes 3.1 hours of labor for every 100 pounds of milk produced from cows with an average production of 3,900 pounds of milk a year compared with 2.1 hours to obtain 100 pounds of milk from cows that averaged 7,400 pounds of milk a year.

Now, Let's "SAY IT WITH SALES"

READY TO BUILD A BETTER BUSINESS

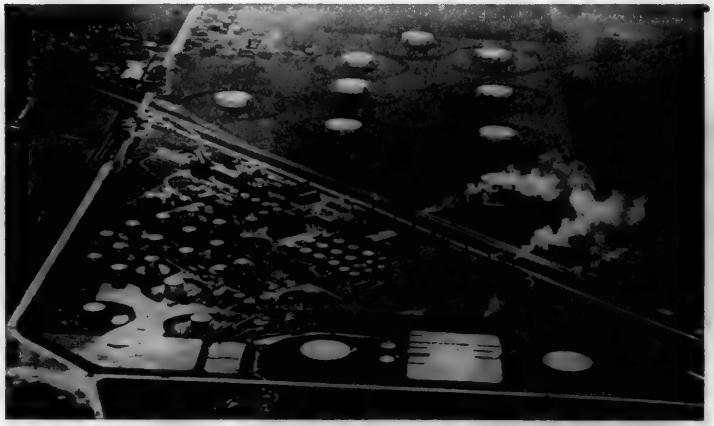
Thanks to the Illinois dairy farmer and his neighbor producers in other states who contributed in June to the ADA advertising set aside -- the industry is ready with a mighty program of national advertising and merchandising for the year.

The American Dairy Association is an association for nation-wide promotion, advertising and research supported by the dairy farmers of the nation. Illinois farmers contribute to the ADA program through their Dairy, Creamery, Processing Plant, or Bargaining Association.

Through the ADA program millions of consumers will see and read about the goodness of dairy products in the coming months.

The ADA program is aimed at building a better public understanding of the dairy industry . . . and a continued good demand and outlets for dairy products which in turn means better returns to you as a producer.

ILLINOIS MILK PRODUCERS ASSOCIATION
AND PRAIRIE FARMS CREAMERIES



Above is a bird's eye view of the largest of the Premier Oil Company refineries. It is at Fort Worth, Texas, and has a capacity of 7000 barrels of petroleum products daily.

Farm Supply Buys Texas Refineries With Other Co-ops

THE Illinois Farm Supply Company together with two regional cooperatives, the Farmers Union Central Exchange, St. Paul, and Midland Cooperative Wholesale, Minneapolis, have purchased the Premier Oil Refining Company of Texas.

The total capacity of the refineries is about 180 million gallons a year of the type of petroleum products used by farmers.

This will mean that ultimately Illinois Farm Supply Company will add between 60 and 70 million gallons annually to the supply of fuel available to Illinois farm people.

Four of the refineries owned by the company are in Texas and one in western Louisiana. Headquarters are in Longview, Texas.

The gallonage from this new company in addition to the output of the Pana refinery acquired by Illinois Farm Supply in January of this year will furnish about one-half of its needs. It will continue to purchase the balance of its needs under contract from other refineries.

A. M. Ault, comptroller for the Illinois Farm Supply Company, will transfer to the newly acquired company as director of finance and treasurer. The refinery employs about 500 persons, and will be operated under the same name and with the same personnel as previously.

Ault started his association with Illinois Farm Supply Company in 1934 as manager of the Jo Daviess Service Company. Two years later he went to Marshall-Putnam county as manager of their service company, and in 1939 joined the field staff of IFS.

In 1942 he came into the Chicago office to head the petroleum division and was promoted to assistant treasurer of the company in 1946 and later to the position of comptroller.

Farm Supply Manager C. H. Becker (seated) gets look at new Blue Seal low pressure tire shown to him by Clarence Carrison, Farm Supply tire buyer. Others are John Rawlings, supplies department, and L. H. Nesemeier, retail sales manager.

Farm Supply Company Introduces New Low Pressure Auto Tire

THE first Blue Seal extra low pressure tire has been manufactured and delivered to the Illinios Farm Supply Company.

The extra low pressure tire employs a revolutionary new principle of design which provides greater riding comfort, extra safety, and longer mileage than the conventional tire.

The tire carcass allows for extra air space, which permits operation at lower air pressures. Its new design also employs a narrower but flatter tread, which actually puts more working rubber on the road than the regular or conventional tire.

The new tire can be used successfully on regular rims, and is made to fit all cars using 15" to 16" rims. This makes it possible to use the tire on the regular or conventional type rims commonly found on older cars.

The maximum advantage from improved ride and car handling is gained only when all four wheels are equipped with extra low pressure tires. On the other hand, when either the front or rear wheels are equipped with these tires, there is a noticeable improvement in car performance.

This new tire will soon be available at all Farm Bureau service companies and service stations.

Seed Co-op Sales Top Half Million Dollar Mark

THE Producers' Crop Improvement Association of Piper City, hybrid corn growers, announced at its annual meeting held recently that sales volume last year amounted to $519,152.18. Most of the sales, 91.4 per cent, were made to Farm Bureau members in the more than 60 Illinois counties where the company operates.

According to the company's annual report, a total of $39,907.11 was distributed to members as a six per cent dividend on first preferred stock, four per cent dividend on second preferred stock, and a refund of 75 cents a bushel in second preferred stock. Total dividends and patronage refunds distributed since the company was organized now total $286,315.17.

How Are They Spending Your Money?

(*Continued from page* 7)

The IAA was the leader in the fight to end the state property tax and will stand unalterably opposed to its return. As to the income tax, we have none because it is impossible to levy an income tax in Illinois until the state constitution has been changed. This has been tried several times but has failed to carry because it is difficult to change and because of the apathy of the voter.

Many are of the opinion that a state income tax would be far more equitable on the taxpayers than the present sales tax which puts a heavier relative burden on the people least able to pay. Others are of the belief that the federal income tax is more than enough to pay without adding a state income tax.

In all fairness, it should be mentioned that Illinois taxpayers paid an average of $45.04 per head for state government in 1947 which was below the national average of $48.66 and below the per person state taxes paid in 30 states. The five high states in 1947 were Washington, $84.05; California, $73.19; New Mexico, $66.77; Arizona, $65.16; and Nevada, $61.19.

This, of course, should be no excuse for waste or inefficiency in Illinois government. Taxpayers and organizations looking out for the taxpayer's best interest must keep a sleepless eye on the public purse and hope that public officials will follow the advice of Governor Green who said in presenting Illinois' peak 1948-49 budget: "By intelligent cooperation we can, if we will, keep Illinois sound under a financial structure which will provide better state service to all the people while imposing the lowest burdens possible on our taxpayers. In these days of inflation and uncertainty, that surely must be our goal."

Good School Buses Run On Time

(*Continued from page* 14)

are not liable, school board members should be careful not to exceed their authority as board members, because then they act as individuals who may be held responsible. At least one insurance company has a clause in its policy renouncing its right to take advantage of the absence of school board liability to refuse to pay a public liability claim.

The school bus driver, however, may be held responsible for an accident if it can be proved he was guilty of "willful and wanton negligence." Some school boards include in the salary of the bus driver enough extra to pay for public liability insurance to protect him against possible proof of negligence. Of the other types of insurance coverage, perhaps fire insurance offers the best protection for the money.

The number of new 12-grade unit districts already established is well over 125 and the number is increasing. Grade and high school pupils will be carried in the same buses. There is no good reason why this will not work satisfactorily. It not only does work in other states but in some districts in Illinois and with considerable economy over dual system duplication of equipment and service.

Tazewell's Organization Director Hoyt, right, signs Jonathan Allen as 2000th member in their Farm Bureau.

Corn, Oats, Beans, Wheat -- Bumper Crops

ILLINOIS farmers are turning in a record harvest of field crops this year. A record corn crop of 525,000,000 bushels is the August estimate for Illinois. This is 20,000,000 more than the 1946 record Illinois harvest.

The state-federal crop reporting service also says the oats harvest will be the largest since 1937, with production figured at 167,684,000 bushels, compared to 117,005,000 last year.

Illinois has also had an all-time high per-acre yield for winter wheat. Winter wheat production is estimated at 40,425,000 bushels, 42 per cent larger than last year's crop and 37 per cent above the 10-year average.

The soybean harvest may be the second largest in history with 75,600,000 bushels the expected fall yield. This is but three per cent under the top year of 1946 when 78,000,000 bushels were harvested.

Bureau Grain Means Business

(*Continued from page* 4)

resells to local feeders. In all they will handle better than a quarter of a million bushels of grain this year. Bureau is the second county in beef and hog production in Illinois. The company also operates a coal yard at Princeton and Sheffield. It was purchased along with the elevator, and has been a profitable business.

The grain company also has a good plant food program. It stockpiles rock phosphate in bulk and gives immediate delivery, spreading it on the farm cheaper than a farmer can buy it by the sack and spread it himself.

During the past spring the company was spreading 33 per cent rock phosphate for $22.65 a ton. They have 20 cars stockpiled at Princeton and Buda and are taking orders for phosphate to be spread as soon as the crops are off the field.

A full time soils tester has been hired by the Bureau County Farm Bureau. He has a back order for 14,000 acres to be tested. The tester goes to the farm, collects samples, and is making a complete color map of the farm's plant food needs.

The success and many services offered by the Bureau County Grain Company proves the statement printed in its first annual report: "Use your own company and you will benefit. Use another man's company and he will benefit."

Plan for 'Grade A' If You're Building

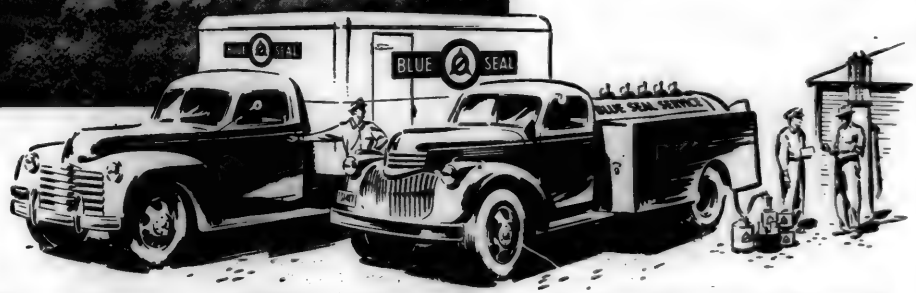
DAIRY farmers who are planning to rebuild or remodel their dairy barns will want to check the building requirements for Grade "A" milk before starting work.

A list of these requirements is available in your farm adviser's office. The compliance requirements for a number of cities in Illinois and neighboring states are included. The list was prepared by the department of agricultural engineering at the University of Illinois College of Agriculture.

Tips For Fall Pigs

Farrowing fall pigs on pasture will eliminate much of the danger from anemia and roundworms. Sows that have been on good pasture all summer should be in the best possible condition for fall farrowing. Good feeding after farrowing will allow the sow to keep up her milk flow.

FOR BETTER FARMING



800 Servicemen Offer the Best Petroleum – Feed – Plant Food Service Direct-to-the-Farm in Illinois

For Better Machinery Performance

Better farming today needs these superior petroleum products to give economical power and efficient, trouble-free operation of machinery to prepare the soil—plant the seed—tend the crop—harvest it—to market it or process it—and finally to turn it into cash income.

MAGIC ALADDIN GASOLINE is a modern high quality gasoline for high-compression engines. 130,000,000 gallons of this fuel have been used this crop season to help make the abundant yields of 1948 a reality.

PS/50 TRACTOR FUEL is an economical fuel that is tax-free and ideal for low-compression tractors. It gives knock-free performance with maximum power for heavy loads.

ILLINI MOTOR OIL is a premium quality lubricant for tractors, trucks, and cars made from the best solvent-refined stocks, combined with war-proven additives that "keeps a clean motor clean longer."

BLUE SEAL GREASES embodying the latest developments in grease lubricant knowledge and experience. These specialized greases are available to meet every farm machine requirement for warm weather or cold.

For Better Poultry and Livestock Returns

Blue Seal Feeds are nutritionally correct as they are formulated under the supervision of the four-organization Quality Control Committee. These feeds are mixed *the modern way* in mills owned and controlled by Illinois farm people.

BLUE SEAL POULTRY BALANCER contains 30% protein of highest quality and includes essential vitamins and minerals. Available in pellet or mash form. When fed cafeteria-style it reduces labor.

BLUE SEAL LAY MASH is a 20% protein laying mash to be fed with home scratch grains. Available in pellet or mash form. This feed is formulated to meet heavy production in the season of highest egg prices.

BLUE SEAL PIG AND SOW SUPPLEMENT is a 35% protein supplement. It should be fed to sows during their gestation and lactation periods. Pigs should have access to this feed in a creep along with shelled corn until they reach the weight of 75 pounds.

BLUE SEAL HOG SUPPLEMENT is a 40% protein feed, gives ideal balance to farm-grown grains for dry-lot feeding. This feed should be fed to hogs from the time they reach 75 pounds until they go to market.

BLUE SEAL PASTURE SUPPLEMENT is a 42% protein mixture containing proteins from both plant and animal sources. No alfalfa meal has been added. This feed is designed to give low production costs on good pasture.

BLUE SEAL DAIRY SUPPLEMENT is a 34% supplement to be fed with good legume hay and farm-grown grains. 600 pounds of farm-grown grains and 100 pounds of this supplement makes a well balanced dairy ration.

For Better Crops from Better Land

The Blue Seal Plant Food Program is dedicated to provide plant food materials to fit into the well-known Illinois plan of permanent soil fertility. Farmers should first have their soil tested by the county Farm Bureau soil testing laboratory and then purchase the materials they need, following the advice of their Farm Adviser.

PHOSPHATES—Rock phosphate, superphosphate, or triple superphosphate, each has a place on Illinois farms. Ample supplies of these are available.

POTASH—A deficiency of potash severely reduces crop yields. Illinois farmers are receiving many times the pre-war tonnage of potash, however the supply remains limited.

NITRATES—Nitrogen, whether added to the soil in the form of legumes or nitrogen fertilizers, is absolutely essential. Due to the heavy domestic and foreign demand, the supply of nitrogen carriers is limited.

HIGH ANALYSIS FORMULA FERTILIZERS—Our policy is to supply more actual plant food and less filler in each bag of mixed fertilizer. To this end, grades available for Fall use are the higher analysis grades. They include such as 4-16-16; 3-12-12; 0-20-10; and 0-12-12.

How Are They Spending Your Money?

(Continued from page 7)

POTASH—A deficiency of potash severely reduces crop yields. Illinois farmers are receiving many times the pre-war tonnage of potash; however the supply remains limited.

NITRATES—Nitrogen, whether added to the soil in the form of legumes or nitrogen fertilizers, is absolutely essential. Due to the heavy domestic and foreign demand, the supply of nitrogen carriers is limited.

HIGH ANALYSIS FORMULA FERTILIZERS—Our policy is to supply more actual plant food and less filler in each bag of mixed fertilizer. To this end, grades available for Fall use are the higher analysis grades. They include such as 4-16-16, 3-12-12, 0-20-10, and 0-12-12.

How Long A Nap Does Your Child Need?

YOUR Susy and Bill will feel better when they take afternoon naps. Children need this rest period until they're at least 5 years old.

If you've had trouble getting little folks to feel in a "sleepy-time" mood during the day, here's advice from Miss Nellie Perkins, director of the child development laboratory, University of Illinois College of Agriculture.

Get children ready to relax as soon as they've finished eating at noon, because they get excited if they start playing. The nap fits in best right after lunch so that it won't interfere with the child's sleeping at night.

It's a good idea to put the children into their night clothes. This suggests sleep. Each child needs to be in a different room or at least a different bed. The room should be quiet, well ventilated and darkened.

A 2-hour nap is best for the littlest tot. By the age of 4, you can expect a child to stay quiet only ½ to ¾ hour if he isn't sleeping. Tell him he doesn't have to sleep, just rest for a short time. He may fall asleep. And if he isn't sleeping, give him some quiet activity — picture books, crayons and paper or puzzles.

Miss Perkins says the important thing is for the child to be by himself, away from other people, for a part of each day to relax.

Comic Books Aren't All Bad

THERE are good comic books and you can help your child choose that kind, say child development staff members at the University of Illinois College of Agriculture.

Some comic books tell actual tales of history, stressing adventure, sports and character. These give a child good ideas to go by. Try to help him select this type.

Avoid tales that are too terrifying or that give untrue information.

Comic books appeal strongly to children because they're easy to read, colorful and have lots of action.

Eight pretty girls turn on the charm for the benefit of the judges picking the Illinois Dairy Queen during 1948 ceremony in Decatur. Left to right: Rosalie Waddington, Pana; Dolores Wilson, Waukegan; Louise Marrs, Harvard; Martha Shehan, Springfield; Marilyn Morgan, Olney; Patricia Monroe, Decatur; Barbara Sasma, Savanna; and Sue Williams, Bloomington. Winner was Patricia Monroe.

News Briefs

Marshall-Putnam Home Bureau members were saddened recently by the death of President Mrs. Joel Hopkins. Mrs. Edward Boers, vice-president, has taken over the duties as president for the unexpired term.

A. A. Wicklein is the new farm adviser in Wabash county. For the past year he has been youth assistant in Bond and Fayette counties.

Miss Lucille Entsminger, a former local school teacher, is the new home adviser for Christian county.

Charles N. Glover, farm adviser in Clark county since 1945, has resigned to accept a similar position in St. Clair county. St. Clair county has a membership of more than 2,000.

Here's Some Tips On Water Systems

YOU must have plenty of hot and cold water under adequate pressure to run an automatic washer, so check the water system in your home before you buy a washer.

That's the advice of Miss Gladys Ward, home management specialist at the University of Illinois College of Agriculture. To have enough hot water you need a 50- to 80-gallon hot water tank, she explains.

You'll be more satisfied with the machine if you check each type of automatic washer before you buy, Miss Ward explains. Machines with a tumble-action are satisfactory for less soiled clothes. In it, clothes are washed by being tumbled in a revolving drum.

There are machines with more action for more soiled clothes. Some have an agitator which has blades attached to the central post in the machine. Or there may be a vacuum cup device that works with an up-and-down type of plunger-suction action.

McDonough county has a Home Bureau unit made up entirely of mothers with small children. They requested the organization so that they "can become better mothers and homemakers."

for HOMEMAKERS

Drug May Cure Undulant Fever

ATABRINE, the drug which, developed in Germany, was the principal reliance for malaria control in the Pacific and Mediterranean theaters during the war, may be effective in controlling undulant fever and tularemia, a Vandalia, Ill., physician reports.

Writing in The Illinois Medical Journal, official publication of the Illinois State Medical Society, D. H. Ecke, M.D., of Vandalia, and Dean H. Ecke of the Illinois Natural History Survey, Urbana, described eight cases of tularemia and four cases of undulant fever which Dr. Ecke successfully treated with atabrine.

Tularemia, which has become increasingly important in recent years, is usually transmitted to man from infected wild rabbits, while undulant fever, or brucellosis, is contracted either by handling diseased cattle, hogs, sheep or goats or eating unpasteurized dairy products from herds infected with contagious abortion or Bang's disease, as brucellosis is known in cattle.

Visitor From Holland

A homemaker from Holland, Mrs. Oud, is expected to pay a visit to a number of Illinois Home Bureau meetings this fall. Homemakers from neighboring counties are invited to attend these tentative meetings: Logan County, Sept. 27; Iroquois, Oct. 1; Macon, Oct. 11; White, Oct 12; Sangamon, Oct. 15.

REA Advances

More and more farms are getting electricity from REA lines. In December of 1943 REA lines handled 1,087,046 consumers with 834,820 farms involved. In December, 1947, 2,029,124 consumers were connected with 1,558,771 of them farmers.

RUFFLED PEPLUM

Peplums have an important place in the new accessories. For changing the silhouette of a dated dress or for adding a dash of color, contrasting peplums are fine innovators. This one of crisp gingham has a double ruffle which gives hipline interest to a straight skirt. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois.

HANDMADE DOLLS

No experience or expense necessary to make these colorful dolls — just a pair of socks and a well-stocked scrap bag. The mammy doll is togged out in flowered blouse and bandanna, crisp white apron and kerchief. Pagliacci has a half-striped, half-plain suit and big cone hat with pompom trim. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois.

CABLE STITCH TRIM

A sweater style that gets the majority vote — the women's vote, too — for its easy fit, attractive pattern and hardy wool. Four sets of cable stitches form panels on the front and back against a background of plain stockinette stitch. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois.

LACY PINEAPPLES

Here's a new variation of the pineapple design, America's favorite crochet pattern. The 22-inch centerpiece combines a ring of pineapples with a wide border of coarse mesh. Make this of mercerized crochet cotton. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois.

WHEN WINTER COMES

Be Ready!

BLUE SEAL ANTI-FREEZE

PERMA-TYPE

Winterize the radiator of your farm truck, tractor and car with PERMATYPE Anti-Freeze. One filling lasts all winter. Prevents corrosion. Improves hot water heater performance. Will not evaporate.

WINTERMASTER

Designed for those who prefer a medium priced methanol-type anti-freeze. WINTERMASTER is odorless. Contains an effective rust inhibitor. Also contains an effective evaporation retardant which reduces evaporation losses. Protect your truck, tractor and car before winter comes.

BLUE SEAL *MAGIC POWER* BATTERY

For quick winter morning starting equip your car, truck and tractor with a new modern BLUE SEAL Magic Power Battery. This battery is made of the finest materials and workmanship. It will give excellent service with a reasonable amount of care.

The NEW EDISON Spark Plug

Cold winter mornings require a strong spark for engine starting. The new EDISON Spark Plugs are fully guaranteed and made to fit all types of engines. Check these great features:

1. Aluminum oxide insulator
2. Thermo-electric seal
3. "Spun-on" leak proof gasket
4. "Edispark" electrodes.

NOW IS THE TIME

Check up on your winter needs for your car, tractor and truck. Prepare them for the winter to come. Radiators and engines require protection against freezing. Strong batteries and good spark plugs eliminate the failures of cold morning engine starting. For your winter needs -- see your Blue Seal Trucksalesman.

FALL CHANGE OVER

- ✔ Check radiator for leaks and clean with RUSTOP.
- ✔ Check the fan belt.
- ✔ Check the thermostat.
- ✔ Check spark plugs -- clean and test -- replace faulty plugs.
- ✔ Check the battery, Replace weak batteries.
- ✔ Change to winter oil.

Swat the FIREBUG Before he LIGHTS!

Oct. 3-9 is Fire Prevention Week — seven days dedicated to whittling down our national fire debt which has skyrocketed to over 700 million dollars a year. Don't give the Firebug a chance to light! Think in terms of FIRE PREVENTION, not just this week but every day of the year.

We list here some garden variety DO'S and DON'TS. Look around your farm, then find 10 more preventive measures for you to follow this coming year.

Swatting the Firebug before he lights is the "ounce of prevention" worth a pound of cure. But when prevention fails, Country Mutual Fire insurance provides that "pound of cure" — ready cash to rebuild property lost by fire.

"DO'S" AND "DONT'S" OF FIRE PREVENTION

1. DON'T SMOKE IN THE BARN.
2. NEVER USE KEROSENE OR GASOLINE TO START A FIRE.
3. INSPECT AND CLEAN CHIMNEYS, STOVEPIPES REGULARLY.
4. INSULATE WOOD, OTHER INFLAMMABLES, FROM HOT STOVES AND PIPES.
5. KEEP OILY RAGS IN METAL CONTAINERS.

Dear Jim,

Just wanted to let you know that I finally took your advice. What a good feeling it is to know that Margaret and the youngsters will be well taken care of if anything should happen

Why I didn't look into the Country Life insurance plans before I'll never know Even if things weren't going pretty well on the farm, I'd never miss the few dollars a month that go into my sizeable new insurance policy. Fred Zimmerman, our local Country Life representative, explained the wonderful in-surance protection his company offers to every Farm Bureau member. He says it all works on a co-operative basis---thats why it costs us Farm Bureau members so little.

Margaret sends her love. And thanks again for the tip on Country Life.

Your brother,

Ted

THE STATE FARM BUREAU PUBLCATION

FOOD PRICE SUPPORTS AND $3.50 STEAK

THE HEADLINE in the evening paper screamed "Farm Price Supports Boost Food Costs." The accompanying feature story was filled with the type of misinformation that has been fed to the American public so liberally during recent weeks. "Mounting food prices are caused by high farm prices which result from the government parity price support program." — That was the story.

Full of resentment, I went into a well-known restaurant on Chicago's Randolph street and picked up the menu. A wide variety awaited my selection, from a complete dinner featuring egg omelet at $1.30 to a steak for $3.50. The waitress informed me that she sold five steak dinners to each omelet. That is the answer to the news headline. With the highest income of all time, the American public demands steak.

The only two food items listed on that restaurant menu which have received any government support price assistance were eggs and potatoes. Even with a support price the omelet was the lowest priced entree on the list. After reading the metropolitan press, city consumers naturally assume that farmers are rolling in wealth created by government guaranteed prices. What are the facts?

Price support legislation was enacted by Congress during the war to encourage needed expansion in production. It has been continued because of the greatly enlarged domestic and foreign needs. However, as a result of this great demand, prices have, with few exceptions, remained much higher than the 90 per cent of parity support levels. If all support prices were removed food prices would probably show little or no reduction. Consumers themselves, not government supports, have forced food prices higher and higher.

Is the price of food too high? The only fair way to determine whether or not the nation's food is costing too much is to examine how much of the national income goes for groceries. Before the war 23 per cent of the total national income went for food, as compared to only about 19 per cent today.

Is the farmer profiteering? Farm incomes have been good but farm operating costs are increasing more rapidly than income. Many farm commodity prices have dropped drastically within recent months. Farm prices of grains, fruits and vegetables have gone down while retail prices to consumers continue to mount upward. In many cases processors, distributors or retailers have not passed on price reduction.

Any farmer can tell our city friends how to obtain lower priced food. He would tell them to shop around for food bargains and go easy on scarce items. He might say eat more eggs and potatoes.

Here are the Voting Records of Issues Affecting Farmers . .

Are Your Representatives Interested In Agricultural Legislation?

X

IN ACCORDANCE with action taken by the voting delegates of Illinois Agricultural Association at an annual meeting several years ago, the Board of Directors has authorized and directed the publication of the following statement, together with the records of the members of the 65th General Assembly, as determined by their votes and general attitude on matters of important legislation directly affecting farmers as supported or opposed by the Illinois Agricultural Association.

The Association was interested in and took a position upon numerous measures of interest to agriculture in the 1947 session. These included the appropriation of $15,000,000 of state funds for local township and road district roads, school reorganization, state support for schools, permissive township and road district consolidation measures, property tax limitations, weed and seed law revisions and other matters.

For the most part, the legislation favored by the Association was enacted. The appropriations for the veterinary college and the home economics' building at the University of Illinois were not passed and did not reach a roll call vote. Many of the measures of major interest received the unanimous support of the members voting in each house of the legislature.

On other major agricultural measures very few negative votes were cast and none of these votes in opposition to the Association's position were cast by members from downstate. This resulted in part from the fact that by the time the bills reached roll call stage they had been amended until they were generally satisfactory. The Association opposed some of the amendments adopted but the amendments were not adopted by roll call vote.

For instance, the Association sought an appropriation of $20,000,000 from state funds for local roads. This appropriation was reduced to $15,000,000 in the senate but there was no official roll call upon the amendment reducing the appropriation. In view of this peculiar situation, this report is weighted heavily by the general attitude of members toward, and the support given the legislative program of the Association, including support in committees as well as on the floor of the legislature.

Basis of Report

This report is based entirely upon the legislator's record and attitude as observed in Springfield. The Association has not given and obviously cannot be aware of, or give consideration to, the record or attitude upon local problems which may affect the voters' decision.

The first column of the report tabulated below lists the number of regular sessions of the General Assembly during which the respective members have served. The second column carries the legislative record of the legislators as determined by their votes on agricultural legislation during the last regular session, together with their general attitude on legislation supported or opposed by the Illinois Agricultural Association throughout their terms of service.

Ratings Used

A member, to receive a rating of "Excellent" must not only have a satisfactory voting record, but his general attitude in recent legislative sessions must have been generally recognized as actively supporting the Illinois Agricultural Association's legislative program. To achieve an "Excellent" record a member must also have served more than one two-year legislative period and must have taken a favorable position on highly controversial legislative proposals.

First term members, to secure a "Very Good" rating, must have a satisfactory voting record and must have actively supported the Illinois Agricultural Association's legislative program. This rating is the highest given any first term member.

In accordance with the directions given by the delegates of the Illinois Agricultural Association, members of the Association are advised that all members of the present General Assembly seeking re-election who are rated as "Excellent" or "Very Good" are entitled to support by all members and friends of the Illinois Agricultural Association in the coming general election.

The records of members rated as "Good" are worthy of careful consideration in comparison with the qualifications of new candidates seeking office.

Vote Nov. 2

In line with its long-established policy, the Illinois Agricultural Association publishes herewith the voting records of members of the Illinois General Assembly.

Many of these legislators are candidates for office Nov. 2. The Association urges its members to study carefully the information published in this issue of the Record and to actively support those representatives who, by their records, have proved themselves worthy of confidence of farmers.

Farm people represent only a minority of the population. Only through their united action at the polls, wherein they place the interests of agriculture above parties and personalities, can they hope to maintain fair representation in lawmaking bodies.

Rep. Powell	7	Excellent

CRIB YOUR CORN FOR PRICE SUPPORT

With good storage, you can get price protection on your 1948 corn crop through a loan or purchase agreement.

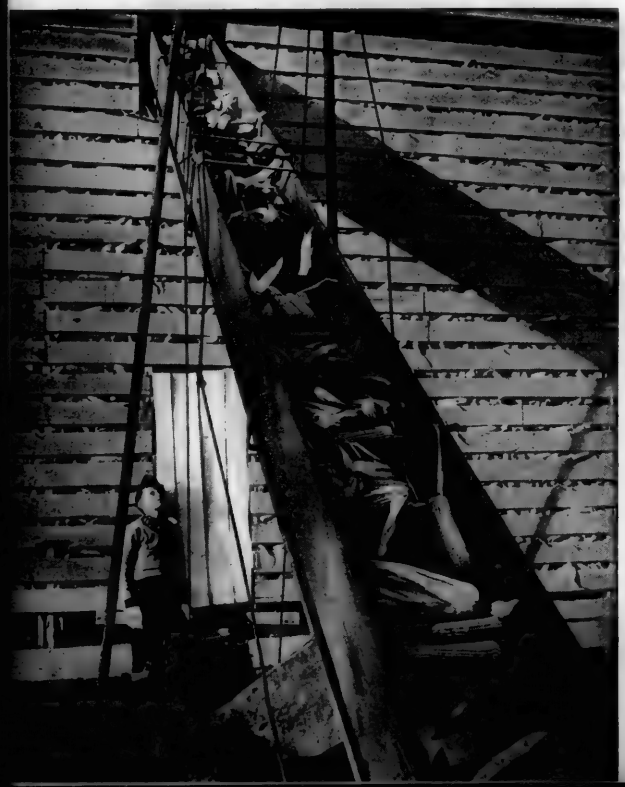
FARM storage of a good share of the 1948 corn crop will pay dividends to the producer this year.

By providing proper farm storage, Illinois farmers can protect their price with either a government loan or purchase agreement. The anticipated corn loan rate is $1.45 per bushel.

A farmer with storage space is in a position to market his grain to the best advantage. He can avoid being caught in a market glut.

Because of record crops, terminal and country elevators won't be able to handle the grain movement unless farm storage is increased, according to government and Extension Service specialists. Unless the storage problem is met, there is danger that an avalanche of corn will hit the market early in the season, scuttle prices and over burden the price support programs. Another aim of the storage program is to prevent undue damage through grain spoilage.

As in past loan programs, a farmer stores his corn under seal in a crib meeting strict specifications. The crib and corn are checked by the county AAA committee. The farmer gets a cash advance equal to the loan rate times the number of bushels he has under seal. The farmer can liquidate the loan at any time or deliver the grain at the maturity date of the loan. Loans will be available from harvest through June 30, 1949. Maturity date will be Sept. 1, 1949, or earlier on demand.



The purchase agreement is a new feature. This is for the producer who wants price protection, but doesn't want to borrow money on his corn. He signs a certificate at the county AAA committee office covering any portion of his 1948 production.

He can do anything he likes with his corn, but if he doesn't otherwise dispose of it, he can at an established time deliver his corn to the Commodity Credit Corporation and receive the loan price, which is expected to be $1.45 per bushel. Any corn delivered under this option must be of proper grade, so good storage is still necessary. The producer signing such a purchase agreement pays ½ cent per bushel for the amount of corn he wants covered.

Only corn produced in 1948 which grades No. 3 or better or No. 4 on test weight only and which meets the moisture requirements for safe storage will be eligible for loan or purchase.

Purchase agreements will be offered producers from harvest time, through June, 1949. The CCC will accept for delivery any quantity up to the maximum stated by the producer on his agreement during the 30-day period immediately following the maturity date of the 1948 loans.

Under the purchase agreement, the county AAA committee doesn't check the corn or the crib, but the corn must have the proper grade if and when it is delivered to the CCC. Thus the producer is his own corn and crib inspector

But to get a corn loan, you have to provide the kind of storage as outlined by your county AAA committee. Here are a few of the rules. Temporary cribs are acceptable, such as picket fence cribs or cribs with woven wire. But they must have good floors off the ground and good waterproof roofs, and the sides must be of adequate strength so that the corn won't break out. The roofs may be of sheet metal. water proof roofing paper or boards.

The corn stored in the crib must come under certain moisture limits, according to the crib width. For a crib 8 feet wide, the maximum moisture content is 20.5 per cent; for 9 feet, 19.5, and for 10 feet, 18.5 per cent.

In the case of round cribs, the width is measured from the central ventilator to the outside. If there is no ventilator, the width is counted as 2/3 of the diameter. For example, in a round crib measuring 12 feet across, the corn would have to meet the same moisture content as in a crib 8 feet wide with straight sides, or 20.5 per cent. A round crib without ventilator must be either small in diameter or the corn very dry. Corn loans carry an interest rate of 3 per cent. Fee for loans is 1 cent per bushel.

Farmers are advised to look around their place to see what they can find in the way of used lumber, poles, etc., for building crib space.

The University of Illinois College of Agriculture at Urbana has plans available for building low-cost storage and you can get further information from your farm adviser at your county Farm Bureau.

It is difficult to predict how the supply of crib materials will hold up in the face of the heavy demand. In September, wire meshing was found to be critically short. Snow fence was available, but dealers expected heavy orders to deplete their stocks. Creosote poles and waterproof roofing paper appeared to be in good supply.

Keith Hincheliff, farm building designer at the U. of I. College of Agriculture, estimates that a farmer can build a

temporary crib at a reasonable cost per bushel. This is the type built from poles and snow fence or welded wire mesh. While not permanent it can last for several years.

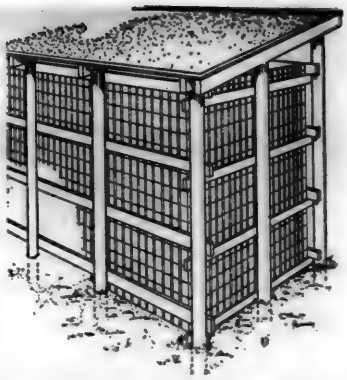
One of the cheapest is that made out of picket fence, 16 feet in diameter and 12 feet high with a central ventilator. Cost of this, including ventilator, would be about 12 cents a bushel, Hinchcliff says. Another low cost type is the poled crib with wire which figures about 21 cents per bushel.

In Illinois, state Production Marketing Administration officials estimate that farmers are going to have to provide additional crib room for about 130 million bushels of corn.

September 1 Illinois corn crop estimate placed production at 534 million bushels. Corn yield outlook for the state is at a new high — 59 bushels. This is two bushels higher than the previous record of 57 in 1946.

Soybean price support loans will be at the rate of $2.18 a bushel for the new crop, but the beans must grade No. 2 yellow and have no more than 14 per cent moisture. Soybeans can be stored in steel bins. Loans will be available from harvest through Dec. 31, 1948 and will mature April 30, 1949.

Price support purchase agreements, similar to the corn purchase agreements, will be available to producers of this year's crop of soybeans from harvest through Dec. 31, 1948. If the producer does not otherwise dispose of his crop before the April 30, 1949, soybean loan maturity date, he may sell to Commodity Credit Corporation any number of bushels, up to the maximum he securing coverage on in his purchase agreement, at the rate of $2.18 per bushel provided they meet grade requirements.



Plans for the temporary corn crib illustrated here may be obtained from your farm adviser at your County Farm Bureau or at the University of Illinois College of Agriculture, Urbana.

HERE'S HOW YOUR CONGRESSMEN VOTED

Check the record of your members of Congress from Illinois on vital issues

"THE extent of the cooperation and support accorded the legislative program of the Illinois Agricultural Association by the members of Congress from Illinois is not adequately reflected by the roll call vote recorded in the published record.

"Most of our representatives from downstate districts and several from Cook county have demonstrated their ability and independence of thinking both on the floor of Congress and in important committee assignments. Both senators from Illinois have had committee assignments of vital importance to Agriculture, and have worked diligently in the longtime best interests of Agriculture.

"While the recorded vote published in this issue of the IAA Record were on issues of extreme importance to Agriculture, they do not adequately reflect the attitude of all members of Congress on Agricultural issues.

"I hope every farmer will carefully study this information."

Charles B. Shuman
President
Illinois Agricultural Association

HERE are the voting records of Illinois Congressmen on several key legislative actions in the 80th Congress. One is the Labor-Management Relations Bill of 1947, better known as the Taft-Hartley law. A second is the vote of Illinois Congressmen on the overriding of the President's veto of the labor bill.

The Illinois Agricultural Association and the American Farm Bureau Federation favored passage of the labor bill and overriding the President's veto. A yea vote therefore by your Congressmen on these two issues is in support of the IAA and Farm Bureau's position.

Another major legislative issue is represented in the Russell amendment to the long-range farm program bill. A nay vote on this amendment is in support of the IAA and AFBF's position. Both Senator Lucas and Senator Brooks supported the IAA's position on this amendment.

The Russell amendment called for the substitution of a temporary extension of existing price supports (with some modifications) for the provisions of the Aiken long-range farm program bill. A vote for this amendment was a vote to prevent the enactment of a long-range farm bill by the 80th Congress. As most Farm Bureau members know, organized agriculture was successful in securing passage of a long-range farm program and the Russell amendment was defeated 27 to 55.

The IAA had urged Illinois Congressmen to enact a long-range farm program bill, rather than temporary extension of price supports.

Farm Adviser E. H. Walworth, Warren county, makes a point on hog marketing during outlook meeting to Raymond Elliott, Fred Shimmin, and Reg Mustain.

WHAT ABOUT LIVESTOCK PRICES?

Market specialists expect them to hold firm until fall of 1949. Corn may drop below $1.45 support price.

By LEW REISNER
Field Editor, IAA RECORD

WITH the nation's grain bins bulging, when will the big drop in livestock prices come? Not as soon as you might think.

Not this fall. And probably not until a year from this fall.

This was the picture of the future of livestock prices as University of Illinois experts presented it during a series of livestock and feed outlook meetings held throughout the state recently.

The drop won't come until the 1949 spring pig crop hits the market. This will be next fall during the heavy hog marketing months of November, December, and January — more than a year from now.

The break won't come until the fall of '49 because it will take that long to increase livestock numbers enough to affect the market — this year's bumper crop notwithstanding.

Next year's spring offering won't be large. Farmers are not planning to increase their pig crop this fall even though their cribs will be filled to overflowing with the largest corn crop the nation has ever produced.

Only hog numbers can increase rapidly enough to affect prices by next fall. Beef cattle marketing won't do it — with all the feed in the world to put on gains.

It takes time to increase beef herds and right now cattle numbers are down. They are down 7,000,000 head from the 1944-45 average. Marketings may be even smaller next year if ranchers save back heifers as breeding stock.

Dairy cattle numbers are down about the same per cent as beef cattle, and this year's lamb crop is the smallest since 1924.

With all the cheap and abundant feed, feeder cattle are in great demand. And speakers at the outlook meetings were talking about the possibilities for profit on a "negative spread" in feeding operations.

This may mean that as feeders you'll be able this year to sell fat cattle for less money than you paid for them as feeders, and still make a profit. The feeding ratio is very favorable.

Walter Howe, from the Chicago Producers Commission Association, said cattlemen could feed "without misgivings" by getting as much cheap feed as possible into their cattle in the beginning, and graining them heavily the last 120 days.

He urged Illinois farmers to stay in the livestock business, despite certain risks in present markets. "The nation needs meat," he said. "You are the ones who can produce it."

Speaking on feed supplies and feed prices, Harry Russell, extension livestock specialist, said many cattlemen are planning to buy most of the corn they will need during harvest time this fall.

Russell said that prices in the corn surplus area will drop below the support price of $1.45 this fall.

He said that the supply of protein supplements is up at least 10 per cent over last year, particularly cotton and flax by-products.

The supplies of wheat and barley for feed as livestock grains are also at record levels.

Hay is the one feed in smaller supply —about seven per cent—from last year.

Front Cover

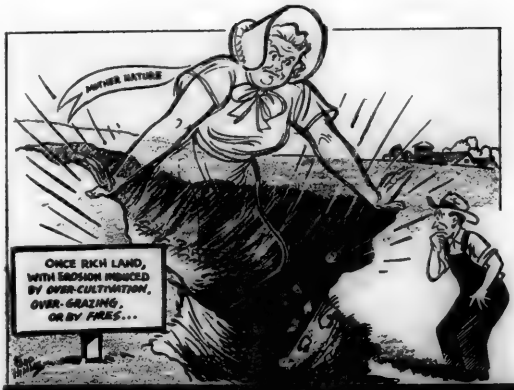
SEVENTEENTH in our series of picturesque and historical Illinois scenes is the Boy Scout statue west of Ottawa in La Salle county to the memory of the man who introduced the Boy Scout movement into the United States.

He was William D. Boyce, prominent Ottawa and Chicago business man and traveler. Lost in a London fog in 1909, Boyce was taken to his destination by a polite youth. When Boyce offered the lad a tip he refused, saying he was a Boy Scout.

Impressed by the Boy Scout movement in England, Boyce brought the idea to the United States where scouting was established in 1910. The statue stands near Boyce's grave which has become a mecca for Boy Scout pilgrimages from throughout the nation.

There are more than two million scouts and scout leaders in the United States of whom about 700,000 live in rural areas. Illinois has 86,000 scouts. Of these about 28,000 live in rural areas.

By ROGER E. GISH, Director
IAA Soil Conservation Activities



What Will Your Farm Be Like Tomorrow?

By working in harmony with nature you can save a highly fertile soil for your children.

WHAT type of farm will you pass on to your children and grandchildren? Will it be one with eroded, worn-out soil or one with high fertility and productivity? The choice is yours.

Future generations are depending on you. You can make life more difficult for them by shrugging off the future and confining your farming to present profits and present yields.

You can fulfill that obligation to the Americans of the future and at the same time help yourself. How? By preventing soil erosion and practicing soil conservation.

Through soil control, you can increase the moisture content of your land during the growing season and increase yields with less fertilizer and at the same time use 10 per cent less fuel in your farming operations.

Soil erosion is the result of man's attempt to take something for nothing from the soil. Now nature needs help to regain productivity on much of our eroded land. Are you making returns to the "soil bank" and guarding it from erosion so that you will have a future "checking account"?

It has been said that the man who would gain nature's rewards must first learn her laws and obey them implicitly. Apparently, we have not yet learned nature's laws or how to obey them. Wide, fertile areas have been depleted. Over-cropping, over-grazing, burning over of woodlands and other undesirable practices have allowed sheet and gulley erosion to spread. Many operators have acquired more acreage in order to maintain total production. Proper land use is the key to soil conservation. This more than the cropping of more acres is a far better solution to the production problem.

According to the Bureau of Agricultural Economics, there are in Illinois 3,523,000 acres which should be taken out of crop land and 3,016,000 acres in idle or pasture land which should be put in grain production. This gives a minus balance of 507,000 acres.

From the present 22,103,000 acres of crop land in the state, this would leave 21,596,000 acres in crop land according to their classification of proper land use. Even with the reduction of 507,000 acres of crop land, total production and profits could be increased by making the shifts to proper land use.

According to the 1940 census, there are 1,007,001,467 acres in farm land in the United States. These acres are devoted to the following purposes: cropland, 397,869,606; grassland, 493,801,863; woodland, 115,329,998.

Of the 398 million acres used for crops, 40 million acres are not suitable for this purpose, according to the Soil Conservation Service. That leaves 358 million acres of cultivated land which are suitable for crops. However, some lands not used for crops are suitable for this purpose. The following table gives the suitable land use regardless of present crops.

	million acres
Cultivated land suitable for crops	358
Land in grass (mainly pasture) which could be put into crops	132
Land in woods (including considerable cutover and brush land) which could be put into crops	34
Total land suitable for crops	524

Any problem should be attacked first by carefully looking at what we have and then making a plan as to what should be done. Based on a complete soil survey which includes the mapping of soil type, slope, and degree of erosion, the Soil Conservation Service classifies all the agricultural land into eight classifications according to land capabilities. With the farmer, technicians of the Soil Conservation Districts make a farm plan to suit the land capabilities of each acre.

Scientific soil tests on which to base fertilizer recommendations are necessary for greatest efficiency. Terraces may be needed to prevent erosion. Contour farming and strip cropping may be sufficient. A grass waterway is, in many cases, nothing more or less than a reclaimed gulley but nature will never, by herself, produce a desired shape which can be attained with ordinary farm implements by the farmer.

Shaping with farm implements, together with use of the proper fertilizers, and the final seeding, will accomplish in a short time something that would never be accomplished if left alone. Black locust seedlings in the gulley might accomplish the same job of erosion control, but they have to be put in by man in order for them to do the job. These same seedlings could not continue to grow unless properly protected from grazing.

In a pasture-improvement program, a proper fertilization program is necessary and a desirable seeding mixture should be used. The area then needs to be protected from overgazing. Sometimes this involves the removal of a hedge row, changing of fences, or the use of temporary fences. In the establishment of a pasture or wood lot, the desired species are selected and planted rather than allowing a survival of the fittest among the existing species, most of which are usually not too desirable.

Altogether, the Soil Conservation Service lists 59 standard physical practices, but many of these are simple variations of a few basic ones such as vegetative cover, rotation, fertilization, contour cultivation, strip-cropping, terracing, and drainage. Not all of the basic ones are

He was William D. Boyce, prominent Ottawa and Chicago business man and traveler. Lost in a London fog in 1909, Boyce was taken to his destination by a polite youth. When Boyce offered the lad a tip he refused, saying he was a Boy Scout.

Impressed by the Boy Scout movement in England, Boyce brought the idea to the United States where scouting was established in 1910. The statue stands near Boyce's grave which has become a mecca for Boy Scout pilgrimages from throughout the nation.

There are more than two million scouts and scout leaders in the United States of whom about 700,000 live in rural areas. Illinois has 86,000 scouts. Of these about 28,000 live in rural areas.

By ROGER E. GISH, Director
IAA Soil Conservation Activities

"I didn't plan on your children inheriting this!"

What Will Your Farm Be Like Tomorrow?

By working in harmony with nature you can save a highly fertile soil for your children.

WHAT type of farm will you pass on to your children and grandchildren? Will it be one with eroded, worn-out soil or one with high fertility and productivity? The choice is yours.

Future generations are depending on you. You can make life more difficult for them by shrugging off the future and confining your farming to present profits and present yields.

You can fulfill that obligation to the Americans of the future and at the same time help yourself. How? By preventing soil erosion and practicing soil conservation.

Through soil control, you can increase the moisture content of your land during the growing season and increase yields with less fertilizer and at the same time use 10 per cent less fuel in your farming operations.

Soil erosion is the result of man's attempt to take something for nothing from the soil. Now nature needs help to regain productivity on much of our eroded land. Are you making returns to the "soil bank" and guarding it from erosion so that you will have a future "checking account"?

It has been said that the man who would gain nature's rewards must first learn her laws and obey them implicitly. Apparently, we have not yet learned nature's laws or how to obey them. Wide, fertile areas have been depleted. Over-cropping, over-grazing, burning over of woodlands and other undesirable practices have allowed sheet and gulley erosion to spread. Many operators have acquired more acreage in order to maintain total production. Proper land use is the key to soil conservation. This more than the cropping of more acres is a far better solution to the production problem.

According to the Bureau of Agricultural Economics, there are in Illinois 3,523,000 acres which should be taken out of crop land and 3,016,000 acres in idle or pasture land which should be put in grain production. This gives a minus balance of 507,000 acres.

From the present 22,103,000 acres of crop land in the state, this would leave 21,596,000 acres in crop land according to their classification of proper land use. Even with the reduction of 507,000 acres of crop land, total production and profits could be increased by making the shifts to proper land use.

According to the 1940 census, there are 1,007,001,467 acres in farm land in the United States. These acres are devoted to the following purposes: cropland, 397,869,606; grassland, 493,801,863; woodland, 115,329,998.

Of the 398 million acres used for crops, 40 million acres are not suitable for this purpose, according to the Soil Conservation Service. That leaves 358 million acres of cultivated land which are suitable for crops. However, some lands not used for crops are suitable for this purpose. The following table gives the suitable land use regardless of present crops.

	million acres
Cultivated land suitable for crops	358
Land in grass (mainly pasture) which could be put into crops	132
Land in woods (including considerable cutover and brush land) which could be put into crops	34
Total land suitable for crops	524

Any problem should be attacked first by carefully looking at what we have and then making a plan as to what should be done. Based on a complete soil survey which includes the mapping of soil type, slope, and degree of erosion, the Soil Conservation Service classifies all the agricultural land into eight classifications according to land capabilities. With the farmer, technicians of the Soil Conservation Districts make a farm plan to suit the land capabilities of each acre.

Scientific soil tests on which to base fertilizer recommendations are necessary for greatest efficiency. Terraces may be needed to prevent erosion. Contour farming and strip cropping may be sufficient. A grass waterway is, in many cases, nothing more or less than a reclaimed gulley but nature will never, by herself, produce a desired shape which can be attained with ordinary farm implements by the farmer.

Shaping with farm implements, together with use of the proper fertilizers, and the final seeding, will accomplish in a short time something that would never be accomplished if left alone. Black locust seedlings in the gulley might accomplish the same job of erosion control, but they have to be put in by man in order for them to do the job. These same seedlings could not continue to grow unless properly protected from grazing.

In a pasture-improvement program, a proper fertilization program is necessary and a desirable seeding mixture should be used. The area then needs to be protected from overgazing. Sometimes this involves the removal of a hedge row, changing of fences, or the use of temporary fences. In the establishment of a pasture or wood lot, the desired species are selected and planted rather than allowing a survival of the fittest among the existing species, most of which are usually not too desirable.

Altogether, the Soil Conservation Service lists 59 standard physical practices, but many of these are simple variations of a few basic ones such as vegetative cover, rotation, fertilization, contour cultivation, strip-cropping, terracing, and drainage. Not all of the basic ones are

Editor's Note: This is the seventeenth and final in our series of articles on the IAA board of directors.

BUSY VICE PRESIDENT

IAA Official Devotes Considerable Time and Effort in Furthering Interests of Illinois Agriculture

WHEN a farmer points to a neighbor and says: "That fellow started from scratch," no doubt you will detect a hint of praise in his voice.

"He started from scratch," is one of the finest compliments one farmer can pay another because the phrase means far more than the words say. The words simply mean the neighbor started farming with little or nothing. You could say that about a lot of people.

Actually the phrase has come to mean that from humble beginnings your neighbor has attained some degree of success in the eyes of his friends and neighbors. It means that he has lived a good, constructive life; that he has rendered his community some worthwhile service; that he has reared a healthy, happy family that is a credit to the community; and above all, that he has been a good farmer, and a successful one.

Floyd E. Morris of near Buffalo, 14 miles east of Springfield, started from scratch. Today, he is vice-president of the Illinois Agricultural Association, the largest State Farm Bureau in the nation. As such, he works in the interest of agriculture not only at the community level but also at the state level. And last spring he testified for the IAA before a Senate committee in Washington on a long-term national farm program.

Vice-President Morris was born in Lincoln in Logan county, the youngest of nine children. His father was a carpenter who decided to move to an 80-acre farm near Hartsburg. Floyd was five then. Later the family rented 160 acres near Beason. When Floyd was 11 his father died. His mother carried on for four years before returning to Lincoln.

Morris worked as a hired hand in several places until 1922 when he was married to Amelia Sampen, an Emden school teacher. At that time he took over 320 acres in a livestock share-lease near Delavan in Tazewell county.

In 1926, the Morrises moved to a 100-acre farm adjacent to the one they now occupy. It was one of the Scully farms, well-known throughout central Illinois. Under the English-type Scully lease, the tenant buys everything but the land from the previous tenant.

In 1937 the Morrises bought and moved to the 120-acre farm they live on today. With the Scully lease, the Morris operations added up to 220 acres.

In 1945 an additional 120 acres were rented but that same year Morris was elected vice-president of the IAA. As his IAA duties increased, he sold his Scully lease. Today, Morris operates 240 acres with a hired man.

Vice-President Morris is a general farmer. Normally he has 30 acres in permanent pasture, 40 in oats, 80 in corn, 70 in beans, and 20 in clover. His rotation is corn, corn, beans, oats, clover.

He was one of the first men in his neighborhood to start using grassed waterways. The land is fairly level except one field which Morris plans to contour. All the fields have been limed and phosphated.

Morris hasn't fed cattle since he left the Delavan farm in 1926. He raises an average of 100 to 150 hogs each year.

Twelve years ago Mrs. Morris bought

Vice President Morris combines a field of rye he experimented with this past summer. Riding behind him is Bob Etherton, the combine operator.

a couple of ewes. Now they keep about 50 sheep, market the wool and sell the males.

About eight to 10 milk cows are kept. The animals are owned mostly by sons, Bob, 21, and Don, 13, as a result of Bob's former interest in 4-H Club work and Don's present interest.

Mrs. Morris raises the poultry flock of from 300 to 500 birds each year. A laying flock of 100 hens is maintained.

Morris is tall, trim, and muscular. He is soft spoken and quiet in his manner, calm and methodical in his work. He admits to little formal education on a higher level but his awareness of this fact has made him one of the best read men on the IAA board. Reading is his hobby and in particular the study of problems of agriculture.

He is proud of his family of four children—Kathryn, 25, a registered nurse who served in the army during the war, is married to Floyd Dale and lives in Springfield with their three small sons; Jean, 23, is married to Fred Siemert, a district forester with the state forestry department now on leave of absence to study for his master's degree at Penn State College; Bob, 21, started his third year this fall in agricultural engineering at the University of Illinois. He served in the navy during the war; Don, 13, works diligently on his 4-H projects and attends local school.

Morris joined the Sangamon County Farm Bureau in 1926, the year he started farming in the county. He took part in the numerous member drives and served on the county board of directors and later as vice-president of the County Farm Bureau. He was elected to the IAA board in 1944 and as vice-president in 1945.

The IAA vice-president was on the first corn-hog temporary committee in 1931 and served as secretary-treasurer of the permanent committee until 1938 when he was elected chairman and served for two years.

He is a member of the board of trustees of his local Methodist church, a member of the board of trustees of Mechanicsburg township, and a former member of the Buffalo school board. Morris was a key figure in the establishment of the Tri-City school district which resulted in the successful consolidation of three high schools located in Mechanicsburg, Buffalo, and Dawson. The first move in this consolidation was made in the early 30's. The school was ready for use in the fall of 1938.

On the state level he is vice-president of Country Mutual Casualty Company, Country Life Insurance Company, a member of the board of directors of Illinois Farm Supply Company, and Country Mutual Fire Company, and a member of the IAA public relations committee and finance committee, which keeps an eye on IAA funds.

Members of the Morris family shown together are, left to right: son Don, 13, at piano; Vice President Morris with grandsons, Bill and Bob, son Bob, 21; Mrs. Morris; and daughter, Jean, 23, Mrs. Fred Siemert.

By JIM THOMSON
Ass't. Editor, IAA RECORD

Mrs. Morris comes out to watch her husband work in their flower and vegetable garden.

MARKET PRICES ABOVE SUPPORT LEVEL

For most of the important farm commodities for which Government price-support programs are available, the level of support is below the market price. Here is a comparison for 1948 crops of national averages of price-support levels, parity prices, and prices received by farmers as of August 15, 1948:

1948 Commodity	Parity 8-15-48	Price Support Nat. Average	Prices Received by Farmers 8-15-48
Cattle, beef (per cwt.)	$13.60	No support	$24.40
Sheep (per cwt.)		No support	10.20
Lambs (per cwt.)	15.80	No support	24.80
Hogs (per cwt.)	18.20	16.84	27.10
Wool (per lb., shorn wool grease basis)	.459	.423	.471
Eggs (per doz.-operative in Midwest)	.54	.35	.492
Soybeans (per bu.)	2.41	2.18	2.91
Rye (per bu.)	1.81	1.29	1.46
Corn (per bu.)	1.61	90% of 9-15 parity	1.91
Wheat (per bu.)	2.22	2.00	1.96
Oats (per bu.)	1.00	.70	.680
Barley (per bu.)	1.55	1.15	1.14
Potatoes, late (per cwt.)	1.86	1.25 - 1.75	1.58

NOTICE OF ANNUAL MEETING COUNTRY MUTUAL CASUALTY COMPANY

Notice is hereby given that the annual meeting of the members of Country Mutual Casualty Company will be held in the Sherman Hotel, Chicago, Illinois, on Tuesday, the 16th day of November, 1948, at 1:00 P.M., to receive, consider and if approved, confirm and ratify the reports of the officers and of the Board of Directors of the Company for the year ending December 31, 1947; to elect directors for the coming year and for the transaction of such further and other business as may properly come before the meeting.

Otto Steffey, Secretary

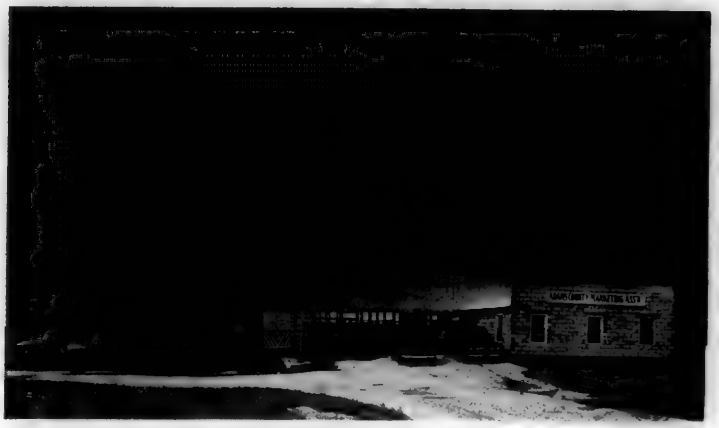
NOTICE OF ANNUAL MEETING COUNTRY MUTUAL CASUALTY COMPANY

Notice is hereby given that the annual meeting of the members of Country Mutual Casualty Company will be held in the Sherman Hotel, Chicago, Illinois on Tuesday the 16th day of November, 1948 at 1:00 P.M. to receive, consider and if approved, confirm and ratify the reports of the officers and of the Board of Directors of the Company for the year ending December 31, 1947; to elect directors for the coming year and for the transaction of such further and other business as may properly come before the meeting.

Otto Stelley, Secretary



Above are the new office and yards of the Adams County Marketing Association at Camp Point.

TROUBLES? Sure, we've had plenty. Almost more than our share, young Gene Shaver, manager of the new livestock co-op yards in Adams county, admitted readily.

But in spite of set backs the young marketing cooperative Shaver manages handled more than a million dollars worth of hogs during their first year of operation. And more important, raised the general price level on hogs from 25 to 50 cents a hundred.

The new Adams County Marketing Association organized a year ago at Quincy. It took over the yards and the business of the old shippers' association.

"Then shortly after we started buying we were notified we were losing our lease" Shaver related. "So we decided to build yards more centrally located than Quincy."

Camp Point was settled on as being more nearly in the center of the county. They moved into the present location July 19.

"It means we'er still new at Camp Point," Shaver said. "And much of our business still comes from the Quincy area."

Last year Adams county farmers were flooded out in the low country, and burned out in the hills. They had a poor corn crop. And that resulted in a small hog crop this year. All the buyers are feeling its effect.

The cooperative also has faced stiff competition from the seven direct buyers in the county.

"And it's partly a problem of letting the farmers know how we operate," Shaver said. For one thing, the Adams yard completes most of its buying in the early afternoon, generally by 2 o'clock. Most farmers there have been used to selling late in the afternoon.

The Adams County Marketing Association is a member company of the Illinois Livestock Marketing Association, a statewide marketing cooperative affiliated with the Illinois Agricultural Association.

Both county and state companies have been set up to help farmers market their hogs closer to their homes and to furnish proper grading and weighing.

Any farmer who sells his hogs to the Adams co-op knows how much he will be bid for his hogs before they leave his feedlot. He is paid cash for his hogs as soon as they are graded and weighed in at the yards.

All hogs are sold through the state sales office at Decatur where orders are taken for carload lots.

The state office can demand competitive bidding because, through its volume, it reaches buyers in Chicago, Milwaukee, St. Louis, Indianapolis, Louisville, Philadelphia, and points throughout the east and west.

The Adams county yards at Camp Point is one of 16 yards in this fast-growing group of county-wide marketing yards affiliated with the Illinois Livestock Marketing Association.

Other yards are located at Bloomington, Champaign, Danville, Paris, Shelbyville (with a branch at Effingham), Decatur, Stronghurst, Rushville, Freeport (with a branch at Lena), Camp Point, Elvaston, Aledo, Cambridge, Erie, Bluffs, and Princeton.

The Camp Point yards are of cement block construction. The aluminum roof reflects the sun's rays and helps make them cool in summer. The yards, and an office building were constructed at a cost of about $10,000.

Gene Shaver, the manager, was reared on a farm near Rushville. He worked in livestock yards in Iowa before coming to the yards at Quincy, and later, Camp Point.

The Adams county cooperative is bringing a cash market direct to the farmer's feedlot. But even more important in the eyes of such local farmers as Charles Kopsieker: "It is restoring competition."

By LEW REISNER

Field Editor, IAA RECORD

Gene Shaver (right) talks beef and beef prices with Charles Kopsieker, who owns fine Hereford herd with son, Ralph. The Kopsiekers have sold stock through new marketing point.

Plans well underway for 34th annual meeting Illinois Agricultural Ass'n.

PLANS are now well underway for the 34th annual meeting of the Illinois Agricultural Association which will be held Nov. 15-18 at the Hotel Sherman in Chicago. The 1947 meeting was held in St. Louis. Ransom Aldrich of Mississippi, former member of the American Farm Bureau Federation board of directors, has been invited to speak at the IAA convention.

The November issue of the IAA RECORD will carry the complete program including times and places for meetings of the Associated Companies of the IAA.

PLAN NOW *for* NOVEMBER PRODUCTION

This is the season of the year when egg prices become more favorable.

The experienced poultryman will start NOW to build his pullet flock, so that by November he will be able to cash in on the seasonably higher prices.

"FREE CHOICE" FEEDING

During recent years this program has become very popular because of its convenience and the economy it effects in time and labor

"Free Choice" is a method of feeding BLUE SEAL POULTRY BALANCER with farm grains. This allows the pullets to balance their own rations according to their individual requirements.

"Free Choice" eliminates grinding and mixing—or purchasing a lay mash if farm grains are available.

"MASH and GRAIN" FEEDING

This program is widely used and well-adapted in grain-deficient areas. The "mash and grain" method consists of feeding BLUE SEAL LAY MASH and hand-feeding whole farm grains.

Where supplies of farm grains are adequate, an economical lay mash can be made by mixing ground grain with BLUE SEAL POULTRY SUPPLEMENT according to directions on the tag.

Begin NOW on one of these systems!

Blue Seal Feeds are distributed by Local companies affiliated with

ILLINOIS FARM SUPPLY CO.

BLUE SEAL

MILLION DOLLAR CO-OP

Adams County Livestock Association is Still a Baby But Has Marketed Record Number of Hogs in First Year

Above are the new office and yards of the Adams County Marketing Association at Camp Point.

ILLINOIS FARM SUPPLY CO.

608 S. DEARBORN ST. • CHICAGO 5, ILL.

BLUE SEAL

Mrs. Opal Schirch, McLean, displays form that won her women's horseshoes title.

Ed Dugan, Kane, defeats Albert Anderson, Warren, to win table tennis singles.

Bernhardt and Sharp, Will county, are classed as an "A" acrobatic dance team.

Mrs. Mary Schaumburg, Iroquois, takes first in dart throwing, women's singles.

HOT TIME AT THE FESTIVAL

YES, it was hot. Hotter than the inside of an incubator. But that didn't stop 5,000 rural Illinois athletes, dancers, and singers from exerting every effort to bring glory to their home counties.

They had come from every section of Illinois to vie for championships in every sport in the book and they weren't going to let a little heat stop them from giving the best they had.

We said it last year; we say it again this year—the 1948 Sports Festival was the biggest and best on record. There were more contestants; there were more contests; and there were more spectators.

Good sportsmanship and clean, hard play marked the rural olympics as bowlers, ball players, and barber shop quartets did their best in two-days filled with games, music, and dancing.

Symbolic of the fine sportsmanship and the colorful pageantry of the games was the crowning of the Queen of Sports by Bob Prymuski, veteran tackle of the University of Illinois football team. Miss Betty Farrell, DeKalb, was chosen queen by a vote of women winners.

The nineteen-year-old Queen of Sports was a pitcher on the DeKalb girls' softball team which won the state girls' open class title for the second year in succession. Born and reared on a farm, Betty is now a junior at Northern Illinois State Teachers College.

Champaign county repeated last year's triumph by amassing the most points of any county in the festival—4,935. Kane county ranked first in the folk festival with 2,860 points. Champaign's points included 2,975 in sports events and 1,960 in the folk festival events. Champaign was high county in sports events as well as in total points.

Other counties rating first in their districts were: Winnebago, Kane, Whiteside, Warren, Livingston, Iroquois, Adams, Sangamon, Bond, Effingham, Edgar, St. Clair, Richland, Hamilton, and Jackson.

Winner of one of the most coveted honors of the Sports Festival—the State Farm Bureau baseball championship—was Will county. The Joliet-area farmers pushed out DeKalb in the final 6-2. Will held the title in 1934-39-40-41-46.

Greater than a three-ring circus, the Sports Festival was scattered over a 10 square mile area—from the bowling alleys in downtown Champaign to the archery courts, and the University golf course south of the campus. It was just impossible to keep an eye on everything.

Left: Smiling following her victory as women's diving champion is Jo Davis, Champaign. Above: William Goff (left), Sangamon, defeats D. A. Cadwell, Knox, to win checkers title. Right: Bowling singles champion is Ray Baker, Ogle, with a 591.

Twelve-year-old Dolores Maple, Macoupin, wins women's shuffleboard singles with ease.

Mrs. Leslie Allen makes some emergency repairs on skirt of Diane Seibel, McHenry county.

Francis Hazen, Champaign, makes a bullseye and wins men's singles event in archery.

Lloyd Marcoot, Georgia Cook, Bond, win ping pong doubles, praise of Bernice Engelking.

Ninth Annual Sports Festival sponsored by IAA, County Farm and Home Bureaus, WLS-Prairie Farmer, U. of I. Extension, and others, hits a new high in participation and attendance.

On the top floor of the Huff gym table tennis enthusiasts slugged away for the ping pong championship while nearby shuffleboard players were engrossed in their matches. Over in the armory sharpshooters banged away in the rifle shoot all day Thursday. Bowlers tossed the ball at the hardwood pins all day Thursday, and Friday morning too. The heat was oppressive but bowling gets in your blood and neither heat nor cold can stop a rabid kegler.

All over the campus as far as the eye could see there were ball games, from the 4-H girls class to men over 35, stretching from the stadium south of the campus to Illinois field more than a mile to the north.

There were so many good music and dancing acts in the folk festival that it is difficult to single out any that stood far above the rest. The best were rated "A" and all were the cream of district festivals in which more than 2,000 entrants participated.

The stifling heat continued through the evening programs on Thursday. Over at Huff gymnasium, the youngsters who like modern dancing sweltered in the 95-degree heat but the floor was jammed with dancers just the same. At the women's building oldsters and youngsters scraped, bowed, and do-si-doed to the notes of the fiddler and the calling of Duke Regnier.

It was a lot more comfortable out on the lawn under the stars in front of the University auditorium where several thousand spectators watched the best of the folk festival contestants present their talent. Another feature on this program was the singing of three numbers by the Illinois 4-H Club Chorus.

The wilting heat seemed to have little effect on the contestants because bright and early the next morning the campus was again swarming with competitors eager to put the finishing touches on their opponents.

Because the Sports Festival conflicted with the Grand American Trap Shoot, the Sports Festival trap shoot was held Aug. 6 at the Champaign Gun Club. The contest drew about 500 entries for the trap and skeet events.

The trap shoot became an exciting duel between last year's champion James Holderman, Grundy, and Marion Partlow, Clark. Tied at the end of their shoot, Partlow won on the shoot-off before a large crowd. Partlow also headed the Clark county quintet which won team honors. In the skeet shoot, Wilford Tendick, Logan placed first. Team winner was Kankakee.

(*Continued on next page*)

Champion horseshoe pitcher was Earl Bonko, Sangamon, last year's winner.

Winners of the short dashes were: Gale McDade and Becky Ayres, Champaign.

Boys broad jump winner was Don Anderson, Bureau. He jumped 17' 11".

Mrs. Roscoe Smith, Kane, who won honors in several doubles events, tosses darts.

Mrs. Opal Schirch, McLean, displays form that won her women's horseshoes title.

Ed Dugan, Kane, defeats Albert Anderson, Warren, to win table tennis singles.

Bernhardt and Sharp, Will county, are classed as an "A" acrobatic dance team.

Whiteside county's tug o'war team wrested the crown from the strong Vermilion team which has held the title for the past two years. In another of the special events, Turner Mayfield, Adams, earned the plaudits of the crowd by winning the woodchopping contest for the third successive year. He chopped through a nine-inch hickory log in 1 minute and .6 seconds.

Also defending his hog calling title successfully for the third year in a row was Alfred DeCap, Whiteside. According to the judges, DeCap's voice had 1. The greatest carrying power, reaching out to the back field; 2. The best appeal to the hog, denoting honesty and a firm conviction that supper is ready; 3. The most variety; pigs, they say, get tired of the same old monotonous calls; 4. The most original; the hog must know his master's voice; and 5. The clearest and most musical; pigs apparently are lovers of good music.

At noon Thursday, Russell Parks of WLS introduced a number of the early winners to the radio audience over the Dinnerbell Hour program. President Charles B. Shuman and IAA Director Otto Steffey, Stronghurst, festival chairman, also spoke.

Sue Davidson, Piatt, was first among women contestants in the trap shoot.

At the final session, held in Huff gymnasium starting with the Dinnerbell Hour Friday, many of the champions were introduced to the audience including Miss Farrell, the Queen of Sports, and her court which included about two dozen girl winners in all types of competition.

The traditional IAA Staff-Farm Advisers game was won for the third straight year since the war by the boys from Chicago by a score of 10-1.

Any way you look at the Sports Festival, it was a great show. In size and variety of musical, dancing, and sports events it probably cannot be equaled by any rural group in the nation. If you didn't get to the festival this year you missed a great deal. Why don't you plan now on attending the festival in 1949? Tell your farm adviser you want to get on one of the county teams. Because only by participation can you get the fullest enjoyment out of the Illinois Farm Sports Festival.

SUMMARIES OF FESTIVAL EVENTS

ARCHERY

WOMEN — 1st, Mrs. Robert Kern, Macon; 2nd, Edith Hvalgren, Whiteside; 3rd, Nancy Danby, Macoupin; 4th, Joan Nelson, DeKalb.

MEN — 1st, Francis Hazen, Champaign; 2nd, John Linengood, Piatt; 3rd, R. J. Hales, Champaign; 4th, Mason Burd, Vermilion; 5th, Virgil Mewes, Piatt.

BASEBALL

Final: Will 6, DeKalb 2. Consolation: Peoria won on forfeit from Champaign.

BOWLING

MEN'S OPEN SINGLES — 1st, Ray Baker, Ogle; 2nd, Art Holtman, Adams; 3rd, Fred Vincent, Henry; 4th, Stanley Smith, Macoupin; 5th, Elmer Degen, Randolph.

MEN'S OPEN TEAM — 1st, Macoupin; 2nd, St. Clair; 3rd, Christian; 4th, Ogle; 5th, Iroquois.

WOMEN'S OPEN TEAM — 1st, DeKalb; 2nd, St. Clair; 3rd, Christian; 4th, Ogle; 5th, Iroquois.

WILL COUNTY WINS FARM BUREAU BASEBALL TITLE

WILL COUNTY won the state championship of the Illinois Farm Bureau baseball league by defeating DeKalb county 6-2 at the Illinois Farm Sports Festival.

Third place went to Champaign county on a forfeit from Peoria county.

A home run by Seehausen, Will county second baseman, with two men on base in the first half of the ninth inning, clinched the game and Will county's sixth league title in the 20 years of championship competition. To open the ninth, with the score tied at two-all, Drecksler singled and was moved to second on McQuarrie's sacrifice. Smith, the pitcher, walked. McHugh singled to right on a three-two pitch scoring Drecksler. Then Seehausen drove his homer over the right fielder's head, Smith and McHugh counting ahead of him. Box Score:

Whiteside county's tug o'war team wrested the crown from the strong Vermilion team which has held the title for the past two years. In another of the special events, Turner Mayfield, Adams, earned the plaudits of the crowd by winning the woodchopping contest for the third successive year. He chopped through a nine-inch hickory log in 1 minute and .6 seconds.

Also defending his hog calling title successfully for the third year in a row was Alfred DeCap, Whiteside. According to the judges, DeCap's voice had 1. The greatest carrying power, reaching out to the back field; 2. The best appeal to the hog, denoting honesty and a firm conviction that supper is ready; 3. The most variety; pigs, they say, get tired of the same old monotonous calls; 4. The most original; the hog must know his master's voice; and 5. The clearest and most musical; pigs apparently are lovers of good music.

At noon Thursday, Russell Parks of WLS introduced a number of the early winners to the radio audience over the Dinnerbell Hour program. President Charles B. Shuman and IAA Director Otto Steffey, Stronghurst, festival chairman, also spoke.

Sue Davidson, Platt, was first among women contestants in the trap shoot.

At the final session, held in Huff gymnasium starting with the Dinnerbell Hour Friday, many of the champions were introduced to the audience including Miss Farrell, the Queen of Sports, and her court which included about two dozen girl winners in all types of competition.

The traditional IAA Staff-Farm Advisers game was won for the third straight year since the war by the boys from Chicago by a score of 10-1.

Any way you look at the Sports Festival, it was a great show. In size and variety of musical, dancing, and sports events it probably cannot be equaled by any rural group in the nation. If you didn't get to the festival this year you missed a great deal. Why don't you plan now on attending the festival in 1949? Tell your farm adviser you want to get on one of the county teams. Because only by participation can you get the fullest enjoyment out of the Illinois Farm Sports Festival.

SUMMARIES OF FESTIVAL EVENTS

ARCHERY

WOMEN — 1st, Mrs. Robert Kern, Macon; 2nd, Edith Hvalgren, Whiteside; 3rd, Nancy Denby, Macoupin; 4th, Joan Nelson, DeKalb.

WOMEN'S OPEN TEAM — 1st, DeKalb; 2nd, St Clair; 3rd, Christian; 4th, Ogle; 5th, Iroquois

WILL COUNTY WINS FARM BUREAU BASEBALL TITLE

WILL COUNTY won the state championship of the Illinois Farm Bureau baseball league by defeating DeKalb county 6-2 at the Illinois Farm Sports Festival.

Third place went to Champaign county on a forfeit from Peoria county.

A home run by Seehausen, Will county second baseman, with two men on base in the first half of the ninth inning, clinched the game and Will county's sixth league title in the 20 years of championship competition. To open the ninth, with the score tied at two-all, Drecksler singled and was moved to second on McQuarrie's sacrifice. Smith, the pitcher, walked. McHugh singled to right on a three-two pitch scoring Drecksler. Then Seehausen drove his homer over the right fielder's head, Smith and McHugh counting ahead of him. Box Score:

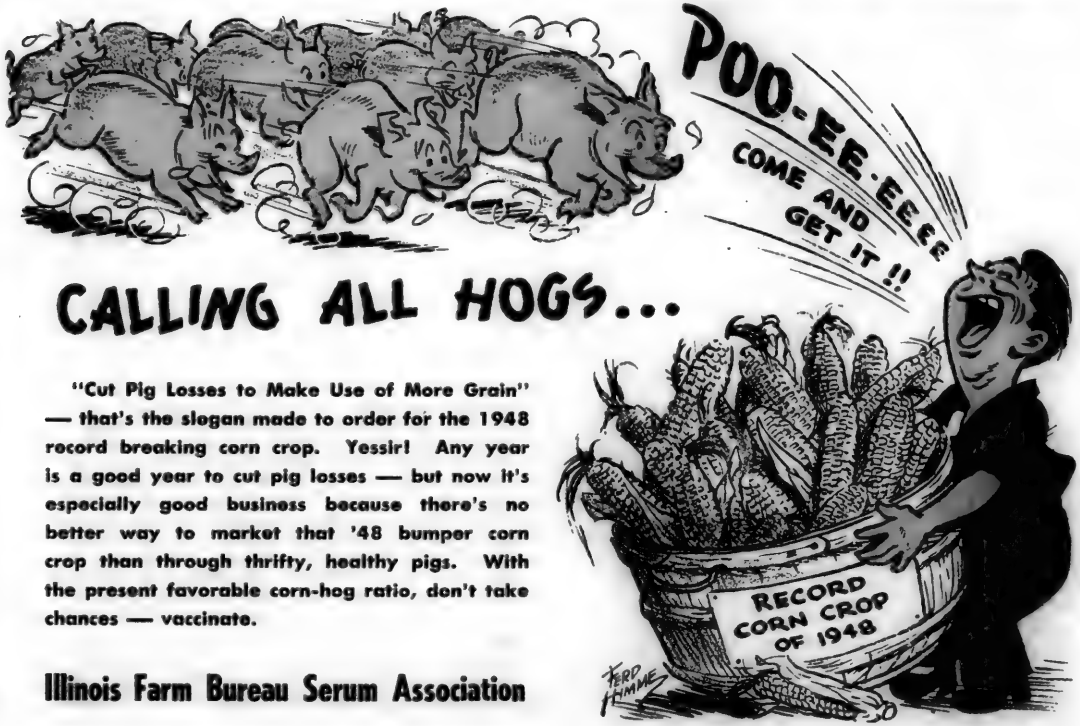
All County Champions: DeKalb — Back row: Stahl, Smith, Prestegaard, Smiley, Tompkins, Voss. Front: R. Breunig, Chapman, Anderson, LeRette, Doner, G. Breunig, Ropp, Ritter.



CALLING ALL HOGS...

"Cut Pig Losses to Make Use of More Grain" — that's the slogan made to order for the 1948 record breaking corn crop. Yessir! Any year is a good year to cut pig losses — but now it's especially good business because there's no better way to market that '48 bumper corn crop than through thrifty, healthy pigs. With the present favorable corn-hog ratio, don't take chances — vaccinate.

Illinois Farm Bureau Serum Association

When Horsepower Was Measured In Hay

. . . . YOU DIDN'T WEIGH THE RISKS

Surrey with the fringe on top . . . pleasant memories of gentle horsepower when a rare runaway presented the only threat to life and limb. Back in the "good old days" we didn't have to weigh the risks of speed, bustling traffic, powerful machinery — we didn't have to *be prepared* with ample insurance coverage to protect ourselves and our property as we must in this modern age of ruthless, untamed HORSEPOWER.

Country Mutual Casualty Company offers Farm Bureau members low-cost insurance to protect you, in this machine age, against liability and property damage. Extensive coverage will stand by you in your driving, in the event of an accident to your employees, in case strangers should be harmed by your livestock, your machinery. Unleashed horsepower — in tractors, cornpickers, combines, autos, trucks — is too dangerous an ally without the precaution of adequate insurance.

Ask your Country Mutual Casualty agent to help you determine the amount of liability and property damage insurance best suited to protect your investments.

Get Reservations In Now For IAA Trips East, South

"WHEELS a-rolling." Everyone wants to go! We have a pile of requests a foot high. It's the IAA caravan train trips to the AFBF convention in Atlantic City, Dec. 13-16.

More than 400 Farm Bureau folks have already said: "Sure. Let's go!" We've had that many requests. And they're still rolling in. So if you want to go, please let us know. We're running short of train space.

The latest development along the caravan front is a special side trip! If you're going the southern route you'll have an invitation to see a big Florida ranch, big enough to keep 32 separate herds of cattle. And you'll be entertained in traditional southern style with a big beef barbecue plus a rodeo staged by ranch hands.

Those taking the eastern tour will visit the large U. S. Department of Agriculture experimental farm at Beltsville, Md., where they will see the vast dairy and hog projects together with other experimental work. They will also visit United Nations headquarters and see UN in action.

The southern tour will leave on the Illinois Central Railroad Dec. 5 and will travel through Florida and up the Atlantic seaboard on its way to the convention. It leaves the convention Dec. 16 and arrives in Chicago the next day.

The eastern train leaves Chicago Dec. 8 on the Pennsylvania Railroad, arriving in Washington, D. C., the next day. After special tours throughout eastern states, this group will arrive at Atlantic City Dec. 13 in time for the convention. The train returns to Chicago Dec. 19 by way of New York City.

Reservation requests have been printed in the July, August, and September issues of the RECORD. You can assure yourself of a place on the train of your choice by clipping out one of these requests and mailing it in to us.

The southern trip, longer by three days, will cost about $220 and the eastern trip about $175, depending on the type of travel accommodations.

Roy Johnson, who is in charge of the trip for the Illinois Agricultural Association, has this one word of caution. He says that those who are thinking about travel accommodations should be warned that "two in one lower" is just the same as two persons sleeping in a single bed. It may mean discomfort in travel for many.

NOTICE OF ANNUAL MEETING ILLINOIS WOOL MARKETING ASSOCIATION

Notice is hereby given that the annual meeting of the shareholders and members of Illinois Wool Marketing Association will be held on Tuesday, the 16th day of November, 1948, at the hour of 9:30 A.M. in the Sherman Hotel, Chicago, Illinois, to elect directors for the succeeding year; to receive and if aproved, confirm the report of the Board of Directors of the Association for the fiscal year ending September 30, 1948; to consider and if approved, ratify and confirm all of the acts and proceedings of the Board of Directors done and taken since the last annual meeting of the shareholders and members of the Association; and for the transaction of such further and other business as may properly come before the meeting.

J. King Eaton, Secretary

State Honors Go To Prairie Farms Creamery of Olney

PRAIRIE Farms Creamery of Olney won first prize on market milk and first prize on cottage cheese in the dairy products class competition at the Illinois State Fair.

Competing against a large number of entries from both large and small dairies over the state, Prairie Farms of Olney won first prize on pasteurized market milk on the basis of flavor, visible sediment and package. The entry consisted of four quarts of milk.

The cottage cheese also was entered in open class competition and the blue ribbon fell to Prairie Farms on the basis of flavor, body and texture, makeup and package over a large number of entries. This is the second year in succession that Prairie Farms of Olney has won the blue ribbon first on cottage cheese.

The judging of the dairy products was conducted by the University of Illinois.

Due to a vigorous quality program conducted by Prairie Farms with its producers during the past two years, much of the credit for these prizes is due to the Prairie Farms patrons who have improved the quality of their milk immeasurably. Careful processing in the plant with high quality milk from the producers has made the winning of these prizes possible, according to Frank Mylanek, manager of the Olney plant.

Clean plowing will destroy 95 to 98 per cent of the corn borers in a field.

Fairchild Named Manager of Prairie Farms Creameries

FORREST C. FAIRCHILD, 45, manager of dairy and creamery cooperatives in Bloomington for the past 22 years, has been named manager of Prairie Farms Creameries, the statewide affiliate of the Illinois Agricultural Association. He will assume his new duties Nov. 1.

F. C. Fairchild

Fairchild was born on a dairy farm in Knox county and moved to a farm near Kansas City, Kans., with his family when five. He remembers delivering milk to railroad men near the Kansas farm. The family returned to Knox county and a dairy farm retailing milk in Galesburg.

In 1923 Fairchild was a dairy herd tester in Edgar county and in 1924 worked for Jubilee Farms in Peoria and later exhibited cows for the Ruth Hanna McCormick Sims farm and the Governor Lowden farm at Sinissippi. He studied dairy husbandry at the University of Illinois for two years before doing dairy herd testing work in McLean county.

A few months later, Fairchild became first manager of the newly organized McLean County Milk Producers Association. In 1932 when the producers creamery was organized he became manager of both until and after their consolidation last year.

Fairchild also served as manager of the Prairie Farms Creamery of Champaign while Manager Ike Hochstrasser was in the armed service for 4½ years. In 1931 he assisted with the reorganization of the Rockford Milk Producers Association and was secretary of the organization which preceded the Illinois Milk Producers Association.

In 1946-47 he served on the National Milk Producers Association committee on national policy on social security and hospitalization for farmers.

Fairchild lives in Bloomington with his wife and family of two daughters, both students at Illinois Wesleyan University. Ann, 19, is a junior. Alice, 17, is a freshman. Mrs. Fairchild is a member of the Bloomington board of education.

He is a member of the local Presbyterian church, the Bloomington consistory, past president of the local Rotary club, and chairman of the citizens committee on needs of Bloomington schools.

Champions, 35 and over class: Vermilion — Back row: Hunt, Custer, Melecosky, Sawyer, Woodard, Norman, Brown, Rebmann, Cottle. Front: Sproul, Leonard, Potter, Barry, Wise, Dickson, Klayer, Jeffers.

Get Reservations In Now For IAA Trips East, South

"WHEELS a-rolling." Everyone wants to go! We have a pile of requests a foot high. It's the IAA caravan train trips to the AFBF convention in Atlantic City, Dec. 13-16.

More than 400 Farm Bureau folks have already said: "Sure. Let's go!" We've had that many requests. And they're still rolling in. So if you want to go, please let us know. We're running short of train space.

The latest development along the caravan front is a special side trip! If you're going the southern route you'll have an invitation to see a big Florida ranch, big enough to keep 32 separate herds of cattle. And you'll be entertained in traditional southern style with a big beef barbecue plus a rodeo staged by ranch hands.

Those taking the eastern tour will visit the large U. S. Department of Agriculture experimental farm at Beltsville, Md., where they will see the vast dairy and hog projects together with other experimental work. They will also visit United Nations headquarters and see UN in action.

The southern tour will leave on the Illinois Central Railroad Dec. 5 and will travel through Florida and up the Atlantic seaboard on its way to the convention. It leaves the convention Dec. 16 and arrives in Chicago the next day.

The eastern train leaves Chicago Dec. 8 on the Pennsylvania Railroad, arriving in Washington, D. C., the next day. After special tours throughout eastern states, this group will arrive at Atlantic City Dec. 13 in time for the convention. The train returns to Chicago Dec. 19 by way of New York City.

Reservation requests have been printed in the July, August, and September issues of the RECORD. You can assure yourself of a place on the train of your choice by clipping out one of these requests and mailing it in to us.

The southern trip, longer by three days, will cost about $220 and the eastern trip about $175, depending on the type of travel accommodations.

Roy Johnson, who is in charge of the trip for the Illinois Agricultural Association, has this one word of caution. He says that those who are thinking about travel accommodations should be warned that "two in one lower" is just the same as two persons sleeping in a single bed. It may mean discomfort in travel for many.

NOTICE OF ANNUAL MEETING ILLINOIS WOOL MARKETING ASSOCIATION

Notice is hereby given that the annual meeting of the shareholders and members of Illinois Wool Marketing Association will be held on Tuesday, the 16th day of November, 1948, at the hour of 9:30 A.M. in the Sherman Hotel, Chicago, Illinois, to elect directors for the succeeding year; to receive and if aproved, confirm the report of the Board of Directors of the Association for the fiscal year ending September 30, 1948; to consider and if approved, ratify and confirm all of the acts and proceedings of the Board of Directors done and taken since the last annual meeting of the shareholders and members of the Association; and for the transaction of such further and other business as may properly come before the meeting.

J. King Eaton, Secretary

State Honors Go To Prairie Farms Creamery of Olney

PRAIRIE Farms Creamery of Olney won first prize on market milk and first prize on cottage cheese in the dairy products class competition at the Illinois State Fair.

Competing against a large number of entries from both large and small dairies over the state, Prairie Farms of Olney won first prize on pasteurized market milk on the basis of flavor, visible sediment and package. The entry consisted of four quarts of milk.

The cottage cheese also was entered in open class competition and the blue ribbon fell to Prairie Farms on the basis of flavor, body and texture, makeup and package over a large number of entries. This is the second year in succession that Prairie Farms of Olney has won the blue ribbon first on cottage cheese.

The judging of the dairy products was conducted by the University of Illinois.

Due to a vigorous quality program conducted by Prairie Farms with its producers during the past two years, much of the credit for these prizes is due to the Prairie Farms patrons who have improved the quality of their milk immeasurably. Careful processing in the plant with high quality milk from the producers has made the winning of these prizes possible, according to Frank Mylanek, manager of the Olney plant.

Clean plowing will destroy 95 to 98 per cent of the corn borers in a field.

Fairchild Named Manager of Prairie Farms Creameries

FORREST C. FAIRCHILD, 45, manager of dairy and creamery cooperatives in Bloomington for the past 22 years, has been named manager of Prairie Farms Creameries, the statewide affiliate of the Illinois Agricultural Association. He will assume his new duties Nov. 1.

F. C. Fairchild

Fairchild was born on a dairy farm in Knox county and moved to a farm near Kansas City, Kans., with his family when five. He remembers delivering milk to railroad men near the Kansas farm. The family returned to Knox county and a dairy farm retailing milk in Galesburg.

In 1923 Fairchild was a dairy herd tester in Edgar county and in 1924 worked for Jubilee Farms in Peoria and later exhibited cows for the Ruth Hanna McCormick Sims farm and the Governor Lowden farm at Sinissippi. He studied dairy husbandry at the University of Illinois for two years before doing dairy herd testing work in McLean county.

A few months later, Fairchild became first manager of the newly organized McLean County Milk Producers Association. In 1932 when the producers creamery was organized he became manager of both until and after their consolidation last year.

Fairchild also served as manager of the Prairie Farms Creamery of Champaign while Manager Ike Hochstrasser was in the armed service for 4½ years. In 1931 he assisted with the reorganization of the Rockford Milk Producers Association and was secretary of the organization which preceded the Illinois Milk Producers Association.

In 1946-47 he served on the National Milk Producers Association committee on national policy on social security and hospitalization for farmers.

Fairchild lives in Bloomington with his wife and family of two daughters, both students at Illinois Wesleyan University. Ann, 19, is a junior. Alice, 17, is a freshman. Mrs. Fairchild is a member of the Bloomington board of education.

He is a member of the local Presbyterian church, the Bloomington consistory, past president of the local Rotary club, and chairman of the citizens committee on needs of Bloomington schools.

George Lewis, Brown county, president of Illinois Future Farmers and a member of Rural Youth, presents honorary state farmer degree to State Ag Director Arnold Benson at Illinois State Fair. Left is Lee Rogers. Right is Larry Douglas.

RURAL YOUTH

By ELLSWORTH D. LYON
Director
IAA Young People's Activities

WHEN this issue of the IAA RECORD reaches you a number of counties will have held their talk fests. Other counties will not complete speech activities until about the middle of October.

All along the way, from the small local practice sessions to the big state talk fest in Chicago on Nov 16, each reader of the RECORD can give support to this speech project by participation, by giving information on the topics discussed, or by attendance at talk fest meetings.

This worthwhile project has proven its value in personal development and community leadership many times in the history of Rural Youth. Former participants speak with enthusiasm of the confidence developed, of the ability gained to think and speak while standing before an audience, of the information added to knowledge from research upon the various topics, and of skills discovered in organizing speech material as some of the values to be derived from talkfesting.

A number of topics this year deal with some phase of rural health. The State Rural Youth Committee recommended that opportunity for participants be given to discuss several phases of this problem since the general topic of the National Talk Meet sponsored by the American Farm Bureau Federation is "National Health Problems Facing Rural America." The health and safety topics listed for our talk fests are in harmony with the recommendations of our department of safety and public health.

Here are the topics: (1) Brucellosis, enemy of man and animal; (2) Rural medical doctors are needed; (3) Muffle that sneeze; (4) Better hospitalization is needed in my community; (5) First aid education for everyone; (6) Swat the fly with D.D.T.; (7) A good school — a healthy community; (8) Time for that annual health check; (9) Soil erosion is human erosion; (10) Control those rats; (11) Glide or slide on country roads; (12) Planned recreation leads to good health; (13) Democracy must first be lived and taught in my community; (14) My limbs are my living; (15) What are the opportunities in farming not found in other occupations; (16) My idea of a successful farmer or homemaker; (17) An ounce of insurance protection; (18) Getting along with the family.

The schedule for the district talk fests is as follows: Mon., Oct. 18, Oregon; Tues., Oct. 19, Cambridge; Wed., Oct. 20, Rushville; Thur., Oct. 21, Petersburg; Fri. Oct. 22, Streator; Mon., Oct. 25, Champaign; Tues., Oct. 26, Greenville; Wed., Oct. 27, Louisville; and Thur., Oct. 28, Benton.

Any help we can provide for Rural Youth members to take part in the talk fests, or any support by encouragement or attendance at talk fests will be appreciated and will be of much value in developing leaders for agriculture.

Farm Sports Festival

Rural Youth increased participation in the Farm Sports Festival this year. The district sports festivals provided opportunity for wide participation in bowling, softball, and folk and square dancing. Rural Youthers were outstanding in their participation at Urbana on Aug. 26 and 27. The Rock Island square dance team shown on this page which took first place in Moline's Centennial celebration in July, received an "A" rating and attracted much attention in Urbana. Ilene Kruse, Tazewell, received high individual score for Rural Youth Girls' Bowling. Coles County took first place in Rural Youth Softball. Ed Dew, Ogle Rural Youther, was rated as the outstanding community song leader.

County Activities

Darrell McAfee, past president of Christian, and Avo Hancock were married in the old Stonington Baptist Church, Sept. 5. While on their honeymoon in Chicago they paid a visit to the office of Young People's Activities of the IAA. Come again Mr. and Mrs. McAfee. Word comes from the same county that Barbara Shetler and James Atkinson were married Aug. 2 in the Presbyterian Church in Taylorville with 200 relatives and friends present. Be on the alert, Christian Rural Youthers, and keep adding new members to your group.

Mr. and Mrs. Marvin Clark, popular Warren youth leaders, left for Iowa State College, September 15, where Marvin will study in the Iowa State College of Veterinary Medicine. We hope they will return to Illinois when Marvin has completed his studies.

Congratulations LaSalle upon your successful "snack bar" project at the 4-H Club Fair held August 10, 11, and 12 on the selling of 22,715 items. Profits were $806.07. Co-chairmen were Betty Barr and Bob Wilson.

The Rock Island County Rural Youth square dance team takes part in the state folk festival held in connection with the State Farm Festival at Champaign-Urbana

IS TWELVE-GRADE SCHOOL UNIT BEST FOR OUR CHILDREN?

IAA Schools Director Points Out Advantages in Combining Grade And High School Boards — Economy, More and Better Equipment, Special Teachers, Greater Flexibility, and a Better Balanced Program

THE school boards of several new community unit school districts have apparently been led to believe that there is something very unusual and different about a 12-grade district, that the change requires fancy jobs, business agents, extra secretaries and other costly non-essentials. Some extra help may be needed in a very large district, say of county size, but patrons should expect the main advantages of the 12-grade unit to come from the broader, more equitable tax base and the greater flexibility and coordination inherent in the unit district.

Some of those advantages and possibilities are of a cooperative nature such as a more practical and fuller use of buildings, equipment, special teachers, health and recreational services.

Other advantages come from the fact that the curricula and extra curricula programs in all the schools in the district will be coordinated so that all 8th grade graduates enter high school with approximately equal training and opportunities. Also, the same text-books will be used over the entire district.

Balanced Program

The overall supervision of the unit district also provides an opportunity to balance the entire 12 grade program by strengthening the grade school that is suffering from a severe teacher shortage and has been unable to recruit sufficient replacements. Under the 12 grade district it would be possible to reward teachers of equal training, experience, and responsibility equally. Then weaknesses in pupil preparation that show up in high school—English, mathematics, etc.—can be traced back under one supervision into the grade school and corrected.

Economies

There may be some economy in the unit district not possible in the dual system. Experience in other states as well as in Illinois all indicate that the taxpayer gets more for his dollar in the 12 grade district. Top heavy administrative costs can nullify any financial advantage the 12 grade district should normally enjoy from economies or from additional state aid to the unit district.

Organization of Unit District

Briefly, the organization personnel of a unit district consists of the superintendent, various grade school and high school principals and teachers. The superintendent's job is one of overall supervision of course of study, activities, correlation and supervision of all units of instruction, pupil transportation, and head executive officer of the board and public relations representative in the district. He carries out the policy established by the board. In many of the smaller unit districts he will also be principal of the high school.

The principals over the various schools will handle enrollment, discipline, the extra curricular programs and eligibility of players, supervise teachers, handle office records of that particular school, supervise hot lunch programs, and generally administer that school unit. Most of them will also have teaching responsibilities as well. However, they are relieved of being the main contact between the school and the school board.

The teachers in a 12 grade unit occupy about the same position as before.

Delay Building — Modest Structures

The soundest advice to school boards in new 12 grade districts seems to be to go slow and study the possibilities for making the most of the inherent advantages of the 12 grade unit. A few buildings may be closed the first year, but the people should be assured that their children will be well provided for. It seems wise to urge against building new buildings and floating big bond issues in these high cost times. Most of these bonds are paid off over a 20 year period which may extend over very lean years with lower assessed valuations and increasing tax delinquencies. If some building is necessary, modest housing seems to be more in keeping with common sense.

Consolidate Sentiments in Community

During the first year or two of the unit district the administration and school board might well concentrate on welding the district together in common interests and loyalties. This can be done by various devices including an all district open-house where parents are invited to see the school actually in

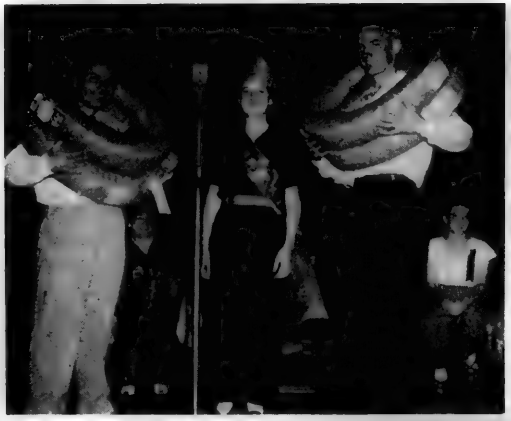
GIRLS 50 YARD DASH — UNDER 15 (:6.5 sec.) — 1st, Becky Ayres, Champaign; 2nd, Charlotte Needham, DeKalb; 3rd, Judith Konneker, Macoupin.
GIRLS HIGH JUMP — UNDER 15 (4') — 1st, Lois Jett, Bond; Tie for 2nd, Lena Baird, Vermilion — Alice Bishop, Will.
GIRLS BROAD JUMP — UNDER 15 (12' 2") — 1st, Ruth DeDecker, Henry; 2nd, June Beaver, Will; 3rd, Marietta Smith, Kane.
BOYS 8 LB. SHOT PUT — UNDER 15 (42' 5¼") — 1st, Bill Turner, Jackson; 2nd, Eugene Hewerst, Champaign; 3rd, William Kahl, Macoupin.
BOYS 50 YARD DASH — UNDER 15 (:6.1 Sec.) — 1st, Gale McDade, Champaign; 2nd, Don Anderson, Bureau; 3rd, Willis Hannum, Marshall-Putnam.
BOYS 100 YARD DASH — 16 YRS. & OVER (:10.9 sec.) — 1st, Ed Stormer, Vermilion; 2nd, Tilden Meyers, Kane; 3rd, Gene Green, Whiteside.
BOYS HIGH JUMP — UNDER 15 (4' 10") — 1st, Gale McDade, Champaign; Tie for 2nd, Dean Behrends, Mason — Jim Esarey, Wabash.
BOYS BROAD JUMP — UNDER 15 (17' 11") — 1st, Don Anderson, Bureau; 2nd, Don Pottorf, Mason; 3rd, Bob Huber, Mason.

TRAP SHOOTING

TEAM — Men (A Team): 1st, Clark; 2nd, Tazewell; 3rd, Kankakee; 4th, Vermilion; 5th, Crawford.
TEAM — Men (B Team): 1st, Shelby; 2nd, Will; 3rd, Champaign; 4th, Kankakee; 5th, Tazewell.
INDIVIDUAL — Men: 1st, Marion Partlow, Clark; 2nd, James Holderman, Grundy; 3rd, Dale Rithaler, Tazewell; 4th, James Hunter; 5th, Tony Sankey, Crawford.
INDIVIDUAL — Women: 1st, Sue Davidson, Piatt; 2nd, Mrs. Edith Vinckel, Henry; 3rd, Marilyn Mathers, Sangamon; 3rd, F. Tolley, Macon.
INDIVIDUAL — Old Timers: 1st, A. H. Amman, Will; 2nd, Harry Zelle, Tazewell; 3rd, W. A. Stephenson; 3rd, I. Dace; 5th, Russell Winterbottom, Grundy.
INDIVIDUAL — Juniors: 1st, Joe Marble, Vermilion; 2nd, W. Bollman, Whiteside; 3rd, J. Hartman, Kane.
FATHER AND SON: 1st Clyde & Joe Marble, Vermilion; 2nd, Dan & Joe Steinke, Will; 3rd, J. S. & R. G. Ford, Macon.
HUSBAND AND WIFE: 1st, Edith & James Vinckle, Henry; 2nd, Marion and Jane Partlow, Clark.
BROTHER AND BROTHER: 1st, Clyde & Laverne Love, Kankakee; 2nd, Harold & Wilbur Love, Kankakee; 3rd, Harry & Elmer Dannewitz, DeKalb.
TWO-MAN TEAM: 1st, Marion Partlow & Art Stifal, Clark; 2nd, James Holderman & John Phillip, Grundy; 3rd, Trulock & Mahannah, Macon; 3rd, Laverne Love & Wm. Love, Kankakee.
DOUBLES: 1st, James Holderman, Grundy; 2nd, Marion Partlow, Clark; 3rd, Art Stifal, Clark; 4th, Pete Graham, Douglas; 5th, Carl Miller.



In appreciation of their unselfish efforts to make the Illinois Farm Sports Festival a success, the Illinois Agricultural Association presented the two men at left with pairs of Illinois Farm Supply Company's new low pressure tires. Left is E. H. Regnier, U. of I. rural sociologist, and right is Ralph McKenzie, Kane county farmer. The Queen of Sports, Betty Ferrell, DeKalb, joins in the fun.

Winner of top honors in the trap shoot was Marion Partlow, Clark. Partlow tied with James Holderman, Grundy, last year's champion, then defeated him in the shootoff.

Howard Elliott, DeKalb, proudly displays ribbon he won for first place in men's singles of clock golf.

ALL AROUND (TRAP & SKEET): 1st, Marion Partlow, Clark; 2nd, James Holderman, Grundy.

TUG 'O WAR

1st, Whiteside, Bob Anderson; 2nd, Vermilion, Elmer Varner; 3rd, DeKalb, Clarence Bale.

VOLLEY BALL

1st, Will, Richard McHugh; 2nd, Richland, Walter Fehrenbacher; 3rd, Champaign.

WOODCHOPPING

1st, Turner Mayfield, Adams; 2nd, Dwayne Vorses, DeKalb; 3rd, Henry Maddox, Crawford; 4th, Al DeCap, Whiteside; 5th, Glen Hickam, Jackson.

A *Special* Grease For Every Farm Need!

Lubrication costs less than new parts. The life of farm trucks, cars and machinery can be prolonged by regular and complete lubrication. It is highly essential that a good grease of the proper grade be used for effective lubrication. BLUE SEAL greases provide high quality lubricants for every farm purpose. Each grease contains the highest quality ingredients and is specifically made to meet the requirements of the part for which it is recommended.

BLUE SEAL pressure gun greases are marketed in 100 lb. Drums, 40 lb. and 25 lb. Lug Pails, the 25 lb. E-Z Pail and the 10 lb. Can. Cup greases are also available in 1 lb. and 5 lb. Cans.

LUCO LUBE A premium quality gun grease with enough "tackiness" to stay put. LUCO LUBE possesses stability, heat and water resistance and is of a cleaning nature which makes it our most popular general purpose farm machinery and chassis lubricant. Available in both summer and winter grades.

ALUMINATE GUN A top quality aluminum base grease. It is formulated to be of a smoother texture and without the tackiness possessed by Luco Lube. ALUMINATE GUN grease will do an excellent job on medium to high speed anti-friction bearings and is an excellent chassis lubricant.

HARVESTER GUN An excellent grease for corn pickers and combines. The oils in HARVESTER GUN grease have been selected to give maximum lubrication and ease of handling during the late fall and early winter harvesting seasons.

GRAPH SEAL For those who prefer a graphited-type grease, high quality lubricating stocks are combined with a calcium base and powdered graphite to make an excellent lubricant.

HUSKER ROLLER
A "tacky" compound for use on corn picker rollers. The proper application of Husker Roller Compound will enable the corn husker roller to do a neat clean job of corn husking.

AXLE GREASE
Designed for long lasting lubrication of axles of farm wagons and other implements requiring axle grease.

HI-TEMP BEARING
An excellent soda base grease especially designed to lubricate anti-friction bearings operating at high speeds or under severe conditions where high temperatures are produced.

SMOOTH WHEEL BEARING
A short fiber lubricant which is superior for passenger cars.

FIBROUS WHEEL BEARING
A long fiber lubricant designed for heavy duty bearing service.

OUTSIDE GEAR
An excellent grease for use on slow moving exposed gears.

Your Blue Seal Salesman can satisfy your farm lubrication needs.

NEWS and VIEWS

Miss Rena L. Hodgen (right), chief of home economics education in Illinois, presents $100 scholarships to Barbara Isenberger, Lanark; Marjorie Moore, Camp Point; and Barbara Buckholz, Melvin. Muril Tracy, Wyoming, who was not present, also was awarded one of the four scholarships for outstanding achievement in high school and Future Homemakers of America work.

100 Girls Win Special Awards at Future Homemakers Conference

ALMOST 100 girls received special awards or ribbons at the eighth annual leadership training conference of the Illinois Association of Future Homemakers of America at East Bay Camp near Bloomington in late August.

The girls received the awards as individuals or as representatives of high school units. About 400 girls, representing 18,478 members, attended the camp.

Highest of the individual awards were the $100 State Future Homemakers of America Scholarships presented to four girls in the state for outstanding achievements in high school and FHA work.

Those receiving the scholarships were Barabara Isenberger, Lanark; Marjorie Moore, Camp Point; Barabara Buckholz, Melvin; Muril Tracy, Wyoming. Miss Rena L. Hodgen, chief of home economics education in Illinois, presented these scholarships. They require that the girls go to a four-year accredited college or university and major in home economics.

Mary Baird of Bethany was elected state president of the Future Homemakers of America. Other officers are: Lois Magnuson, Irion, vice-president; Marjorie Troutvetter, Hamilton, secretary; Claudine Atterbury, Armington, treasurer; Jeanne Di Gusto, Lacon, parliamentarian; Barabara Foote, Granville, historian; Bette O'Neil, Springfield, public relations; Donna Beals, Neoga, recreation; and Barbara Murphy, Carthage, projects.

The week-long conference was in charge of Miss Francis Conkey of the Home Economics Education department, Illinois State Normal university. Counselors included high school homemaking teachers from various high schools in the state and four junior counselors of home economics majors in colleges.

Vernon L. Nickell, state superintendent of public instruction, was a guest speaker.

Special programs included, "The Model FHA Girl," described by an instructor from the Patricia Stevens Finishing school; "This Thing Called Morale" by Dr. A. H. Lauchner, lecturer and principal of Thornburn Junior High school, Urbana; Miss Patsy Lew, formerly of Shanghai, China, and a home economics student from Francis Shimer college, Mount Carroll talked on "Our Chinese Friends." Miss Conkey chose as her topic, "Cheerful Cherub Speaks."

Name Eleven Top 4-H Judging Teams

ELEVEN Illinois 4-H county livestock, dairy and poultry champion judging teams ranked tops at the 1948 state judging contest held at the University of Illinois College of Agriculture on Sept. 4.

E. I. Pilchard, in charge of boy's 4-H club work, supervised the contest in which 790 Illinois 4-H boys took part in an all-day program of judging horses, beef cattle, sheep, swine, dairy cattle and poultry.

Six county teams were given a rating of "A" for high scoring on livestock (except dairy cattle and poultry): Boone, Christian, Macon, Tazewell, Sangamon and McLean. Three county teams were awarded an A rating in the dairy judging contest: Fulton, McLean and Tazewell; and two county teams were given A ratings in poultry judging: Kendall and Will.

On Oct. 2 the six county livestock teams were scheduled to return to the University for a run-off to determine the state champion. The winning team will represent Illinois in the non-intercollegiate judging contest held in Chicago on Nov 26, preceding the opening of the International Live Stock Exposition.

Members of the winning teams were: (livestock) Boone, Earl Jackson, James Turner, David Lampert; Christian, Jim Winans, Dale Smith, Gene Fisher; Macon, Lyle Tohill, Arnold Bork, Ernest Myers; Tazewell, Robert Schrock, Dan Roth, Howard Springer; Sangamon, William Brunner, John Krell, Harry Robertson; McLean, Lynn LaMont, Lee Quast, Eddie Wright.

(Dairy) Fulton county, H. Ault, J. Thompson, Philip Melville; McLean, Dick Compton, Gordon Ropp, Don Smith; Tazewell, David Diemer, Elmon Koch, Gerald Wagler. (Poultry) Kendall, Duane Clauson, Ronald Johnson, Ralph Norwick; Will, Vernon Laukenau, William Shoop, Maurice Soucie.

Here's Chance to Take Educational Eastern Trip

AN interesting and educational all-expense tour to New England is being sponsored Oct. 22-31 by the Agricultural Leaders' Digest, Chicago.

The tour is being conducted by Mr. and Mrs. C. L. (Cap) Mast, Jr., who will be assisted by representatives of the New York Central Railroad and other tour services. Cap, who is editor and publisher of the Digest, was formerly a 4-H club leader in LaSalle county. He has also been editor of Prairie Farmer, IAA RECORD and the Business of Farming. He is a native of Adams county.

To make reservations for the trip, write to Cap Mast at 139 N. Clark Street, Chicago 2, Ill.

Members of the Pike County Home Bureau are shown during their trip by bus to St. Louis in late July. Seventy-four members made the trip and visited numerous points of interest in the city.

CROSS STITCH

Two popular forms of needlework join forces in this handsome afghan. The side panels are worked in afghan stitch and crocheted together with strips of star stitch. A colorful leaf and trellis pattern in rust, tan and maroon is cross-stitched to the back-ground panels of dark green. The center stripes combine light and dark green. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois.

NOTICE OF ANNUAL MEETING ILLINOIS AGRICULTURAL ASSOCIATION

Notice is hereby given that the annual meeting of the members of Illinois Agricultural Association will be held in the Sherman Hotel, Chicago, Illinois, on the 17th day of November, 1948, at 9:30 o'clock A.M. for the following purposes:

To receive, consider and if approved, to ratify and confirm the reports of the officers and the acts and proceedings of the Board of Directors and officers in furtherance of the matters therein set forth since the last annual meeting of members of the Association;

To approve, ratify and confirm the several purchases heretofore made by this Association of stocks and evidences of indebtedness of corporations whose activities will directly or indirectly promote agriculture or the interests of those engaged therein;

To secure consent and authorization to acquire on behalf of the Association by purchase certain stocks and evidences of indebtedness of corporations whose activities will directly or indirectly promote agriculture or the interests of those engaged therein;

To elect eight (8) members of the Board of Directors to serve for a term of two years;

To elect a President and Vice-President who shall also serve as directors for a term of one year;

To consider and act upon such proposed amendments of the Articles of Incorporation or of the By-Laws of Illinois Agricultural Association as may be properly submitted;

For the transaction of such other business as may properly come before the meeting.

Paul E. Mathias, Secretary

HOME BUREAU WOMEN HOLD THREE-DAY RETREAT

The annual Home Bureau retreat for counties in the central Illinois area was held for three days in late August at East Bay Camp. Home Bureau women attending heard lectures during their stay on such subjects as handcraft, and nature study. Book reviews and inspirational talks and a stunt night also were included. Activities included swimming and boating.

FESTIVE TABLECLOTH

For a table cloth with a party flavor, make it with Irish crochet. The rose petals, scallops and picots which characterize it have an ornamental, special occasion quality. You can make this cloth in any size to fit your table by joining together as many of the four-inch motifs as you need. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois.

Is 12-Grade Unit Best For Children?

(*Continued from page* 28)

operation, to get acquainted with the teachers of their youngsters, to meet and talk with the superintendent, principals, etc. The superintendent or principal should take this opportunity to explain basic school policy, tell what they are trying to do for the children and enlist the understanding and cooperation of parents in their important partnership undertaking.

School leaders should always take the patrons into their confidence on important school issues. Gaining the confidence of the people is fundamental to developing a feeling of unity and loyalty within the district. Parents should be encouraged to attend other school functions, perhaps including a father and son banquet and an afternoon tea for the mothers.

It might add solidarity to a school district to have a joint meeting of all the teaching staff wherein teachers can get better acquainted with one another.

Then the special teachers as music, speech, art, and physical education instructors should initiate their programs in each of the grade schools, including remaining one room schools, and see to it that all of the pupils, as nearly as possible, get the same advantages and opportunities.

Possibility of Junior High

Some school boards will doubtless see the advisability of transferring the 7th and 8th grade pupils out of the elementary schools into a junior high program, thus improving their opportunities and perhaps relieving the grade teachers or grade school buildings of over-crowded conditions. This step should discourage drop-outs.

Many opportunities and possibilities for improving the school program under the unit district will appear to the superintendent and school board that studies their situation. Not all of the possibilities could or perhaps should be exploited immediately. Gradually over a period of years, local leaders can make progress as conditions permit. But careful planning should precede all important changes, and local people should be informed of the intended changes and the reasons for them. If the reasons do not justify the changes, perhaps no changes should be made.

The 12 grade district offers an opportunity to do a better job if we can eliminate the non-productive costs and efforts and make the new system work.

Frank Bill, farm editor of the Bloomington Pantagraph for the past 32 years, is presented a plaque by J. C. Spitler (right) of the University of Illinois, for his "outstanding service to agriculture." Mrs. Bill (center) was presented an orchid. The Bills also were given a four-door Chevrolet sedan by "agricultural interests of central Illinois" in "recognition of his service to agricultural journalism." The honors were given at the McLean County Soil Conservation Field Day program in early September.

Livestock Prices to Hold Firm in 1949

(*Continued from page* 10)

But even though there may be hay shortages on some farms, there still should be enough to go around, Russell concluded.

The demand for meat continues strong in the cities despite the very real threat of buyers strikes, the men at the livestock meetings said. This demand will help shore up prices during the months ahead.

"After all, we are a nation of meat eaters," Howe said. "We like good meat, and we've always been willing to pay the price it takes to get it. Even during the depression."

Key industries are going full blast. We've had another round of wage increases. The federal goverment is spending at the rate of $40 billion annually.

It looks like boom times ahead for all. Livestock men should share in the general prosperity.

What Will Your Farm Look Like Tomorrow?

(*Continued from page* 11)

needed on all farms. Only the ones are used which are needed in a sound land use plan in which the laws of nature are respected, and nature is helped by the farmer in the conservation of the soil upon which life depends. This plan is made by the farmer himself, with the assistance of the Soil Conservation District farm planner.

Do you have such a plan on your farm? If not, talk to your neighbor who does. With the help of your farm adviser and local soil conservationist, you can get started now on a planned program of soil conservation.

NOTICE
ILLINOIS AGRICULTURAL ASSOCIATION ELECTION OF DELEGATES

Notice is hereby given that in connection with the annual meetings of all County Farm Bureaus to be held during the month of October, 1948, at the hour and place to be determined by the Board of Directors of each County Farm Bureau, the members in good standing of such County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the Association, including the election of officers and directors, as provided for in the By-Laws of the association.

During October, annual meetings will be held in Adams, Hamilton, JoDaviess, Madison, Peoria, Pike, Pulaski-Alexander, Stark and Washington Counties.

Paul E. Mathias, Secretary

Phone Strike Affects Fruit Exchange

BECAUSE of the phone strike which tied up the telephones in Carbondale and several other southern Illinois communities, the Illinois Fruit Growers Exchange, an affiliated company of the IAA, found it necessary to set up temporary sales headquarters in Mount Vernon. The strike hit the Fruit Growers Exchange at the height of the apple harvest. R. S. McBride, manager of the exchange, reports that the southern Illinois apple crop this year has been of good quality and excellent size.

A House that GREW like a Garden

Big wages, big incomes, big prices . . . TOO BIG to fit values of a couple years back when house and property were insured against fire according to pre-war costs of building and real estate.

COUNTRY MUTUAL FIRE COMPANY is reminded daily that fire losses today mean MORE LOSS when insurance protection hasn't kept pace with increasing costs. Your home, your farm buildings, may have doubled in value since 1940. *Should fire strike today,* would your present insurance do its fair share in helping you to rebuild?

For your own protection, re-estimate your property's present value, and insure accordingly. Country Mutual Fire offers you the complete protection of your OWN company at rates tailored for YOU at the lowest possible cost. Your Country Mutual Fire adviser is always there to help you keep your insurance UP . . . your costs DOWN . . . your protection IN STEP with values.

Is 12-Grade Unit Best For Children?

(*Continued from page 28*)

operation, to get acquainted with the teachers of their youngsters, to meet and talk with the superintendent, principals, etc. The superintendent or principal should take this opportunity to explain basic school policy, tell what they are trying to do for the children and enlist the understanding and cooperation of parents in their important partnership undertaking.

School leaders should always take the patrons into their confidence on important school issues. Gaining the confidence of the people is fundamental to developing a feeling of unity and loyalty within the district. Parents should be encouraged to attend other school functions, perhaps including a father and son banquet and an afternoon tea for the mothers.

It might add solidarity to a school district to have a joint meeting of all the teaching staff wherein teachers can get better acquainted with one another.

Then the special teachers as music, speech, art, and physical education instructors should initiate their programs in each of the grade schools, including remaining one room schools, and see to it that all of the pupils, as nearly as possible, get the same advantages and opportunities.

Possibility of Junior High

Some school boards will doubtless see the advisability of transferring the 7th and 8th grade pupils out of the elementary schools into a junior high program, thus improving their opportunities and perhaps relieving the grade teachers or grade school buildings of over-crowded conditions. This step should discourage drop-outs.

Many opportunities and possibilities for improving the school program under the unit district will appear to the superintendent and school board that studies their situation. Not all of the possibilities could or perhaps should be exploited immediately. Gradually over a period of years, local leaders can make progress as conditions permit. But careful planning should precede all important changes, and local people should be informed of the intended changes and the reasons for them. If the reasons do not justify the changes, perhaps no changes should be made.

The 12 grade district offers an opportunity to do a better job if we can eliminate the non-productive costs and efforts and make the new system work.

Frank Bill, farm editor of the Bloomington Pantagraph for the past 32 years, is presented a plaque by J. C. Spitler (right) of the University of Illinois, for his "outstanding service to agriculture." Mrs. Bill (center) was presented an orchid. This Little Piggie Stays Home

This little piggie doesn't know it, but he's going to stick around awhile to grow and fatten up. A potential pork chop this size may be small potatoes now . . . and yet he's a part of a $100 billion investment.

Few people realize the size of agriculture — the mammoth investment that totals 100 BILLION DOLLARS! It's made up of small things like newborn livestock, big things like powerful farm machinery, land and buildings. For the first time in more than a generation, the farmer is financially in a position to take advantage of the wonderful, progressive practices developed in recent years.

Your Farm Bureau membership has made many of these advances available to you. It has pointed out the advantages of erosion-control, cooperative practices of marketing and buying, given you and other farmers a strong voice in molding favorable farming legislation.

Your investment is great. Protect it through your Farm Bureau activities.

THE STATE FARM BUREAU PUBLICATION

For These Things We Are Thankful

WE WHO are privileged to live and work in God's own workshop — the open field — are, I'm sure, more conscious than any other group of His constant presence. We appreciate the importance of the harvest season and welcome the opportunity of giving thanks to the Giver of all good.

Charles B. Shuman

We are thankful for America where the individual citizen is still the most important unit in the nation and where the power of the state protects rather than destroys his property and freedom. We are thankful that we have made some recovery from the destruction of war. We are thankful that we have been able to help those less fortunate than ourselves.

AS FARMERS, we are thankful for a bountiful harvest even in the face of its almost certain reduction in financial reward. We appreciate the more nearly equitable balance between farm and city income during recent months. We are thankful for debts that are paid, for more modern homes, for new farm machines, for money in the bank, for government bond reserves for future security. We value highly our new scientific knowledge. We are thankful for county farm and home advisers who help us use this knowledge; for research workers and teachers; for all who serve our many needs.

AS HOME loving men and women we are thankful that farming is a family occupation. We are proud of and thankful for the wonderful stream of rural youth that means so much to our nation and to agriculture. We are confident in the future for agriculture as more and more of our best young people stay on the land. We are thankful for our Farm Bureau organization and our affiliated cooperatives that have helped bring agriculture to its proper place in our society. We pay tribute to the wisdom of the early leadership; to the present membership; to all who serve the farmers of Illinois and the nation.

FOR ALL of these and many more we are deeply grateful. Let us each in our own way give thanks and pray that the blessings that have come to us may be multiplied throughout the world.

Charles B Shuman

President,
Illinois Agricultural Association

Ransom Aldridge

We'll see you in CHICAGO!

More Than 5000 Farmers Are Expected to Hear Aldridge, Butler, and Sen. Aiken at 34th Annual Meeting of the Illinois Agricultural Association at the Hotel Sherman Nov. 15-18

HOW will the long-range farm bill affect Illinois farmers? What is the outlook for grain and livestock prices? Farmers attending the 34th annual meeting of the Illinois Agricultural Association can expect to hear answers to both these questions.

The annual meeting sessions will be held this year in Chicago Nov. 15-18. The meetings, dinners, and general sessions will be held in the Hotel Sherman, with the exception of the annual meeting of Illinois Farm Supply Company, which will be held in the Morrison Hotel.

Those attending the IAA meeting will hear a discussion of national issues by prominent spokesmen, as well as programs and projects being sponsored by the IAA to help solve local problems.

A review of the year's activities of the IAA and its affiliated companies, as well as their financial reports, will be presented during the sessions by company managers and department heads.

Last year the annual meetings of the IAA and its affiliated companies were held in St. Louis. More than 5,000 were registered last year, and an even larger crowd is expected for this year's sessions in Chicago.

The first two days of the convention will be devoted to conferences, Rural Youth activities, and the annual meetings of the IAA-affiliated cooperatives.

The third and fourth days will be devoted to the general sessions of the Illinois Agricultural Association and to conference meetings on subjects of interest to Illinois farmers.

Conferences will be held on national legislation, schools, organization and publicity, roads and property taxation, health and safety, marketing, and soils.

The closing hours of the convention will be devoted to the election of a president and vice-president of the IAA, and the election of half the membership of the IAA board of directors.

Finals for the state Rural Youth Talk Fest will be held during the convention. A champion will be selected to represent Illinois at the American Farm Bureau Federation in Atlantic City in December. A dance on Monday evening will be held for the Rural Youthers, as well as a Rural Youth breakfast Wednesday morning. Finals of the state Skilled Driver's Club will also be held during the annual meeting.

Prominent Figures to Speak

Two widely-known speakers are scheduled to address general sessions. George D. Aiken, the senior senator from Vermont, will speak Thursday morning. Aiken is a member of the senate agricultural committee and author of the long-range farm program bill that carries his name. Carl Butler, president of the American Institute of Cooperation, will address the convention Wednesday night. Martin H. Kennelly, mayor of Chicago, has been asked to give the welcoming address. President Charles B. Shuman of the IAA is also scheduled to give his annual address at this assembly.

Other speakers scheduled include Ransom E. Aldridge, president of the Mississippi Farm Bureau Federation, Dr. H. M. C. Case of the University of Illinois who was a member of the committee which helped draft the Aiken long-range farm bill, and a representative from the state revenue committee who will discuss state finances.

A special invitation is extended all Farm Bureau people who attend the annual convention to also visit the IAA office building located across the Chicago river, only a few blocks from the Hotel Sherman.

Members of the Junior Farmers' Association from Ontario, including its president, Ross Beattie, a young farmer from Stayner, Ont., will be guests of Illinois Rural Youthers during the IAA annual meeting.

The young Canadians will speak during the Tuesday afternoon session of the Rural Youthers at the grand ballroom in the Hotel Sherman.

They will also talk informally during the Wednesday morning breakfast, answering questions on the home life and farm activities of young people in Canada.

Ellsworth D. Lyon, director of Rural Youth activities for the IAA, expects more than 500 during their annual session.

During the convention, finals will be held in the State Talk Fest to pick a representative from Illinois to go to the national Talk Fest at the American Farm Bureau Federation meeting in December in Atlantic City.

During the conference on veterinary medical relations, Dr. Robert Graham, dean of the College of Veterinary Medicine at the University of Illinois, and A. R. Kemp, farm adviser at Galesburg, Knox county, will discuss animal diseases and their importance to livestock farmers. Dr. Graham will also speak during the annual meeting of the Illinois Farm Bureau Serum Association.

Dr. C. D. Scarseth, director of the American Farmers' Research Association, will address the soils conference. C. E. Yale, Lee county farm adviser, will tell of the soil testing laboratory at Amboy.

(*Continued on page* 34)

The five Maschinos, acrobatic team, will entertain during general sessions at IAA annual meeting in grand ballroom of Hotel Sherman in Chicago.

1:00 IAA General Session

IAA Vice President Floyd E. Morris (center) presents checks to the first three students to participate in the joint rural doctor training program sponsored by the Illinois Agricultural Association and the Illinois Medical Society. Left to right: Dr. Percy E. Hopkins, president, Illinois Medical Society; Lawrence R. Irish, Hancock county; Morris; Burton E. Bagby, Pulaski; and L. C. Fiene, Franklin.

IAA HELPS STUDENTS START MEDICAL CAREERS

THREE students are starting their medical careers in Chicago universities with loans to finance their studies granted them by the Illinois Agricultural Association and the Illinois State Medical Society.

The men have agreed to return to counties in Illinois where rural doctors are needed. This is a condition of the loan. They are eligible for $5,000 loans at the rate of $1,000 a year to complete four-year medical courses and one-year internships.

The three students are: Burton E. Bagby, Mounds, Pulaski county; Lawrence Fiene, Steeleville, Randolph county, and Lawrence R. Irish, Blandinsville, Hancock county.

Bagby, 36 years old, is a veteran and the father of three children. He took his premedical course at Memphis (Tenn.) State College, and will study at Loyola University. Bagby is a registered nurse and started his training in 1934 in New York City hospitals. He was in the medical corps in the army.

Fiene, 21, took his pre-medical work at Southern Illinois University, Carbondale, and is attending the University of Illinois in Chicago. He is the son of a factory worker and one of eight children.

Irish, 20, studied at the University of Illinois at Champaign-Urbana and will continue his studies at the University of Illinois in Chicago.

These men are the first to benefit from a $100,000 joint medical student loan fund set up by the IAA and the Illinois Medical Society.

The plan is designed to improve medical care in the rural areas of Illinois. Specialization, failure of young doctors to settle in country towns, lack of hospitals, and other factors, have cut down the proportions of physicians to population in rural areas.

NOTICE
ILLINOIS AGRICULTURAL ASSOCIATION ELECTION OF DELEGATES

Notice is hereby given that in connection with the annual meetings of all County Farm Bureaus to be held during the month of November, 1948, at the hour and place to be determined by the Board of Directors of each County Farm Bureau, the members in good standing of such County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the Association, including the election of officers and directors, as provided for in the By-Laws of the Association.

During November, annual meetings will be held in Bond, Brown, Cumberland, Franklin, Gallatin, Lawrence, Hancock, Massac, Macoupin, Montgomery, Schuyler, Shelby, St. Clair, Warren, Williamson and Richland Counties.

The three students are: Burton E. Bagby, Mounds, Pulaski county; Lawrence Fiene, Steeleville, Randolph county, and Lawrence R. Irish, Blandinsville, Hancock county.

Bagby, 36 years old, is a veteran and the father of three children. He took his premedical course at Memphis (Tenn.) State College, and will study at Loyola University. Bagby is a registered nurse and started his training in 1934 in New York City hospitals. He was in the medical corps in the army.

Fiene, 21, took his pre-medical work at Southern Illinois University, Carbondale, and is attending the University of Illinois in Chicago. He is the son of a factory worker and one of eight children.

Irish, 20, studied at the University of Illinois at Champaign-Urbana and will continue his studies at the University of Illinois in Chicago.

These men are the first to benefit from a $100,000 joint medical student loan fund set up by the IAA and the Illinois Medical Society.

The plan is designed to improve medical care in the rural areas of Illinois. Specialization, failure of young doctors to settle in country towns, lack of hospitals, and other factors, have cut down the proportions of physicians to population in rural areas.

NOTICE
ILLINOIS AGRICULTURAL ASSOCIATION ELECTION OF DELEGATES

Notice is hereby given that in connection with the annual meetings of all County Farm Bureaus to be held during the month of November, 1948 at the hour and place to be determined by the Board of Directors of each County Farm Bureau, the members in good standing of such County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the [illegible] meeting of the Association, including the election of officers, as is provided for in the By-Laws of the Association.

During November annual meetings will be held in Bond, Brown, Clinton and Franklin [illegible] Counties, Lawrence, Richland, Marion, Macoupin, Montgomery, Christian, Shelby, De Witt, Macon, Williamson and Piatt [illegible]

Paul E. Marriott, Secretary

Who's to Blame for *High Food Pr*

Many Consumers Have Been Misled Into Believing That Price Supports On Farm Commodities Are Responsible For High Cost of Living

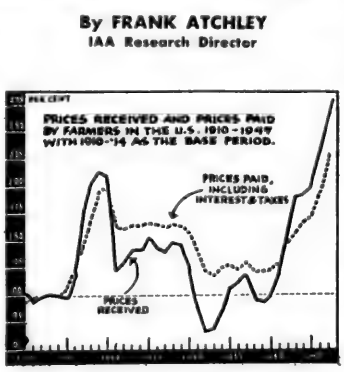
By FRANK ATCHLEY
IAA Research Director

WE HEAR considerable talk these days about farmers making so much money. It is true to some extent. Most farmers are making more money than they did in 1932 when whole milk sold for less than $1.25 a hundredweight, and hogs were selling at the rate of $3.35. Certainly those times represented anything but a fair relationship between agricultural prices and those of other parts of our economy.

We see many charts these days in our newspapers and magazines showing the percentage increase in annual earnings of farmers compared to other businesses. It seems to me that showing the percentage increase in annual earnings of farmers over the last 15 or 20 years is quite similar to giving three more pennies to a child who has but one penny, saying that the gift increased his money 300 per cent and then assuming that he has a lot of money.

Although some newspapers do, others do not carry the complete story of farm prices and income. If you'll look at the prices-paid-prices-received chart, you will see that the prices paid by farmers, including interest and taxes, were higher than the prices received by farmers from 1920 to 1941.

Surely that is long enough for the farmer to have to pay higher prices than he receives. The crossing of



those lines in 1942 was certainly overdue. If we look at the prices-received line for 1939, we see that it is much below the dotted line of prices paid. That means that farmers were several steps behind on the price front during those pre-war years.

If we'll go clear back to 1910-14, the period commonly used as a base, we'll find that prices received by farmers in this country in 1947 were more than 175 per cent higher than they were in that base period. On the other hand, if we'll check the average earnings of factory workers using the same base period, we'll find that their earnings increased nearly 350 per cent over the same period of time.

True, there were some good and some poor times between 1915 and 1940 both for labor and agriculture. In 1929, the average income per person on farms from farming was $223 as compared to $871 for those persons not on farms. In 1946, income per person on farms was $620 compared to $1326 for those persons not on farms.

Here is another way of figuring income. Net farm income in 1947 was estimated to be about $18 billion. A little arithmetic shows us that our 6 million farm families would each receive an everage of $3,000 net income or about $58 a week.

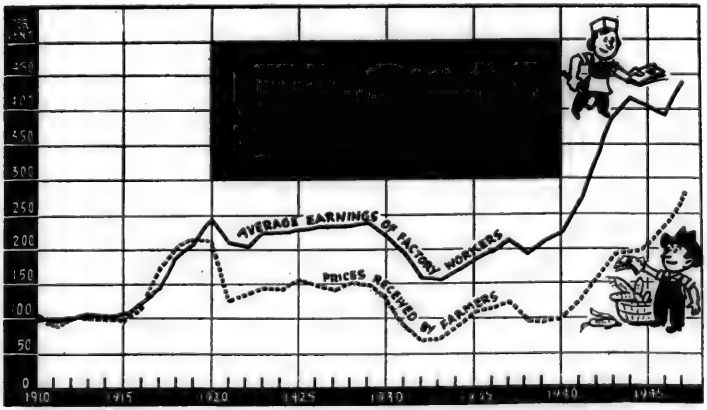
Now just what is this net income? It is the farmer's return for his own work, for the work on the home farm done by members of his own family without pay, and for the return on his investment without any adjustment being made for changes in inventory.

Just the interest on the farmer's investment would take about $15 a week away from this $58 figure. That would leave $43 a week for the labor, management, and risk of the operator, and for the labor of his family. Let's just compare this figure of $43 a week with the average manufacturing worker who received about $49 a week during 1947. This is for the work of only one person. It doesn't include pay for any other member of the family.

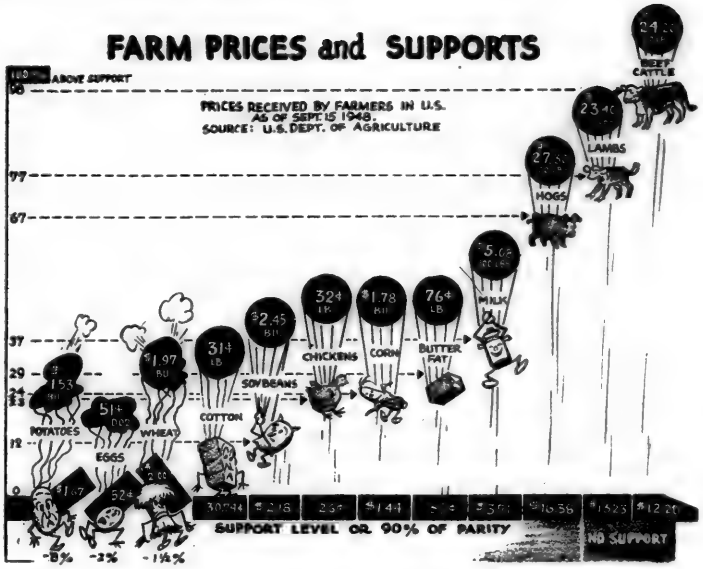
Expressions involving "price supports," "parity price," and "high production" were used during the war to indicate that farmers were doing their part to help win the conflict. They hadn't even been thought of in the villainous role in which they are now pictured by some consumers.

Price supports then were popular because they stimulated greater food output without which wars cannot be won. Many forget that food is now having a great deal to do with our efforts to win the peace. Surely, farmers shouldn't be made the scapegoat for inflation.

The metropolitan press has carried stories of how farm price supports are the cause of high food prices. They say



d Prices?



that the taxpayer's money is being used to hike the prices he is paying to his grocer, his butcher, and the milkman. The issue has even been brought into the political campaign but so far neither party has been able to fasten the blame for high food costs.

Some of the critical statements have implied that the farm price-supports were foisted on the public at the whim of government officials. This certainly is not the case. These price supporting activities are the result of action by Congress and are required by law to be carried out in full. These laws were passed with the support of the American Farm Bureau Federation and the Illinois Agricultural Association.

The original law requiring minimum support levels for farm prices (90 per cent of parity in most cases) was a war measure to stimulate agricultural production. This law was to run two full years after the end of the war, which would be to the end of this year.

In the closing hours of the last regular session, Congress, by enacting the Agricultural Act of 1948 extended the requirements to run through 1949, and on crops produced in 1949 until the end of the marketing season running into 1950. Beginning with the 1950 crop, the Act provides for a new method of computing parity and for a variable level of price support, ranging from 60 to 90 per cent of the "modernized" parity with the percentage variations based on the yearly level of supplies of each commodity in relation to a "normal supply."

With respect to support prices generally, there are two items which need to be noted.

First, support prices are in effect a form of insurance. Farmers are requested to hold or maintain production at a level which will meet domestic and foreign needs, and in return, they are given some assurance against disastrous price breaks.

Second, actual support-price operations have been relatively minor during the war and so far in the post-war period.

Farmers are not "guaranteed" that prices will not go below the "floors." They are offered loans, purchases, or purchase agreements that give them an alternative to selling below support levels if market prices should go below the support price. Furthermore, it seems likely that even with the support programs some sales will be made below the floors because the support programs may not be technically fully effective.

For example, a farmer may have to sell corn for less than the support price because he doesn't have approved storage, making it impossible for him to get a loan on his corn or to enter into a purchase agreement with the Commodity Credit Corporation.

Larger support operations are probable for this year as a result of record crop yields. Cotton, wheat, and new-crop corn prices are now at, or near, the support level, but this does not mean that huge losses have been necessarily realized.

In fact, operations of the Commodity Credit Corporation (other than wartime subsidies which were mainly for the purpose of holding the line on price ceilings) from the time of its first loans in 1933 through June 30, 1948, showed a gain of about $80 million after paying all operating expenses of the corporation.

What have support prices really done to the price of food? Many key food prices are far above the level at which the government would have to come in with its support program.

To reach the support level, hogs would have to drop 42 per cent; butterfat, 22 per cent; milk, 27 per cent; chickens, 19 per cent. Other products on which there are no support prices are even higher. Beef cattle are 79 per cent above parity price and lambs and veal calves are nearly as far above. Certainly support prices haven't affected these products.

The accompanying "balloon chart" indicates that the prices of very few products are down to, or below, their support level or 90 per cent of parity. Only four products — potatoes, eggs, wheat, and cotton — have reached, or gone below, the point where, according to the law, they must be supported by the government.

Prices paid to farmers are only a part of the cost of a loaf of bread or a bottle of milk delivered at your back door. Food prices include the cost and profits of middlemen, processors, distributors, and retailers. What part of the consumer's dollar does the farmer get? This varies of course for different foods but it was down to an average of 51 cents in June. That was the farmer's pay for growing the food. The remaining 49 cents pays for the cost of transporting, processing, and delivering the food between the farm and the consumer's table. In June, 1932, the farmer was getting only 29 cents of the retail food dollar while the middleman was getting 71 cents.

In the current boom, farm prices have risen much more than marketing charges giving farmers, rather than the middlemen, the edge. In the next few years, if history repeats itself, farm

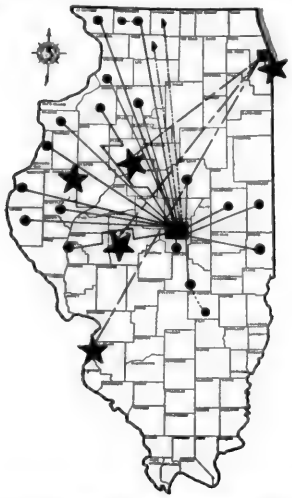
This is the new $20,000 livestock marketing yards at Princeton in Bureau county.



Map shows network of cooperative marketing points in Illinois. Lines radiate from state sales office of Illinois Livestock Marketing Association at Decatur, and National Livestock Producers' Association office in Chicago. Circles show where county buying points affiliated with Illinois Livestock are operating. Stars show Producer markets. Triangles indicate county points of Illinois Livestock organized but not yet buying.

Feeders For Sale!

New Farm Bureau Yards At Princeton Are First To Handle Cattle On A 'See Before You Buy' Basis

THE Bureau County Livestock Marketing Association, buying hogs at its fine new yards at Princeton, is the 17th county member to affiliate with the fast-growing statewide Illinois Livestock Marketing Association.

Bureau county's marketing association started buying hogs in June. They moved into their new quarters the last week in September.

The new building which houses the yards is one of the finest of its kind. It is made of concrete block construction and was built at a cost of $20,000.

Work With Producers

Bureau is the first county set-up to handle feeder steers. This it is doing through an agreement with the Chicago Producers Commission Association.

Although their feeder business is new, the livestock yards have had four successful months of buying hogs. Their hog business has been running just under $100,000 a month during the slack hog marketing season.

At this Princeton outlet, the Chicago Producers plan to handle calves, yearling heifers and steers, and two year old steers. They are also selling feeders at Malta and Montgomery.

The feeder cattle business has been good, even though they got started at the end of the feeder season, as Leo Richardson, local manager for the Chicago Producers, explained.

These first cars of feeders were 600-900 pound yearlings, good and mediums, that came from Montana, Colorado, Wyoming, Texas, and northern New Mexico.

Darrel Newmister, manager of the yards and in charge of buying hogs, said they hoped to buy from 30,000 to 50,000 hogs a year. This large volume is possible in Bureau county, he explained, because it is one of the largest hog producing counties in the nation.

Newmister comes from McLean county where he worked for the Producers stock yards in Bloomington. He was reared on a McLean county farm.

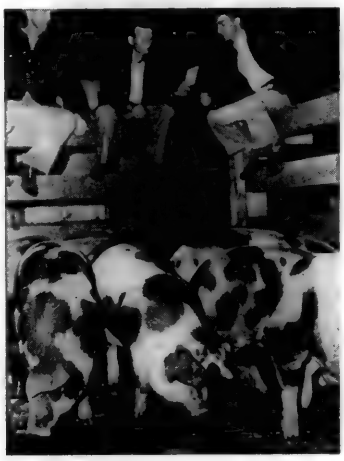
Hogs have been sent to the Princeton yards from farms near a number of neighboring towns, Newmister said. He has had shipments from Wyanet, Sheffield, Neponset, Manlius, Buda, Tiskilwa, Ohio, Walnut, La Moille, Arlington, Spring Valley, Bureau, and Mendota.

Raise Prices

Several farmers estimated that the yards have raised the price on hogs substantially since they started buying.

The Producers agency, a cooperative that operates on the Chicago market, is handling the feeders at Princeton as a service to local feeders.

Farmers there say that the advantages to them are obvious. Cattlemen can see the feeders before they buy, they can buy in less than carload lots, and will share in any savings from the operation.



These top market hogs, 200-pound Spotted Poland Chinas, were sent to market through Princeton co-op by Bob Linden, center. At right is Darrel Newmister, manager, and at left is Frank Anderson, farmer.

Cowles Retires After 26 Years As IAA Treasurer

ROBERT A. COWLES is the first officer of the Illinois Agricultural Association to retire under the Association's retirement plan. He was retired at the close of the fiscal year, Sept. 30, after 26 years of service as treasurer of the Association.

Coincidentally, he retired as treasurer of the Illinois Agricultural Service Company, Illinois Agricultural Holding Company, Illinois Agricultural Auditing Association, Prairie Farms Creamery, and Illinois Grain Corporation. On April 30, 1948, he retired as treasurer of Illinois Wool Marketing Association, when it moved its offices to Paris in Edgar county.

Robert A. Cowles

On Dec. 31, 1946, Mr. Cowles retired as treasurer of Country Mutual Fire Company, Country Mutual Casualty Company, Country Life Insurance Company and Illinois Farm Supply Company, other associated companies.

A native of Normal and Bloomington and charter member of the McLean County Farm Bureau, Mr. Cowles came to the IAA in 1922. At that time he had completed 20 years of employment with a principal owning substantial acreage of farm and business properties and other real estate which he managed as agent.

Mr. Cowles was chosen by the Association to fill the vacancy in the treasurer's office arising through the appointment of George A. Fox of Sycamore to the office of executive secretary. Howard Leonard of Eureka was then president of the Association and Sam Thompson of Quincy, who was later to become IAA and AFBF president, was a board member and chairman of the finance committee.

In his early years with the Association, in addition to performing the duties of treasurer, Mr. Cowles shared with officers general responsibility of carrying on the Association's program, including particular attention to some of its accumulated and troublesome problems.

He was actively engaged with the legislative committee and represented the Association with others during the deliberations of the Constitutional Convention and its submission to the electorate.

Fights for Parity

Later, with Mr. Thompson, then president, Mr. Cowles represented the Association in Washington in its support of the original McNary-Haugen bill. At that time, with the Association's approval, he acted as secretary-treasurer for the American Council of Agriculture, an organization formed by George N. Peek of Moline, one of the co-authors of the bill. The main objective of the Council was to carry on support of the bill which had the backing of farm leaders and some prominent business men. Earl C. Smith of Pike county, succeeding Mr. Thompson as IAA president, carried on the fight with George Peek, Chester Davis, Bill Settle of Indiana, Charles Hearst of Iowa, and many others, in support of the major principle embodied in the bill of — "parity prices for major agricultural commodities."

From time to time the Association organized statewide cooperative associations and mutual insurance companies.

Mayfield Moves To Organization From Road Dep't.

CHARLES S. MAYFIELD, 32, IAA director of road improvement since December 1946, has transferred to the organization department as assistant organization director. He will devote his time to all sections of the state and will work under the general direction of Organization Director O. D. Brissenden, who has been on leave of absence for several months because of ill health.

Charles Mayfield

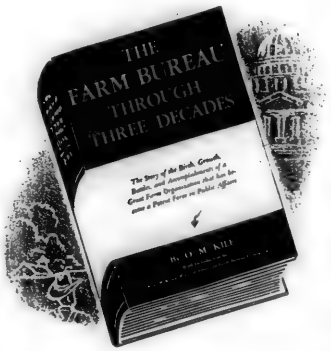
Until the IAA road survey committee has finished its work, Mayfield will still work part time on roads and part time on organization work.

Mayfield was born and reared in Hardin county, graduated from Harrisburg high school, received his bachelor's degree from Southern Illinois University, and his master's degree from Oberlin College.

He was superintendent of schools at Ullin in Pulaski county following his work at Oberlin. He was commissioned an ensign in the navy in 1943 and spent most of the time in the Pacific aboard transports.

Mayfield joined the IAA staff in March 1946 as assistant to the research director.

Read The Thrilling Story of Farm Bureau



Every Farm Bureau leader and member in Illinois needs a copy of the new book, "The Farm Bureau Through Three Decades."

In addition to being a thrilling story of the birth, growth, battles and achievements of the Farm Bureau, it will help you to answer questions of non-Farm Bureau members who want to know something about your organization.

You will also be proud to read of Illinois' part in the building of Farm Bureau. The names of Sam Thompson and Earl C. Smith frequently appear in this history.

You can order it for $3.50 postpaid from the Department of Information, American Farm Bureau Federation, 109 North Wabash Ave., Chicago 2, Ill.

IAA Plans Junior Co-op Institute

By CRESTON FOSTER, Editor IAA Record

ORGANIZATION by the Illinois Agricultural Association of a junior institute of cooperation to train tomorrow's cooperative leaders of the state was announced at the fall meeting of Farm Bureau leaders early in October at Springfield.

The institute will be held early in January and three single men between the ages of 17 and 25 will be selected to attend from each county Farm Bureau of Illinois.

The selection will be made by the county Farm Bureaus and associated county cooperatives. It is expected that those named will be drawn largely from the ranks of 4-H and Future Farmers of America clubs and Rural Youth groups.

I. E. Parett, secretary of general services for the IAA, outlined the great need for such training in his announcement of the institute. Most young farmers, he said, have little opportunity to get any formal training in cooperatives. After they get married and leave Rural Youth they are busy getting started in farming. Before they are 30 years old, these young men may be elected directors of cooperatives without having had a chance to learn much about cooperative philosophy, Parett said.

According to present plans, the institute will be held once each year and will consist of four full days of classes with some evening sessions. Parett will serve as chairman of the institute.

President Charles B. Shuman presented another matter of wide interest to the leaders in discussing the 1948 Christian Rural Overseas program for Illinois. He reported that the IAA board of directors had decided that the Association would lend its cooperation in this program, but would not be in the position of sponsorship. President Shuman said that he knew many Farm Bureau members would participate as individuals and through their church organizations.

Delivery of contributions to the 1948 CROP train is set for Nov. 29 to Dec. 2, and the loading of cars is scheduled for Dec. 11 to 14. The 300-car Abraham Lincoln Food Train is scheduled to leave Illinois on Dec. 15, according to Arnold P. Benson, state director of agriculture, and state chairman of CROP.

The 1947 Abraham Lincoln train from Illinois amounted to 60½ freight cars of gifts in kind, 15,469 packages of seeds for peace, and the total value of donations amounted to $350,019.72. County Farm Bureaus and their members were responsible to a large degree for this achievement.

President Charles B. Shuman addresses the Farm Bureau Leaders Conference. At right is IAA Secretary Paul Mathias.

President Shuman also presented to leaders the position of the Association in regard to soybean grading and export allocations. He pointed out that the Association had vigorously demanded an increase in the fourth quarter export allocation from 2,800,000 bushels to at least 10 million bushels.

The announcement of the small soybean allocation in the face of the record U. S. crop had unduly depressed the market at harvest time. President Shuman said that the Association had endeavored to get an immediate increase in the allocation while the soybeans were still in the hands of the farmers. Historically, President Shuman pointed out, some development seems to occur just after the beans have been marketed by the producer and handlers and processors reap the profits.

President Shuman also said that he planned to ask the IAA board of directors to ask the proper government agency to investigate the soybean and grain processing and milling industry.

The IAA president also said that the Farm Bureau had urged three other revisions in soybean marketing practices: 1. that a sizeable portion of the soybean export allocation be in the form of whole beans; 2. that grades be revised so that high quality beans be given proper recognition; 3. that a premium be paid on low moisture beans. These proposals have been opposed by the soybean processing industry.

Other subjects discussed at the meeting and reported elsewhere in this issue were the taxation of cooperatives by Paul E. Mathias, IAA secretary; the handling of insurance claims and the grain marketing program by George E. Metzger, IAA field secretary and secretary of organization and information.

L. L. Colvis, secretary of marketing for the IAA, reported on the need for additional financing to take care of expansion in the grain, locker, and creamery programs.

This is a view of audience at Farm Bureau Leaders Meeting held in auditorium of Knights of Columbus building at Springfield.

Below is Vermilion Farm Adviser Orin Hertz' account of the interstate 35'ers championship game with Iowa which Illinois won, 8-2 and 6-1. Vermilion won the Illinois title at the Farm Sports Festival in August.

CORN BELT CHAMPIONS

TWO games were played against the Webster county, Iowa, 35-and-over champions at Dayton, Iowa, Sept. 18. For Vermilion county Forrest Hunt pitched the first game and Elmer Learnard the second, with Raymond Sprouls catching both games.

In the first game it was three runs scored on John Klayer's being hit by a pitched ball, Merle Jeffers' sacrifice, Raymond Sprouls' three base hit and Glenn Custer's home run that started the series in proper order for Vermilion County and Illinois. The final score was 8 to 2.

In the second game, after two and one-half scoreless innings, it was a single by Ken Berry followed by his thefts of second and third, coupled with an overthrow at third, that produced the first run, which looked big at that time. The final score was 6-1 with Learnard giving them but two hits.

Our team was quite anxious to make this trip and to soundly trounce Iowa to make up for a pre-war loss or two to Iowa teams when Vermilion County 35'ers had been the state champs. A total of 26 people drove to Fort Dodge in six automobiles. One carload even stopped at Ames to see an Iowa State football game. All felt that the trip was worth while and returned in good order.

This is Livingston Assistant Farm Adviser H. H. Fulkerson's description of the 4-H Club championship game with Iowa which Illinois lost, 3-6; 5-4; and 4-5. Livingston won the state title at the Farm Sports Festival in August.

ONE RUN LOSES SERIES

THE Livingston County 4-H Club softball team traveled to Chariton, Iowa, to play an interstate championship softball playoff with the Iowa state champions Sept. 18-19. After a hard-fought battle, the Iowa state champions pulled through victorious two games to one.

Iowa got into the one game lead by copping the first game 6-3 on 7 hits while the Illinois champions were collecting 5 hits. The batteries were J. Nicols and Rinehart for Iowa and Emmet Trainor and Elmer Huisman for Illinois.

The Illinois champions came back with a hard-fighting team to win the second game 5-4, collecting 10 hits to Iowa's 3 hits. The outstanding thing in this game was that the Illinois battery, consisting of Trainor and Huisman again, made 15 putouts, with Trainor striking out 10.

Iowa, taking advantage of five costly Illinois errors, emerged victorious in the third game, winning 5-4 on eight hits compared to 10 for Illinois.

The team felt it a high privilege to have been able to make this trip to Iowa and felt that Lucus County had made it a very receptive visit.

ILLINOIS Wins One, LOSES 2 TO Iowa Farm BUREAUS

Will county's championship Farm Bureau baseball team, winner at the Sports Festival, went to Decorah, Iowa, in September, where they played Iowa's Festival winners Winneshiek county. Illinois lost the three game playoff 2-1; 4-7; 3-5. Following is the account of the game by Will County Farm Adviser Wayne Churchill.

WIN FIRST, THEN LOSE TWO

IN the first game Will defeated Winneshiek two to one. Will made two runs, seven hits and one error; Winneshiek, one run, seven hits and three errors. Will's battery was made up of R. Bormet pitching and McQuarrie, catching.

In the second game, Winneshiek defeated Will seven to four. Winneshiek had seven runs, ten hits and two errors; Will four runs, six hits and six errors. Battery in this game was Honsbruch pitching and McQuarrie catching.

In the third game, Will lost five to three; summary, Winneshiek five runs, seven hits and three errors; Will, three runs, two hits and two errors. R. Bormet was the pitcher with Jacobs and McQuarrie catching.

More than 65 accompanied the team to Iowa from Will county. The first game was as good as any one would ever want to see with the score tied one to one going into the last half of the ninth inning. Three singles by Palmer,

(*Continued on page* 34)

THIS month's cover picture is of the reconstructed store in the abandoned village of New Salem at New Salem State Park northwest of Springfield. It is the 18th in our series of historical and picturesque photographs of Illinois.

It was the first store built in the village and was constructed by Samuel Hill in 1829. It was here that Abraham Lincoln served as a clerk for Hill and later as the village postmaster.

On completion of the building Hill was named first postmaster of the village in 1829. The store thereupon became New Salem's first post office. This was the only store in the village after the failure of Lincoln and his partner, William F. Berry, and two other enterprises.

Hill moved the store to nearby Petersburg in 1839. This building was set up on the exact site of the original store and is stocked with many of the authentic articles sold over the counter during the time of Lincoln. Illinois' famous son lived in New Salem from 1831 to 1837.

IAA Plans Junior Co-op Institute

By CRESTON FOSTER, Editor IAA Record

ORGANIZATION by the Illinois Agricultural Association of a junior institute of cooperation to train tomorrow's cooperative leaders of the state was announced at the fall meeting of Farm Bureau leaders early in October at Springfield.

The institute will be held early in January and three single men between the ages of 17 and 25 will be selected to attend from each county Farm Bureau of Illinois.

The selection will be made by the county Farm Bureaus and associated county cooperatives. It is expected that those named will be drawn largely from the ranks of 4-H and Future Farmers of America clubs and Rural Youth groups.

I. E. Parett, secretary of general services for the IAA, outlined the great need for such training in his announcement of the institute. Most young farmers, he said, have little opportunity to get any formal training in cooperatives. After they get married and leave Rural Youth they are busy getting started in farming. Before they are 30 years old, these young men may be elected directors of cooperatives without having had a chance to learn much about cooperative philosophy, Parett said.

According to present plans, the institute will be held once each year and will consist of four full days of classes with some evening sessions. Parett will serve as chairman of the institute.

President Charles B. Shuman presented another matter of wide interest to the leaders in discussing the 1948 Christian Rural Overseas program for Illinois. He reported that the IAA board of directors had decided that the Association would lend its cooperation in this program, but would not be in the position of sponsorship. President Shuman said that he knew many Farm Bureau members would participate as individuals and through their church organizations.

Delivery of contributions to the 1948 CROP train is set for Nov. 29 to Dec. 2, and the loading of cars is scheduled for Dec. 11 to 14. The 300-car Abraham Lincoln Food Train is scheduled to leave Illinois on Dec. 15, according to Arnold P. Benson, state director of agriculture, and state chairman of CROP.

The 1947 Abraham Lincoln train from Illinois amounted to 60½ freight cars of gifts in kind, 15,469 packages of seeds for peace, and the total value of donations amounted to $350,019.72. County Farm Bureaus and their members were responsible to a large degree for this achievement.

President Charles B. Shuman addresses the Farm Bureau Leaders Conference. At right is IAA Secretary Paul Mathias.

President Shuman also presented to leaders the position of the Association in regard to soybean grading and export allocations. He pointed out that the Association had vigorously demanded an increase in the fourth quarter export allocation from 2,800,000 bushels to at least 10 million bushels.

The announcement of the small soybean allocation in the face of the record U. S. crop had unduly depressed the market at harvest time. President Shuman said that the Association had endeavored to get an immediate increase in the allocation while the soybeans were still in the hands of the farmers. Historically, President Shuman pointed out, some development seems to occur just after the beans have been marketed by the producer and handlers and processors reap the profits.

President Shuman also said that he planned to ask the IAA board of directors to ask the proper government agency to investigate the soybean and grain processing and milling industry.

The IAA president also said that the Farm Bureau had urged three other revisions in soybean marketing practices: 1. that a sizeable portion of the soybean export allocation be in the form of whole beans; 2. that grades be revised so that high quality beans be given proper recognition; 3. that a premium be paid on low moisture beans. These proposals have been opposed by the soybean processing industry.

Other subjects discussed at the meeting and reported elsewhere in this issue were the taxation of cooperatives by Paul E. Mathias, IAA secretary; the handling of insurance claims and the grain marketing program by George E. Metzger, IAA field secretary and secretary of organization and information.

L. L. Colvis, secretary of marketing for the IAA, reported on the need for additional financing to take care of expansion in the grain, locker, and creamery programs.

This is a view of audience at Farm Bureau Leaders Meeting held in auditorium of Knights of Columbus building at Springfield.

ILLINOIS Wins One, LOSES 2 TO Iowa Farm BUREAUS

Below is Vermilion Farm Adviser Orin Hertz' account of the interstate 35'ers championship game with Iowa which Illinois won, 8-2 and 6-1. Vermilion won the Illinois title at the Farm Sports Festival in August.

CORN BELT CHAMPIONS

TWO games were played against the Webster county, Iowa, 35-and-over champions at Dayton, Iowa, Sept. 18. For Vermilion county Forrest Hunt pitched the first game and Elmer Learnard the second, with Raymond Sprouls catching both games.

In the first game it was three runs scored on John Klayer's being hit by a pitched ball, Merle Jeffers' sacrifice, Raymond Sprouls' three base hit and Glenn Custer's home run that started the series in proper order for Vermilion County and Illinois. The final score was 8 to 2.

In the second game, after two and one-half scoreless innings, it was a single by Ken Berry followed by his thefts of second and third, coupled with an overthrow at third, that produced the first run, which looked big at that time. The final score was 6-1 with Learnard giving them but two hits.

Our team was quite anxious to make this trip and to soundly trounce Iowa to make up for a pre-war loss or two to Iowa teams when Vermilion County 35'ers had been the state champs. A total of 26 people drove to Fort Dodge in six automobiles. One carload even stopped at Ames to see an Iowa State football game. All felt that the trip was worth while and returned in good order.

This is Livingston Assistant Farm Adviser H. H. Fulkerson's description of the 4-H Club championship game with Iowa which Illinois lost, 3-6; 5-1; and 4-5. Livingston won the state title at the Farm Sports Festival in August.

ONE RUN LOSES SERIES

THE Livingston County 4-H Club softball team traveled to Chariton, Iowa, to play an interstate championship softball playoff with the Iowa state champions Sept. 18-19. After a hard-fought battle, the Iowa state champions pulled through victorious two games to one.

Iowa got into the one game lead by copping the first game 6-3 on 7 hits while the Illinois champions were collecting 5 hits. The batteries were J. Nicols and Rinehart for Iowa and Emmet Trainor and Elmer Huisman for Illinois.

The Illinois champions came back with a hard-fighting team to win the second game 5-4, collecting 10 hits to Iowa's 3 hits. The outstanding thing in this game was that the Illinois battery, consisting of Trainor and Huisman again, made 15 putouts, with Trainor striking out 10.

Iowa, taking advantage of five costly Illinois errors, emerged victorious in the third game, winning 5-4 on eight hits compared to 10 for Illinois.

The team felt it a high privilege to have been able to make this trip to Iowa and felt that Lucus County had made it a very receptive visit.

Will county's championship Farm Bureau baseball team, winner at the Sports Festival, went to Decorah, Iowa, in September, where they played Iowa's Festival winners Winneshiek county. Illinois lost the three game playoff 2-1; 4-7; 3-5. Following [illegible] Will County Farm Au[illegible] Church.

WIN FIRST, THEN LOSE TWO

IN the first game Will defeated Winneshiek two to one. Will made two runs, seven hits and one error; Winneshiek [illegible] run, seven hits and three errors. Will's battery was made up of R. Bormet pitching and McQuarrie, catching.

In the second game, Winneshiek defeated Will seven to four. Winneshiek had seven runs, ten hits and two errors. Will four runs, six hits and six errors. Battery in this game was Homstead pitching and McQuarrie catching.

In the third game, Will lost five to three; summary, Winneshiek five runs, seven hits and three errors; Will, three runs, two hits and two errors. R. Bormet was the pitcher with Jacobs and McQuarrie catching.

More than 65 accompanied the team to Iowa from Will county. The first game was as good as any one would ever want to see with the score tied one to one going into the last half of the ninth inning. Three singles by Palmer.

SCHOOLS FOR TOMORROW

Kane County District Follows Tradition and Consolidates

By JIM THOMSON
Ass't Editor, IAA Record

IT MAY seem strange to say that any rural community in Illinois has a tradition of school consolidation behind it. This is the case, however, in the area covering all or parts of eight townships which comprises Community School District 302 (see map) in Kane and part of DeKalb counties.

Discontinuance of some rural schools during the period 1900-10 in what is now District 302 sent a number of farm children to village schools. By 1920 one-room schools in the neighborhood of Big Rock started the move by consolidating some rural grade school districts.

The move at Big Rock was followed by similar consolidation around Sugar Grove, Elburn, Maple Park, and Kaneville.

Before the Kane County School Survey Committee was ready to issue its preliminary report, the District 302 area had no one-room school districts in existence. All had combined with their neighbors to set up larger grade school districts.

So when the voters were asked at an election in July to approve of district consolidation, they did so by a heavy majority. The move brought five high schools and seven grade schools under one board.

Voters cast their ballots separately as either rural or urban residents. Both groups favored the proposal. District 302 school board President Donald Stevenson, Elburn, said it wasn't entirely a tradition of consolidation that caused the voters of District 302 to approve the move to bring 197 square miles in Kane and part of DeKalb counties under one school district.

The important factor, according to Stevenson, was the general attitude of the people. He said he believed that the farmers and towns-people in Kane county are among the best-informed and most enlightened voters in the state in school matters. They knew, Stevenson said, that consolidation meant better opportunities for their children. That was the only thing that really mattered. They felt it was the thing to do and they did it.

The people were aware that some school reorganization was necessary to give their children a better chance. The Illinois Agricultural Association School Report states that a minimum of 150 students is needed to operate a high school with any degree of efficiency. The National Education Association sets the figure at twice that number. Maple Park, the largest high school in District 302, had an average daily attendance last year of 90; Big Rock, 45; Elburn, 37; Kaneville, 25; and Sugar Grove, 25. Together they expect eventually to have a combined enrollment of 300. This is enough for one first class high school with a good assortment of both academic and vocational subjects.

John E. Shields, principal of the Sugar Grove high school and chairman of the administrative staff of District 302, said he believed the consolidation was long overdue. Small high schools like Sugar Grove are not adequate in his opinion. Sugar Grove is about ready to combine with another school any time, Shields said, and this may be done next fall.

"A small high school like ours," Shields said, "can't offer much of a curriculum. How can you with 22 students? We feel the need for an athletic program, better vocational agriculture and shop courses, music, speech correction, etc., and we don't always have a home economics teacher. Besides high school classrooms are needed by the increasing number of children in the lower grades."

No plans have been made for a central high school as yet and the logical development in the eyes of school leaders is for two or three of the schools to combine their enrollment.

Already arrangements have been made or are being made to combine some school activities and use special teachers, who will work in many of the grade schools and most or all of the high schools.

About 75 high school boys are enrolled in vocational agriculture in the five high schools. None of the courses is entirely adequate. With all the students together, a first class fully-equipped shop would no doubt be set up.

Further consolidation of the class rooms would require fewer teachers and maintenance personnel, thus keeping teacher and building costs per pupil lower. The system now requires 68 teachers, and 22 janitors and bus drivers.

At present, for instance, there are four vocational agricultural teachers. With consolidation, one may be enough or possibly two. There are at present, three home economics teachers. With the students under one roof, one teacher could do the work of three. With two home economics teachers one high school in the district could also accommodate the girls who do not now have the advantage of homemaker training.

For the school year 1946-47, according to the county treasurer's books, per capita cost per year of educating a student in the Elburn high school was $584 compared with an average of about $200 per pupil in schools of about 300 enrollment in northern Illinois.

Per capita cost of operation in the other four high schools in the district are similar. Costs that same year were: Elburn, $25,377; Sugar Grove, $17,945; Kaneville, $21,006; Big Rock, $25,609; and Maple Park, $32,281.

Greater efficiency and better business methods can be expected from the consolidation. Already one board secretary has taken the places of 10 secretaries and one treasurer has replaced 10 township treasurers, who handled school funds on a part time basis. Records are being kept on school bus efficiency and costs, and bus routes are being laid out to eliminate all unnecessary travel.

Many Kane county men and women, including County Superintendent of Schools E. E. McCoy, have devoted a great deal of their time and energy to do the best possible job of reorganizing Kane county schools. Their efforts are directed mainly at giving the children of the county the best possible education at the least cost to the taxpayers.

Their attitude is summed up in the following taken from the preliminary report of the Kane County School Survey Committee: ". . . . the work . . . . involved the highest responsibility and honor. The committee operated on the assumption that free public education of the highest type is the birthright of every American child . . . . Their primary obligation is to discover and recommend to their fellow citizens a system . . . . that will best serve . . . . the youth of Kane county. They have unanimously decided to abide by this principle even at the risk of conflicting with tradition . . "

Lud Almburg uses nine fingers to show size of taxes, $900 on his 320-acre DeKalb county farm. Listening are Ward Cross, left, assistant farm adviser, and John Urie, new tax assistant for DeKalb County Farm Bureau.

★

Do You Growl About Taxes?

Everyone does. But DeKalb county farmers aren't stopping with talk. Here's what they've decided to do about it.

HAVE you ever cussed taxes? Have you ever been asked to do something about them? Even more, have you ever been put on a tax committee, say, as chairman?

This is about where C. B. Watson, DeKalb, found himself. Chairman of the DeKalb County Farm Bureau committee on taxation.

So he and his committee got busy figuring taxes. Their figures added to a total — a confusing mess. What they needed, they soon concluded, was help.

They called in Bert Vandervliet, director of taxation for the IAA. Together they decided they needed someone to work full-time on the tax problems in DeKalb county.

This recommendation was made to the DeKalb County Farm Bureau board of directors. George Bark of Hinckley, as president of the DeKalb County Farm Bureau, took up the responsibility of promoting the program to the board.

They hired John Urie as tax research director on a three year experimental basis. Urie is a recent graduate of the University of Denver. He is the first tax expert hired by any Farm Bureau in Illinois.

Like many other DeKalb county farmers, Lud Almburg, Malta, is interested in taxes, and the help that a tax expert may be able to give him. Almburg's taxes are high, and confusing. He pays $900 personal and real estate taxes on his 320 acre farm He sees no relief.

He pays federal, state, county, township, school, road, and drainage district taxes. And if his case is similar to most Illinois farmers, these taxes are levied hit or miss.

DeKalb county farmers hope, by working with Urie, to bring more efficiency to these taxing bodies. They know they'll always pay taxes. They know that taxes probably won't get much lower. But they would like more for their tax dollar.

As one of them said: "We've paid for roads, we've paid for good schools. Our roads are still poor, our schools not adequate."

Since levies for schools and roads are the two largest tax items, Urie will make a study of those levies first. He also plans to help develop comprehensive township budgets. He will offer help to the 19 township tax assessors, and will give suggestions on bonds for road and other improvements.

In short, he will help to bring efficiency in the spending and levying of the annual $2,261,000 county tax bill, help that can be of benefit to all citizens of DeKalb county.

Farm and Home Week

Farm and Home week, annual five-day agriculture program at the University of Illinois College of Agriculture, will be held Jan. 31 to Feb. 4 at Champaign-Urbana.

ILLINOIS GRAIN MARKETING PLAN

Rolls into High Gear

☆

Sam L. Hassell, Outstanding Grain Merchandiser, is Employed as Illinois Grain Terminals Manager, and site is purchased for Terminal Elevator on Chicago's South Side.

☆

ILLINOIS farmers stand on the threshold of a new era in grain marketing. As the result of action taken within the last several weeks by the Illinois Grain Terminals Company and the Illinois Agricultural Association, the Farm Bureau's grain merchandising program is now picking up speed.

Step by step this great overall cooperative grain merchandising plan has been taking shape — now it is ready to go into a vital stage of development.

Action was authorized on two major fronts in mid-October by the IAA and Illinois Grain Terminals.

A financing plan was adopted providing for the sale of three-quarters of a million dollars in capital stock to start the venture.

One of the country's outstanding grain men was hired as merchandising manager of the Terminals Company.

A third important step in the program, approved prior to the October board meetings, was the purchase of a site for a Chicago terminal elevator. This purchase covers 11 acres adjacent to the Calumet River at 106th Street on Chicago's south side. It is accessible for lake transport boats.

Thus the Farm Bureau is moving ahead with a grain merchandising program geared to meet modern grain marketing trends.

It's a big plan and to understand the importance of recent developments, it's necessary to go back and take another look at the overall program.

The general plan was approved back in 1945 by the IAA after a study of two years by a staff committee and many conferences with various groups.

It was clear at the outset that there were many steps in a complete marketing job. Marketing means more than delivering the grain to the local cooperative elevator or even performing a brokerage service.

[redacted]

A complete marketing job includes not only brokerage and transportation, but also merchandising and even processing in some cases. And merchandising includes operation of terminals elevators, storing, and blending grain.

Therefore if the producer is to get a larger share of the marketing dollar, he and his cooperative have to perform more of the steps in the marketing job. He must follow his grain beyond the local elevator.

With these facts established, the grain marketing department of the IAA went to work. Terminal elevators were definitely part of the overall plan. But first the producer had to build up operations.

Samuel L. Hassell

It also was apparent that any grain merchandising program could not overlook the Illinois and Mississippi waterways as important channels to principal terminal markets. Long-range trucking was also found to be increasing the volume of river grain marketing.

Therefore, during the last several years, the merchandising program has moved forward to take advantage of these trends.

County-wide grain companies have been organized by Farm Bureaus.

Some county service companies have developed grain marketing facilities.

[redacted]

Regional operations have been organized and operating for several years on the Illinois and Mississippi Rivers by Western Illinois Grain Company, Havana River Grain Company, and Prairie Grain Company. These regional operations include sub-terminal river elevators and inland elevators. Probably two or three more regionals will be established on the Illinois and Mississippi Rivers.

All of these operations are Farm Bureau-type cooperatives and are part of a coordinated grain marketing program.

Now the grain merchandising program has progressed to the terminal elevator stage and that is going to take considerable money.

Farm Bureau type grain marketing cooperatives of Illinois have already invested approximately $1,450,000 in river sub-terminal elevators and other facilities.

But more money will be required to finance terminal elevators and to buy and sell grain at the terminal level.

In addition to the Chicago terminal elevator, for which a site has been purchased, it is planned to have terminal facilities on the Mississippi at St. Louis, and perhaps others will be found necessary at a later date.

The Chicago terminal elevator's capacity probably will be in excess of three million bushels. The St. Louis elevator will be smaller.

It may also be found necessary to establish transportation facilities, such as river grain barges.

Several million dollars of capital will be needed to complete this merchandising program.

The first phases of the financing will be carried on through the sale of stock to the river grain companies mentioned previously, country grain companies, service companies, Farm Bureau type elevators, county Farm Bureaus, and other organizations vitally interested in a complete grain marketing program. The IAA and other Farm Bureau affiliates of course have and will invest money in the venture.

Farm Bureau members will, for the most part, carry the risk. Farm Bureau members also will put forth most of the effort to raise the money.

Because of the effort and investment, it seems fair and reasonable that the new grain merchandising program is set up as a Farm Bureau-type cooperative with patronage earnings, when available, passing down through regional or local Farm Bureau-type cooperatives to the Farm Bureau member.

To run the merchandising end of this program, the Illinois Grain Terminals Company has hired Sam L. Hassell of Buffalo, N. Y., who has been operating his own successful business in that city.

G. H. Iftner, IAA director of grain marketing, now will be able to devote more time to the overall phases of grain marketing.

Hassell has a long and fine record in the grain marketing field. During the war he served as assistant regional director of Commodity Credit Corporation in charge of all grain operations and exports originating east of the Mississippi River. He handled allocations of wheat made by the lower lakes grain committee and also handled governmental corn and wheat programs with distilleries making alcohol for ammunition, synthetic rubber, and other war purposes.

Hassell got started in the grain business in 1921 in Kansas City, Mo., with the Equity Union Grain Company, and after traveling several years opened several branch offices for this cooperative. He became manager at Omaha in 1930.

In 1931, Hassell was employed by the Farmers National Grain Corporation at Chicago and had charge of branch

THE PAYOFF

When Hail Hit Last Summer, Fremont Tuftie Was Protected. His Farm Bureau Insurance Paid Well — To The Tune of $4,300

IT WAS after supper, almost dark. He heard the wind rising sharply. Then Fremont Tuftie looked out of his window.

The sky was black with heavy, rolling clouds. Trees and branches were weaving wildly. Suddenly the wind shifted. Then the hail showered down.

"It didn't last long," Tuftie recalled. But the damage was done. Just north of his farm, near Earlville in La Salle county, corn and bean fields were severely damaged.

Tuftie found later, that all considered, he had been lucky. Only the northern part of his farm suffered the total fury of the storm. And his hail insurance helped to shoulder a big part of this loss.

The storm that hit Tuftie's farm started from the Mississippi River and swept east through Whiteside, Lee, and La Salle, finally spending itself in Grundy county.

On one mile-long corn field on Tuftie's farm, where the damage was the most extensive, the adjuster for Country Mutual Fire Company, Clifford Harvey, allowed from 10 to 90 per cent damage.

Tuftie's check, covering loss on 45 acres of beans and 135 acres of corn, amounted to $4300. His policy, covering his loss, cost him $198. It was but one of many paid out by Country Mutual, whose losses this year will amount to about $3,000,000, largest in the company's history.

The storm that hit Tuftie's crops was one of many that month. A second damaging hail storm swept over northern and central Illinois on Aug. 29. Other storms, more local in character, were reported on Aug. 14, 15, and 16.

La Salle county farmers were paid the most for hail damage and had the greatest number of claims, 512. And because of this terrific loss, appraisers were brought in from Wisconsin and Iowa to help out.

The heavy loss brought an ugly crop of rumors: the company was broke, it was issuing coupons rather than cash, it was deducting $15 for fertilizer value of the soybeans. All were false.

Country Mutual Fire Company, an IAA affiliate which writes the hail insurance, has protected itself against such losses. It has a catastrophe fund of $1,000,000 to draw on if needed. It has a re-insurance contract with Lloyd's of London if losses exceed income.

But more important, their losses this year are less than the funds collected this year to pay these losses. It was never a question of money. Insurance companies don't work that way.

It was more a case, as Harvey, a veteran adjustor said, of having the man power to go around. Some farmers just had to wait. August was the worst storm month in the company's history. It took more time than usual to get around. More than 4,500 claims were adjusted and paid.

On Oct. 6 the company sent out checks totalling $445,015.61, probably a record for hail claims paid during one day. The largest check was for $17,308.

A tribute to their work was paid Country Mutual by George E. Metzger, IAA field secretary, at the fall Farm Bureau leaders meeting held recently at Springfield.

"Country Mutual is giving a wonderful service by furnishing this kind of hail protection to Farm Bureau members," he said. "And they are doing it at about two-thirds the cost charged when the hail insurance was established."

The storms did one thing well. It taught many the value of insurance, as Tuftie said. He had gone five years without hail insurance before starting in again two years ago.

But he'd never be without hail insurance again.

Above: Hail caused almost total loss in this area of corn field on Fremont Tuftie farm near Earlville in La Salle county. Below, here you can see extent of hail damage. Fremon Tuftie, left, and Clifford Harvey, right, hold ears of seriously damaged corn from same area of field where corn in basket on left was picked. Corn at right is from the same field, but on southern end one mile distant, and shows little damage. Many of the cobs on ears of poor corn were infested with blue mold.

THE attention of a food-conscious world will be focused next month on Atlantic City when the American Farm Bureau Federation, the nation's largest farm organization, holds its annual convention there Dec. 13-16.

Speakers of national reputation, including Harold E. Stassen, now president of the University of Pennsylvania, and Paul G. Hoffman, head of the European Recovery Program and former president of the Studebaker Corporation, will address the largest delegation expected to meet at an AFBF convention.

Senator George Aiken of Vermont will be on hand to address the assembly and to defend his recently enacted long-range farm bill to the more than 5,000 farmer-delegates expected to attend.

Helping to make it the biggest convention in Farm Bureau history will be special trains running to Atlantic City from the corn belt states of Illinois, Indiana, Iowa, and Wisconsin, from the tobacco and cotton states of Georgia, Mississippi, Arkansas and Tennessee, and from the citrus fruit state of California.

Three special trains from Illinois will carry more than 450 farm couples to the convention. The trains will combine a sightseeing and vacation trip to and from the convention.

The first days of the AFBF meeting will be devoted to women's meetings and commodity conferences, and the last two days to the general sessions.

The highlight of the convention for many Illinois delegates will be the all-expense train trips to the convention. You can still get reservations by writing Roy Johnson, Illinois Agricultural Association, 43 East Ohio Street, Chicago 11, Illinois. The deadline is Nov. 20, and not too many are left.

Two special trains will carry vacationing Illinois farm couples on a southern route through Florida and up the Atlantic seaboard to Washington, D. C. A third train will travel on an eastern route through New York City, Williamsburg, Va., and United Nations headquarters at Lake Success.

Farm Bureau folks on the southern tour will get a taste of deep-south hospitality. Members of the Alabama Farm Bureau are planning to take both train loads of Illinois folks on a car tour to Wilson dam, a part of the TVA system.

Later they will be treated to a barbecue and rodeo at the famous Norris Cattle Company ranch at Ocala, Florida.

Folks on the eastern trip will have a chance to see the workings of international diplomacy at close range on their tour of the United Nations headquarters at Lake Success. Here they will see the general assembly in session or visit smaller committee hearings.

The IAA has secured good rooms at special rates at two of the best hotels in Atlantic City, hotels that are close to convention headquarters. The IAA has made hotel reservations for all those going by special train.

Osborn Named IAA Internal Auditor

WILLIAM T. OSBORN, 42, has joined the Illinois Agricultural Association as its internal auditor.

W. T. Osborn

Before coming with the IAA Osborn was assistant comptroller of a large Chicago manufacturing company. He lives in Chicago.

During the war years Osborn was comptroller and assistant secretary of the Illinois division of Bendix.

Earlier he worked as an internal auditor for a subsidiary of the U. S. Steel Corporation, and was on the special service staff of Ernst and Ernst, a Chicago public accounting firm.

Osborn was reared in Kansas City, Missouri, attending public schools there, and later the University of Kansas. He later enrolled at Walton's School of Commerce in Chicago where he received his training in accounting.

Osborn is married and has one child, a son, Donald, 19, a pre-veterinary student at the University of Missouri.

BE SEEING YOU AT THE MEETING!

There'll be Big News!

We'll want to talk—you and I—about our company—what it has done—and what it will do.

This has been a busy year for our cooperative. Great strides have been made in securing more adequate sources of supplies. Additional facilities have been built and purchased. It has been a year of accomplishments—and a year of problems.

I'm bringing a friend of mine with me—Charlie Smith, one of your neighbors with lots of good farming experience behind him. He has a story to tell you—some memories of his early years of farming —reasons why he joined his cooperative—what it has done for him —how it looks today—why he considers it an investment in better farming.

Yes, I want you to meet Charlie Smith and his family in the new film "Your Investment in Better Farming"—a film produced on an Illinois farm, with Illinois people, telling the story of Illinois cooperatives. It's an important story—one you won't want to miss!

Champion Plowman

With His Pretty Wife As His Helper, Hillis Swanson captured first place in State Contour Plowing Contest

By LEW REISNER, Field Editor, IAA Record

HILLIS SWANSON, 28, ex-navy pilot, driving a battered 13-year-old tractor, won the state contour plowing contest held in September on the rolling, 400-acre Dewey Johnson farm near Ohio in Bureau county.

Swanson and a partner rent a 400-acre dairy farm near Caledonia in Boone county. His pretty wife, Frances, acted as his stakeman in the contest.

This meant, they said, that both could claim shares in the $100 first place award given the winner by the Illinois Agricultural Association.

The plowing contest was the featured event of the day-long conservation demonstration. The program included terrace and pond building, an FFA staking contest, machinery exhibits, and a windbreak and landscaping demonstration.

The field day was the farmer's answer to the problem of saving the soil. For the most part, the men who ran the show were farmers, members of soil conservation boards.

"It's bringing home the lesson of soil-saving to men who will do the most about it," Halsey Miles, Bureau county farm adviser, said. The crowd, estimated at 3,000, was made up almost entirely of farmers. They gave the new techniques in soil saving a long, long look.

The field day was sponsored by the Bureau County Farm Bureau, the Illinois State Soil Conservation district board, the Bureau County Soil Conservation District, the College of Agriculture Extension Service, and the Illinois Agricultural Association.

During the day a large pond was excavated on the farm. It had a pond area of one and one-half acres and a drainage area of about 10 acres. Three large earth moving machines were used to build it. The dam normally would cost about $1500 to construct.

On one of the fields a terrace was built with a new terracing machine, a large auger mounted on a single bottom plow. The auger threw dirt on a ridge to make the terrace. The machine sells for about $450.

The Johnson farm, where the field day was held, has been operated on a soil conservation program for the past three years.

To save his soil Johnson keeps one-third of his farm in legumes, utilized by beef cattle and hogs. All his corn is planted on the contour, and terraces eventually will be built on all the crop fields.

Contouring and contour plowing are gaining in favor throughout the state. John and William Kaufmann, brothers who were entered in the contest, said they had been contouring for five years on their 315 acre farm.

Hillis Swanson, Boone county, holds IAA check for $100 for winning state plowing contest as wife, Frances, his stakeman, gives him a great big smile.

This year's plowing contest is the second official Illinois state contour contest. Last year the contest was held near Sibley in Ford county. Nineteen contestants, most of them winners of county contests, entered the plowing contest this year. All contestants received a cash award from the Illinois Agricultural Association.

The placings of the first nine were: 1st, Hillis Swanson, Boone; 2nd, Jerry Haberkorn, Livingston; 3rd, Fred Alsene, McLean; 4th, John Hood, Bureau; 5th, Duke Dail, Whiteside; 5th (tie), John Wire, Ogle; 7th, Richard Green, Kankakee; 8th, Austin Peterson, Marshall-Putnam; 9th, Lloyd, Shafer, Livingston.

Fat Barrow Show

Any Man Would Be Proud to Put These Prize Hogs on Display As Did These Illinois Farm Boys and Girls in Chicago

By LEW REISNER

Field Editor, IAA Record

Chicago Daily News Photo

Champ of the fat barrows at junior show is this Berkshire shown by Russell Kates, 13, Grand Ridge, La Salle county.

WHERE do the top fat barrows go that 4-H and FFA kids show at county fairs? Many of them go straight to market.

But some of the best find their way to the Chicago junior market hog show and sale held every year in mid-September.

At this year's show held in the noisy, bustling stockyards, fat barrows that carried off the purple ribbon at county, and even state fairs were pitted against each other for championship crowns.

King of them all was a plump 290-pound Berkshire, led to his crown by Russell Kates, 13-year old farm boy from Grand Ridge in La Salle county.

His hog was later sold at auction to Swift for $1.20 a pound, 20 cents higher than last year's champ. The sale brought young Kates $348.

A pretty 12-year old girl, Marcia Tuftie, La Salle county, was the top winner in the division for pens of three. Her champion pen, averaging 271 pounds per head, brought $45 per cwt. from a Chicago packing company. Her hogs were Hampshires.

The champion pen of five were Chester Whites shown by Jerald Jorstad, 15, Kendall county. They averaged 217 pounds per head and sold for $39 per cwt.

Winners in the various weight classes included Roger Worthington, 17, whose pen of five won the class for hogs 230 to 270 pounds.

Jeanette Hubly, 16, Livingston county, showed a pen of Chester Whites to first place for pens of five, 270 to 300 pounds.

Billy Trainor, 11, Livingston county, showed a pen of cross Chester Whites which won top spot in the class of pens of three, 200 to 230 pounds.

Jerome D. Donnelly, 12, Bureau county, showed the best heavyweight pen of three with his Hampshires. Phillip Trainor again won the class for lightweight individual hogs, and Robert Bomkamp, 20, Macoupin county, showed a Spotted Poland China hog to first place in the mediumweight division.

Left: Marcia Tuftie, 12, La Salle county 4-H club member, showed her pen of three to a grand championship in this division. Below: Jerald Jorstad, 15, has sparkle in eye over winning grand championship award in pen of five division. He was one of 150 boys and girls from Illinois, Wisconsin, and Indiana competing.

Court Decision Releases Rural School Funds

THE STATE supreme court of Illinois handed down on Sept. 24 a momentous decision affecting the school reorganization movement in Illinois. Much confusion would have resulted from an adverse decision. The court, however, declared House Bill 575, referred to as the Community Unit Act, constitutional after many weeks of uncertainty on the part of school leaders, school treasurers and state officials.

The decision automatically released school funds in many of the new community unit districts that had been held on the advice of states attorneys pending the decision by the supreme court. Also, it will allow such districts to sell bonds where needed and will encourage other areas on the verge of voting under the community unit law. The opinion of the court was expressed on related points, namely:

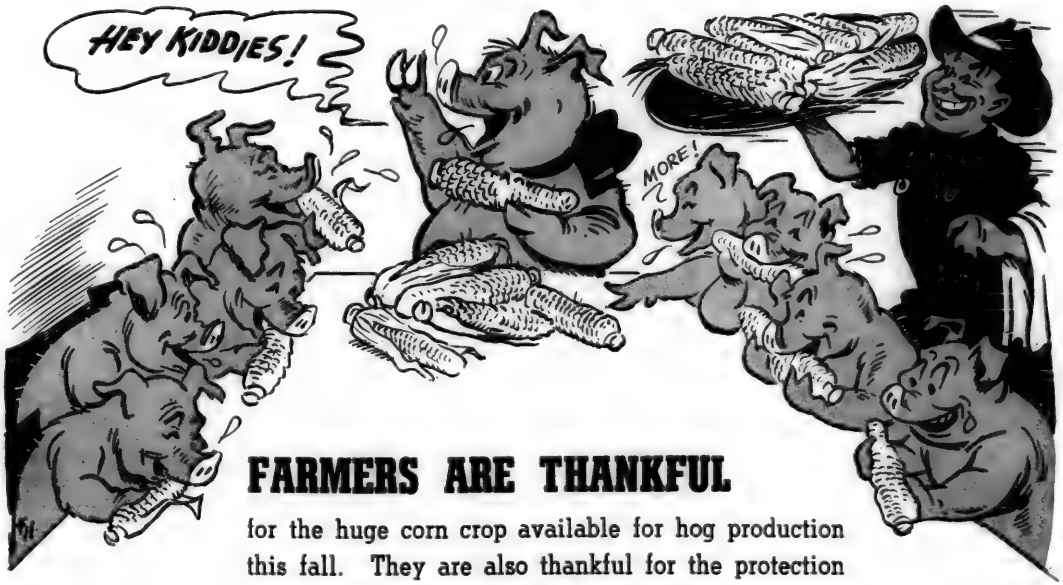
1. The legislature has all right to legislate on public school matters. This right is subject only to stated limitations in Section 1 of Article VIII of the constitution. The local citizen's right to vote in his school district is granted by legislative grace only to further the policy of the legislature. The power given to local people to organize a school district by petition or election is only a "privilege" granted by the legislature as distinguished from a "right." It also states that the constitution nowhere gives a particular group of the population the *right* to the continued enjoyment of a particular school system, against the will of the legislature.

2. Teachers of districts wholly absorbed into community unit districts retain their "tenure" rights. The court holds that the new district stands in the place of the old one and the contractual rights are unimpaired.

3. House Bill 340, which required petitions for a change of boundaries to be submitted to the survey committee in the county or counties affected before being acted upon, was declared not to apply to community unit districts. The court argues that the wording of House Bill 340 referring to "change in boundaries" was the same wording used in other laws in deferring to annexing or detaching of territory. It said that although the petition for the establishment of a new community unit district did involve a change of boundaries, the legislature obviously did not intend that petitions for community unit districts were to be submitted to survey committees. This point is important as it pertains to the validity of several new community unit districts in the vicinity of Springfield.

4. The court again upheld the two-vote idea — which gives rural and urban groups the right to vote separately on the establishment of a new school district.

5. The court also by inference upheld the method of scattering representation on school boards as provided in the Community Unit Act. The act specifies that if a district has more than two congressional townships then no one can have more than three representatives on the school board.



FARMERS ARE THANKFUL

for the huge corn crop available for hog production this fall. They are also thankful for the protection Farm Bureau Serum affords their valuable pigs against hog cholera.

King of them all was a plump 290-pound Berkshire, led to his crown by Russell Kates, 13-year old farm boy from Grand Ridge in La Salle county.

His hog was later sold at auction to Swift for $1.20 a pound, 20 cents higher than last year's champ. The sale brought young Kates $348.

A pretty 12-year old girl, Marcia Tuftie, La Salle county, was the top winner in the division for pens of three. Her champion pen, averaging 271 pounds per head, brought $45 per cwt. from a Chicago packing company. Her hogs were Hampshires.

The champion pen of five were Chester Whites shown by Jerald Jorstad, 15, Kendall county. They averaged 217 pounds per head and sold for $39 per cwt.

Winners in the various weight classes included Roger Worthington, 17, whose pen of five won the class for hogs 230 to 270 pounds.

Jeanette Hubly, 16, Livingston county, showed a pen of Chester Whites to first place for pens of five, 270 to 300 pounds.

Billy Trainor, 11, Livingston county, showed a pen of cross Chester Whites which won top spot in the class of pens of three, 200 to 230 pounds.

Jerome D. Donnelly, 12, Bureau county, showed the best heavyweight pen of three with his Hampshires. Phillip Trainor again won the class for lightweight individual hogs, and Robert Bomkamp, 20, Macoupin county, showed a Spotted Poland China hog to first place in the mediumweight division

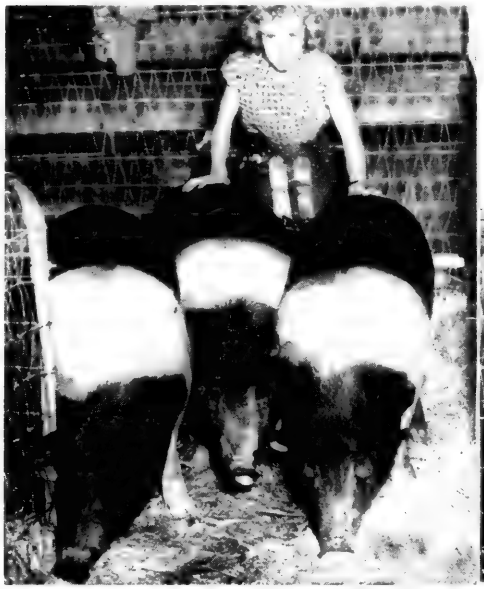
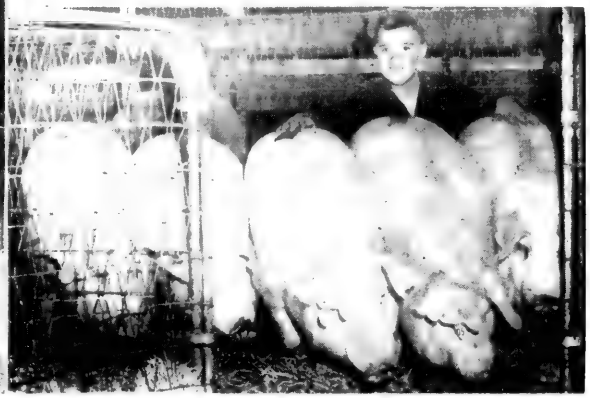
★ **Champ of the fat barrows at junior show is this Berkshire shown by Russell Kates, 13, Grand Ridge, La Salle county.**





Left: Marcia Tuftie, 12, La Salle county 4-H club member, showed her pen of three to a grand championship in this division. Below: Jerald Jorstad, 15, has sparkle in eye over winning grand championship award in pen of five division. He was one of 150 boys and girls from Illinois, Wisconsin, and Indiana competing.

Court Decision Releases Rural School Funds

THE STATE supreme court of Illinois handed down on Sept. 24 a momentous decision affecting the school reorganization movement in Illinois. Much confusion would have resulted from an adverse decision. The court, however, declared House Bill 575, referred to as the Community Unit Act, constitutional after many weeks of uncertainty on the part of school leaders, school treasurers and state officials.

The decision automatically released school funds in many of the new community unit districts that had been held on the advice of states attorneys pending the decision by the supreme court. Also, it will allow such districts to sell bonds where needed and will encourage other areas on the verge of voting under the community unit law. The opinion of the court was expressed on related points, namely:

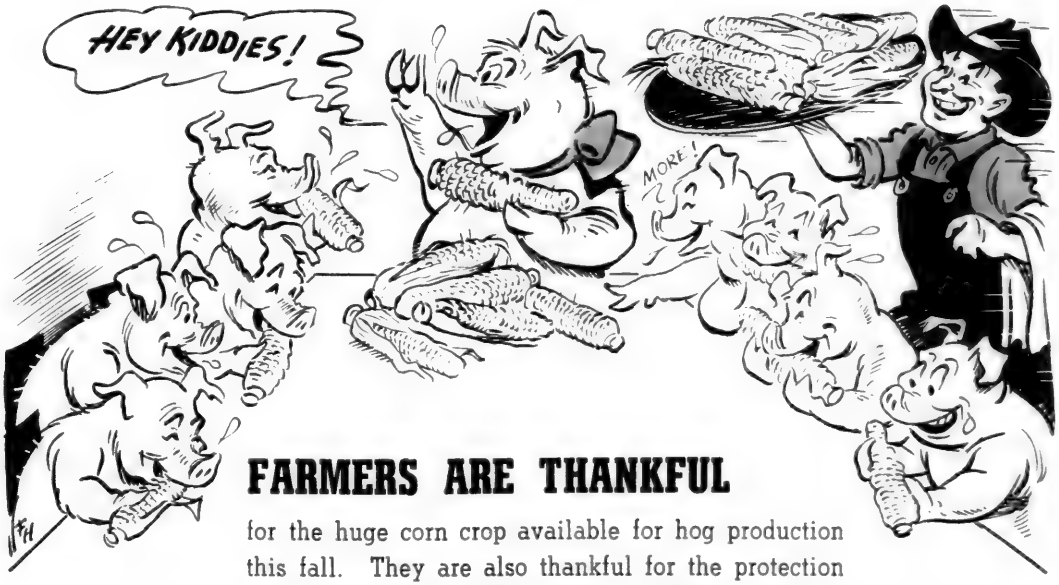
1. The legislature has all right to legislate on public school matters. This right is subject only to stated limitations in Section 1 of Article VIII of the constitution. The local citizen's right to vote in his school district is granted by legislative grace only to further the policy of the legislature. The power given to local people to organize a school district by petition or election is only a "privilege" granted by the legislature as distinguished from a "right." It also states that the constitution nowhere gives a particular group of the population the *right* to the continued enjoyment of a particular school system, against the will of the legislature.

2. Teachers of districts wholly absorbed into community unit districts retain their "tenure" rights. The court holds that the new district stands in the place of the old one and the contractual rights are unimpaired.

3. House Bill 340, which required petitions for a change of boundaries to be submitted to the survey committee in the county or counties affected before being acted upon, was declared not to apply to community unit districts. The court argues that the wording of House Bill 340 referring to "change in boundaries" was the same wording used in other laws in deferring to annexing or detaching of territory. It said that although the petition for the establishment of a new community unit district did involve a change of boundaries, the legislature obviously did not intend that petitions for community unit districts were to be submitted to survey committees. This point is important as it pertains to the validity of several new community unit districts in the vicinity of Springfield.

4. The court again upheld the two-vote idea — which gives rural and urban groups the right to vote separately on the establishment of a new school district.

5. The court also by inference upheld the method of scattering representation on school boards as provided in the Community Unit Act. The act specifies that if a district has more than two congressional townships then no one can have more than three representatives on the school board.



FARMERS ARE THANKFUL

for the huge corn crop available for hog production this fall. They are also thankful for the protection Farm Bureau Serum affords their valuable pigs against hog cholera.

ILLINOIS FARM BUREAU SERUM ASSOCIATION

What Are Motives Behind Attacks On

Illinois Farmers Do Not Regard Their Co-ops As Part Of Any Movement. The Farmer Regards His Cooperative As A Tool, A Means for Increasing His Farm Operations Income

MANY charges are made that farm cooperatives receive unfair tax advantages. There is a constant barrage of propaganda to this effect. These charges are repeated by persons who are members of cooperatives serving business or industry, which enjoy the same tax advantages. One wonders why all the propaganda directed against farm cooperatives? What are the motives behind this drive?

Illinois farmers do not regard their cooperatives as part of any movement, as a peculiar system, or as a panacea for all economic ills. The farmer regards his cooperative as a tool, a means for increasing his income from his farming operations.

His cooperative is merely a corporation, privately owned and engaged in business primarily for the benefit of its owners who use its services. It distributes its earnings on a patronage basis in proportion to the amount of business done with each member.

The cooperative differs from the business corporation principally in the distribution of earnings. The business corporation is privately owned and engaged in business for the benefit of its shareholders, with its earnings distributed to its shareholders on the basis of the amount of stock held by them.

Farm cooperatives engaged in marketing farm products are referred to as marketing cooperatives and those engaged in purchasing supplies and commodities used on the farm are referred to as purchasing cooperatives. The nature of the farming industry, in itself, forces farmers to cooperate with their neighbors.

It was natural that farmers should form cooperatives for the marketing of their products and the purchasing of farm supplies. According to the most recent reports, there are 10,125 farm cooperatives in the United States. 94 per cent are local associations serving small areas. However, a substantial portion of the total volume of business is done by large scale central or federated cooperatives operating in larger areas.

The United States Department of Agriculture estimates that for the 1946-47 marketing year, these farmer cooperatives had a total volume of $7,100,000,000. This compares with a volume of $6,100,000,000 in the preceding year. Of the total volume in 1946-47, $5,600,000,000 was done by marketing cooperatives and $1,500,000,000 was done by purchasing cooperatives. However, cooperatives handled only about 25 per cent of the farm products marketed, and purchased only about 20 per cent of the farm supplies.

It is charged that farm cooperatives have made a tremendous growth in recent years. However, the United States Treasury Department recently stated that the "increases in cooperative marketing and purchasing are no greater in the aggregate than the increases in total cash receipts from farm marketing and purchasing".

The business of the cooperatives has not increased faster than that of other types of firms doing business with farmers. An elevator handling a bushel of corn selling at $2 has a 300 per cent increase over the year in which it sold a bushel of corn for 50 cents on a dollar basis. However, on a bushelage basis, it is still just one bushel of corn.

While the propaganda is directed against farm cooperatives, the cooperative type of organization is not confined to farmers. The newspaper which prints the charges probably is a member of the Associated Press. The Associated Press is a cooperative news gathering agency owned by its newspaper members. There are many cooperatives in the retail field.

The National Retailer-Owned Grocers, Inc., 309 W. Jackson Blvd., Chicago, provides a cooperative buying service for over 100 regional cooperatives in 33 states and one Canadian province and is reported to have a membership of around 18,000 retail food dealers. The Central Growers Cooperative, 1001 South California Ave., Chicago, serves over 500 retail grocers in the midwest.

The Mutual Drug Company, 25 North Green St., Chicago, serves coop-

s On Farm Cooperatives?

erative drug stores. There is the Retailers Marketing Guild, also in Chicago, serving more than 150 furniture stores. There are also cooperative associations for cleaners and dyers, bakers, laundries, truck owners and many other businesses.

These cooperatives have been formed by small businesses in order to enable them to meet competition. Our production and distribution facilities have tended to become concentrated in the hands of big corporations. In order to meet this situation, small business men have banded together into cooperative organizations and have combined their resources and purchasing power just as farmers have done.

And big business has well integrated operations. For example a farm implement company may own and operate the iron ore mine, the ship which transports the ore, the steel mill, the factory which manufactures the machine and the trucks which transport the finished machine to the retail distributor. Farmers are not critical of these multi-million dollar organizations. It is recognized that they represent the United States industrial capacity and have contributed greatly toward the high standard of living which we enjoy.

However, it is obvious that the farmer and the small business man facing the competition of this type of integrated operation is compelled to cooperate with other farmers or other small business men in order to maintain himself and achieve efficiency in buying and selling and gain the advantages of bigness without surrendering his independence.

Our economy, our capitalistic system, is based upon competition. Cooperatives serve to maintain competition. Without competition we would have monopoly. Then to control monopoly we probably would insist upon governmental regulation. This could lead to nationalization and socialization of many industries just as is happening now in England.

But it is charged the farm cooperatives have an unfair tax advantage; that they have grown big through an accumulation of untaxed reserves and surpluses. Under the theory of our internal revenue law, there are no net profits in a cooperative. The earnings all are to be distributed to the members and there is nothing to tax in the hands of the cooperative. The earnings which are distributed to members as patronage dividends, are, of course, taxable in the hands of the members. However, cooperatives have been permitted to accumulate "reasonable" reserves.

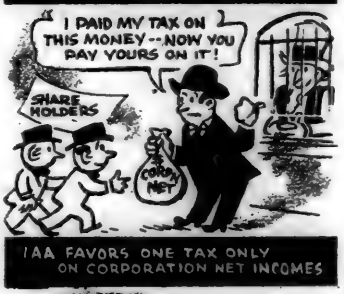
In cooperatives having complete exemption from federal income tax, no taxes have been paid upon the amounts retained as reserves. It is pointed out that in a business corporation the corporation would pay a tax upon its earnings and when these earnings were distributed to the shareholders as dividends they would again be taxable as income to the shareholder. This constitutes double taxation.

While the propaganda as to unfair tax advantage is all directed toward farm cooperatives, it should be pointed out that there are over 500,000 partnership business income tax returns. No tax is paid by the partnership as such but the income is taxed as a part of the individual income of the partners. There are more than 2,000,000 proprietors of non-farm individually owned businesses. These businesses, likewise, are exempt from any double levy on the business income. However, all of the fire is directed toward the 10,125 farm cooperatives.

The Illinois Agricultural Association agrees that but one income tax should be paid upon earnings. The business corporation should not be required to pay a tax upon the amount of its earnings which it distributes to its shareholders as these dividends are taxable as income of the shareholder.

The Illinois Agricultural Association does not insist upon complete exemption from income tax for farm cooperatives. It is not opposed to the taxation of the amount of earnings retained by farm cooperatives but it does maintain that the farm cooperatives should be allowed a deduction for amounts paid as patronage dividends or as dividends on invested capital. These dividends would be taxable in the hands of the recipient.

All statewide companies affiliated with Illinois Agricultural Association are now on a tax paying basis. Most of the local companies affiliated with the Farm Bureaus in Illinois also pay income tax. It is estimated that the Illinois Farm Supply Company, which has often been referred to recently as "tax free" will pay $400,000 in federal income tax for its year ending Aug. 31, 1948. Other statewide companies likewise pay substantial income tax.



The tactics used and the extremes resorted to indicate that many of the attacks upon farm cooperatives are not designed to secure tax reform or adjustment but to destroy farm cooperatives.

Many persons do not like the competition of the farm cooperatives. They do not like this competition even though the cooperative is paying income taxes and is maintaining current retail prices because the cooperative returns a portion of its net earnings as a patronage dividend to

R. H. Schilling, Logan C.O.D. Dies Suddenly

RAY H. SCHILLING, 34, Logan county organization director and assistant farm adviser, died at 11 a.m., Sunday, Oct. 17, of a heart attack.

Schilling had been with the Logan County Farm Bureau for the past four years during which time he also was in charge of Rural Youth activities.

He was the son of Mr. and Mrs. Clarence Schilling of Elkhart, Ill., where he was born and reared. He attended Blackburn College two years, then operated a small dairy at Elkhart for a short time and was an agent for the New York Life Insurance Company. He was married to Lois Sparling two years ago.

He is survived by his widow and a seven-months-old son, Keith.

Put Those Extra Dollars In Government Bonds For Future Security

EVERY well-managed business maintains a financial reserve as security against future needs and emergencies.

This financial backlog is built up during good years and drawn on to tide the business over the lean years.

Farming is a combination of a business and a home. So it is doubly important that every farm family have a financial reserve for both business and personal security.

Here are four reasons why farmers need financial reserves.

1. As insurance against emergencies — crop failure, disease in herd or flock, sickness or accident in family, etc.

2. To provide some of those things that cost money but make life more enjoyable — better conveniences in the home and on the farm, education of children, travel, etc.

3. To have some money coming in when the time comes to retire or to "take it a little easier."

4. To have something to fall back on in case of a sharp drop in the general price level.

So farmers can't go far wrong in the practice of putting financial reserves into safe and profitable bonds of our Federal Government. This should be a permanent and definite part of the financial program of every farm family, says the Treasury Department.

The Treasury's new movie in color, "Power Behind the Nation," is now available to farm groups. Prints are available in the film library of the Illinois Agricultural Association's publicity department.

Veterinarians Meet With Farm Leaders

AIMED at promoting better cooperation in dealing with farm problems, the Central Illinois Veterinary Medical Association held a recent meeting in Springfield with state and county agricultural leaders.

Representing farming interests at the conference were county Farm Bureau presidents, Illinois Agricultural Association board directors, state department of agricultural representatives and farm advisers.

Dr. C. Don Van Houwelling, director of veterinary medical relations of the Illinois Agricultural Association, served as toastmaster for the meeting that attracted more than 120 farm leaders and veterinarians. Dr. Van Houwelling was introduced as the "only veterinarian in the country who holds the unique role of working full time for a Farm Bureau organization."

Arnold P. Benson, state director of agriculture, said, "Many of the livestock diseases which cause an annual loss of 100 million dollars in the nation can be eliminated by teamwork between the farm organizations in carrying out the educational part of program and the veterinarians in actual disease control."

Dr. Van Houwelling said it was the first time that the veterinarians have had agricultural leaders take part in their association meetings. He stressed the need of dropping "petty differences in favor of the overall good that can be achieved through cooperation."

Officials who spoke briefly in behalf of their organizations were: Dr. R. C. Klussendorf, Chicago, assistant executive secretary of the American Veterinary Medical Association; Dr. E. A. Anderson, Dixon, president of the Illinois State Veterinary Medical Association; Robert Graham, dean of the U. of I. Veterinary College; K. T. Smith, member of the IAA board and chairman of the legislative committee; M. N. Meyers, DeWitt county farm adviser and vice-president of the Farm Advisers' Association.

George Lewis Will Represent Illinois in FFA Speaking Contest

GEORGE LEWIS, 18, member of the Mt. Sterling, Ill., chapter of Future Farmers of America, won first place in the 12-state central region FFA public speaking contest held last month at Waterloo, Ia.

George Lewis

Lewis won the right to represent the central region in a national FFA public speaking contest to be held Sunday night, Nov. 14 at the FFA's 20th anniversary convention at Kansas City, Mo. Lewis will speak on "The Place of Farm Cooperatives in Our National Economy." He is the son of Mr. and Mrs. Dana Lewis of Hersman in Brown county.

Illinois FFA also had teams entered in dairy cattle, poultry, livestock, and meat judging.

THIS IS YOUR FIGHT

TODAY, more than ever before, the American farmer is learning the truth of the old maxim: "United we stand; divided we fall."

During recent months, some segments of the city press have been attempting to convince the public that farmers are to blame for inflation.

Many city papers have used half-truths and innuendos to accomplish this objective. Their campaign now seems to be turning into an open attack against the whole farm program.

The individual farmer is powerless to combat this sort of attack. Were farmers divided, there would be no way of presenting the true facts to the general public.

You can be thankful that modern farmers are united. They are represented by a great and powerful organization—the AFBF—which is meeting this attack with united strength.

The battle is far from won. It may never end. There have been organized attacks on the farmers before; there will be again.

That is why farmers must support their organizations to the limit.

The price of a free and prosperous agriculture is organized vigilance.

American Farm Bureau Federation

IT'S TIME YOU LEARNED THE FACTS OF LIFE!

"Now that you're using the car quite a bit, it's time you realized what a dangerous animal that car can be if you don't put safety first. Drivers of your age — 16 to 19 years old — drive only ONE FIFTH as far as the safer, older age group for EVERY FATAL ACCIDENT that takes place!

"Know what that means? That with better reflexes than us oldsters . . . in better physical condition . . . the average teen-age driver still has MORE ACCIDENTS.

"Why? Because sometimes you get a little too sure of yourselves. Even if it takes time to learn caution from experience, that experience is a compensation — even after we get older and aren't quite as quick on the brake and at the steering wheel as we used to be.

"So take a tip from me, and from the Country Mutual Casualty Company which handles our auto insurance, and BE CAREFUL. We Farm Bureau members get the benefit of lower auto insurance rates because we're considered PREFERRED RISKS. That's because our driving conditions are safer than your average run of policy holders.

"Son, let's keep it that way. Let's put SAFETY FIRST every time we get behind that steering wheel."

COUNTRY MUTUAL CASUALTY COMPANY

Members of the Rural Youth state committee listen intently to the discussion at the Farm Bureau Leaders conference in Springfield in October. Left to right: Ruth Huser, Tazewell; Edna Dew, Ogle; George Matthews, Whiteside; Glenn Niehaus, Montgomery; Youth Activities Director Lyon; and Rex Emory, McDonough.

RURAL YOUTH

THE State Rural Youth Committee planned the Rural Youth activities of the IAA annual meeting well in advance this year. The program, from the get-acquainted party at 8 p.m. Monday, Nov. 15 in the Gray room of the Sherman Hotel, Chicago, throughout the entire annual meeting, will be of interest to Rural Youth over the state. Last year 72 counties were represented by young people. It is possible that registration will be higher this year.

Edna Dew, Ogle, will be in charge of registration. Rural Youth Day will be on Tuesday, Nov. 16. Every interested person should take note that the talk fest this year will be in the grand ballroom at the Sherman Hotel at 9 a.m., with Ruth Huser, Tazewell, as chairman.

All Rural Youth activities for Tuesday are scheduled for this room. The Rural Youth conference under the direction of Rex Emory will be held there at 2 p.m. Throughout the years there has been a growing interest in both the state talk fest and the Rural Youth conference, requiring larger and larger meeting rooms. Can we fill the grand ballroom this year, Rural Youthers?

Host to Canadians

Floyd Morris, vice-president of the IAA, will welcome Rural Youth at the talk fest. Another IAA personality on the program will be Bert Vandervliet, director, department of taxation. He will speak at the Rural Youth conference upon the subject "Democracy at the Local Level." Vandervliet is a student of local government and feels strongly that young people should think clearly upon the subject of democracy and that they should bring it down to the local

By ELLSWORTH D. LYON, Director
IAA Young Peoples Activities

level where people should live democratically. Another highlight of the afternoon conference will be the presentation of guests from the Junior Farmers' Association of Ontario, Canada, who will tell Illinois Rural Youth about the Junior Farmer activities of Ontario. Last spring representatives of Illinois Rural Youth attended the annual meeting of the Junior Farmers' Association of Ontario at Guelph and were warmly entertained by the young people of that organization who are of the same age group as our Rural Youth. Now we give to the Ontario Junior Farmers a hearty welcome.

Skilled Drivers Contest

Scheduled for 1:30 p.m. will be the annual skilled drivers' contest under the direction of W. W. Whitlock, department of safety, Illinois Farm Supply Company, with Glenn Niehaus, Montgomery, chairman. At Soldier Field the nine contestants will demonstrate their ability in both road performance and skill tests.

The state committee for 1949 will be elected at 4 p.m. by the young people designated from each county Rural Youth group to represent officially the local county organization. Two voting delegates may represent each county. County delegates may make nominations from the floor in addition to the slate presented by the nominating committee.

The climax of Tuesday's activities will be the annual Rural Youth mixer led by Edna Dew and Rex Emory. In this evening of fun, Rural Youthers from over the state will entertain both adults and young people who are in attendance at the annual meeting of the IAA. An orchestra has been procured for this big event and Rural Youth members trained in recreation will direct the games and dances.

Breakfast will be ready for Rural Youthers at 7 a.m. on Wednesday, Nov. 17. To balance the lateness of this breakfast, our Rural Youthers will be privileged to ask questions of our Canadian guests about young people on Ontario farms. George Matthews, presiding, will lead us through the breakfast activities and then invite all assembled to hear IAA President Charles B. Shuman's address at 9 a.m. in the grand ballroom.

This year Rural Youth will participate in the Organization-Information conference held at 1:30 p.m. Wednesday, Nov. 17, and will take part in presenting a dramatic skit which will include the place of Rural Youth in our total farm picture.

Rural Youthers desiring to attend the annual meeting should contact their county Farm Bureau for reservations. Greet your friends at this, the largest meeting of agricultural leaders in Illinois.

State Conservation School

The State Conservation School at Lake Villa in Lake county was one of the interesting and valuable experiences for a limited number of Rural Youthers in the study of soil and wild life conservation. The young people in attendance were quite enthusiastic about the instruction, the spirit of the school, the well-trained personnel, the good food, and the beautiful surroundings. The dates, Sept. 23-25, possibly were not suited to harvesting schedules for this year. It

was suggested that plans be made for a session in 1949 around the first week of September.

Coordinator of the school, and assistant to Director Livingston Osborne, Claude Graeff of the Department of Conservation will gladly welcome Rural Youth back for the third Rural Youth Conservation School if funds are made available.

District Camps

Two important district camps have been reported briefly. Western Illinois district camp was held Labor Day week end, Sept. 4, 5, and 6, at Epworth Springs near Lewistown. Twelve counties were present with 115 campers participating in a full week end of education and sports features. Counties taking part in the camp were: Brown, Schuyler, Hancock, Morgan, Warren, Scott, Tazewell, McDonough, Pike, Henderson, Fulton, and Adams. Educational features were directed by Clareta Walker of the University of Illinois and Fred Herndon, president, Illinois Farm Supply Company. Frank Turnbull, Pike, was elected chairman and Carroll Borrowman, Pike, co-chairman. Elizabeth Hardy was elected treasurer for 1949 for the district camp.

A similar district camp was held at Giant City State Park, south of Carbondale, Sept. 17 to 19 with Curt Kenyon U. of I. in charge. One hundred Rural Youthers were present from a dozen southern Illinois counties.

Kankakee reports a large attendance at a recent meeting with ten new-comers and the return of several old members. This group is growing.

LEARNING ABC'S OF CONSERVATION

Claude R. Graeff, supervisor, division of education, Illinois department of conservation, shows a pheasant (stuffed) to four Rural Youthers attending the three-day conservation school held under his supervision at Lake Villa. L. to R.: Richard Myers, Macon; Graeff; Leon Swiney, Christian; Dale Bauer, Christian. Right, Rural Youthers gather for marshmallow roast.

This is the Lake Villa conservation school building with some Rural Youthers enjoying the sun during a brief recess from the classroom. Dr. George Bennett, Illinois Natural History Survey, lectures. Graeff is standing at rear.

Rural Youthers really put it away three times a day in the school's dining room.

Roberts Mann, superintendent of conservation, Cook County Forest Preserve, leads a field trip.

Members of the Rural Youth state committee listen intently to the discussion at the Farm Bureau Leaders conference in Springfield in October. Illinois Grain—

(*Continued from page* 15)

offices in Illinois and Iowa. He was transferred to Baltimore, Md., as branch manager in 1933, and later to Louisville, Ky., to sell grain to distilleries. He returned to Kansas City in 1938 and became a member of the Kansas City Board of Trade and in charge of the coarse grain and consignment department of Farmers National Grain Corporation.

In 1938, Hassell went with the Federal Crop Insurance Corporation, Kansas City, as chief of the commodity and traffic division and in that position had charge of large purchases of wheat for the government.

In July, 1942, Hassell transferred to the Commodity Credit Corporation after grain operations of the CCC and Federal Crop Insurance Corporation were merged through his recommendation. This merger resulted in large savings to the government.

A native of Texas, Hassell was graduated from Fort Worth High School and attended the University of Texas for three years. He served on the Mexican border and in Mexico with the Sixth U. S. Cavalry in 1916-17 and in France with the Sixth Field Artillery Brigade Headquarters in 1918-19.

Hassell is married and has one daughter. He is a member of the Central Park Methodist Church of Buffalo, Buffalo Corn Exchange, Buffalo Athletic Club, Buffalo Flour Club, Central Park Men's Club, and National Grain and Feed Dealers Association.

What Are Motives?—

(*Continued from page* 25)

its patrons. There have been a number of instances in which business concerns have stated that they did not want to do business with cooperatives. It is noticeable, too, that much of the campaign is directed against purchasing cooperatives which, as was pointed out before, are doing only slightly more than 20 per cent of the total volume of business done by farm cooperatives. Very little, if any, propaganda is directed against the cooperatives which are serving newspapers, grocery stores, furniture stores, drug stores and similar businesses.

Local companies last year paid more than $480,000 of federal income tax. These companies which are alleged to be "tax free" are paying more than a million dollars per year in federal income taxes. But the same charges continue to be made by persons who either are misinformed and have not made an effort to verify their statements or who misrepresent the facts.

This leads one to inquire as to the motive back of these charges. Are they designed to secure a change in the tax laws or is there some other objective? As previously pointed out, cooperatives and the payment of patronage dividends help to maintain competition. Consumers are afforded some protection against price fixing schemes.

Farmers do not want monopoly either of big business or of cooperatives. They do not want any unfair tax advantage for cooperatives. They are concerned that we keep our competitive system with its rewards for individual enterprise and initiative.

They believe cooperatives are a part of that system. They believe that farmers have the same right as other businesses to set up cooperatives and to obtain the savings resulting from cooperative operations. They believe cooperatives, both farm and business, provide competition and help to prevent monopolies. Are the persons talking about unfair tax advantages of farm cooperatives really concerned with taxation, do they want tax reform or are they attempting to destroy the competition of farm cooperatives.

Wormy pigs were more quickly and seriously affected with necrotic enteritis than were healthy pigs when both were equally exposed during careful tests.

NOTICE
ILLINOIS AGRICULTURAL ASSOCIATION ELECTION OF DELEGATES

Notice is hereby given that in connection with the annual meetings of all County Farm Bureaus to be held during the month of October, 1948, at the hour and place to be determined by the Board of Directors of each County Farm Bureau, the members in good standing of such County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the Association, including the election of officers and directors, as provided for in the By-Laws of the association.

During October, annual meetings will be held in Adams, Hamilton, JoDaviess, Madison, Peoria, Pike, Pulaski-Alexander, Stark and Washington Counties.

Paul E. Mathias, Secretary

NOTICE OF ANNUAL MEETING
ILLINOIS AGRICULTURAL ASSOCIATION

Notice is hereby given that the annual meeting of the members of Illinois Agricultural Association will be held in the Sherman Hotel, Chicago, Illinois, on the 17th day of November, 1948, at 9:30 o'clock A.M. for the following purposes:

To receive, consider and if approved, to ratify and confirm the reports of the officers and the acts and proceedings of the Board of Directors and officers in furtherance of the matters therein set forth since the last annual meeting of members of the Association;

To approve, ratify and confirm the several purchases heretofore made by this Association of stocks and evidences of indebtedness of corporations whose activities will directly or indirectly promote agriculture or the interests of those engaged therein;

To secure consent and authorization to acquire on behalf of the Association by purchase certain stocks and evidences of indebtedness of corporations whose activities will directly or indirectly promote agriculture or the interests of those engaged therein;

To elect eight (8) members of the Board of Directors to serve for a term of two years;

To elect a President and Vice-President who shall also serve as directors for a term of one year;

To consider and act upon such proposed amendments of the Articles of Incorporation or of the By-Laws of Illinois Agricultural Association as may be properly submitted;

For the transaction of such other business as may properly come before the meeting.

Paul E. Mathias, Secretary

NOTICE OF ANNUAL MEETING
ILLINOIS WOOL MARKETING ASSOCIATION

Notice is hereby given that the annual meeting of the shareholders and members of Illinois Wool Marketing Association will be held on Tuesday, the 16th day of November, 1948, at the hour of 9:30 A.M. in the Sherman Hotel, Chicago, Illinois, to elect directors for the succeeding year; to receive and if approved, confirm the report of the Board of Directors of the Association for the fiscal year ending September 30, 1948; to consider and if approved, ratify and confirm all of the acts and proceedings of the Board of Directors done and taken since the last annual meeting of the shareholders and members of the Association; and for the transaction of such further and other business as may properly come before the meeting.

J. King Eaton, Secretary

Get HIGH EGG PRODUCTION

High egg production is most desirable at this season of the year when egg prices are usually more favorable. Following a few simple rules and a good feeding practice will help your flock produce more eggs.

FOLLOW THE BLUE SEAL FEED SYSTEM

1. A well ventilated laying house.
2. Plenty of feeder space.
3. Ample supply of fresh, clean water.
4. Clean nests.
5. Follow one of these two BLUE SEAL feeding methods:

"FREE CHOICE"

During recent years this program has become very popular because of its convenience and the economy it effects in time and labor.

"Free Choice" is a method of feeding BLUE SEAL POULTRY BALANCER with farm grains. This allows the pullets to balance their own rations according to their individual requirements.

"Free Choice" eliminates grinding and mixing—or purchasing a lay mash if farm grains are available.

"MASH and GRAIN"

This program is widely used and well-adapted in grain-deficient areas. The "mash and grain" method consists of feeding BLUE SEAL LAY MASH and hand-feeding whole farm grains.

Where supplies of farm grains are adequate, an economical lay mash can be made by mixing ground grain with BLUE SEAL POULTRY SUPPLEMENT according to directions on the tag.

Begin NOW on one of these systems!

Blue Seal Feeds are distributed by Local companies affiliated with

ILLINOIS FARM SUPPLY CO.

608 S. DEARBORN ST. • CHICAGO 5, ILL.

BLUE SEAL SERVICE

NEWS and VIEWS

Money Now Going For Permanent Improvements

SOME farm families are adjusting their post-war spending by putting a higher percentage of their income into durable things—housing improvements, household equipment and savings.

This is found in a study of account records of 204 Illinois farm families for 1947. These families are using currently high income in a number of ways to reach long-time goals rather than putting more money into short-time spending. That is pointed out by co-authors of the study, Mrs. Ruth Crawford Freeman and Miss Wilma Sebens, University of Illinois College of Agriculture.

A great deal more was spent for housing improvements during 1947 than in 1946. Putting in running water and bathrooms were the most common improvements.

In 1947 the families spent about 2¼ times as much for household equipment as in 1946. Most commonly purchased items included vacuum cleaners, washing machines, stoves, refrigerators and home freezer lockers.

Because of the rise in prices, the families also spent more for food and clothing. But they had less to show for the money they spent in 1947.

Average total savings were larger in 1947 than 1946, though they represented a smaller percentage of total income.

As these families have shown, money management is vitally important during these days of inflation if a family is to achieve its goals, Mrs. Freeman says.

WILL GETS NEW ADVISER

Mrs. Melvin Wingrove, Wilmington, is the new home adviser for Will county, succeeding Mrs. Clarence Castle. Mrs. Wingrove is a graduate of the home economics department of the University of Wisconsin, where she specialized in clothing and textiles.

Mrs. Eloise Tholen, assistant home adviser of the Morgan-Scott Home Bureau admires an old Burmese bowl owned by Mrs. Mindora E. Henley of Concord, right, who will exhibit it at their hobby show Nov. 12-13 at the Centenary Methodist church.

HEAR NEWS OF WORLD MEETING IN HOLLAND

THE 10th annual meeting of the Will County Home Bureau was held Oct. 5 at 10 a. m. in the Woodruff Hotel at Joliet. Mrs. R. E. Milligan, Champaign county, was the guest speaker. She told about the meeting of the Associated Country Women of the World held recently in Holland, and which she attended as a delegate.

In the afternoon Mrs. Mona Luckow, Chicago, showed motion pictures of customs and scenes of Mexico. Mrs. Luckow will be the director of women's relations when the Chicago station, WHIP, returns to the air soon.

BEWARE OF CORN PICKER

Harvesting the corn crop is now the number one job on Illinois farms. Harvest time is bringing into operation thousands of mechanical pickers.

Even though these machines are well-guarded and specific instructions are given for safe operation, many operators will meet with accidents due to carelessness.

Every fall, corn-picker accidents run high in the cornbelt states. Besides being costly, many accidents are fatal.

So if your husband is operating a corn picker this fall, advise him to follow the rules of safety — always.

Cool, Dark, Dry Storage Is Key To Canning Luck

FOOD you canned this summer is a precious crop, so store it where it will keep well — in a cool, dark and dry place.

Having a cool storage place is especially important. If jars are kept where it's warm, bacteria in them may grow and cause food to spoil, explains Miss Frances Cook, foods and nutrition specialist, University of Illinois College of Agriculture.

She points out that a dry place is best because dampness may injure metal caps. And jars need to be kept in a dark place because light fades food and is hard on vitamins.

Food in tin cans needs the same storage conditions except that light doesn't harm it.

If you're planning to build in shelves for canned food, have them 10 inches deep for jars up to the quart size. A convenient width is 12 inches. This is wide enough for three rows of jelly glasses or two rows of large jars.

MONROE HEARS BOOKER

Monroe County Home Bureau's annual meeting on Sept. 14 drew an attendance of more than 80, according to the report of Mrs. Milton Nottmeier, county publicity chairman.

Miss Fannie Booker was the speaker of the afternoon for the session held at Memorial Hall, Waterloo.

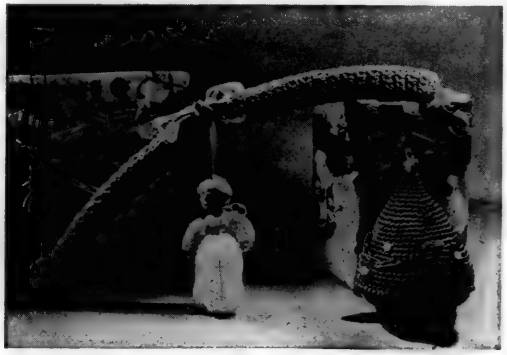
TIPS ON SLIPCOVERS

With attractive ready-made slipcovers on the market, you may decide to buy covers for your furniture. Look for covers that are guaranteed not to shrink or fade, advises Miss Marion Kaeser, home furnishings specialist, University of Illinois College of Agriculture.

Most of these covers are of knit heavy-weight cotton yarn or cretonne. You may find that the knit ones fit furniture best, says Miss Kaeser.

for HOMEMAKERS

Make Your Own Christmas Gifts



Why not make your own Christmas gifts this year? — a sweater for any member of the family, a sweet-scented sachet, a covered clothes hanger, a sequin-speckled angel, a crocheted Christmas tree, spiral knitted sox, a felt handbag, a pair of slippers, or crocheted gift horses. For free instructions here send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 5, Ill.

Who's To Blame?—

(*Continued from page 7*)

prices will decline more than marketing charges and the farmer's share of the food dollar will again go down.

The weatherman was helpful in 1948 in producing the largest amount of feed ever produced in this country. It doesn't seem, however, that the lower prices which have been brought about by high production have as yet affected the consumer's food price to any great extent. Bread hasn't come down from its last year's price although the price of wheat has been reduced from $3 to less than $2. Perhaps someone other than the farmer is making money too.

We'll grant that farmers' incomes now are high. Net farm incomes are several times what they were before the war. Chances are good that these high incomes will be cut sharply if, and when, we have deflation or depression.

A little financial planning for those years ahead would seem to be good business. Costs of farming will not be reduced as fast as the prices you get for your farm products. Although you may have your debts pretty well paid off, the mortgage burned, and the buildings painted, a little nest egg may come in handy as a reminder of the days when you sold corn for $2.65 or beef steers for $40 and there was a lot of fuss about farm income.

Illinois Wins One—

(*Continued from page 11*)

Broadrick and Drecksler brought in the winning run. This game was played on the Luther College diamond.

Sunday's double header was played on the Winneshiek county fair grounds diamond at Decorah. Paid attendance 503. Will jumped off to a 4-0 lead in the early stages of the first game on Sunday afternoon but their defense fell apart in one inning and four runs came in as a result. Later in the game, two more unearned runs were made by Winneshiek county. Honsbruch did a very good job of pitching in the second game. Iowa, on the other hand, was still better in this game and the Will county boys were not able to deliver hits when needed.

Because of the time in getting the second game started on Sunday afternoon, it was agreed that the game would only go seven innings. Although Will lost five to three in this game, darkness was fast approaching and the weather was quite cold. Winneshiek scored two unearned runs in the final game in the three-game series. Will's team was only able to make a total of two hits in the last game. Lack of hits, together with errors at inopportune moments cost Will county the series. Pitching was good on both sides.

We certainly have no alibis for losing to Iowa—they had a fine team. As far as we were concerned, however, it was unfortunate that our good left handed pitcher Smith who pitched against DeKalb in the finals in Urbana was unable to get away from St. Bede to make the trip. We certainly could have used him in the third game of the series.

See You in Chicago—

(*Continued from page 4*)

Several speakers, well-known in Illinois, will address the conference on schools. They are: Luther Black, acting secretary of the state advisory commission and assistant to the state superintendent of public instruction, and Ray Fetterston, field secretary of the Illinois Association of School Boards.

A picture of this year's world production of grain will be presented at the annual meeting of the Illinois Grain Corporation by Roy F. Hendrickson, Washington representative of the National Federation of Grain Cooperatives. Sam L. Hassell, recently employed as its new manager, will talk at the annual session of the Illinois Grain Terminals Company.

The IAA also promises plenty of entertainment during the four-day convention. Gene Fields will be master of ceremonies. A quick-witted comedian, he also does imitations of such celebrities as The Ink Spots and Vaughn Monroe. The Five Maschinos, four men and a girl, do a sensational tumbling, balancing, and acrobatic act. Also included in the general entertainment are acrobatic and trapeze acts and singing and dancing numbers.

NOTICE OF ANNUAL MEETING
COUNTRY MUTUAL CASUALTY COMPANY

Notice is hereby given that the annual meeting of the members of Country Mutual Casualty Company will be held in the Sherman Hotel, Chicago, Illinois, on Tuesday, the 16th day of November, 1948, at 1:00 P.M., to receive, consider and if approved, confirm and ratify the reports of the officers and of the Board of Directors of the Company for the year ending December 31, 1947; to elect directors for the coming year and for the transaction of such further and other business as may properly come before the meeting.

Otto Steffey, Secretary

Cowles Retires—

(*Continued from page 9*)

affiliated with the Association, many of which elected Mr. Cowles to the office of treasurer by virtue of his office with the Association and under the central treasurer's office set-up.

Mr. Cowles, first with Mr. Smith as IAA president, and later with A. R. Wright of Varna, assistant treasurer, and Mr. Smith, arranged and negotiated the Association's several leases for office space during the IAA's 24 years of tenancy in the Transportation building at 608 South Dearborn street. Mr. Cowles handled the leases with the management of the building and recoveries of rent to the Association from affiliated organizations.

Within the period of Mr. Cowles office the Association and its affiliated organizations passed through and weathered the troublesome times and worries of the "agricultural depression," the "stock market collapse," with resulting nation-wide failures and closed banks, the "bank moratorium," and in later years, encountering the many problems presented through World War II.

Locate IAA Building

With Mr. Wright, assistant treasurer, Mr. Cowles located the building at 43 East Ohio street, now owned and occupied by the Association. Together they contacted the owner of the property through a broker, not intending then to disclose the Association as a possible purchaser. The broker succeeded in securing the listing of the property with him for sale and immediately secured for the Association an option to purchase the building. The Association exercised the option and completed the purchase for a cash consideration. Other buyers, then aware of the option to purchase in the hands of the Association, stood ready, able and anxious to buy the property on the same terms made the Association.

With other officers, board members and downstate Farm Bureau leaders in Illinois, Mr. Cowles throughout his years with the Association, has contributed his services and endeavors to secure for the Association its financial stability and well regarded character and position among other organization and business men.

Arthur F. Schuck, who recently joined the staff of the IAA, has been elected treasurer by the IAA board of directors to succeed Mr. Cowles. He took office Oct. 1. Mr. Schuck will serve as general treasurer and adviser to the affiliated companies of the IAA on financial matters.

LOOK OUT- BROTHER!

"We wouldn't bet on your chances of survival this month — any more than we'd bet on how long a farmer can 'take a chance,' risking fire loss without adequate fire insurance protection.

"But you're lucky in a way! You know when the axe is going to fall. But with a farmer — fire may sweep away his farm buildings at any time, day or night, WITHOUT WARNING!"

That's why Country Mutual Fire Company offers Farm Bureau members complete fire insurance protection at the lowest possible rates. You see, it's your company, set up for your own security, and owned cooperatively by all Farm Bureau members. We know that you can't afford to gamble on taking a chance when rates are so low, protection so high.

NEVER A MILLIONAIRE

"...not for a Million"

They say millionaires don't whistle — and me, I like to whistle. I like the things that make living fun — a good day's work behind me, a good meal, a family.

Take farming, for instance. In my work we have better opportunities today than ever before. Farm Bureau alone offers many fine advantages. Through it I rub shoulders with men and women who are trying always to do a better job of farming. From them I get good and new ideas. Farm Bureau helps me get fair prices in buying and selling through co-operative purchasing and marketing — the best insurance in the world at a saving — legislation that will help maintain fair prices for farm products.

Let millionaires have their millions and their worries. Me, I'm going to spread the word about Farm Bureau, and what farming has done for me.

THE STATE FARM BUREAU PUBLICATION

Onward!

ONE OF THE GREATEST scientists the world has ever known was Louis Pasteur. His discoveries were the basis for much of our present day knowledge in biology, medicine and agriculture. Faced with bitter public opposition, Pasteur devoted his life to the search for truth. The motto he lived by was the one word — "Onward."

Charles B. Shuman

TODAY, AS ALWAYS, it is easier to turn back than to press onward. If we go forward we must deal with the uncertain and the unknown. It is therefore quite natural that political candidates often gain favor by promising to turn back to some previous type of activity. However, history reveals that the progress of our American civilization has resulted from moving forward rather than turning back. Perhaps we are fortunate that all campaign promises are not kept.

AT THE PRESENT time, the battle lines are being drawn by those who would like to see the new Congress move backward rather than onward. Strong attempts will be made to repeal the Taft-Hartley law, to nullify the Aiken long-range farm bill and to return to OPA price controls. Farmers, through their own organization, have been active in securing the recent constructive action along these lines and they will certainly resist every effort to turn back.

FARMERS BELIEVE in the right of labor to organize. They also believe that the public welfare comes ahead of any organized group. The Taft-Hartley law may need some revision and amendment. Organized agriculture will, however, continue to insist that certain features of this legislation be maintained. We are not willing to give the control of our entire national economy to a small group of unscrupulous individuals.

GOVERNMENT-IMPOSED price controls as a cure for inflation were recognized as a failure by practically all who cared to look at the facts. Prices do not cause inflation, they only indicate how far it has progressed. As long as consumer income continues to increase, prices will also advance until adequate production is secured. Farmers know that price controls do not encourage production.

THE AIKEN LONG-RANGE farm bill was actively supported by the American Farm Bureau Federation. This legislation undoubtedly has many imperfections but it does deserve the opportunity of a fair trial. We know that rigid, extremely high support price programs have not been fully satisfactory to farmers or to the public. If we wish to preserve past gains we must recognize the need for constructive change.

THE NEXT FEW WEEKS will determine whether we in America meet our problems courageously by pressing onward, or whether we turn about to satisfy those who prefer to walk down hill.

Charles B. Shuman

President,
Illinois Agricultural Association

Speakers at American Farm Bureau Federation Convention Include Brannan, Hoffman, Stassen, Ruml, Senator Aiken

OUR guess is that right now about 450 of your neighbors are basking in the Florida sun or taking a boat ride down the Potomac.

For that number of Illinois farm folks have berths on the three IAA caravan train trips to the annual convention of the American Farm Bureau Federation in Atlantic City, N. J.

Most of the folks are going the southern route, through Florida where tropical sunshine should welcome them.

So many decided to go on the southern trip, the IAA scheduled two trains for the trip down South. About 350 are going this route, with the remaining 100 taking the eastern tour.

Three trains are leaving Chicago Dec. 5 and 8, carrying Illinois delegates to Atlantic City in time for the AFBF convention Dec. 13-16.

Farm Bureau folks should have a chance to get acquainted with their Illinois neighbors, because every section of the state is well represented. Farmers from 62 counties are taking the trip.

The delegates have come from farms near Illinois crossroads, towns, villages, and cities. From Oswego, Tuscola, and Wataga. From Chicago and Champaign, Decatur and Altona, El Paso and Aledo.

In fact, more came from Aledo than any other town, and more reservations, 36, from the Rock Island-Mercer county area than any other. La Salle, with 24, led all counties for numbers registered. Other high towns were Dixon, Cordova, Port Byron, Caledonia, and Fisher.

Helping the Illinoians to maintain their convention spirit will be special trains from eight other states, Indiana, Iowa, California, Oklahoma, Kentucky, Arkansas, Georgia, and Mississippi.

When the Farm Bureau folks on the southern tour return to their Illinois homes, they'll be able to give you a first-hand account of Alabama hospitality.

Members of the Alabama Farm Bureau are taking both train loads of Illinois folks on an automobile tour to Wilson dam, a part of the TVA system.

Later they will be treated to a barbecue and rodeo at the famous Norris Cattle Company ranch at Ocala, Florida.

The IAA caravan trains will help transport a record number of delegates to the AFBF meeting. Atlantic City is one of the largest resort and convention centers in the nation.

So this year the AFBF has asked everyone who can, to come. As many as 8,000 farmers are expected, counting easterners who drive to Atlantic City. Pre-convention reservations totalled 5,000.

The eyes and ears of a food-conscious world are focusing on our Illinois delegates, and all the nation's farmers attending this giant convention.

The AFBF is the largest farm organization in the greatest food exporting nation in the world. What Illinois farmers, your neighbors, say at the AFBF forum during this convention week in December, will affect tomorrow's farm policy.

Persons of a national reputation will address the farm group. Alfred E. Driscoll, governor of New Jersey, will give the address of welcome.

Another of the principal speakers will be Charles F. Brannan, U. S. Secretary of Agriculture.

Hanson W. Baldwin, famed *New York Times* military editor, will talk on our prospects for peace. Senator George Aiken, of Vermont, will discuss the newly enacted long-range farm bill which bears his name.

Other speakers include: Beardsley Ruml, chairman of the board of R. H. Macy and company; Harold E. Stassen, now president of the University of Pennsylvania, and Paul G. Hoffman, head of the European Recovery Program.

NOTICE
ILLINOIS AGRICULTURAL ASSOCIATION ELECTION OF DELEGATES

Notice is hereby given that in connection with the annual meetings of all County Farm Bureaus to be held during the month of December, 1948, at the hour and place to be determined by the Board of Directors of each County Farm Bureau, the members in good standing of such County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the Association, including the election of officers and directors, as provided for in the By-Laws of the Association.

During December, annual meetings will be held in Cass, Clay, Clinton, Cook, DuPage, Edwards, Henry, Iroquois, Jackson, Jasper, Jefferson, Johnson, Lee, Logan, Morgan, Moultrie, Ogle, Perry, Saline, Stephenson, Union, Vermilion, and Livingston Counties.

THE BANG'S PUZZLE

What Is The Answer To Brucellosis? Vaccination, Blood Test, Careful Sanitation And Good Herd Management Are All Vital Parts Of A Successful Control Program

By DR. C. D. VAN HOUWELING
Director, Veterinary Medical Activities

ONE question that has confronted practically every owner of cattle in Illinois at one time or another is "What shall I do about Bang's disease?" Anyone trying to read all of the reports and articles on this subject during the past few years has probably come to the conclusion that no one seems to know the answers.

In fairness to all who have presented the various aspects of the problem one has to admit that there has been and still are many unanswered questions. Unfortunately, many questions that pertain to diseases and their control seldom can be answered with a straight yes or no. There are so many complicating and influencing factors that most of these questions have to be given a qualified answer.

Differences of opinion are always healthy and stimulating. The same can be said about discussions that have been going on relative to Bang's disease control. In fact it is fortunate that those who have ideas and evidence to support their contentions express themselves and have an opportunity to be heard.

For that reason farmers in Illinois have been fortunate. To many of them it has seemed that nothing but confusion existed so far as the authorities in Illinois were concerned. On the one hand, the Extension Service of the University of Illinois, because of its great responsibility to the livestock producers in the state, has had to limit its recommendations to scientific evidence proven beyond a shadow of a doubt.

On the other hand, the Division of Livestock Industry, whose job it is to control the disease, has had to see that the control work progressed. It has had to accept what seemed to be the best program and the one the livestock owners wanted. The volume of the work that had been carried on in Illinois shows how active the Division has been in the control of brucellosis.

Even today no one has all the answers. However, there are a good many points which should be brought out.

One question often raised is "How long are calves that are vaccinated between four and eight months of age protected against the disease?" The results of field tests indicate that 95 per cent of the calves properly vaccinated will be protected against abortion from three to five years. Another ten per cent may develop a positive blood test during the same period of time. So, one can say that roughly 85 to 95 per cent of the calves vaccinated seem to be protected against the disease for the greater part of their lives.

Dr. Van Houweling has discussed the Bang's disease problem with hundreds of farmers. Here he talks it over with Ray Pearce (right) Jersey County.

Although experiments have been designed and conducted to demonstrate that the vaccine can spread the active form of the disease they have not been successful. One can say with a reasonable amount of confidence that the vaccine will not cause the active form of disease in unvaccinated animals.

Accusations have been made that vaccination causes sterility in the vaccinated animals. There does not seem to be any basis for this statement. On the other hand there is certainly no basis for the belief that vaccination by itself will serve to correct sterility. It must be remembered that vaccination does not possess curative powers. Its sole purpose is to develop a resistance against the disease.

Vaccination of adult animals has been advocated and discredited. There is no evidence to show that there is any value received from vaccinating *infected* adult animals. There does seem to be evidence that there is value in vaccinating the uninfected cows in a herd which is experiencing a "storm" of abortions. In any case, the vaccination of adults should be regarded conservatively due to the complications that arise from subsequent blood testing.

Another confusing point has been how long vaccinated calves will continue to react to the blood test. It can safely be said that about 90 per cent of the calves vaccinated between four and eight months of age will be negative to the blood test in about nine to 12 months. It can be just as definitely stated that a few per cent will continue to react to the blood test up to two or three years of age or older. Some vaccinated animals may lose this blood reaction and later have it reappear.

That brings up another point I mentioned earlier, as to the percentage of animals that will be protected against the disease by vaccination. One should always remember that vaccine is not 100 per cent effective and that it is possible for vaccinated animals to become infected and to lose calves. Therefore, no one should place his entire faith in controling the disease on vaccinating animals. Vaccination alone probably never will eliminate the disease. The blood test coupled with careful sanitation and good herd management are still vital parts of a successful control program. Combined with proper vaccination they provide the means for the elimination of Bang's disease losses.

Vaccination, with all its shortcomings, is still the best answer for Bang's disease control. At left a federal veterinarian is shown taking a blood sample. At right he injects Bang's vaccine.

All Farm Roads Lead to Atlantic City

Speakers at American Farm Bureau Federation Convention Include Brannan, Hoffman, Stassen, Ruml, Senator Aiken

OUR guess is that right now about 150 of your neighbors are basking in the Florida sun or taking a boat ride down the Potomac.

For that number of Illinois farm folks have berths on the three IAA caravan train trips to the annual convention of the American Farm Bureau Federation in Atlantic City, N. J.

Most of the folks are going the southern route, through Florida where tropical sunshine should welcome them.

So many decided to go on the southern trip, the IAA scheduled two trains for the trip down South. About 350 are going this route, with the remaining 100 taking the eastern tour.

Three trains are leaving Chicago Dec. 5 and 8, carrying Illinois delegates to Atlantic City in time for the AFBF convention Dec. 13-16.

Farm Bureau folks should have a chance to get acquainted with their Illinois neighbors, because every section of the state is well represented. Farmers from 62 counties are taking the trip.

The delegates have come from farms near Illinois crossroads, towns, villages, and cities. From Oswego, Tuscola, and Wataga. From Chicago and Champaign, Decatur and Altona, El Paso and Aledo.

In fact, more came from Aledo than any other town, and more reservations, 36, from the Rock Island-Mercer county area than any other. La Salle, with 24, led all counties for numbers registered. Other high towns were Dixon, Cordova, Port Byron, Caledonia, and Fisher.

Helping the Illinoians to maintain their convention spirit will be special trains from eight other states, Indiana, Iowa, California, Oklahoma, Kentucky, Arkansas, Georgia, and Mississippi.

When the Farm Bureau folks on the southern tour return to their Illinois homes, they'll be able to give you a first-hand account of Alabama hospitality.

Members of the Alabama Farm Bureau are taking both train loads of Illinois folks on an automobile tour to Wilson dam, a part of the TVA system.

Later they will be treated to a barbecue and rodeo at the famous Norris Cattle Company ranch at Ocala, Florida.

The IAA caravan trains will help transport a record number of delegates to the AFBF meeting. Atlantic City is one of the largest resort and convention centers in the nation.

So this year the AFBF has asked everyone who can, to come. As many as 8,000 farmers are expected, counting easterners who drive to Atlantic City. Pre-convention reservations totalled 5,000.

The eyes and ears of a food-conscious world are focusing on our Illinois delegates, and all the nation's farmers attending this giant convention.

The AFBF is the largest farm organization in the greatest food exporting nation in the world. What Illinois farmers, your neighbors, say at the AFBF forum during this convention week in December, will affect tomorrow's farm policy.

Persons of a national reputation will address the farm group. Alfred E. Driscoll, governor of New Jersey, will give the address of welcome.

Another of the principal speakers will be Charles F. Brannan, U. S. Secretary of Agriculture.

Hanson W. Baldwin, famed *New York Times* military editor, will talk on our prospects for peace. Senator George Aiken, of Vermont, will discuss the newly enacted long-range farm bill which bears his name.

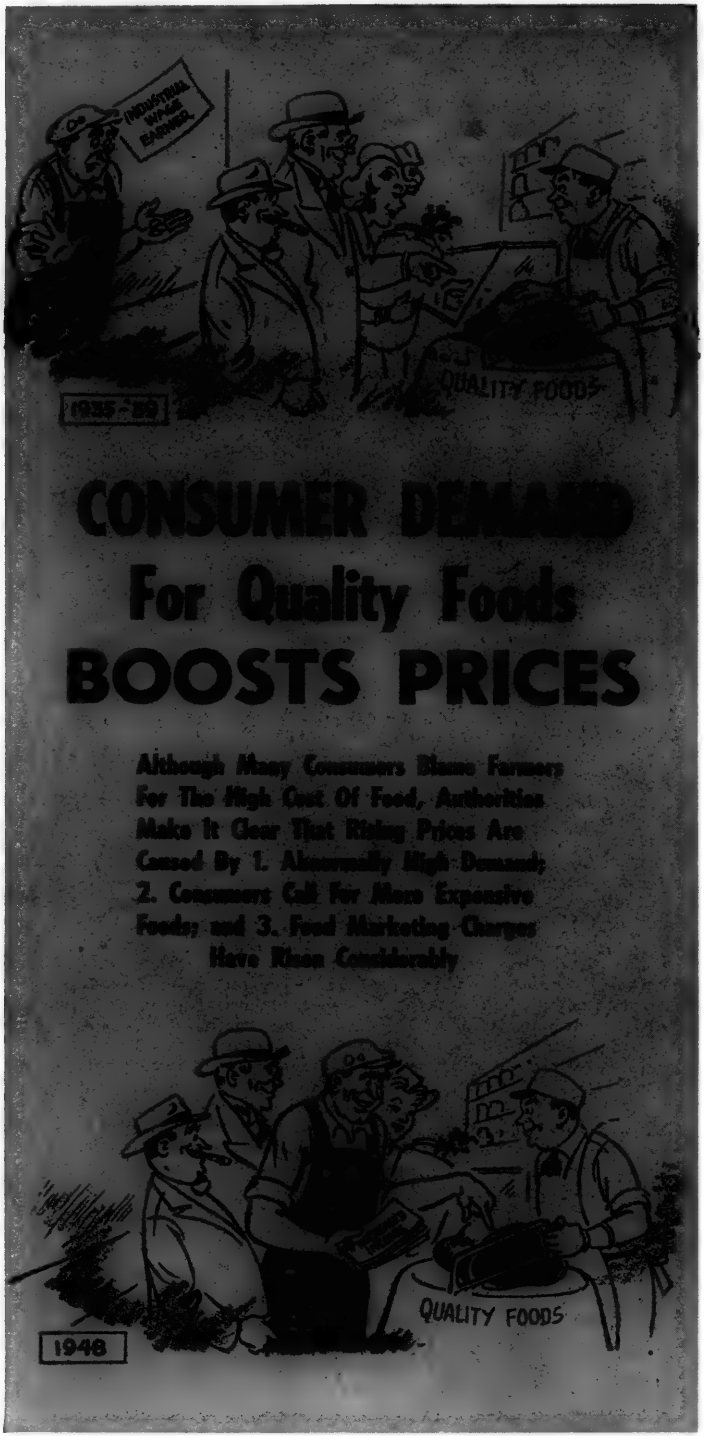
That brings up another point I mentioned earlier, as to the percentage of animals that will be protected against the disease by vaccination. One should always remember that vaccine is not 100 per cent effective and that it is possible for vaccinated animals to become infected and to lose calves. Therefore, no one should place his entire faith in controling the disease on vaccinating animals. Vaccination alone probably never will eliminate the disease. The blood test coupled with careful sanitation and good herd management are still vital parts of a successful control program. Combined with proper vaccination they provide the means for the elimination of Bang's disease losses.

Vaccination, with all its shortcomings, is still the best answer for Bang's disease control. At left a federal veterinarian is shown taking a blood sample. At right he injects Bang's vaccine.



BILL JONES filled his pipe and settled his plump dimensions comfortably into his easy chair. He had just finished a large evening meal and was looking over the accounts before working on the family budget.

Suddenly he sat upright as though stuck with a pin. "What," he roared at his wife, "Do you mean to tell me this is our food bill for last week? Why," he spluttered, "it's outrageous. Those confounded farmers must be getting rich!"

This is the usual reaction of many consumers. Without thinking much about it they look around for someone handy on whom to pin the blame. Food, they appear to reason, comes from farmers. So farmers are the cause of high prices.

What are the facts? First and foremost, the high cost of food is caused by heavy demands from Bill Jones and everyone else. Factory worker Bill Jones, who thinks farmers must be "getting rich," is doing pretty well himself. His wages have more than doubled since 1934.

And strange as it may seem, he is spending a smaller part of his income for the same quantity of food than he did before the war. Furthermore, he is eating more and better; better than he has in a good many years. He and his family are consuming more milk, more eggs, more meat, and more fruits and vegetables, but less potatoes and bread.

A Fine Thing

Farmers think it's a wonderful thing that more American families are better fed and they take a great deal of pride in feeling mainly responsible for the improved American diet.

While other peoples are going hungry, how is it that Bill Jones and his neighbors can eat better quality foods than ever before?

Simply because of the man he criticizes — the farmer. Since 1940 the farmer has, by his efficiency and hard work, poured record-breaking floods of food and fiber on the market. His efforts were climaxed this fall by the production of record grain crops including the greatest corn crop of all time. Sure, the farmer will benefit from this record production. But so will Bill Jones. Bill should try to imagine where prices would be if the fellow he thinks is "getting rich" produced only two-thirds of the food he is producing now.

And what about this "getting rich" idea in Bill's head. Yes, the farmer is making a better living; but is he

making a better living at someone else's expense? Of course not. Food prices are high; sure they are; all prices are high, and why? Simply because more American families have more money to buy more of everything. Supplies haven't been equal to the demand; so food prices have gone up with most other commodities.

What is the farmer doing about it? We just told you. He is pouring record-breaking floods of food and fiber on the market. What will this mean? Already you should have noticed it. The cost of food is dropping.

Farm Prices Drop

You say it isn't dropping much? That may be true. But the farmer's prices have dropped considerably. Wheat has dropped an average 83 cents from the peak price of $2.81 per bushel; corn is down $1.08 per bushel. But remember the farmer only gets 50 cents out of every dollar you spent on food. It was 32 cents in 1933. The rest goes for processing and distribution. The farmer cannot help it if the middleman doesn't cut his price when the farmer does.

In bringing in these huge crops, the average farmer made about $3,000 in 1947 and worked longer hours than Bill Jones to earn it. And that doesn't take into consideration help from other members of the family. Besides he has thousands of dollars tied up in land, buildings and machinery. Bill Jones probably has little or nothing invested in the factory where he works and if he did naturally he would expect a fair return on his investment.

The years 1910-14 are thought by many experts to have been a period when farm and factory income were in proper balance.

Considering this period as a base of 100, we find that average earnings for factory workers have increased 350 per cent while farm income, despite the talk of high food prices, has increased 175 per cent. In other words, the average factory worker is still away ahead of food costs.

Americans are fortunate in being able to get and pay for good food. They are fortunate that they have to work far less than the peoples of many other countries to be able to buy more and better food.

How long does the American worker have to labor to earn enough to buy the same foods as say, for instance, a Russian worker? In one hour the average American factory worker earns enough to buy a loaf of bread, a dozen eggs, and a quart of milk. It takes a Russian worker a half day to earn enough to buy the same bread, eggs, and milk. In Russia it takes four days work to buy a shirt. Bill Jones can buy a good shirt for less than half day's work.

Has the farmer restricted production in any way to create shortages and thus raise prices? He has not. Per capita food consumption has risen dramatically since 1938. With 1935-39, the base period, as 100, food consumption per person rose to an all-time high of 118 in 1946 and receded slightly to 117 in 1947.

During the years of rising consumption, farmers kept pace with greater production. Output responded to increasing demands both at home and abroad.

What is the outlook now? The farmer's skill and hard work have practically assured Bill Jones of more and better foods at lower prices in the months ahead, provided processors and distributors pass along the lower prices to the consumers.

Secretary of Agriculture C. F. Brannan reiterates the above-mentioned causes for the high price of food. In a recent statement he gave the following three reasons:

1. "Demand is abnormally high.

2. "Consumers are calling for increased quantities of the more expensive foods. Consumption of milk, meat, and poultry products is 15 to 27 per cent above the pre-war level. For the cheaper foods — wheat (bread), potatoes, and sugar — consumption is five to seven per cent below the pre-war average.

3. "Increased food marketing charges account for as much of the rise in retail food costs as does the rise in farm prices since June, 1946."

Illinois Teams Win Two More; Final Result Illinois 3; Iowa 2

WHEN the final returns were in, the results show that Illinois won the series of championship ball games with Iowa and not Iowa as the results carried in the November RECORD showed. In two more games Palo Alto County Rural Youth of Iowa lost to the Coles County Illinois Rural Youth champions in the three-game series. The scores were 2-4; 3-2; and 5-4. The games were played at Coles county.

The DeKalb All-County champions defeated the Hardin, (Iowa) All-County team 5-0.

The final tabulation shows that Illinois teams — Vermilion, DeKalb, and Coles — won and two Illinois teams — Livingston and Will — lost. Thus Illinois was the victor in the state series, three games to two.

Front Cover

YOU MAY not care much for an Illinois winter but you will have to admit that there are scenes of breath-taking beauty throughout our state after a newly-fallen snow. This picture of winter beauty was taken on a country road near Morris in Grundy county. It is the 19th in our series of covers on picturesque and historic Illinois.

To the man or woman who attended rural school this scene may bring back happy memories—of trudging to or from school with the snow soft and wet underfoot; of happy days with Christmas and all its surprises and fun just ahead; of trips to woods for a Christmas tree to bedeck the schoolroom; of snowball fights; of many things too remote now to recapture.

Just before Christmas there's a feeling of quiet happiness in the still, crisp air. The harvest has been put away; the cattle are snug in the barns; "God's in his heaven and all's right with the world."

BRIGHT OUTLOOK

Optimistic Prediction Presented At 20th Cattle Feeders Roundup At Urbana. Demand For Beef To Continue Strong For Next Twelve Months

By LEW REISNER
Field Editor, IAA Record

CATTLE feeders are in a better position to make money during the next 12 months than any other group of livestock farmers in Illinois.

This was the optimistic outlook presented during the 20th cattle feeder's round-up held recently at the University of Illinois in Urbana.

The cattle business looks good. The demand for beef continues strong because of beef shortages, shortages that will not be relieved by the bumper harvests this fall.

There is no prospect for an increase in beef for a year. About the same number of feeders moved into the feedlots of the eight cornbelt states during July, August, and September of this year as moved last year: 749,300 for 1948 and 748,700 for 1947.

"The big corn crop hasn't affected the cornbelt farmer's plans. They're playing their cards very carefully," R. W. Grierer, of the Chicago Producers Commission Association, said during the meeting.

He pointed out that even though it costs more to buy feeders this year, gains will cost but one-half of last year's because of cheaper feeds. He believes that feeders can take a 20-25 per cent break in price and still get along.

If farmers can make money feeding cheap corn to cattle, why aren't there more cattle in the feedlots?

The answer, Grierer believes, can be found in the cautious attitude of cattlemen. Feeder stock is high, and farmers remember the big break after the last war. They just don't want to get caught again.

So most of them are giving their feeder cattle a quick feed of up to 120 days, and then shipping. "There's just no cattle on long feeding any more," he said.

Texas ranchers do not see the cattle future with so little optimism, Jim Mitchell, secretary-manager of the Texas Livestock Marketing Association, said at the cattle feeders' meeting.

"Down in Texas we don't see why you Illinois farmers aren't taking our calves—even if fat cattle should drop $10 a hundred," Mitchell said. He reported that Texas ranchers have fewer calves for export than any time in recent history. This is due to a severe drouth in the calf-exporting area of the state.

One of the College of Agriculture cattle feeding experiments discussed during the meeting was the results obtained by grazing feeders on strip mine pasture.

The spoils pasture in Fulton county, where one test was made, was mined about 11 years ago. The pasture seedings were started in 1938 when legumes and grasses were broadcast over the area by plane.

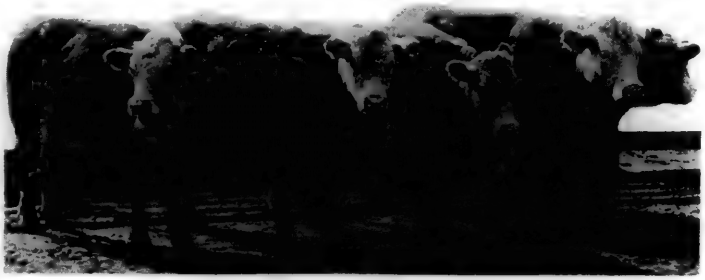
The animals did well enough, gaining 1.19 pounds daily on the spoils pasture while the control steers, pastured on a near-by bluegrass pasture, gained 1.29 pounds.

Sweet clover, redtop, orchard grass, lespedeza, and alta fescue are the species found to do best so far on this strip-mined land, and furnished most of the forage consumed by steers on test.

During the day-long meeting, the latest data was released on a continuing experiment where steers are fed to a given market grade on a limited amount of grain.

The experiment was started in August of 1947. Complete results may be obtained by writing the College of Agriculture.

(*Continued on page* 34)



These well-fed cattle have just been taken off strip-mine pasture in Fulton county.

Large crowd gathers near University beef barns during Cattle Feeders Day.

NIGHT FEEDING

Farmer GI Finds Hogs Put On Weight Faster When They Get Plenty Of Midnight Snacks Under Bright Lights. After 63 Days Gain Per Day Registers 1.45 Pounds

APPARENTLY a little night life, with plenty of midnight snacks under the bright lights, and lots of rest during the day, pays off in raising hogs.

Put like that it may sound just a bit extreme, but night feeding of hogs, at least during the hot summer months, may prove highly practical for the average farmer and hog raiser.

Speedy Pork Production

This is indicated in the results of what is believed to have been the first experiment in night feeding of hogs conducted on the farm of Robert C. Turner, Henry, Illinois, this summer.

Turner, a GI paratrooper turned farmer, established enviable records for speedy and economical pork production in a 63-day test with 107 purebred Duroc hogs.

Control By Time Clock

Turner noted that hogs are reluctant to eat during the heat of the day, but will make regular visits to their self-feeders on moonlit nights. He erected electric lights over the feeders in his hog lot and had them controlled by time clock to provide two feeding periods each night. His idea was to encourage his hogs to eat during the cool of the night and thus increase their feed intake and get them to market weight earlier.

107 Pig Experiment

The experiment was started on July 1 when 107 Duroc pigs, farrowed in late March and early April, were weighed in. They weighed a total of 7,424 lb., or an average of 69.38 lb. per pig. They were placed on a ration of ground oats, plus a pelletized milk product in the self-feeders, and ear corn which was hand fed. They were on good alfalfa pasture and also had a supply of salt and mineral.

The lights flash on and Robert C. Turner's hogs get up and head for the feed trough during the night.

Gain 1.45 lb. Per Day

At the end of the 63-day period, on Sept. 2, the hogs were weighed out and tipped the scales at 17,270 lb. for the lot, or an average of 161.4 lb. per hog.

This meant that they had made an average daily gain of about 1.45 lb. per hog per day which may be compared to an average daily gain of about 1.31 lb. for hogs of similar weight and age in 12 experiments of five midwest experiment stations reported in USDA Technical Bulletin No. 894, July, 1945.

Turner kept complete records of feed consumption and costs. Feed consumption per 100 lb. gain was of special significance. To make a total gain of 9,846 lb. of pork in 63 days, the pigs consumed a total of 27,069 lb. of feed, or 275 lb. of feed for each 100 lb. of pork produced. This may be compared to 300 to 350 lb. of feed for each 100 lb. gain, which is generally considered good to average feed consumption. Turner figured the feed cost at $11.70 per 100 lb. of pork produced.

Electricity — 7 Cents

Total cost of electricity for the 63 days was $7.40, or about 7 cents per pig. Turner has one pole with a single 150-watt bulb to light the pen area, and another pole with two 150-watt bulbs and reflectors directly over his feeders. Lights were time clock controlled to come on automatically twice during the night, from 10 to 11:30 p.m. and from 2 to 3:30 a.m. This resulted in the use of 148 kilowatt hours of electricity.

Turner noted that when the lights came on at night the hogs made no quick rush to the feeders, but within about five minutes they got up in groups of four or five to go to the feeders. He estimated that at least three-quarters of the herd got up to feed during each of the night-feeding periods.

Plans to Repeat

The experiment was sponsored jointly by a feed company and local feed distributor. Paul Laffey, Marshall-Putnam farm adviser, and Ira Burton, Turner's neighbors, were official witnesses at the scales at both the weighing in and weighing out of the hogs for the experiment.

Turner, who was well pleased with the results, said, "The results speak for themselves. They're a swell lot of hogs and I think my program is right. Leading hog men who saw them at the weighing out said my animals would top the market. I'm going to repeat the program with my fall pigs."

BRIGHT OUTLOOK

Optimistic Prediction Presented At 20th Cattle Feeders Roundup At Urbana. Demand For Beef To Continue Strong For Next Twelve Months

By LEW REISNER
Field Editor, IAA Record

CATTLE feeders are in a better position to make money during the next 12 months than any other group of livestock farmers in Illinois.

This was the optimistic outlook presented during the 20th cattle feeder's round-up held recently at the University of Illinois in Urbana.

The cattle business looks good. The demand for beef continues strong because of beef shortages, shortages that will not be relieved by the bumper harvests this fall.

"The big corn crop hasn't affected the cornbelt farmer's plans. They're playing their cards very carefully," R. W. Grierer, of the Chicago Producers Commission Association, said during the meeting.

He pointed out that even though it costs more to buy feeders this year, gains will cost but one-half of last year's because of cheaper feeds. He believes that feeders can take a 20-25 per cent break in price and still get along.

If farmers can make money feeding cheap corn to cattle, why aren't there more cattle in the feedlots?

The answer, Grierer believes, can be found in the cautious attitude of cattlemen. Feeder stock is high, and farmers remember the big break after the last war. They just don't want to get caught again.

So most of them are giving their feeder cattle a quick feed of up to 120 days, and then shipping. "There's just no cattle on long feeding any more," he said.

Texas ranchers do not see the cattle future with so little optimism. Jim Mitchell, secretary-manager of the Texas Livestock Marketing Association, said at the cattle feeders' meeting.

"Down in Texas we don't see why you Illinois farmers aren't taking our calves—even if fat cattle should drop $10 a hundred," Mitchell said. He reported that Texas ranchers have fewer calves for export than any time in recent history. This is due to a severe drouth in the calf-exporting area of the state.

One of the College of Agriculture cattle feeding experiments discussed during the meeting was the results obtained by grazing feeders on strip mine pasture.

The spoils pasture in Fulton county, where one test was made, was mined about 11 years ago. The pasture seedings were started in 1938 when legumes and grasses were broadcast over the area by plane.

The animals did well enough, gaining 1.19 pounds daily on the spoils pasture while the control steers, pastured on a near-by bluegrass pasture, gained 1.29 pounds.

Sweet clover, redtop, orchard grass, lespedeza, and alta fescue are the species found to do best so far on this strip-mined land, and furnished most of the forage consumed by steers on test.

During the day-long meeting, the latest data was released on a continuing experiment where steers are fed to a given market grade on a limited amount of grain.

The experiment was started in August of 1947. Complete results may be obtained by writing the College of Agriculture.

NIGHT FEEDING

Farmer GI Finds Hogs Put On Weight Faster When They Get Plenty Of Midnight Snacks Under Bright Lights. After 63 Days Gain Per Day Registers 1.45 Pounds

APPARENTLY a little night life, with plenty of midnight snacks under the bright lights, and lots of rest during the day, pays off in raising hogs.

Put like that it may sound just a bit extreme, but night feeding of hogs, at least during the hot summer months, may prove highly practical for the average farmer and hog raiser.

Speedy Pork Production

This is indicated in the results of what is believed to have been the first experiment in night feeding of hogs conducted on the farm of Robert C. Turner, Henry, Illinois, this summer.

Turner, a GI paratrooper turned farmer, established enviable records for speedy and economical pork production in a 63-day test with 107 purebred Duroc hogs.

Control By Time Clock

Turner noted that hogs are reluctant to eat during the heat of the day, but will make regular visits to their self-feeders on moonlit nights. He erected electric lights over the feeders in his hog lot and had them controlled by time clock to provide two feeding periods each night. His idea was to encourage his hogs to eat during the cool of the night and thus increase their feed intake and get them to market weight earlier.

107 Pig Experiment

The experiment was started on July 1 when 107 Duroc pigs, farrowed in late March and early April, were weighed in. They weighed a total of 7,424 lb., or an average of 69.38 lb. per pig. They were placed on a ration of ground oats, plus a pelletized milk product in the self-feeders, and ear corn which was hand fed. They were on good alfalfa pasture and also had a supply of salt and mineral.

The lights flash on and Robert C. Turner's hogs get up and head for the feed trough during the night.

Gain 1.45 lb. Per Day

At the end of the 63-day period, on Sept. 2, the hogs were weighed out and tipped the scales at 17,270 lb. for the lot, or an average of 161.4 lb. per hog.

This meant that they had made an average daily gain of about 1.45 lb. per hog per day which may be compared to an average daily gain of about 1.33 lb. for hogs of similar weight and age in 17 experiments of five midwest experiment stations reported in USDA Technical Bulletin No. 894, July, 1945.

Turner kept complete records of feed consumption and costs. Feed consumption per 100 lb. gain was of special significance. To make a total gain of 9,846 lb. of pork in 63 days, the pigs consumed a total of 27,069 lb. of feed, or 275 lb. of feed for each 100 lb. of pork produced. This may be compared to 300 to 350 lb. of feed for each 100 lb. gain, which is generally considered good to average feed consumption. Turner figured the feed cost at $11.70 per 100 lb. of pork produced.

Electricity — 7 Cents

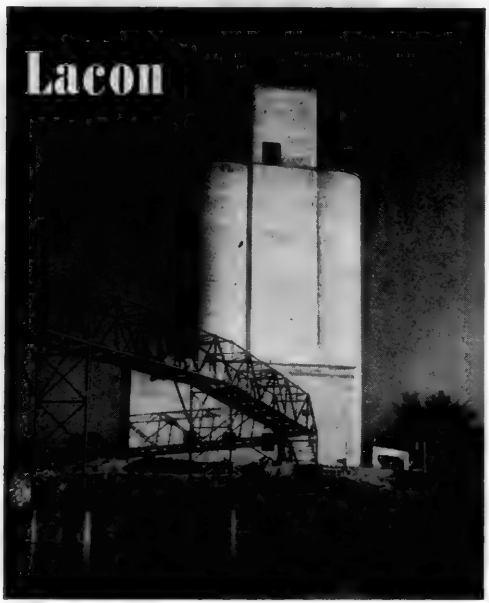
Total cost of electricity for the 63 days was $7.40, or about 7 cents per pig. Turner has one pole with a single 150-watt bulb to light the pen area, and another pole with two 150-watt bulbs and reflectors directly over his feeders. Lights were time clock controlled to come on automatically twice during the night from 10 to 11:30 p.m. and from 2 to 3:30 a.m. This resulted in the use of 148 kilowatt hours of electricity.

Turner noted that when the lights came on at night the hogs made no quick rush to the feeders, but within about five minutes they got up in groups of four or five to go to the feeders. He stated that at least three-quarters of the hogs got up to feed during each of the night feeding periods.

Plans to Repeat

The experiment was sponsored jointly by a feed company and local feed distributor. Paul Talley, Marshall Putnam farm adviser, and Ira Burton, Turner's neighbors, were official witnesses at the scales at both the weighing in and weighing out of the hogs for the experiment.

Turner, who was well pleased with the results, said, "The results speak for themselves. They're a swell lot of hogs and I think my program is right. Leading hog men who saw them at the weighing out said my animals would top the market. I'm going to repeat the program with my fall pigs."



TERMINAL GRAIN PROGRAM MOVES STEADILY AHEAD

Further Progress Made By Prairie Grain Company Completes Second of Its Sub-Terminal Elevators On Illinois River At Lacon

This is the new 190,000 bushel elevator at Lacon completed recently by the Prairie Grain Company, an affiliate of the IAA's Illinois Grain Terminals.

THE dream of a large-scale cooperative grain merchandising plan for Illinois farmers took a long step closer to realization in late November with the completion of another elevator on the Illinois river at Lacon.

The Lacon elevator is the third of the newly-built river houses in the Illinois Grain Terminals plan for a string of river elevators tied in with terminal marketing outlets at Chicago and St. Louis.

The elevator at Lacon is the second built by the Prairie Grain Company, a regional, Farm Bureau-type grain cooperative organization operating along the upper reaches of the Illinois river.

With other regional cooperatives it is affiliated with the IAA's Illinois Grain Terminals Company. These regional operations, Western Illinois Grain Company and Havana River Grain Company, include sub-terminal river elevators and inland elevators which will be the sources of supply for the terminal elevators.

Prairie Grain completed its first new river elevator at Hennepin in June. The previous June Havana River Grain finished a 70,000 bushel capacity elevator at Havana. The Hennepin and Lacon elevators are of identical dimensions. Each has a capacity of 190,000 bushels of grain.

The Hennepin elevator cost close to $200,000. The Lacon elevator is expected to cost a little more because of the additional expense of a roadway to the site and more extensive dredging of the river. Both are of the latest and most modern design. Each are able to load and unload 9,000 bushels of grain per hour. A third Prairie Grain elevator is to be constructed near Ottawa whenever a suitable site has been selected.

With the affiliation of more Farm Bureau-type grain organizations with Illinois Grain Terminals and the construction of the three new river sub-terminals, four further developments recently highlighted the progress of the parent organization:

1. A financing plan has been adopted providing for the sale of $750,000 in capital stock to finance expansion of Illinois Grain Terminals Company.

2. Sam L. Hassell of Buffalo, N. Y., one of the nation's outstanding grain merchandisers, has been employed as manager.

3. Terminal elevator sites have been selected at Chicago and St. Louis. An 11-acre tract adjacent to the Calumet River and accessible to lake boats has been purchased on Chicago's south side. The site at St. Louis has been selected and a long-term lease will be taken on the property which is not for sale.

4. An eastern sales outlet has been set up in Buffalo to move Illinois grain into eastern markets. Hassell said the company expected to market considerable grain through the Buffalo office where many eastern buyers have offices. Buffalo has the largest feed mills and is the largest manufacturer of feeds in the nation.

Farm Bureau-type grain marketing cooperatives already have invested about $1,450,000 in river sub-terminal elevators and other facilities.

But more funds will be required to finance terminal elevators and to buy and sell grain on the terminal market. It will be a big financing job but it must be done if Illinois farmers are going to have terminal operations similar to those enjoyed by farmers in a number of neighboring states.

"Illinois farmers," Hassell said, "have shown their desire for more than a brokerage and commission service. That means terminal operations. Before we can proceed to fulfill their wishes we must have the facilities. To get these facilities we need the support of Farm Bureau farmers."

The Chicago terminal elevator's capacity probably will be in excess of three million bushels. The St. Louis elevator

will be smaller. It may also be found necessary to establish transportation facilities, such as river grain barges.

Several million dollars of capital will be needed to complete this merchandising program.

The first phases of the financing will be carried on through the sale of stock to the river grain companies mentioned previously, country grain companies, service companies, Farm Bureau type elevators, county Farm Bureaus, and other organizations vitally interested in a complete grain marketing program. The IAA and other Farm Bureau affiliates of course have and will invest money in the venture.

Farm Bureau members will, for the most part, carry the risk. Farm Bureau members also will put forth most of the effort to raise the money.

Because of the effort and investment, it seems fair and reasonable that the new grain merchandising program is set up as a Farm Bureau-type cooperative with patronage earnings, when available, largely passing down through regional or local Farm Bureau-type cooperatives to the Farm Bureau member.

Above are two of the river houses affiliated with Illinois Grain Terminals Company. The elevator at Havana is the main outlet for the Havana River Grain Company. The Hennepin elevator is duplicated at Lacon and both are operated by the Prairie Grain Company, also affiliated with Illinois Grain Terminals.

Dr. C. D. Van Houweling Resigns As Veterinary Med. Relations Director

DR. C. D. VAN HOUWELING, director of veterinary medical relations for the Illinois Agricultural Association for the past two years, resigned Dec. 1 to take charge of professional relations for the American Veterinary Medical Association.

During the two years, Dr. Van Houweling traveled extensively throughout the state for the IAA and served as technical veterinary adviser to the Association and its affiliated organizations.

He will work from the Chicago office of the AMVA and hopes to maintain his fine working relationship with the IAA and the American Farm Bureau Federation. Van Houweling was born in Iowa and graduated from Iowa State College in 1942. He practiced in central Illinois, served in the army three years and joined the IAA staff in November 1946. He lives with his wife and two sons in Elmhurst.

Honor 13 Illinois FFA At National Convention Held in Kansas City

THIRTEEN Illinois Future Farmers of America were honored in the national organization's 20th annual convention Nov. 15 at Kansas City. They were named to receive the American Farmer degree, highest degree of achievement that the FFA offers.

The FFA's American Farmer degree is awarded annually to members who have achieved distinction in their supervised farming programs, scholarship in vocational agriculture, rural leadership, farm citizenship and patriotism. Only one member in a thousand may receive the degree.

Those from Illinois receiving this high honor were:

Edward C. Bates, Henry county; Glen Loyde Busboom, Champaign; Eldon Ray Chapman, Wabash; Kenneth LeWayne Cheatham, Bond; Harold F. Farley, Champaign; Edward H. Heine, Kane; Russel Mathre Jorstad, Grundy; Kenneth W. Koertner, Stephenson; Herbert L. Mueller, Jr., Monroe; Ray C. Musser, Henderson; Donald Arland Petrie, Lee; William Lewis Porter, Adams; and Lyle P. Schertz, Woodford.

Illinois is in second place in the nation in FFA membership with a total of 14,282 members.

This is a scene from a plant food spreading demonstration held recently in DeKalb county.

Fertilizer Now Available In Greater Amounts

But High Analysis Carriers Of Nitrogen And Potassium Are Still Scarce

ILLINOIS farmers have long realized the value of plant foods in a sound fertility program. So they will hail as good news reports that fertilizers are becoming available in larger amounts. The picture is not as bright, however, as we would like to see it.

Increase in production of high analysis materials is mostly in the production of phosphate. High analysis carriers of nitrogen and potassium are still scarce. It is to be expected, therefore, that most of the nitrogen and potash materials will continue to be used in mixed fertilizers. So the time when you can expect to obtain large amounts of high analysis straight goods is still in the future. At present the production situation stands about as follows:

By ROGER E. GISH, Director
Soil Conservation Activities

Limestone

Production of limestone is up in individual quarries and the number of producing quarries is somewhat greater. Demand and supply are now parallel although some quarry operators are ahead of demand and are stock-piling against future seasonal demand.

Nitrogen

SULPHATE OF AMMONIA — The supply of coke oven by-product sulphate of ammonia still continues to be inadequate in spite of additional production from purchased synthetic ammonia. No easing of the tight supply situation is indicated. Demand continues far in excess of expected supply.

NITRATE OF SODA — Supplies of nitrate of soda at warehouse points are, in general, adequate for spot requirements. Producers and importers are not making contracts for future delivery at the present time.

AMMONIUM NITRATE AND SOLUTIONS — Demand far exceeds the supply of ammonium nitrate and solutions in spite of increased production in some plants. The supply of other nitrogen carriers is about the same.

Phosphate

The demand for rock continues at such levels that producers are still unable to accumulate any sizeable reserve supply of raw rock. However, quantities are available to farmers at present.

SUPER-PHOSPHATE — Practically no shortages of super-phosphate are reported. In general, adequate supplies of triple super-phosphate are available.

Potash

The potash industry is in the process of increasing production. It will be available in the future, but at present the supply is short of demand.

In looking at the above review of supply, it becomes apparent as previously stated that straight goods carrying nitrogen and potash will continue to be absorbed by the mixing industry. In fact, mixing plants in operation are having difficulty maintaining production because of insufficient supplies of nitrogen.

It is reported that current use of fertilizers now is two and one half times pre-war years with demand still increasing. The absorption of the production of nitrogen and potash carriers by the mixing industry will continue to make straight goods carrying these elements hard to get but will make more mixed fertilizers available.

The Illinois Farm Supply Company estimates that there will be about five times as much mixed fertilizers available than there was a year ago. They report the grades available to be 4-16-16, 3-12-12, 0-20-10, and 0-12-12. These are good grades of material but they may not all be available at the time of the spring peak demand. There are several things that the farmer can do to meet the supply and demand problem in his farm fertility program.

Planned Fertilizer Program

In a farm fertility program, the farmer should first abide by the slogan of "Test, Don't Guess". The soil testing laboratories which county Farm Bureaus have set up over most of the state make it possible for the farmer to follow an efficient fertility program.

In general, all land in the state which has not been previously limed, needs an application of limestone for the growing of legumes and especially for alfalfa and sweet clover. About 70 per cent of the land in the state needs additional phosphate for maximum production. The need for potash is a more local problem and may be the limiting factor in a number of areas. Soil tests are the only means of determining just how much of the elements are needed for high yields.

Agronomists of the University of Illinois estimate that farmers in the state waste five million dollars annually by the application of fertilizers where they are not needed or are applied in incorrect proportions. On the other hand, the soil testing laboratories save the farmers an estimated four million dollars annually in directing the rate of application of

fertilizers. An even higher saving is possible by the increased use of these laboratories.

Both limestone and rock phosphate can be applied any time during the year provided the ground is not sloping to an extent where considerable amounts of the material will be lost by washing. The important thing in the application of limestone and rock phosphate is to apply the material when it is available and then work it into the ground as soon as possible. Nitrogen fertilizers, super and triple super-phosphate, and potash materials as well as mixed fertilizers should be handled differently. As these materials are readily soluble, they should be applied just before or at any time a crop can use the plant food in solution.

In estimating needs for fertilizer to be used, high analysis materials should be obtained whenever they are available even though they have to be stored until used. Obtaining and storing quality materials in advance is one method of being assured of a supply of good fertilizers. This will prevent the necessity of buying low-grade materials such as 2-12-6 in the spring when the higher grade materials may not be available. To assure efficient use and a supply of quality materials, three suggestions are offered:

1. Make soil tests to determine what elements are needed and in what quantities.

2. Accept materials when they are available. Lime and rock phosphate may be applied at any time of the year with consideration being given to loss by washing on sloping ground.

3. Buy high analysis straight goods whenever available and high quality mixed fertilizers well in advance if necessary. Store the quality materials properly and apply them at the time a crop can get the greatest benefit from them.

NEW CLASSES AT STATE FAIR

A NEW class of livestock, individual classes of ram lambs, will be added to the junior livestock division of the Illinois State Fair in 1949.

The joint 4-H and FFA advisory committee on junior department rules and regulations made this announcement after a recent meeting at the University of Illinois College of Agriculture.

The showing of ram lambs will be limited to those shown previously as part of a pen exhibit, the committee decided.

It also changed the classes in the dual-purpose breed to correspond with those used in dairy classes. Deadline date for dairy and dual-purpose records was extended to Jan. 1, while all other deadline dates remained unchanged.

Moving phosphate direct from the railroad car.

BUY THE CARLOAD

Bureau Grain Company Keeps Farmers Well Supplied With Rock Phosphate At Low Price In Buying By Carload

BUREAU county farmers who need rock phosphate have little trouble getting all they want any time of the year. And they get it delivered to their farm and spread on their fields for about what it would cost them if they bought it in 100-pound bags.

Bureau county buys its rock phosphate in bulk, a 50-ton railroad carload at a time. The mineral is handled entirely by machines — from car, to stockpile, to field.

By handling the mineral in bulk and in large amounts, the Bureau Grain Company, which handles plant food, has found it can deliver and spread it for farmer members for about the same price as bagged fertilizer delivered but not spread.

Since most farmers are not well-equipped to spread the fertilizer, and it is an unpleasant job at best, the spreading service is a welcomed "dividend" from the new handling and storage program.

By stock-piling large tonnages of rock phosphate Bureau Grain is now able to meet the sky-rocketing demand for the mineral. During months of heavy demand, rock phosphate has been hard to get.

In developing its program, which could lend itself to programs in other counties, Bureau has pioneered in developing outside storage. It has found that the principal requirement for stock-piling is a good concrete floor.

Rock phosphate is moved from freight cars directly into trucks equipped as regular fan-type limestone spreaders. For this job, a small three-wheeled hoister equipped with a hydraulic scoop is used.

The bulk phosphate is wetted down to prevent blowing as it is moved to the stock-pile. After it is dumped, it is wetted again to prevent blowing. Rock phosphate handled this way can be stock-piled without loss of material or quality.

The moisture absorbed by the stock pile forms a crust but the material does not cake or harden. Most of the moisture soon dries out, and the little that remains makes it possible to spread in 15 mile an hour winds without blowing.

Wetted phosphate can also be spread more evenly.

But even more important, a large stock pile means that the phosphate is on hand and ready to be spread when the farmer needs it for his land.

You may remember the picture of the calf scramble in the "Farm Bureau Day at the State Fair" picture section in the October Record. Here's one of the lads and the calf he scrambled after. He is Leo Bunting, Ford county. He planned to exhibit it at the International in Chicago.

This is a scene from a plant food spreading demonstration held recently in DeKalb county.

Tomorrow's Co-op Leaders

WHO will direct our farm co-ops in 1968? How will they be trained? Can they learn from our experience and our mistakes?

And just as important, how can we train young men today for the years ahead? What chance do young farmers have to get formal training in cooperative organization and operation?

These questions perplex farm leaders. As one solution the Illinois Agricultural Association is launching a co-op training course for farm youth.

The course will be held from Jan. 31 through Feb. 4 at Urbana. The University of Illinois College of Agriculture will act as host. It will be conducted at the same time as Farm and Home Week but will not be a part of the latter event.

From 200 to 250 candidates are expected. Each of the counties in Illinois has been asked to select three young men for the course, one each from Future Farmers of America, 4-H clubs, and the Rural Youth group in their county.

The course is designed to train young men as present and future leaders in local and district cooperatives, either as farmer board of director members or as employees and managers.

The four-day training course will stress the increasing importance of cooperatives to farmers. The program states:

"Most of the farmer's training has been for production. But with four out of five people fighting to get food prices down, and with food handlers fighting to increase their percentages, the farmer needs to pay more attention to purchasing and marketing."

After most young farmers get married, and leave Rural Youth groups, they have little chance to get formal training on cooperatives, I. E. Parett, IAA secretary of general services and general chairman of the Co-op Training Course, said in announcing the program.

"Before they are 30 years old, many of these young men may be elected as directors of cooperatives and because they have been busy getting started in farming, many have had little chance to learn much about the philosophy of farm cooperatives," Parett said.

Others from the IAA working with Parett in organizing the training course are: John K. Cox, program director and IAA director of rural school relations; W. P. Peterson, Illinois Farm Supply; George Metzger, IAA field secretary, and E. D. Lyon, IAA director of young people's activities.

Much of the training during the week will be done by the farm youths themselves. They will conduct panel discussions, speak in talk fest, and as a final project, go through the steps in setting up a farm service cooperative.

IAA department heads and company managers as well as staff members of the College of Agriculture will serve as instructors during the course.

President Charles B. Shuman will give the address of welcome and will outline the aims and purposes of the school, known as the Illinois Agricultural Association Co-op Training Course for Farm Youth.

The business and economics of farming will be reviewed by staff members of the College of Agriculture who will discuss parity and the flexible parity formula, the fact that farmers buy retail and sell wholesale, and such matters as the mounting costs of processing.

George Metzger, IAA field secretary, will give a brief history of the Farm Bureau movement in Illinois, tell how Farm Bureau policy is made, and discuss problems concerning farm legislation.

I. E. Parett, IAA director of general services, will tell the young farmers how the service and educational branches of county Farm Bureaus, the Illinois Agricultural Association, and the American Farm Bureau are organized to work for farmers.

The aims and objectives of cooperatives will be the subject of a panel discussion during one of the sessions.

This panel will be composed of Fred Herndon, chairman and president of Illinois Farm Supply Company, Howard McWard, manager of the Illinois Grain Corporation, A. E. Richardson, manager of the Country Life Insurance Company, Frank Wilcox, manager of Country Mutual Casualty Company, C. H. Becker, manager of Illinois Farm Supply Company, and L. L. Colvis, IAA secretary of marketing.

Most of these men will appear later in the program to explain the cooperative or company they manage or direct for the IAA.

Becker will explain how the Illinois Farm Supply Company operates as a purchasing cooperative. Colvis and McWard will tell how Illinois grain, milk, produce and livestock are handled in Illinois cooperatively.

Richardson and Wilcox will discuss the three IAA insurance companies.

During one of the panel sessions these men will act as "experts" and will pay a forfeit if they are stumped by questions from the audience of junior co-op students.

Those students who wish may enter a talk fest and the best of the extemporaneous talkers will form a junior panel of experts. The judges for this contest will be J. E. Hill, director of vocational agriculture in Illinois, Robert Bartlett, farm economist at the University of Illinois, and Floyd Morris, vice-president of the Illinois Agricultural Association.

During the closing hours of the four-day course, the students, drawing on the material presented during the sessions, will set up their own farm co-operative.

They will appoint an organizing committee, draw up articles of incorporation according to state law, elect a board of directors, select a manager, and then sell stock.

On their way home from the Co-op Training Course the young men will visit outstanding Illinois farm cooperatives.

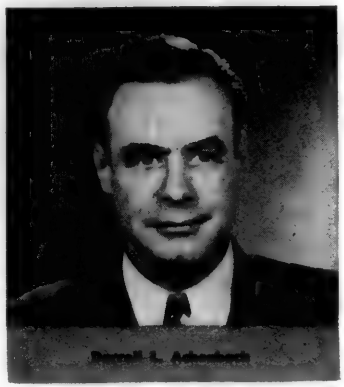
Darrell L. Achenbach, 38, is Named To Succeed John H. Kelker as Manager Of Country Mutual Fire Company

DARRELL L. ACHENBACH will become manager of Country Mutual Fire company Jan. 1. He will succeed John H. Kelker, who is retiring under the IAA retirement plan at the close of 1948 after 25 years of service.

Achenbach comes from near Taylorville, Christian county. He was born Jan. 29, 1910, and reared on the farm originally owned by his grandfather. Achenbach and his only brother, Dallas, now own the 160-acre homestead.

Achenbach's father, William, was a Christian county farmer all his life. He was active in the Farm Bureau movement, having served at one time as vice-president of the Christian County Farm Bureau.

Educated in country school and Taylorville high school, Achenbach farmed with his father for a year. He then worked as station clerk of Central Illinois Public Service company's generating station at



Darrell L. Achenbach

Kincaid. After a year and a half, he went to Kincaid Trust and Savings bank as assistant cashier. The bank did not reopen after the bank moratorium in 1933.

In autumn of that year, the Federal Intermediate Credit Bank of St. Louis, employed Achenbach as a credit examiner and field representative.

He began working for the Production Credit Corporation of St. Louis in January, 1936. This, in effect, was a transfer, as the bank and corporation are both units of the Farm Credit Administration. He was first a credit analyst in the St. Louis office; then an association supervisor for the state of Illinois, and later, as the organization grew, for the southern half of the state.

After eight years, Achenbach became secretary-treasurer of the Decatur Production Credit Association in Decatur. During 1945, because of the war-time manpower shortage, he filled the same office for the Jacksonville association.

Achenbach left Decatur in August, 1946, to become secretary-treasurer of the Fox Valley-Joliet Production Credit Association in Geneva.

In December, 1933, Darrell Achenbach married Marguerite McWard, a farm girl of Christian county, who taught in country schools of that area. The Achenbachs have a daughter, Kay Ellen, 11, and a son, Billy, 6.

Grass silage can't be beat as a dairy feed, says Paul Montavon, (center) and father, Jim, (right). DeKalb County Farm Adviser W. C. Mummert, (left) agrees, says more than 200 DeKalb county farmers are feeding grass silage.

Paul, a veteran ham radio operator, says farmers should have inside hobby. He has reached 60 foreign countries with his powerful set. Montavon has numerous interests and a master's degree in English from University of Wisconsin.

Using Grass Silage in the Cash Grain Belt

Montavons Find Cows Milk Better on Grass and Fewer Acres of Grass Fill Silo

By LEW REISNER
Field Editor, IAA Record

WHEN YOU ask Paul Montavon, DeKalb, what he thinks of grass silage as a feed, he has a quick answer and a ready proof of its value.

"It's a wonderful feed," he tells his visitors, adding, "here, taste it." And it does taste good. Like sauerkraut, slightly pickled. And that's just what they're calling it in the dairy belt, pickled grass.

Paul and his father have had a great deal of experience with this new feed. They have been putting grasses into their silo for 10 seasons. "And we like it better and better," they say.

If you had your choice (and he does have) between an acre of corn and an acre of alfalfa for silage, which would you take, Paul was asked. Alfalfa, everytime, he answered. Here are his reasons.

Paul and his father have found that cows milk better on grass silage (it's the next thing to grass). It takes fewer acres of grass to fill a silo, and it's a better feed for growing stock.

The Montavons have a cement stave silo that normally takes 13 acres of corn to fill, or 20 acres of first cutting of alfalfa. It actually takes fewer acres of alfalfa, however, because of the second and third cuttings.

"We like to look at it this way," Jim, the father, said. "We can grow 20 acres more of legumes, getting more grass and less crop into our rotation." As a member of the DeKalb county soil conservation board, Jim is serious about saving his soil.

Since the grass silage is high in protein, the Montavons have found that dairy heifers. For feeding their high-producing dairy herd, they add grain but use only half as much purchased protein feed.

The Montavons like to cut their grass for silage just a little before it's mature enough for hay. In practice it works like this. The alfalfa is cut for silage first, a few day's before it is ready for hay. When the silo is filled, the alfalfa is a little more mature, and is ready for cutting as hay.

They still like to use a preservative, Paul said. They sprinkle 200 pounds of ground corn-and-cob meal per ton of grass over each load of silage as the wagons are being unloaded. They have never had a failure with this method.

The hay goes in the silo two hours after it is cut, soon after the leaves have started to wilt. "We like to put ours in a little wetter than is generally recommended, when it has about 70 per cent moisture," Paul said.

"We've tried several mixtures, but like brome and alfalfa best. Brome beats timothy," he added. They seed 8 pounds of alfalfa and 12 of brome per acre. The brome is mixed in with the oats at seeding time at a rate of six pounds of brome to one bushel of oats.

★ ★ ★

Paul and his father do not claim to know all the answers about grass silage, but they have given thought to most of the questions you might ask.

While talking about silage, Paul mentioned he thought farmers needed indoor hobbies. His is radio. Paul is a "ham" and is proud that he has sewed up 60 countries — from the Fiji Islands to Norway.

By sewed up he means that he has established two-way contact with "hams" in these many countries — almost all the countries in the world. Paul's barnyard is a maze of transmitting wires. This leads Paul to say his most rewarding crop is his 5 acres of antennas.

Paul and his father say that many of their neighbors are switching to legumes for silage. One neighbor has had success with a temporary silo. Another has tried blowing it in a pile, something similar to the square open-air piles of pea-vine silage common in Lee county.

There is still a good deal to learn about grass and legume silage. But his much the Montavons know after 10 years of fruitful experience. It is a good, safe feed, ideal for milk production.

THE FARM WOODLOT

Urge Reduction of Taxes on Woodlands In Illinois to the Point Where They Would Be More in Line With Income From Timber

REDUCTION in taxes on farm woodlots to a point where they would be more in line with woodlot income was urged by President Charles B. Shuman of the Illinois Agricultural Association in addressing the first Illinois Forestry Congress held in October on the University of Illinois campus.

President Shuman also called for improved market outlets for wood from farm forests, including cooperative marketing groups.

The IAA president also pointed out that greater stability of farm prices would enable farmers to invest in improvements for their woodlots instead of using all income for other farm operations. He also urged that private consulting firms, specializing in management of farm lots, be established to take care of the work of laying out, planting and harvesting of farm timber.

By CRESTON FOSTER
Editor, IAA Record

Above: Illinois business and educational leaders examine a display of baskets produced in a Union county plant. Left to right. Dr. W. L. Burlison and Dean H. P. Rusk of the College of Agriculture; Dr. J. N. Spaeth, head of the U. of I. forestry department and general chairman of the congress; Chester C. Davis, president, Federal Land Bank, St. Louis; and F. W. Gottschalk, technical director, American Lumber and Treating Company. Right: IAA President Charles B. Shuman (left) talks timber with L. B. Culver, extension forester.

Plans also were discussed at the congress for setting up an organization to promote forestry in Illinois. Dr. J. N. Spaeth, chairman of the congress and head of the U. of I. forestry department, was authorized to appoint a committee to recommend what type of organization was needed to put the plan into effect.

This committee will include farmers, lumber representatives, sportsmen, women's clubs, conservationists and others interested in forestry.

Possibilities of increased farm income through the growing of pulp wood was stressed by George W. Brooks, director, department of research and education, National Brotherhood of Paper, Pulp and Sulphite Workers, American Federation of Labor.

Brooks said that finding a source of pulpwood is one of the most urgent problems of the paper industry today. Use of paper is increasing yearly by leaps and bounds and paper pulp sources are dwindling. The shortages of paper that have existed during and since the war have been due mainly to lack of wood pulp and not because of a lack of production machinery or manpower.

John R. Fornof, publisher of the Streator Times-Press, and president of the U. of I. board of trustees, had earlier pointed out how much paper his publication used in a year, and how little pulpwood is produced in Illinois.

Chester C. Davis, president of the St. Louis Federal Reserve Bank, declared that many farmers who treat trees as another crop are making money at it.

Davis presented some estimates on 32 southern Illinois counties with an average of 27,000 idle acres.

Assume, he said, that this land if reforested eventually could produce 370 board feet of timber per acre. At an $8 valuation per thousand board feet these 27,000 acres per county would yield $80,000 per year income. If the farmer owner would harvest the timber himself, an increased farm income of another quarter-million dollars could be had in each of the 32 counties, Davis said.

Other points stressed at the congress were that Illinois (1) is not making the best use of its timber crop, and (2) is not making full use of the land best suited to growing forest crops.

Dr. Spaeth pointed out that Illinois has 3.5 million acres of timberland now loafing on the job. With better management, this land could produce almost three times its present yield.

Illinois has another 2½ million acres of land that need reforesting because

"G I" AG TRAINING

Serious Young Farm Veterans Learn Finest Modern Agricultural Practices Through On-The-Job Programs

WHAT about the on-the-job training for veterans? Has it helped returning service men to get started farming?

After talking to young veterans now farming on their own, the answer, you will find, is yes.

It is helping in two ways. Through an extensive training program that is employing the best in teaching talent. And through generous financial payments.

Many of the teachers are vocational agricultural instructors. Others are successful farmers, farm managers, and others, whose experience qualifies them to teach.

One of these instructors, held in high esteem by his ex-GI students, is H. P. Erwin, who teaches in the Mattoon high school. He is one of 440 vocational agricultural teachers and 700 special instructors engaged as part-time teachers for veterans in Illinois.

Erwin teaches a class of self-employed veterans, men farming for themselves. One of Erwin's students is Fred Turner, 28-year old ex-army sergeant. His on-the-job training under the guidance of Erwin, his instructor, has helped Turner in many ways. Turner and Erwin have worked together well.

Young Turner was discharged from the army about three years ago and now farms 400 acres which he and his father rent.

"One of the first problems I've had to tackle has been to check gully and sheet erosion," Turner said recently. Here is how his on-the-job training helped.

He took soil samples of all his fields and had the samples tested at the Coles County Farm Bureau soils laboratory. This helped him establish soil-building legumes.

Turner also has planted a large corn field on the contour. One of his biggest projects has been to hire a bulldozer to grade shut a deep gully on the farm. Where this five-foot ditch once divided the field he now has successfully established a 200-feet-wide grass waterway.

Through his GI classes Turner, with the help of his instructor, mapped out a livestock program for his farm, consisting of a beef cow herd, a flock of ewes, and from 400 to 500 hogs.

The GI classes have enabled Turner to meet other veterans with similar problems and to talk things over with them. He used the school's shop to build a grain wagon box, and the welder to fix broken machine parts.

Appreciates the Help

Turner, like most of the GI's, appreciates the help it has given him.

"I don't think you'd find any group of veterans in any trade or profession who take their work in classes any more seriously than we do," Turner said recently.

This substantiates the word of J. E. Hill, chief of agricultural education for Illinois.

"I believe that most of the bad situations have been eliminated. Attendance is excellent, absence is a rare thing. In my opinion, the present program is effective and is a good educational program."

What about the self-employed veteran as a student? "They make the best student a teacher could have in his classroom," Erwin says. "Veterans are eager to learn. And equally important, if they are farming for themselves, they can put what they learn into practice."

The financial payments the program provides have been a lifesaver to such veterans as Ben Wither, 27, an ex-marine, who started farming this spring. He also farms near Mattoon in Coles county.

Everything about Illinois farming was new to Wither. He moved up here last winter from Brightwater, Ark., for a second start. He had been completely wiped out on his 44-acre chicken farm by a tornado that destroyed the town, killing among others, his sister's baby and the baby's paternal grandparents.

Bill Wither

"I needed help with everything," Wither says. "The kind of machinery to buy, how and when to plant. And the payments, to tide me over until my first crop, were a real lifesaver."

As a self-employed veteran with two dependents, Wither is entitled to $97.50 from the government, provided his earnings over the year do not exceed $290 a month.

The ceilings and payments vary, depending on the num-

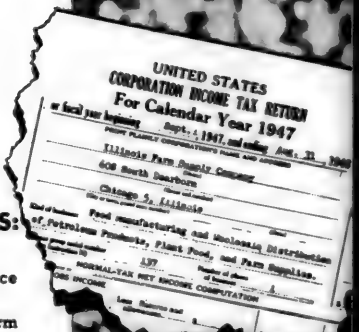
An Open Letter

TO THE BUSINESSMEN AND FARMERS OF RURAL ILLINOIS:



UNITED STATES
CORPORATION INCOME TAX RETURN
For Calendar Year 1947
Illinois Farm Supply Company
608 South Dearborn
Chicago 5, Illinois
Manufacturing and Wholesale Distribution
of Petroleum Products, Plant Food, and Farm Supplies.
1377
NORMAL-TAX NET INCOME COMPUTATION

This is a statement of the ownership and tax paying position of the Farm Bureau service companies in Illinois.

The Illinois Farm Supply Company began operations in 1927. It was organized by farm leaders from seven counties. These counties had earlier set up their own local service companies and decided that they could increase their effectiveness by organizing a state-wide purchasing company. They supplied $22,450.00 which was the first working capital of the Illinois Farm Supply Company. Soon other counties set up their own local service companies and became members of the Illinois Farm Supply Company. They, too, sold sufficient capital stock to farmers to meet their needs for fixed assets and enough additional to provide their pro-rata share of the capital needs of Illinois Farm Supply Company. This policy is still in effect. To show how this works, let us consider two recent developments:

In January, 1948, the Illinois Farm Supply Company purchased a corporation known as Pana Refining Company. This company has continued in operation under that name and is a Federal income tax paying corporation. Then in June, 1948, the Illinois Farm Supply Company, with two other large midwestern co-operatives, purchased the Premier Petroleum Company of Longview, Texas. To finance our share of these and other transactions, the 105 member companies bought and paid for $3,500,000.00 in additional capital stock of the Illinois Farm Supply Company. To do this, these member companies not only sold this $3,500,000.00 but also another $1,000,000.00 in stock for their own capital needs. The extra $1,000,000.00 was used to cover improvements and additions to their own local facilities.

Today, after almost twenty-two years of operations, the farmers of Illinois have directly and indirectly invested in Illinois Farm Supply Company and its 105 member companies $10,707,750.00 in capital stock. These farmers are the real owners of the $10,868,700.00 worth of fixed assets at depreciated value.

These Farm Bureau service companies and Illinois Farm Supply Company pay Federal income taxes. In fact, they pay the same kind of taxes that your business does. All monies paid out in capital stock dividends are subject to taxation. Moreover, all monies retained in the capital structure of the company are taxed. Combined Federal income tax payments of these 105 Farm Bureau service companies and Illinois Farm Supply Company and its subsidiaries in 1948 will approximate $1,000,000.00.

Our farmers paid for what they own with cash. The earnings of these operations are distributed to the farmers in cash — $28,942,018.00 has been paid out in patronage refunds since 1927 without any strings attached. During this same period in addition these companies have paid dividends on capital stock in the total amount of $2,355,938.00.

Expansion, either in the county companies or in the Illinois Farm Supply Company, has been financed by money invested by farmers in their local county companies, and these local companies in turn have invested a part of this money in the capital stock of the Illinois Farm Supply Company. THIS EXPANSION HAS NOT COME FROM RETAINED TAX-FREE EARNINGS.

This open letter is written in the interest of better understanding. We strive to be good citizens, good businessmen, boosters of American free enterprise, and fair competitors.

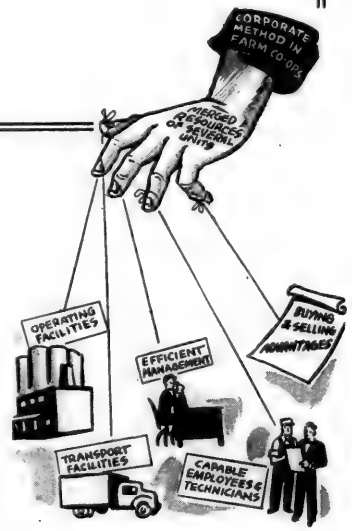
The CORPORATION and the FARMER

Farmers Are Beginning To Take Full Advantage Of The Corporate Organization As Other Economic Groups Have For Years

By GEORGE E. METZGER,
IAA Field Secretary



FARMERS are just beginning to make use of the corporation as other economic groups of people have made use of it for years.

According to Raymond Miller, former president of the American Institute of Cooperation, the principal reason that farmers have not been able to advance their standard of living as have city groups, is because they have not availed themselves of the corporation and the benefits that might be derived from it.

As an example, an incorporated city is classified as a muncipal corporation. When a city gets its corporate charter, under the law, it can avail itself of the taxing power. This power, along with other advantages, has enabled residents of a municipal corporation to enjoy advantages that the farmer does not have operating as an individual.

A municipality can construct a sewer system. It can have available the best engineering service for laying out that sewer system and for determining the size of the main sewer and its various tributaries. It can have available to it construction crews which can put in a sewer system in accordance with engineering blueprints. In other words, it can bring a sewer system to the door of the city resident.

When that city resident decides to modernize his home and put in a bathroom, he of course has fixtures installed and pays a moderate charge for a connection to the municipal sewer. True, he has paid some taxes for the construtions of that sewer, but through the power of the corporation he, along with this neighbors and fellow townsmen, has constructed a system to meet the requirements of the law and health regulations.

If the farmer should decide to modernize his home, we will assume that he will be at the same expense as a city resident in installing bathroom fixtures, and probably the same expense in carrying the sewage from his bathroom a reasonable distance from his house. But when he has done that, he still lacks a sewerage system which he must have installed at his own expense. To be safe, he must install a septic tank and arrange to protect his own water supply. In many instances, these expenses have put the thing out of his reach.

The same can be said of a municipal water system, which the farmer himself must supply when he attempts to modernize his own residence. So, the corporation has distinct advantages that the farmer, as an individual, does not have.

A similar illustration might be used in the case of an electric company. The utility corporation, through its corporate powers, can service a city at moderate cost. Before the days of REA, if the farmer wanted electricity, he was generally called upon by the electric companies to construct his own line or do it jointly with neighbors, and then to virtually give the line to the company.

He had the same expense as his city neighbor. In addition, he had a hook-up charge to the main line. Above that, in many instances, he was required to guarantee a high minimum amount per month. He did not have the advantages of the corporate structure until REA came along. Many of our farmers now have electricity and have it at a reasonable rate.

We might multiply these examples of the corporate structure. Farmers are just beginning to use it. Someone may argue that we have had farmer cooperative elevators for a number of years and that that is a corporate structure. True it is, and it has served the farmers of the various communities well, but until recently, that corporate structure has not been expanded in such

FARMERS BOUGHT AT RETAIL PRICES....

a way that it would tie these local cooperatives together and bring to the community additional benefits to be derived from large corporate organization.

The corporate set-up which the farmer ordinarily uses is a little different from that commonly used in the cities. The farmer likes the cooperative way of using the corporation. The ordinary corporation entering its business field does so generally for profit. Its profits are distributed on the basis of capital investment. Its control is based largely on capital investment.

Under the cooperative set-up, the return on capital is limited. In a true cooperative, the return for invested capital cannot be more than 8 per cent. It may be considerably less than 8 per cent. When the fixed return has been paid on invested capital, then any amount of earnings, aside from possibly reasonable reserves, are allocated in the form of stock or certificates or cash to the members in proportion to the business they have done with the cooperative. In virtually all other respects, the cooperative resembles the general corporation very closely.

The cooperative must serve its members. It must always be a leader in its field. Therefore, it must be aggressive and progressive. Farmers are the one economic group that buy most of the material they use in a retail market and sell most of their products in a wholesale market. This is contrary to the conventional way of doing business.

The general policy of cooperatives operating in Illinois is to sell at the going price. Earnings or savings are refunded to the member in proportion to the business he has done with the concern.

In a marketing cooperative, the organization again should merchandise quality products. For the most part, our marketing cooperatives buy the product from the farmer and take title to it. They pay the going market price except in some instances, they make the market.

A year or so ago Illinois Livestock Marketing Association opened a couple of new cooperative concentration points in the western part of the state. Their bid to the farmer for livestock was good enough that it raised almost immediately the price level 50 cents to 75 cents per hundred pounds live weight of hogs. The difficulty this cooperative had was taking care of all hogs that were offered. The margin has narrowed as competitors were forced to higher prices.

Our cooperative creameries, when they started operation in Illinois, raised the going price level to a considerable extent. Sometimes, the farmer member of these cooperatives is inclined to measure his marketing cooperative by the amount of cash dividend he receives. This is an erroneous conception of the cooperative on his part. He should also take into consideration the increase in the market level.

FARMERS SOLD AT WHOLESALE PRICES...

If the cooperative raised the market level of butterfat a nickel a pound, or as in the case that has been cited on hogs in western Illinois, the farmer marketing through old-line competition benefited as well as the farmer marketing through the cooperative. The marketing or purchasing cooperative cannot just be a standby organization. To force competition to do what is right, it must have the active and aggressive support of its members.

There may be times when competition will attempt to squeeze out a cooperative. Unless members come to its rescue, they may lose the very thing that they set up and financed to serve them. So in addition to the cooperative serving the member and making it profitable for him to be a member, the member himself must exercise some degree of loyalty toward that cooperative for its protection.

Many cooperatives operate on narrow margins. Sometimes these narrow margins are brought about by the cooperative itself. Under such conditions, it must have able management and it must have volume. The supplying of volume becomes the responsibility of the member.

There is one other responsibility which both the member and the cooperative organization itself must assume. Local cooperatives often operate at a disadvantage when in competition with old-line corporations that operate over a wide expanse of country. The old-line can raise prices in the vicinity of the local cooperative. They can lower them elsewhere where such competition is not in the picture.

With a monopolistic trend in the combining of local corporations into gigantic organizations and with a monopolistic tendency on the part of organized labor, farmer cooperatives have no choice except to merge and cooperate for their own advantage. One of the hardest jobs I have ever encountered is to get cooperatives to cooperate. Many managers and many boards of directors of local cooperatives will not cooperate, in the way they expect their farmer members to cooperate with them.

Large cooperatives closely knit and commanding tremendous volumes of business, operating on relatively narrow margins, must come into the picture if the full use of the corporate structure is going to be made available to the rank and file of farmers. Illinois farmers now have the opportunity to make wide use of the corporate structure.

BUT FARMERS FINALLY "GOT WISE!"

Membership of the Illinois Agricultural Association is now above 155,000. Cooperative marketing and purchasing organizations of one kind or another are available to most of these members. Some of these local cooperatives need merging. Many of them need closer tie-ins with their statewide and regional cooperatives. Such understanding is necessary on the part of members to bring about the reorganization that is necessary if our cooperatives are to be of the greatest value and render the greatest service to their members and to agriculture as a whole.

RURAL YOUTH

By ELLSWORTH D. LYON, Director
Young Peoples Activities

Talkfesters and Drivers

NEARLY 200 talkfesters and skilled drivers took part in the district activities — Oct. 18-28. Not to be overlooked are the loyal supporters who accompanied the participants and who cheered them on. There were 120 talkfesters from 53 counties. Most encouraging was the high quality of the speeches given by the talkfesters from all over the state.

Virginia Johnson

The well-prepared talks indicated much previous preparation through study and practice. Both factors are necessary for clear thinking and good speaking, and both result in good leadership for agriculture. Virginia Johnson, Adams, stands as a good example of one who spoke with great emphasis upon her topic, "An Ounce of Insurance Protection Prevents a Ton of Grief."

The skilled drivers' program on the district level was supported by 75 drivers from 40 counties. This year around 2,500 Rural Youthers took the written test in skilled driving and many of these engaged in actual performance and skill tests in the local counties. These figures are an increase over last year when there were 72 drivers selected for district contests from a field of 1,500 young people who engaged in county contests.

In driving their automobiles, as was true in speech activities, practice helped the participants. It was evident that counties which had engaged in actual driving contests had received practice in various driving tests and made better scores in the districts than participants from counties which did not have county contests.

Program Planning

Programs for county meetings are always a timely topic for consideration. Now that corn picking is being completed many Rural Youth members will have more time for preparation for solid but interesting educational features for future county meetings. A source of help heretofore not available is the newly formed county Public Relations Committees which have been organized under Farm Bureau in nearly all counties of the state. These public relations committees are made up of "minutemen" who are wide awake and alert upon issues effecting agricultural life within the county, state, and the nation.

These five-man committees are made up of farmers who can discuss with groups or individuals preparing to lead discussions upon such specific topics as road improvement, taxation, safety, animal health, rural schools, legislation, and Farm Bureau cooperatives, as well as topics of general interest to agriculture. By contacting your Farm Bureau president or Farm office, Rural Youthers may find out who are the members of the public relations committees. Remember, they are there to help you as young farm people upon the problems which effect your living.

Richard Balsley, high point driver, Tazewell, shows how difficult it was to make a perfect score in serpentine driving at the Petersburg contest by not touching or knocking over any standards which were set in a line 24 feet apart.

County Activities

The Marengo Club of McHenry had Farm Adviser W. H. Tammeus discuss Bang's disease at their October meeting. He also presented a movie showing how serum and virus are prepared.

Brown heard Nelson Workman, general agent of IAA insurance, in an interesting talk on life insurance.

Stephenson is rolling along at a good rate. In a recent meeting with a number of guests present, 15 new members were received into the group. Elwood T. Baker of Farm Bureau-Farm Management, showed slides relative to his work. Also Miss Joyce Baltzer of Dakota spoke on the United Nations.

"The Whiteside of Rural Youth," newsletter of Whiteside, carried a timely full-page article just before Nov. 2 upon voting procedure, and a challenge for every eligible voter to fulfill his duty and exercise the democratic privilege of voting. Commendable work! Keep it up!

The county Rural Youth newsletters are always welcome (and read) in the office of Young People's Activities. Special recognition goes to Montgomery for their new "Chit Chat" and to Sangamon's and Will's new, but as yet unnamed, newsletters.

National Rural Youth

There are now 12 states in the National Rural Youth Organization under the American Farm Bureau Federation. They are: Illinois, Indiana, Iowa, New Hampshire, Tennessee, Ohio, Michigan, Nebraska, Minnesota, Oklahoma, California, and Wisconsin. Minnesota and Oklahoma are the new members received in 1948.

It is proposed by the agricultural agent of the Gulf, Mobile, and Ohio Railroad that his company be permitted to give some form of recognition to some of the Rural Youth county groups in the 29 counties which the railroad serves. Bases of evaluating the activities of counties have been suggested to be upon administration, (constitution, by-laws, minutes, parliamentary procedure), community service, and recreation. It is suggested by the G. M. and O. that the project be carried through the Rural Youth department of the University of Illinois College of Agriculture.

Illinois is a long state, extending from 37 degrees latitude in the south to approximately 42 degrees and 30 seconds in the extreme north.

WINTERTIME...

FUN FOR KIDS- WORRY FOR DRIVERS

COUNTRY MUTUAL CASUALTY COMPANY

December — time for snow balls and sliding. And time, too, for icy roads, and treacherous driving.

Brakes don't mean much on glassy highways, but careful driving does! That's why Country Mutual Casualty Company discounts unfavorable weather conditions in favor of extra driving caution — slow, careful speeds.

Over a period of 21 years Country Mutual Casualty Company has found the risks of insurance less by insuring *only* Farm Bureau Members whose safer driving conditions have made them a *preferred risk*. This means greater protection at *far less cost*, and with a company cooperatively owned by you, where savings are passed back to you each year in the form of dividends.

Ask our friendly Country Mutual Casualty counsellor why it PAYS to insure with your own company for greater protection at less cost.

COUNTRY DOCTOR

Dr. Hoyt, Roseville, Is Honored as Illinois' Outstanding General Practitioner

IN DOWNTOWN Roseville, population 1000, the citizens have erected this sign:

"Reserved for physician by order of the village board. Fine $5."

Dr. Hoyt

It is a token of esteem by the townsmen to "Doc" Hoyt, the town's only physician, who has recently been chosen by the Illinois State Medical Society as the outstanding general practitioner in Illinois.

The sign was put there to end the parking problems of Roseville's busiest citizen. The rural area Dr. L. T. Hoyt serves has a population of about 4,000. It comprises Henderson and Knox counties.

Dr. Hoyt is an outstanding example of the type of country doctor the Illinois Agricultural Association and the Illinois State Medical Society are seeking to attract to rural areas through their jointly-sponsored student medical loan plan.

Under this plan medical students are granted loans up to $5,000 to finance their medical education. In return, they agree to practice in counties in Illinois where rural doctors are needed.

Loans have been granted to three medical students who enrolled last fall for their first year of work in Chicago medicals schools.

Dr. Hoyt is held in high esteem among his colleagues for the quality of his medical and surgical work. His aid as a consultant is frequently sought in diagnostic problems.

He was praised for keeping up with the new developments in medical literature and techniques despite his heavy work schedule, colleagues for the quality of his medical and surgical work.

As a loyal member of his community, Dr. Hoyt has served on the local board of education and has been active in establishing a modern health program in Roseville, with emphasis on preventative medicine and immunization.

He is president of the county chapter of the National Foundation for Infantile Paralysis and is a member of the county tuberculosis district board.

He is also know to Farm Bureau members as the chief examiner for Country Life Insurance Company in Warren county.

Raised a country boy at Good Hope, McDonough county, he came to Chicago for his medical work, and was graduated from Rush Medical College.

After his internship at West Suburban Hospital in Oak Park, he went back to the country, practicing seven years in Raritan, Henderson county, before moving to Roseville.

FARMERS SEE MODERN LOGGING DEMONSTRATION

THE LATEST in logging machinery was demonstrated recently to more than 700 farmers, foresters and sawmill operators during the first Illinois Logging Equipment Show staged in the Kaskaskia Experimental Forest near Harrisburg.

The show was planned by the department of forestry of the University of Illinois and the Central States Forest Experiment Station.

Visitors entering the forest area watched chain saws felling trees. They saw the various makes of new saws and compared the techniques of the operators doing the work of felling and bucking.

With the trees felled and bucked, the skidding and yarding equipment took over, and the large tractors, sulkies, log carts and hydraulic lift bars were put to work.

Wood chopping and sawing contests, traditional logging show stunts, were held during the noon hour.

The afternoon was devoted to log-loading demonstrations and sawmill operations. One of the new machines shown was a self-loading attachment for log trucks.

Final sawmill operations were performed by two portable mills. Both were diesel-powered.

Men in charge of the show estimated that more than half a million dollars worth of logging machinery and equipment was demonstrated during the day.

Registration cards showed visitors from 12 states, including Illinois.

This is a self-loading attachment for log trucks. Here an oak log is being removed from the forest during the show and loaded for hauling to the sawmill.

This winch and sulky is skidding a white oak log from the forest to area where it will be loaded on trucks to be taken to the sawmill.

Donna Joan Egbert, 6 months old, Schuyler county, plays he-loves-me, he-loves-me-not as her terrier puppy stands beside her table.

$5 AWARD PICTURE. Half-mile-long crowds line up to see Freedom Train, center, at George Rogers Clark Memorial, Vincennes, Ind. Snapped by Fay Geltzinger, Lawrence, from Wabash bridge built at exact spot where Lincoln crossed river.

Farm Bureau Folks In Pictures

Lover's Leap at Starved Rock park, showing dam on Illinois river taken by Ester Widolff, Lee.

Joyce Blair, Greene county, goes western with dog and snow horse of her own making.

Two girls at play. Bride is Lois Gocken, 9, Ogle county, groom is her cousin, Marion, also 9.

Year-old Border collie owned by David Hall, La Salle county, climbs 10-foot vertical ladder.

Mr. and Mrs. Frank Becker, Jo Daviess county, celebrate their golden wedding day with feast.

Four scholarship award winners in a 4-H "better methods" activity project received awards from B. I. Budd, president of Public Service Company of Northern Illinois. The winners, left to right, are Thelma Thomas, Livingston county; Anita Reaman, and Marvin Subbert, both of Kankakee county, and William Hubbard, Jr., Ogle.

80 4-H'ers Honored

Boys and Girls From 21 Illinois Counties Are Feted in Chicago By Business Leaders And National 4-H Club Officials

MORE than 80 4-H Club boys and girls from 21 northern Illinois counties — all winners in this year's "better methods" activity — were honored by business leaders and national 4-H officials Oct. 30 in Chicago at a special 4-H "achievement" day.

The winners include two boys and two girls from each of the 21 counties. The boy and girl winner in each county received U. S. savings bonds and the runners-up were awarded all-expense camping trips for 1949 to Camp Shaw-Waw-Nas-See near Kankakee. The "better methods" activity aims at improving farm and home chores.

In addition, four top winners, two boys and two girls, were awarded $200 educational scholarships. They were Thelma Esther Thomas, Livingston county; Anita Reaman and Marvin Subbert, both of Kankakee county, and William Hubbard, Jr., Ogle.

The scholarship winners were picked by county farm and home advisers in cooperation with the University of Illinois 4-H club staff.

Other winners and runners-up in each county were: David L. Lampert, Phyllis Holmes, Clifford Peacock and Marlene Turner, Boone county; Donald Linneman, Jeanne Dettman, Edwin Linneman and Shirley Landwehr, Cook; John Huftalin, Clara Mae Anderson, Donald Huftalin and Joanne Quinc, DeKalb.

George R. Heimann, Caryl Towsley, Clarence Mack, and Betty Mae Smith, DuPage; James Williams, Eleanor McGuam, Batt Maher and Barbara Dorheim, Grundy; Kenneth Lange, Marjory Bailey, and Susannah Alfredson, Kane.

Eugene Novack, Dolores Essington, Rodney Ohm and Betty Ranz, Kankakee; Floyd Hutchings, Dolores Naffziger, George Connell and Beverly Chamberlin, Lake.

Bill Stassell, Joan Watts, Betty Ackland, Lee; Edward Masching, Delores Collins, Owen Pratt and Wyvonna Rose, Livingston; Eugene Kunkel, Peggy Ransom and Rena Bade, Marshall-Putnam.

Richard Jacobson, Angela Week, Wendell Calhoon and Lucy Raffel, McHenry; Melvin McCaw, Barbara Guthrie and Joan Nelson, Mercer; William C. Coffman, Carol Schumaker, Robert Ruthe and Reita Pope, Ogle.

Robert Scholl, Frances Adams, David Keiser and Bertha Jean Kieser, Stark; Nathan Kubly, Evelyn Rosenstiel, Lorris Bowers and Carolyn Giessel, Stephenson.

Tom Housenga, Doris Knox, Orville Goodenough and Darlene Bielman, Whiteside; Vernon Lankenau, Jane Wisherd, Kenneth Heisner and Dorothy Kohl, Will; Cletus Schertz and James Cornwall, Woodford.

What About Next Year's Corn, Hog Crop?

ARE you thinking now about your next year's corn and hog crop? Are you in doubt about support prices? If you are, here are some figures from the U.S. Department of Agriculture that may help in your planning.

Hog prices are to be supported at 90 per cent of parity through 1949. Hog prices are not expected to drop to this support level during the present period October-March.

Support prices for hogs are figured twice a year on the basis of parity prices on March 15 and Sept. 15. The Sept. 15 parity was $18.20 a hundred on hogs, while the average price received by farmers was $27.30.

Corn loan rates, also based on parity, range by counties from $1.34 to $1.63 a bushel, and average $1.44 nationally. Purchase agreement rates for the 1948 crop range from $1.34 to $1.66 a bushel.

A pig crop of 60,000,000 is urged by the U.S. Department of Agriculture. This is 17 per cent more than the 1948 crop of 51,400,000. The demand for meat is strong, and abundant feed supplies should bring more pigs to market. The feed ratio for hogs is very favorable.

All School Proposals To Be Voted Upon Before March 1, 1949

By JOHN K. COX, Director
Rural School Relations

ALL THE survey committee proposals not already voted on will be voted up or down by the people before March 1, 1949.

Shall we wait to reorganize schools until everything is favorable? We might say, "Shall we wait to get married until we have 'enough' money laid by, or until we have picked out and paid for the type of home we want?" If we did, most of us would never get married.

Some people have said that roads, the tax structure, public opinion are not ready for reorganization. If we wait until everything is ready, there won't be much reorganization. Those same limitations have existed for many years and have been weighed and considered of secondary importance in every one of the over 160 new community unit districts that have been set up.

We now have a statewide program of school reorganization under way. We have an opportunity in each of our own counties to follow through on school reorganizations proposed by the school survey committees or to make other plans more to our liking.

We learn to walk by taking one step at a time. We now have an opportunity to take the reorganization step and thus provide the conditions in which a sound educational program can develop. We have but one opportunity to make good on our obligation to the citizens of tomorrow. That is while those citizens are the youth of today. Let's put first things first. Let's reorganize our school districts first. Then, that being done, let us put the same enthusiasm into correcting some of the other long standing problems that are related not only to schools but to other phases of community life and government as well.

Christmas Greetings

We go about from day to day,
To week, to month, to year—
And never stop to say or do
A thing to show we think of you
Until the year is almost through
And then say "Christmas Cheer"!

You wouldn't think we cared a bit,
We don't take time to say—
But when we fill a lot of tanks
Or drop a load of feed at Hank's,
We wait and say our many thanks
The "Merry Christmas" way!

This message is presented in behalf of the many truck salesmen, feed salesmen, warehousemen, office personnel and managers of the 105 Farm Bureau-type Cooperatives and the management and personnel of Illinois Farm Supply Company. It is their sincere wish that your Christmas will be most enjoyable.

'A Smart Thing for Me to Join Farm Bureau'

By JIM THOMSON
Ass't Editor, IAA Record

FIFTEEN years ago George Bauer of Franklin county wasn't too happy about his role in life as a farmer.

He thought depressing thoughts one day while disking corn stalks. For one thing, the nation was in the midst of a paralyzing depression. For another, prices were at rock bottom and even if prices had been high it wouldn't have helped much because production per acre was frightfully low. He had never sensed such a dark future for himself.

Bauer dates the long pull upward from that day he disked those puny corn stalks. The same day Farm Adviser Jerry Emser stopped to see him. Emser looked at the spindly corn and asked Bauer how many bushels of corn he was getting to the acre.

"About 20," Bauer answered.

"How much wheat?" the farm adviser asked.

"Around seven to ten bushels."

"You can do better than that," said Emser.

"How?" Bauer asked.

"I'll show you how," Emser replied.

"Well sir," Bauer related, "seeing is believing. It wasn't long at all before the farm adviser took me along to the University of Illinois experiment fields at Urbana. Then he took me to the experiment farm at Dixon Springs."

Bauer stopped and was thoughtful for a moment. "You know," he said, "that Dixon Springs is sure a wonderful place."

"I learned," Bauer continued, "what it means to apply phosphate, limestone, and potash, and how sensible it is to plow under sweet clover for nitrogen.

"I also learned that it would be a smart thing for me to join the Farm Bureau. I did and I've been a member ever since. A good farmer can't afford not to belong."

He is proud of the fact that he was one of the first farmers in the neighborhood to apply phosphate to his fields.

Today Bauer has more than doubled his corn yields. Wheat yields are beyond his dreams. Now he has more feed and more time for hogs and beef cattle. He raises and average of about 70—100 hogs each year, 10 beef cows and 10 beef calves.

He owns 120 acres and rents an additional 80. Fifteen to 20 acres are in corn, 70 in wheat, 30 in soybeans and the rest in pasture and clover.

Today Bauer is a lot happier about his role as a farmer. Thanks to Farm Bureau, he said, and the fateful high prices of the past eight years. He now owns farm machinery worth about $6,000. Mrs. Bauer is happier too about the remodeling of the home this year which includes the installation of running water, a coal furnace, and a bathroom.

For more than a decade now, Bauer has never lost sight of the importance of soil building, and conservation. If there is any question in his mind, he looks to the Farm Bureau for guidance. Some day he hopes to pass along the farm to his son. There is little doubt but that it will be in better condition than he received it.

'Foot and Mouth Disease in Mexico to Stay'

FOOT-AND-MOUTH disease is in Mexico to stay, believes Dr. G. W. Hess of the U. S. Department of Agriculture. Doctor Hess spoke to the staff of the University of Illinois College of Veterinary Medicine recently on his experiences with foot-and-mouth disease in Mexico.

"When the Americans first went down to Mexico, they tried to eliminate the disease by slaughtering infected and exposed cattle," Doctor Hess reported. This method had been used successfully to eliminate foot-and-mouth disease in the United States many years ago. But it was abandoned in Mexico after several months' trial. At that time 12,000 cattle a week were being sacrificed in the district under Doctor Hess' supervision.

Doctor Hess said that foot-and-mouth disease was so widespread that it would have been necessary to slaughter 7½ million cattle to eliminate it.

"Another reason why the slaughter program was not effective was that many farmers refused to cooperate, hiding their cattle rather than allowing them to be killed," Doctor Hess said.

79 Experts Comprise Judges List for 1948 International Show

A PANEL of 79 livestock, crops and light horse experts comprise the judges' list of the 1948 edition of the International Live Stock Exposition and Horse Show, W. E. Ogilvie, manager of the Exposition, has announced.

They include prominent livestock breeders and feeders, agricultural college men, government specialists, packers, and horsemen.

The forthcoming International, which will be the 49th annual edition of this Chicago livestock classic, is scheduled for Nov. 27 through Dec. 4 in the famous International Amphitheatre of the Chicago Stock Yard.

Its judges this year will come from 20 states, Canada, Argentina and the District of Columbia. On their decisions will rest the division of cash prizes — which this year will far exceed the usual $100,000 — among stockmen and farmers from an expected 35 states and Canada who will show their best in livestock and crops.

Heading the list of judges will be Dr. A. D. Weber, popular cattleman and judge of Kansas State College, Manhattan, who will judge all of the individual steer classes of the show both in the Junior Live Stock Feeding Contest for boys and girls and in the open classes for all exhibitors of fat steers.

It is the first time in the 48 year history of the show that an American has been selected for this high honor, Ogilvie states.

His first work will begin on the opening day, Nov. 27, when he will select the winners in the junior show, a competition that has grown in size and prominence since its introduction in 1916. Monday he will start selecting winners in the open classes which will be climaxed Tuesday when he names the grand champion steer of the show.

IAA To Entertain 4-H Club Members

TWENTY-SIX outstanding Illinois 4-H club members represented their state at the National 4-H Club Congress in Chicago Nov. 28 to Dec. 2, and were among the scheduled guests at the Illinois Agricultural Association's annual 4-H dinner.

More than 400 Illinois 4-H club members and leaders were scheduled to attend the annual IAA dinner honoring 4-H members of the state.

Mr. and Mrs. Kline show how some of their chinchillas are kept in cages lining the basement of their home.

RAISING CHINCHILLAS

Breeding These Small, Furry South American Rodents Can Be Done On Farm With Time, Patience, and—Lots Of Money

By JIM THOMSON
Ass't. Editor, IAA Record

AS A HOBBY or full-scale commercial enterprise chinchilla breeding fits easily into life on the average Illinois farm.

All it takes is time, patience, and—last, but by no means least—money. In chinchilla raising it isn't the upkeep, it's the original cost.

A mere $5 worth of feed will keep a chinchilla healthy and happy for a year. A pair of these precious little animals cost an average $1000 a pair. You need at least three breeding lines to start. That means $3000 and as much as $4000.

And you must have patience. It takes about five years before you can start cashing in on your investment by pelting.

The chinchilla is a native South American rodent with the world's most costly fur on its back. Early in this century it was hunted high in the Andes mountains until almost none were left.

A number were brought to the United States in 1923. Today there are 20,000 pairs in the United States and Canada. Chinchillas are raised for their exquisite blue-gray fur which is soft, lustrous, and light as thistledown. A pelt averages 8x12 inches and brings an average $65 to $85.

Pelt production is so small that enough fur is available to make only two or three coats a year. The demand is greater than the supply. This demand runs the price of a finished coat up to $30,000 to $40,000.

Chinchilla fur is costly because it is scarce and of high quality. It is scarce mainly because the chinchilla is not a prolific breeder like the rabbit, a distant relative. Chinchillas keep the same mate for life, litter an average of twice a year, and have an average 1.8 young per litter. Their gestation period is quite long—111 days. They mate at six months and breed at eight months.

The full-grown animal weighs 20-30 ounces. The female is a few ounces heavier than the male.

Mr. and Mrs. Alex Kline of near Utica in La Salle county decided to get into chinchilla raising three years ago when they bought three pairs. Today they have 250 animals. At present they are concentrating on breeding stock but expect to produce pelts commercially in about two more years.

The chinchilla is a timid animal. He sleeps during the day and is active at night. He is fed and watered once a day in early evening. It requires one man to care for 100 pairs.

With the disposition of a rabbit, the chinchilla doesn't bite and he is never vicious. He is very clean, odorless, and free of vermin. He is hardy and not susceptible to many diseases. He may catch pneumonia, however, if exposed to drafts.

Everything he eats can be raised on the farm. Fox and mink require a 95 per cent meat diet but the chinchilla is a grain eater. He thrives on a diet of wheat, oats, beet pulp, barley, sunflower seeds, corn, raisins, and timothy hay.

To assist those with pelts to sell to get a fair price, the National Chinchilla Breeders' Association is setting up a cooperative to bargain with buyers, in much the same manner as our farm cooperatives.

Persons interested in chinchilla breeding are urged to investigate sellers through the Illinois Chinchilla Breeders' Association in Springfield before buying.

Chinchilla raising is an interesting occupation or hobby but it is subject to all the difficulties inherent in animal raising of any kind. The capital outlay is high and the risk is great because of the amount of money involved. But if you have the money to spare you could do worse.

The Klines examine four high-grade pelts which have been appraised at $500. The average pelt, the Klines say, is worth $65 to $80.

SMART HOG MEN SAY—

NOW IS THE TIME TO START—

FEED for SPRING PIGS *NOW*

WHY SO EARLY?

Size and strength of pigs at birth indicate their future performance. The largest pigs at birth have a much better chance of being weaned. They make most rapid gains and are heaviest at market age.

The feed given to the sow during the gestation period is one big factor determining the number of pigs that will be born alive and the size and strength of these pigs. So, right now—by properly feeding your sow—you are determining how your spring pigs will perform.

BLUE SEAL PIG and SOW SUPPLEMENT

Gestation is a critical feeding period and the ration of the sow must be well fortified. Blue Seal Pig & Sow Supplement contains all the vitamins, minerals, and proteins needed to supplement your farm grains for proper feeding of the sow—to insure large, strong pigs at birth.

See Your Blue Seal or Service Brand Salesman for more complete feeding recommendations.

These feeds are distributed by

NEWS and VIEWS

Buy Proper Toys for Those Youngsters of Yours This Christmas

ON YOUR trips into toyland these pre-Christmas days, look for playthings that are both safe and durable for your youngsters.

Miss Margueritte Briggs, family relations specialist, University of Illinois College of Agriculture, says that children up to four years old need sturdy toys. They give things pretty rough handling, as you know. Toys for infants should be fairly large too. Otherwise, they may go into baby's mouth.

For safety, avoid playthings that are flammable and those with poisonous paint. And don't buy electrical toys or stuffed animals with glass or button eyes. Playthings that have sharp edges or small removable parts are also bad buys.

Good toys to choose for infants up to 2 are sturdy rattles, rubber or washable squeak toys, stuffed animals, blocks with rounded corners, and push-and-pull toys with strings or rounded handles.

If you have a two- or three-year old, he'll like a sand box plus a bucket and shovel, wooden animals, cars and wagons to push around, simple plywood puzzles, and a tip-proof kiddie car.

Youngsters from three to four years old like to play "let's pretend." For them you can buy a small broom or toy telephone, dolls and wrap-around clothes, doll buggies and furniture, dishes, modeling clay, and blunt plastic scissors for cutting paper.

Kendall Home Bureau Makes Trip to Chicago

KENDALL County Home Bureau members left their household worries behind them recently when they went on a conducted tour of Chicago high spots as the guests of the Chicago, Aurora and Elgin railroad.

They visited the Merchandise Mart building where they saw the "Ladies be Seated" radio program. Other highlights included a style show, dinner luncheon, and tickets to the Ice Follies.

PARTY APRON

You will make a hit at your next party when you appear in this dainty party apron. For free instructions on how to make this apron send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

Make Your Own Leather Gifts for Christmas

Only a few more shopping days until Christmas!

And whether or not you're thinking of Christmas yet, there's always a birthday or other occasion for which you want a special gift. Handsome leather articles can be the solution, suggests Miss Marion Kaeser, home furnishings specialist, University of Illinois College of Agriculture.

Coin purses, photo albums, jewel boxes, belts and many other things can be made with simple home tools, says Miss Kaeser. Tools include a 12 x 12-inch piece of glass, a ruler, heavy cardboard, orangewood stick, a leather punch which can be made from a nail, and a wooden mallet. A variety of leathers can be used—cowhide, calfskin, sheepskin, goatskin.

For directions on making leather goods, write for "Let's Make a Leather Purse" or "Fun With Leather," new leaflets by Miss Kaeser. Send your request to University of Illinois College of Agriculture, Urbana, Ill.

Favorite Recipes

PECAN ROLLS

2 cups sifted enriched flour
3 teaspoons baking powder
½ teaspoon salt
4 tablespoons shortening
2/3 to ¾ cup milk
2 tablespoons melted butter
½ cup brown sugar
Pecan halves

Prepare muffin pans by spreading thickly with a creamy mixture made by creaming together three tablespoons butter and six tablespoons brown sugar. Put two or three pecan halves into each muffin cup. Sift together flour, baking powder and salt. Cut in shortening. Add milk, stirring only until dough holds together. Turn out on slightly floured board and knead lightly for one-half minute. Roll out to one-fourth inch thickness. Brush with melted butter and sprinkle with brown sugar. Roll jelly-roll fashion and cut into one-inch slices. Place slices cut side down into muffin pans. Bake in moderately hot oven (425 degrees F.) 20 to 25 minutes. Let stand in pan for a minute before turning out. Serve hot or cold. Yield: 16-18 small rolls.

VIENNESE STEW

2 tablespoons fat
¼ cup enriched flour
1 teaspoon salt
¼ teaspoon pepper
½ pound veal stew meat
3 cups water
1 bay leaf
¼ cup chopped onion
¼ cup chopped celery leaves
1 teaspoon Worcestershire Sauce
¼ teaspoon Tabasco Sauce
½ teaspoon salt
2 cups sliced carrots (about 4)
4 ounces elbow macaroni

Heat fat in skillet. Mix flour, salt and pepper. Dip meat in flour mixture and brown well in skillet. Add water, bay leaf, onion, celery, Worcestershire sauce, tabasco sauce and ½ teaspoon salt. Cover and simmer until meat is tender (about 1½ hours). Add carrots and elbow macaroni. Simmer 30 minutes longer. Yield: 4 servings.

Style Consultant Speaks Before Home Bureau

MEMBERS of the Kendall County Home Bureau recently heard Miss Celeste Carlyle, a well-known style consultant, discuss the secret of a smart appearance.

Miss Carlyle won her audience from the start with an informed and chatty presentation. She took volunteers from the audience and created for them new hair styles, complete costumes, and changes in make-up color and applications.

for HOMEMAKERS

Randolph to Hold County Wide Meeting in 1949

A COUNTY-WIDE meeting will be held early in 1949 in Randolph county which will be addressed by Margueritte Briggs, a new member of the extension service and specialist in parent education and child care.

She will speak on "The Social Meaning of Tact."

Randolph county is without a home adviser but the executive board is making a strong effort to carry out the program planned for the year.

Randolph and Franklin counties had delegates at a meeting in Benton Nov. 15 for special lessons on rug making given by Marian Kaeser, specialist in home furnishings at the University of Illinois.

Fun on Family Night

Homemakers, husbands and children will enjoy the annual St. Clair County Family Night at Dupo high school on Dec. 8. The program begins with a mixer, followed by a pot luck supper, then the group will move to the auditorium where Prof. H. F. Gilbert of the University of Illinois will give a talk on "Farmstead Development", after which group singing and stunts will be directed by Mrs. Melvin Corn, county recreation chairman. Mrs. Charles Dyroff, county program chairman, is in charge of the event.

Learning New Home Skills

DURING the past two years members of the Marion County Home Bureau have been learning skills that will help them to make their homes more attractive with a minimum of expense. They have learned to reupholster, slipcover, refinish and recane furniture.

Although the reupholstering and slipcover schools were presented two years ago, help is still being relayed from member to member. Several units have even had training schools recently. One unit which does an almost professional job, reupholstered and sold a chair as a money making project. Members of this unit have become so skilled that they go by truck to the community sale in a nearby town, and come back with a load of worn out pieces to be reupholstered.

LACE DOILY

This doily may look a bit complicated but if you know how to crochet, you know how to make it. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association, 43 East Ohio Street, Chicago 11, Ill.

Paper Draperies Are Good Buy for Your Home

PAPER draperies are a good buy because they're generally inexpensive. That's especially true if you want them just for temporary purposes, such as to brighten a room for the winter.

Miss Marion Kaeser, home furnishings specialist, University of Illinois College of Agriculture lists some points for you to consider before you do buy.

She says that if you want figured or striped draperies, you'll find a good selection in the paper variety. But there are few if any plain-colored styles on the market. For the room with lots of pattern, you'll probably want plain fabric draperies.

Sometimes you will find that paper draperies are almost as expensive as fabric. Then, Miss Kaeser says you'll be wise to choose the fabric kind.

MARINE MOTIF

One way to change the bathroom scenery is to introduce new color interest in a crocheted rug and seat cover. This washable rug measures about 26 by 38 inches including the scalloped border of loops. The color scheme is light and dark green with the loop stitch border in the darker shade. Down the center section slithers a fish cross-stitched in black to the background. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois.

QUILTED BORDERS

Lustrous satin adds a rich and decorative border to this blanket and pillow set for the new baby. The deep satin bindings are padded, then quilted with diagonal machine stitching. Use soft lightweight wool in your favorite baby pastel for the set. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois.

Feeding Outlook—

(*Continued from page 8*)

It takes about twice as much corn to finish those same calves to prime grade, Francis said—63 bushels compared to 39.

This year's tests with calves are the fifth in a series. Other trials with good and choice yearlings and good two-year-olds on pasture or drylot showed that it takes a feeding period of about 200 days to finish them to choice market grade.

This summer's results on the feeding study show that it is possible to finish a good feeder calf to choice market grade on 39 bushels of corn in 235 days.

Other tests demonstrated the value of grass as a steer feed. Steers gained an average of 311 pounds in 158 days this spring on low-cost bromegrass or bluegrass pasture, both with clovers mixed in. This gain was valued at about $90 an acre, the cost per 100 pounds of gain $9.94.

Feeding tests by Fred C. Francis, assistant professor, sought to discover how much corn it takes and how long a feeding period is needed to finish known feeder grades of cattle to any given market grade.

This season's tests showed that choice calves weighing 480 pounds when feeding started on Nov. 6, 1947, gained 1.95 pounds a day during an average 235-day feeding period to reach choice carcass grade. They gained 458 pounds and used 39 bushels of corn, 1,500 pounds of silage, 311 pounds of soybean or linseed meal, and 600 pounds of clover hay per steer.

When slaughtered between June 1 and July 27, 1948, 12 carcasses graded AA and three were A quality. They dressed out 63 per cent.

IAA Entertains—

(*Continued from page 29*)

Delegates to the Club congress, selected on the basis of their superior over-all records for 1948 in project work, 4-H activity and leadership in other events in their community and county, were:

Edward C. Bates, Henry County; John W. Bliss, Knox; Denny Coleman, Gallatin; Margaret Cummins, Jefferson; Mary Elder, Christian; Bettelou Flory, Warren; Jimmie Gahm, LaSalle; Margie Groves, DeKalb.

Kenneth Heisner, Will; Elaine Held, Marshall; Rose Alice Howell, Fulton; Floyd C. Hutchings, Lake; Gladys Krapf, Will; Esther Kuster, Henry; Merle S. Miller, DeWitt; Lewis Porter, Adams; Anita Reaman, Kankakee; Carolyn Reeser, DeWitt; Robert Schrock, Tazewell; Lorna Springer, White.

Thomas C. Sussenbach, Bond; Barbara Thiebaud, Greene; Will F. Tracy, Stark; John White, Jr., Kane; Joe Arthur Wilcox, Lawrence; and Mary Lee Wilson, Montgomery.

Local 4-H leaders, Dale Donley, Adams county, and Mrs. W. J. Stevenson, Henry county, will attend Club Congress in recognition of their fine local leadership and length of service.

Instructor H. P. Erwin takes look at map of farm as Fred Turner and son, Bill, 4, look on. At right is Bob Dale, hatcheryman and veteran's teacher. Wagon is one Turner made in GI class.

GI Training—

(*Continued from page 18*)

ber of dependents. Single men can earn up to $210, and of this amount the government will pay $65 for employed and $67.50 for self-employed veterans.

For veterans with one dependent the ceiling is $270, the government paying up to $90 for an employed and $93.75 for a self-employed veteran. For two or more dependents, the ceiling is $290, the government paying up to $90 for an employed and $97.50 for a self-employed veteran.

The financial payments are attractive. They draw veterans into the program. About 15,000 are enrolled in Illinois — 5,000 as self-employed and 10,000 as employed veterans. The payments mean a larger salary check for the employed veteran and insurance against failure as well as payments for the self-employed veteran.

Whether veterans go on, as Turner and Wither have done, and gain from the educational training, depends as much on the instructor as the student. This is true of any educational program and the farm training program is no exception.

Farm Woodlot—

(*Continued from page 17*)

they are better suited to timber growing than to other crops or pasture.

Growth under present management on this acreage is 100 board feet per acre or less. Growth after reforesting and under good management is placed at 500 board feet per acre.

Speakers at the congress also were emphatic in declaring that timber land should never be pastured. Timber land, it was asserted, should either be managed for timber production without the presence of livestock or it should be cleared and improved for pasture, perhaps leaving a few scattered trees for shade.

The forestry department of the College of Agriculture reports that 54 per cent of the farm woodlands are grazed.

In other talks, Dean H. P. Rusk, of the U. of I. College of Agriculture, was convinced that for much of Illinois' farm land in forests and lying idle "the immediate problem is one of research and education on how these areas can be profitably integrated into general farming operations."

"Public ownership, development, and management seems to be the best solution of the problem on large areas of non-agricultural land where forestry cannot be integrated with profitable farming operations," he added.

Dean Rusk also foresaw larger ownership of forests by industry, and called for expansion of farm accounting in southern Illinois to include forestry income and expense.

The Wise Farmer Looks To The Future—Buys U. S. Security Bonds

THE wise farmer looks ahead. He plans for the lean years that follow prosperous times. The wise farmer knows there is no better way to secure his future than in buying U. S. Security Bonds.

Security Bonds provide a 10-year crop of security that will never fail you as an investment. For every $3 you invest, Security Bonds will repay you $4 in only 10 years.

By saving your extra dollars now you will make a real contribution to controlling inflation that has made the booms and busts so painful to farmers throughout the years.

Security Bonds will safeguard your future and help keep this country free and strong. Invest your extra dollars now. Buy U.S. Security Bonds.

Feeding Outlook—

(*Continued from page 8*)

It takes about twice as much corn to finish those same calves to prime grade, Francis said—63 bushels compared to 39.

This year's tests with calves are the fifth in a series. Other trials with good and choice yearlings and good two-year-olds on pasture or drylot showed that it takes a feeding period of about 200 days to finish them to choice market grade.

This summer's results on the feeding study show that it is possible to finish a good feeder calf to choice market grade on 39 bushels of corn in 235 days.

Other tests demonstrated the value of grass as a steer feed. Steers gained an average of 311 pounds in 158 days this spring on low-cost bromegrass or bluegrass pasture, both with clovers mixed in. This gain was valued at about $90 an acre, the cost per 100 pounds of gain $9.94.

Feeding tests by Fred C. Francis, assistant professor, sought to discover how much corn it takes and how long a feeding period is needed to finish known feeder grades of cattle to any given market grade.

This season's tests showed that choice calves weighing 480 pounds when feeding started on Nov. 6, 1947, gained 1.95 pounds a day during an average 235-day feeding period to reach choice carcass grade. They gained 458 pounds and used 39 bushels of corn, 1,500 pounds of silage, 311 pounds of soybean or linseed meal, and 600 pounds of clover hay per steer.

When slaughtered between June 1 and July 27, 1948, 12 carcasses graded AA and three were A quality. They dressed out 63 per cent.

IAA Entertains—

(*Continued from page 29*)

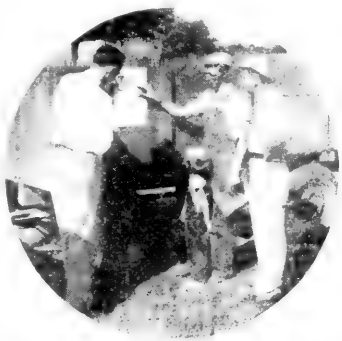
Delegates to the Club congress, selected on the basis of their superior over-all records for 1948 in project work, 4-H activity and leadership in other events in their community and county, were:

Edward C. Bates, Henry County; John W. Bliss, Knox; Denny Coleman, Gallatin; Margaret Cummins, Jefferson; Mary Elder, Christian; Bettelou Flory, Warren; Jimmie Gahm, LaSalle; Margie Groves, DeKalb.

Kenneth Heisner, Will; Elaine Held, Marshall; Rose Alice Howell, Fulton; Floyd C. Hutchings, Lake; Gladys Krapf, Will; Esther Kuster, Henry; Merle S. Miller, DeWitt; Lewis Porter, Adams; Anita Reaman, Kankakee; Carolyn Reeser, DeWitt; Robert Schrock, Tazewell; Lorna Springer, White.

Thomas C. Sussenbach, Bond; Barbara Thiebaud, Greene; Will F. Tracy, Stark; John White, Jr., Kane; Joe Arthur Wilcox, Lawrence; and Mary Lee Wilson, Montgomery.

Local 4-H leaders, Dale Donley, Adams county, and Mrs. W. J. Stevenson, Henry county, will attend Club Congress in recognition of their fine local leadership and length of service.



Instructor H. P. Erwin takes look at map of farm as Fred Turner and son, Bill, 4, look on. At right is Bob Dale, hatcheryman and veteran's teacher. Wagon is one Turner made in GI class.

GI Training—

(*Continued from page 18*)

ber of dependents. Single men can earn up to $210, and of this amount the government will pay $65 for employed and $67.50 for self-employed veterans.

For veterans with one dependent the ceiling is $270, the government paying up to $90 for an employed and $93.75 for a self-employed veteran. For two or more dependents, the ceiling is $290, the government paying up to $90 for an employed and $97.50 for a self-employed veteran.

The financial payments are attractive. They draw veterans into the program. About 15,000 are enrolled in Illinois 5,000 as self-employed and 10,000 as employed veterans. The payments mean a larger salary check for the employed veteran and insurance against failure as well as payments for the self-employed veteran.

Whether veterans go on, as Turner and Wither have done, and gain from the educational training, depends as much on the instructor as the student. This is true of any educational program and the farm training program is no exception.

Farm Woodlot—

(*Continued from page 17*)

they are better suited to timber growing than to other crops or pasture.

Growth under present management on this acreage is 100 board feet per acre or less. Growth after reforesting and under good management is placed at 500 board feet per acre.

Speakers at the congress also were emphatic in declaring that timber land should never be pastured. Timber land, it was asserted, should either be managed for timber production without the presence of livestock or it should be cleared and improved for pasture, perhaps leaving a few scattered trees for shade.

The forestry department of the College of Agriculture reports that 54 per cent of the farm woodlands are grazed.

In other talks, Dean H. P. Rusk, of the U. of I. College of Agriculture, was convinced that for much of Illinois' farm land in forests and lying idle "the immediate problem is one of research and education on how these areas can be profitably integrated into general farming operations."

"Public ownership, development, and management seems to be the best solution of the problem on large areas of non-agricultural land where forestry cannot be integrated with profitable farming operations," he added.

Dean Rusk also foresaw larger ownership of forests by industry, and called for expansion of farm accounting in southern Illinois to include forestry income and expense.

The Wise Farmer Looks To The Future—Buys U. S. Security Bonds

THE wise farmer looks ahead. He plans for the lean years that follow prosperous times. The wise farmer knows there is no better way to secure his future than in buying U. S. Security Bonds.

Security Bonds provide a 10-year crop of security that will never fail you as an investment. For every $3 you invest, Security Bonds will repay you $4 in only 10 years.

By saving your extra dollars now you will make a real contribution to controlling inflation that has made the booms and busts so painful to farmers throughout the years.

Security Bonds will safeguard your future and help keep this country free and strong. Invest your extra dollars now. Buy U.S. Security Bonds.

Just between friends...

We're hoping that you
will have the happiest
Christmas
this year that you
have ever experienced

1948—ILLINOIS FARMERS' YEAR OF S

Cooperative Sales, Farm Bureau Membership, Farm Harvests Reach All-Time Highs

THE 1948 annual meeting of the Illinois Agricultural Association recorded a year of new successes for Illinois farmers, their cooperatives and other organizations.

During the year membership and sales bounded upward in all lines of endeavor and individual farmers reported the greatest harvest in their memories.

The 34th annual meeting drew thousands of farmers to the general sessions and conferences held at the Hotel Sherman in Chicago.

But the bountiful harvest which moved the western world to slap the Midwestern farmer on the back in gratitude, was the very thing which caused him to look to the future with some apprehension. Bountiful harvests meant lower prices.

He listened, therefore, with a great deal of interest to the explanations of the long-range farm program which will take effect on Jan. 1, 1950. Two of the strong supporters of the farm program spoke during the IAA convention — Senator George D. Aiken of Vermont, sponsor of the bill, and Prof. H. C. M. Case, head of the department of agricultural economics, University of Illinois, who attended all Senate hearings on the bill.

Sen. Aiken explained that the law as enacted is based on "two principle objectives which our great farm organizations and the U. S. Department of Agriculture have sought for years; that is, (1) revision of the parity formula, and (2) the establishment of flexible floors under farm prices.

The act still retains the 1909-14 base period for computing parity but provides for adjustments reflecting price conditions that have prevailed during the latest 10-year period.

The flexible floor objective provides for rising and falling prices based on supply. For instance, when supply reaches 130 per cent of normal, support drops to 60 per cent of parity; when supply drops to 70 per cent of normal then support rises to 90 per cent of parity.

In his annual report to the membership, IAA President Charles B. Shuman contradicted statements of several labor leaders that the November election was a clear mandate to the administration to repeal the Taft-Hartley Act.

"Farmers" President Shuman said, "recognize that the decision of the people reflected the thinking of American citizens on many different issues. We do not recognize any clear mandate to turn backward.

"We will continue to insist that legislative action be constructive. We will continue to aggressively support the essential and constructive features of the Taft-Hartley labor relations law."

Shuman again expressed the Farm Bureau stand against price controls: "We reiterate our opposition to the return of unworkable federal price-control legislation. . . . We insist that we move in the direction of less rather than more government controls. We will continue to insist that our system of free enterprise in America is preferable to a governmentally-regulated socialistic economy."

Copies of talks made at the IAA annual meeting by Sen. Aiken, Dr. Smith, Dr. Case, President Shuman, and Ransom Aldrich may be obtained by addressing the IAA Record, 43 East Ohio, Chicago 11, Ill.

Other questions which highlighted the work of the resolutions committee included a request that the board of directors take action "to obtain constructive revision of our state constitution;" opposition to daylight saving time; a request for action on the construction of buildings to house the home economics, veterinary medicine, and agricultural engineering departments at the University of Illinois; a request that teachers be required to take conservation training and that it be taught in our public schools; announcement that the Association will support an increase in the state gasoline tax if an equitable portion is earmarked for use on farm-to-highway roads and bridges; more state aid for schools; and higher premium awards for 4-H boys and girls to "stimulate future growth and development of 4-H club work." (See Resolutions on page 12).

President Shuman issued a warning to labor and industry when he said: "If present cost and price trends continue they will result in a repetition of the 1929 business disaster.

"Farmers," he said, "are now faced with a situation very similar to the conditions which prevailed after the first World War. Farm prices are falling rapidly while all other costs and prices rise. Unless checked soon this two-way trend can have but one result— a repetition of the disaster which befell the nation in 1929."

Following a discussion of the extension of Farm Bureau service privileges to associate members in the special Farm Bureau presidents-farm advisers meeting, it was decided to postpone the

question until next year.

During this meeting President Shuman urged Farm Bureau leaders to get their cooperatives in good financial shape to withstand the shock of deflation when it comes.

A review of the IAA's new grain marketing operations was presented by Field Secretary George E. Metzger. He explained that a half million dollars would have to be raised for the operations alone and that more capital would be needed if Illinois Grain Terminals decides to build terminal elevators at Chicago and St. Louis.

L. L. Colvis, IAA secretary of marketing, outlined and reported steady progress during the year on the IAA plan for statewide cooperative livestock marketing.

Donald Kirkpatrick, IAA general counsel, spoke on what can be expected in farm legislation under the 81st congress. He said the federal oleomargarine tax probably would be removed and that the National Tax Equality League would have anti farm co-op legislation introduced in the next session.

Dean H. P. Rusk of the University of Illinois College of Agriculture appeared before the Farm Bureau presidents-farm advisers meeting and explained his position on a national committee report to recommend the future course for the Extension Service in agriculture and home economics. The report was made by a joint committee representing the U.S. Department of Agriculture and the Association of Land Grant Colleges and Universities. Dean Rusk took sharp issue with the committee on the charge that "formal working agreements between state extension services and farm organizations are not in the best interests of the people." (See full story in this issue).

Principal speakers on the convention program besides Sen. Aiken included Ransom Aldrich, president of the Mississippi Farm Bureau, and Dr. Roy L. Smith, Editor of The Christian Advocate.

Aldrich presented a Southern viewpoint on agriculture. Conservation is Mississippi agriculture's greatest problem, Aldrich said. We in the South have had controls; you have had diversion. And controls are what the South wants least.

question until next year.

During this meeting President Shuman urged Farm Bureau leaders to get their cooperatives in good financial shape to withstand the shock of deflation when it comes.

A review of the IAA's new grain marketing operations was presented by Field Secretary George E. Metzger. He explained that a half million dollars would have to be raised for the operations alone and that more capital would be needed if Illinois Grain Terminals decides to build terminal elevators at Chicago and St. Louis.

L. L. Colvis, IAA secretary of marketing, outlined and reported steady progress during the year on the IAA plan for statewide cooperative livestock marketing.

Donald Kirkpatrick, IAA general counsel, spoke on what can be expected in farm legislation under the 81st congress. He said the federal oleomargarine tax probably would be removed and that the National Tax Equality League would have anti farm co-op legislation introduced in the next session.

Dean H. P. Rusk of the University of Illinois College of Agriculture appeared before the Farm Bureau presidents-farm advisers meeting and explained his position on a national committee report to recommend the future course for the Extension Service in agriculture and home economics. The report was made by a joint committee representing the U.S. Department of Agriculture and the Association of Land Grant Colleges and Universities. Dean Rusk took sharp issue with the committee on the charge that "formal working agreements between state extension services and farm organizations are not in the best interests of the people." (See full story in this issue).

Principal speakers on the convention program besides Sen. Aiken included Ransom Aldrich, president of the Mississippi Farm Bureau, and Dr. Roy L. Smith, Editor of The Christian Advocate.

Aldrich presented a Southern viewpoint on agriculture. Conservation is Mississippi agriculture's greatest problem, Aldrich said. We in the South have had controls; you have had diversion. And controls are what the South wants least.

(*Continued on next page*)

Aldrich warned against the dangers of allowing power over farm credit to fall into the hands of a few who can "control and destroy the farmer."

Turning to the international position of the United States, Aldrich pointed out the dependence of Southern agriculture on foreign trade and said: "One of the greatest dangers in America today is that we fail to appreciate the meaning of what is going on in other countries of the world. Communism and unrest" he said "run hand in hand where agriculture production is lowest."

In his address, Dr. Smith jarred his listeners with a list of eight world shattering events which all happened in 1945 and the like of which, he said, none of us probably ever will experience again in our lifetime. He listed them as (1) the disappearance of Germany as a world power, (2) the emergence of Russia as a great power, (3) the collapse of Japan, (4) the decline of Britain and France (5) the center of power moving from the Atlantic to the Pacific, (6) the world wide turn to the left, (7) the charting of a world government, and (8) the first manifestation of atomic power in the atomic bomb.

Dr. Smith said that in his travels throughout the world he found evidence of American industrial power everywhere. All the world, he said, is turning to us for guidance.

"In this hour," he said, "when America has come of age I join with you in pledging to this world that waits upon us . . . . that I will try to act like an adult, like a grown man, a man made in the image of God, upon whom history and destiny and God and all the days to come have laid an unprecedented responsibility for clear thinking in muddy waters."

Three new members were elected to the IAA board of directors. They are: Lester S. Davison, Woodford county, replacing Edward T. Culnan, Logan; Thomas H. Lloyd, Macoupin, replacing Dan L. Clarke, Sangamon; and Frank L. Simpson, DeWitt, replacing Milton W. Warren, Piatt. Directors Homer Curtiss, Jo Daviess; Earl M. Hughes, McHenry; Albert W. Webb, Franklin; Edwin Gumm, Knox; and Chester McCord, Jasper, were reelected. Like the new directors they will serve two-year terms.

President Shuman and Vice President Floyd E. Morris were unanimously reelected for one-year terms.

Other highlights of the IAA annual meeting included an evening of entertainment before a crowd that overflowed the main ballroom of the hotel, a safe-driving contest, the annual Rural Youth Talk Fest, the visit of a number of Canadian farm youth to the convention, broadcasts on WLS and WBBM, besides conferences on many phases of farm life—animal disease, marketing, soil conservation, rural education, road improvement, taxation, national and state legislation, and organization and information.

ATTACKS REPORT

Dean Rusk Denies Extension Service-Farm Bureau Relationship is 'Detrimental to Public Interest'

A REPORT of vital interest to Illinois farmers touching on the relationship between the county Farm Bureaus and the Extension Service was reviewed by Dean H. P. Rusk of the University of Illinois College of Agriculture during the IAA convention.

Dean Rusk

Dean Rusk, a member of the committee which issued the report, spoke before a special meeting of Farm Bureau presidents and farm advisers.

He said he "took sharp issue" with the committee report on the following statement: "Though close cooperation (by the extension service) with general farm organizations is highly desirable, formal operating relationships with such organizations are considered detrimental to the public interest."

To this recommendation Dean Rusk took issue and prepared a formal "statement of exception" which was included in the report.

The report was prepared by a joint committee representing the U. S. Department of Agriculture and the Association of Land Grant Colleges and Universities appointed to recommend a future course for the Extension Service in agriculture and home economics.

"Where," Dean Rusk said, "but in Illinois will you find such a wonderful rural youth program? Where will you find farmers doing so much to publicize the extension program? Where will you find so many farm people turn out for an event like our Sports Festival? I wouldn't want to run the Extension Service without the support of the county Farm Bureaus in Illinois."

Speaking further, Dean Rusk said: "Very obviously I am especially concerned about the committee's recommendation that extension relationships with farm organizations be discontinued. I cannot speak for other states, but so far as our relationships in Illinois are concerned, it is my sincere belief that they have been on a sound basis and in the public interest.

"I do anticipate," he said, "that an attempt will be made to persuade Congress to dissolve this relationship through some form of legislation. I feel, however, that Congress would not approve such legislation and the attempt would fail."

Duke Regnier, University of Illinois, leads singing during convention.

Presiding at the 25th anniversary meeting of Illinois Agricultural Auditing Association is Board President B. W. Horan, Mercer county. Others at speakers' table (left to right) are board members I. M. Graham, Knox; Roy V. Edwards, Champaign; E. Y. Naffziger, Bureau; and IAA Field Secretary George E. Metzger, Office Secretary Thelma Jansen, and Retiring Manager C. E. Strand.

SILVER ANNIVERSARY

Illinois Agricultural Auditing Association Marks 25th Year of Service to Illinois Farmers

THE Illinois Agricultural Auditing Association celebrated its 25th anniversary this year during its annual meeting held in conjunction with the 34th convention of the IAA in Chicago.

The auditing cooperative started in July of 1924 with 21 member clients. Its first client, Farmers Grain and Lumber Company, Sycamore, holds membership No. 1 and is still a staunch member client. Today its membership totals 490 member clients.

This membership consists of 94 Farm Bureaus, 68 Farm Bureau subsidiaries, 37 cold storage lockers, 104 elevators, 28 livestock companies, 30 dairies and creameries, 6 insurance companies, 87 service companies, 3 Home Bureaus, and 33 miscellaneous companies.

"We believe that our growth and our success has been brought about by our frank and sincere dealings. We know that our success is linked inseparably with the success of our member clients," C. E. Strand, manager, said on the occasion of the auditing company's 25th anniversary.

"Twenty-five years ago," he continued, "there was no such organization as ours. In many instances reports were made by clerks employed to work a few evenings a month.

"Their reports were often inaccurate, depreciation was forgotten or overlooked, liabilities were omitted, and assets were grossly overvalued.

"In many cases farmers loaned the enterprise personal funds to supply capital for the cooperative of which they were directors. Some of these cooperatives failed. Often severe financial loss was suffered by those who risked their money to make a success of their local cooperative."

The memories of many are still fresh and vivid over the early and heroic struggle for survival of the first cooperatives, Strand said.

Strand, who has been manager of the auditing cooperative since 1938, resigned several months ago to become comptroller for the Illinois Farm Supply Company.

President B. W. Horan, Mercer county, urged patience among Farm Bureau presidents and company managers in seeking prompt audits. He pointed out that it takes three years to train auditors in the complicated auditing systems of Farm Bureau-type cooperatives.

He said that in the last two years the auditing association has added a number of young auditors to its payroll, and that the association will soon have a reservoir of highly trained men. Many of the delays in auditing are due, not to the auditors, but to faulty bookkeeping procedures, he said.

Economist Says Co-ops Put Curb On Monopoly

MARKETING cooperatives provide one of the best means of curbing monopoly in our free enterprise system, particularly since the advent of large-scale cooperatives.

This belief was expressed by Kelsey B. Gardner during the marketing conference at the IAA annual meeting held recently in Chicago.

Kelsey Gardner

Gardner is the principal agricultural economist of the Cooperative Research and Service Division of the U. S. Department of Agriculture.

One of the greatest problems large-scale cooperatives face is in maintaining a well-informed and interested membership, Gardner said.

"Large co-ops are making earnest efforts to solve this problem," he said, "but it is a challenging problem of the first magnitude."

Membership loyalty should be placed upon the principles and objectives of the cooperative and not upon patronage refunds, he said.

After the address given by Gardner the marketing conference was divided into two sections for group discussions.

The livestock group met under the chairmanship of Sam Russell, IAA director of livestock marketing, and the men interested in grain marketing met under the chairmanship of George Iftner, IAA director of grain marketing.

CONGRATULATIONS

On behalf of the Illinois Agricultural Association, it is a pleasure to extend congratulations to the Illinois Agricultural Auditing Association on the twenty-fifth anniversary of service to Illinois farmers.

The work of the Auditing Association has been one of the most important factors contributing to the success of the hundreds of farmer cooperatives in the state of Illinois. It has encouraged the use of sound business principles and those proper accounting procedures that are so essential to the success of any business.

As the cooperative movement continues to grow, the Auditing Association will likewise increase in scope and significance.

Charles B. Shuman
President
Illinois Agricultural Association

Aldrich warned against the dangers of allowing power over farm credit to fall into the hands of a few who can "control and destroy the farmer."

Turning to the international position of the United States, Aldrich pointed out the dependence of Southern agriculture on foreign trade and said: "One of the greatest dangers in America today is that we fail to appreciate the meaning of what is going on in other countries of the world. Communism and unrest" he said "run hand in hand where agriculture production is lowest."

In his address, Dr. Smith jarred his listeners with a list of eight world shattering events which all happened in 1945 and the like of which, he said, none of us probably ever will experience again in our lifetime. He listed them as (1) the disappearance of Germany as a world power, (2) the emergence of Russia as a great power, (3) the collapse of Japan, (4) the decline of Britain and France (5) the center of power moving from the Atlantic to the Pacific, (6) the world wide turn to the left, (7) the charting of a world government, and (8) the first manifestation of atomic power in the atomic bomb.

Dr. Smith said that in his travels throughout the world he found evidence of American industrial power everywhere. All the world, he said, is turning to us for guidance.

"In this hour," he said, "when America has come of age I join with you in pledging to this world that waits upon us . . . . that I will try to act like an adult, like a grown man, a man made in the image of God, upon whom history and destiny and God and all the days to come have laid an unprecedented responsibility for clear thinking in muddy waters."

Three new members were elected to the IAA board of directors. They are: Lester S. Davison, Woodford county, replacing Edward T. Culnan, Logan; Thomas H. Lloyd, Macoupin, replacing Dan L. Clarke, Sangamon; and Frank L. Simpson, DeWitt, replacing Milton W. Warren, Piatt. Directors Homer Curtiss, Jo Daviess; Earl M. Hughes, McHenry; Albert W. Webb, Franklin; Edwin Gumm, Knox; and Chester McCord, Jasper, were reelected. Like the new directors they will serve two-year terms.

President Shuman and Vice President Floyd E. Morris were unanimously reelected for one-year terms.

Other highlights of the IAA annual meeting included an evening of entertainment before a crowd that overflowed the main ballroom of the hotel, a safe-driving contest, the annual Rural Youth Talk Fest, the visit of a number of Canadian farm youth to the convention, broadcasts on WLS and WBBM, besides conferences on many phases of farm life—animal disease, marketing, soil conservation, rural education, road improvement, taxation, national and state legislation, and organization and information.

ATTACKS REPORT

Dean Rusk Denies Extension Service-Farm Bureau Relationship is 'Detrimental to Public Interest'

A REPORT of vital interest to Illinois farmers touching on the relationship between the county Farm Bureaus and the Extension Service was reviewed by Dean H. P. Rusk of the University of Illinois College of Agriculture during the IAA convention.

Dean Rusk

Dean Rusk, a member of the committee which issued the report, spoke before a special meeting of Farm Bureau presidents and farm advisers.

He said he "took sharp issue" with the committee report on the following statement: "Though close cooperation (by the extension service) with general farm organizations is highly desirable, formal operating relationships with such organizations are considered detrimental to the public interest."

To this recommendation Dean Rusk took issue and prepared a formal "statement of exception" which was included in the report.

The report was prepared by a joint committee representing the U. S. Department of Agriculture and the Association of Land Grant Colleges and Universities appointed to recommend a future course for the Extension Service in agriculture and home economics.

"Where," Dean Rusk said, "but in Illinois will you find such a wonderful rural youth program? Where will you find farmers doing so much to publicize the extension program? Where will you find so many farm people turn out for an event like our Sports Festival? I wouldn't want to run the Extension Service without the support of the county Farm Bureaus in Illinois."

Speaking further, Dean Rusk said: "Very obviously I am especially concerned about the committee's recommendation that extension relationships with farm organizations be discontinued. I cannot speak for other states, but so far as our relationships in Illinois are concerned, it is my sincere belief that they have been on a sound basis and in the public interest.

"I do anticipate," he said, "that an attempt will be made to persuade Congress to dissolve this relationship through some form of legislation. I feel, however, that Congress would not approve such legislation and the attempt would fail."

Duke Regnier, University of Illinois, leads singing during convention.

Presiding at the 25th anniversary meeting of Illinois Agricultural Auditing Association is Board President B. W. Horan, Mercer county. Others at speakers' table (left to right) are board members I. M. Graham, Knox; Roy V. Edwards, Champaign; E. Y. Naffziger, Bureau; and IAA Field Secretary George E. Metzger, Office Secretary Thelma Jansen, and Retiring Manager C. E. Strand.

SILVER ANNIVERSARY

Illinois Agricultural Auditing Association Marks 25th Year of Service to Illinois Farmers

THE Illinois Agricultural Auditing Association celebrated its 25th anniversary this year during its annual meeting held in conjunction with the 34th convention of the IAA in Chicago.

The auditing cooperative started in July of 1924 with 21 member clients. Its first client, Farmers Grain and Lumber Company, Sycamore, holds membership No. 1 and is still a staunch member client. Today its membership totals 490 member clients.

This membership consists of 94 Farm Bureaus, 68 Farm Bureau subsidiaries, 37 cold storage lockers, 104 elevators, 28 livestock companies, 30 dairies and creameries, 6 insurance companies, 87 service companies, 3 Home Bureaus, and 33 miscellaneous companies.

"We believe that our growth and our success has been brought about by our frank and sincere dealings. We know that our success is linked inseparably with the success of our member clients," C. E. Strand, manager, said on the occasion of the auditing company's 25th anniversary.

"Twenty-five years ago," he continued, "there was no such organization as ours. In many instances reports were made by clerks employed to work a few evenings a month.

"Their reports were often inaccurate, depreciation was forgotten or overlooked, liabilities were omitted, and assets were grossly overvalued.

"In many cases farmers loaned the enterprise personal funds to supply capital for the cooperative of which they were directors. Some of these cooperatives failed. Often severe financial loss was suffered by those who risked their money to make a success of their local cooperative."

The memories of many are still fresh and vivid over the early and heroic struggle for survival of the first cooperatives, Strand said.

Strand, who has been manager of the auditing cooperative since 1938, resigned several months ago to become comptroller for the Illinois Farm Supply Company.

President B. W. Horan, Mercer county, urged patience among Farm Bureau presidents and company managers in seeking prompt audits. He pointed out that it takes three years to train auditors in the complicated auditing systems of Farm Bureau-type cooperatives.

He said that in the last two years the auditing association has added a number of young auditors to its payroll, and that the association will soon have a reservoir of highly trained men. Many of the delays in auditing are due, not to the auditors, but to faulty bookkeeping procedures, he said.

The LONG RANGE Farm Program

☆

What Is It?

By CRESTON FOSTER
Editor, IAA Record

WHAT kind of agricultural programs can farmers expect in the next few years? That's a question to stump the experts, but a good picture of the laws now on the books was given at the conference on national agricultural legislation of the 34th annual meeting of the Illinois Agricultural Association.

Dr. Case

Dr. H. C. M. Case, head of the department of agricultural economics, University of Illinois College of Agriculture, presented a thorough analysis of the Agricultural Act of 1948. Dr. Case was particularly well qualified to discuss this act since he helped develop much of the information used in drafting the law.

Many of the objectives of a desirable long-range agricultural policy are provided for in existing legislation, but there are still many gaps to be filled, Dr. Case pointed out in his analysis. Senate Bill 2318 included some of these objectives, part of which were retained in the Agricultural Act of 1948.

This act, passed in the last hours of the 80th Congress, is limited to a price support program. It is essentially a compromise between two different price support philosophies represented in the separate Senate and House bills.

As finally passed, the act provides for a flexible price support program adjusted to supply, to become effective in 1950. The flexible price support feature was a part of the Senate bill. The House bill provided that most of the farm price support measures now in existence should continue for two years.

Thus the bill finally agreed to by the Senate and House conferees combined part of the Senate bill and part of the House bill.

It provides that the price support of basic farm commodities — corn, wheat, cotton, rice, and peanuts, — will continue at 90 per cent of parity until the 1949 crop is marketed, or until June 30, 1950, thus shortening the period of high price supports contained in the original House bill.

On July 1, 1950, the long-time flexible farm price support program will go into effect for these commodities unless legislation is changed by the new Congress. The fact that this legislation is now on the books is a strategic advantage in Dr. Case's opinion.

The Agricultural Act of 1948 also provides in addition to the basic commodities, price supports for milk and its products, hogs, chickens and eggs at 90 per cent of parity until Dec. 31, 1949, and for other Steagall commodities at not less than 60 or more than 90 per cent of parity at the discretion of the Secretary of Agriculture until Dec. 31, 1949.

As Dr. Case pointed out, this provision was the result of another compromise between the Senate and House bills.

The long-time feature of the act, which becomes effective in 1950, provides that a normal supply of corn, wheat, cotton, rice, and peanuts will be supported at 75 per cent of parity price.

As the supply increases by 2 per cent of normal, the price support drops 1 per cent of parity until it reaches 60 per cent of parity with a supply of 130 per cent of normal production.

Also, as the supply falls to 70 per cent of normal, the price support rises to 90 per cent of parity.

This flexible price support is the most distinctive feature of the new legislation, Dr. Case said, and is intended to correct the present uneconomic program of supporting prices without reference to supply.

The law further provides that the Secretary of Agriculture may adjust the support price level after conducting public hearings if the above plan does not provide desirable results. It may be found, for example, Dr. Case said, that a price support of 80 per cent of parity price will be preferable to the 75 per cent support when there is a normal production.

The 1948 Agricultural Act also provides that when the long-range price support program goes into effect, a new parity price formula also becomes effective, Dr. Case pointed out.

The difference between the old and new parity formulas, according to Dr. Case is simply this: The old parity formula maintains the relationship between prices of individual farm commodities in 1909-14 unless some other base period has been selected. Because of changes in methods of production, the improvement in crop yields, changes in relative demands, and many other factors, this 1909-14 period does not reflect present day price relationships, Dr. Case explained.

The new parity formula uses the relationship of the price of an individual farm product to the average price of all farm products for the 10 preceding years. This keeps the parity prices of individual farm products adjusted to changing demand and price relationships. It is an automatic formula which each year adds the new year and drops the oldest of 10 preceding years as a

basis for determining the parity price of individual farm products.

The price support bill further provides for the support of prices of other than the five basic commodities and tobacco at prices up to 90 per cent of parity with such funds as may be made available to the Secretary of Agriculture.

The so-called Section 32 funds, which represent 30 per cent of our import duties, are made available for farm price support operations. These funds amounted to 135 million dollars in 1947-48; of this amount, 75 million dollars are now assigned to the school lunch program. This still leaves about 60 million dollars for supporting various commodities.

In addition, the Commodity Credit Corporation is permitted to support prices of storable farm products if they are handled without too great a carrying charge. Section 32 funds will help support the prices of perishable products.

Dr. Case raised some thought-provoking questions in presenting two points of view on price supports. He posed the following queries: Do you want a high fixed price support not tied to supply, except through the fixing of acreage allotments and marketing quotas which are likely to be in effect three-fourths of the time for our major products? And which will call for an acreage reduction and a corresponding reduction in income.

Or, do you want a floor under prices at a conservative level and a flexible price support varying inversely to the supply of a product and making infrequent use of controls, which will let supply and demand be the guide to production except in acute depression periods?

Dr. Case said that a careful analysis of data over past years shows that the flexible price support program set forth in the Senate Bill 2318 would not have called for acreage control except in emergency periods such as 1932-33. But the fixed high price support of 90 per cent of parity would have called for acreage control over some of our major crops about three-fourths of the time over the past 25 years.

Under production controls, Dr. Case said, when acreage restrictions are imposed, it means an acreage reduction and a corresponding income reduction unless some other crop is grown in place of the reduced acres.

Dr. Case said that the 1948 Agricultural Act should probably be revised so that the Commodity Credit Corporation cannot sell any commodity controlled by it at a price below 90 per cent of parity, or a price half way between the support price and parity, which ever is lower.

Earl C. Smith, former president of the Illinois Agricultural Association, discusses the long-range farm program recently enacted by Congress, during the national agricultural legislation conference at IAA convention. At left is Prof. H. C. M. Case, head of the department of agricultural economics, University of Illinois. At right is K. T. Smith, conference chairman and member of the IAA board of directors.

The provision in the Commodity Credit Charter which prohibits the CCC from owning or leasing facilities for grain storage is a mistake, Dr. Case said. But he added that it should be clear that this was no part of the work of the agricultural committees of either the House or Senate.

In conclusion, Dr. Case said, there are a few claims that can justly be made for the long-range price support provisions of the new agricultural legislation, which will come into effect in 1950 without further Congressional action:

1. The flexible price support feature of the act should make supply and demand the major guides to farm production.

2. The revisions of parity prices will tend to encourage the production of livestock. That in turn will help to dispose of burdensome grain supplies and indirectly encourage better human nutrition.

3. The minimum support level for basic commodities and other commodities within the limit of available funds should prevent ruinously low prices and also have the moral effect of holding farm prices above the minimum support levels.

4. The judicious use of Section 32 funds, made available for price support operations, should materially aid in stabilizing prices of other than the basic commodities and should encourage better human food habits.

5. Assuming that the price support program becomes operative at both high and low support levels, it will assure farmers a larger return for a larger production of basic commodities than for a smaller production. That will help to assure consumers of an abundant production.

6. When other means fail to keep production within bounds, the new legislation provides for production and marketing quotas if farmers want them.

7. If farmers vote against controls, the 50 per cent of parity price support prevents coercing them into accepting controls, as would be done if all supports were withdrawn.

8. Finally the act leaves even the

"IF YOU are a Farm Bureau member and do not ask for a survey of your insurance program by one of our agents, you are not getting the full benefit of the IAA associated companies' insurance program."

This is the belief of A. E. Richardson, manager of Country Life Insurance Company and director of insurance service for the Illinois Agricultural Association.

"During the coming year we want all of our Farm Bureau members to ask their local agent to make a complete survey of their entire insurance program — life, fire, liability, auto, and accident — without cost or obligation to themselves," he continued.

This program of service to all Farm Bureau members will be stressed by the three IAA associated insurance companies in 1949, Richardson said.

"If you take time off to help with your own survey you may find it will pay greater dividends than any afternoon's work you could do on your farm," he said.

To prove its value, Duane Kuntz, sales director for the IAA associated insurance companies, tells of this incident which happened recently when an insurance agent called on a young Illinois farmer to analyse and survey his insurance program.

"This young man," the agent reported, "was paying for auto insurance, liability protection, fire insurance, and for coverage on crop hail."

The agent's rate book showed that this cost the young farmer as follows:

Auto insurance	$ 90
Liability protection	28
Fire insurance	30
Crop hail	110
Total	$258

"It was easy to show," the agent continued, "that with insurance from our companies this Farm Bureau member could have had the same coverage for a good deal less money."

For insurance coverage in the IAA associated insurance companies, the cost to the young farmer would have been as follows:

Auto insurance	$ 54
Liability protection	14
Fire insurance	24
Crop hail	60
Total	$152

"The total savings," ($256 minus $152), the agent said, "amounted to $106. This was not all that the survey disclosed, however.

"This young farmer needed insurance he was not carrying. By using his savings of $106 our insurance service could, in effect, present him with a $5,000 insurance policy.

"The policy would provide him $5,000 in cash on his 65th birthday, or $5,000 to his family any time in the case of his death," the agent concluded.

An insurance survey will show you many places where you may be underinsured, Richardson said. "It might show that your new deep freeze, washing machine, or other electrical appliances were not covered by fire insurance, and you might find you were carrying insurance you did not need.

"Many Illinois farmers will need added coverage of insurance for the extra hundreds of bushels of grain they are carrying over on their farm this winter," he added.

Here are some of the new coverages and new developments in the expanded IAA associated companies' insurance program. They have been added to present coverages because farmers have found a need for them.

A medical coverage has recently been included in the Casualty Company's auto policy. It provides for the medical and hospital expenses of the farmer and his family, or any passengers, in case of an auto accident. Many Farm Bureau members are not aware of this coverage.

A systematic way to save money — and still be insured — is provided by one of the life insurance policies of the Country Life Insurance Company. This savings and insurance plan can be used to guarantee the payment of a mortgage if the breadwinner dies, help pay inheritance taxes, or provide savings for college educations.

"Farm Bureau members should feel free to call on their agent to handle and report claims, or to explain policies not clearly understood," Richardson said.

L. E. Lingenfelter

Others do not realize the extent to which they are liable. Fifteen farmers were required last year to show financial responsibility when their tractor was involved in an accident on the highway.

In some cases drivers licenses and all motor vehicle licenses have been revoked after tractor accidents. This might not have happened if the farmers involved had been properly insured.

Country Life Insurance Company reported a total of $348,635,402 of life insurance in force at the end of the operating year, Sept. 30, 1948. New business for the year totaled $46,447,840, a record in new business acquired, exceeding any year in the company's 20 years of existence.

The three general agents whose counties produced the largest per cent of their assigned goals this year were: Jasper DeMonbrun, Monroe county, $626,757 in sales, 272 per cent of quota; Walter Specht, Clay county, $492,000, 265 per cent; William C. Linker, Whiteside, $1,732,204, 208 per cent.

NEW HIGHS

pany, continued its steady growth. It has registered an increase in number of policies in force for each of the 21 years it has been in business.

The Casualty Company has had but one rate increase since the war and this applied only to property damage and collision. In contrast, insurance rates in general since the war have risen about 100 per cent.

"The tremendous growth of the company is emphasized by the fact that 3 out of 10 policies in force have been added in the past two years," Frank V. Wilcox, manager, said.

Country Mutual Casualty Company provides one of the most popular of all Farm Bureau services. Wilcox said that 80 per cent of all Farm Bureau members have a policy in the company.

Country Mutual Fire Company had $433,977,687 of fire and extended coverage and $205,467,325 of wind insurance in force at the close of their fiscal year.

During the year the company also wrote $200,537,775 of hail insurance on crops.

"The fire and windstorm insurance written during the year has kept pace with the greatly increased value of farm property," L. E. Lingenfelter, president, said of the year's business written by the company.

"Losses in the fire division have not been high," he said, "but destruction by windstorms, two of tornado velocity, added to the claims paid by the company."

Hail losses, however, were the most severe in the company's history. "Losses will run over $3,000,000 this year," he said. More than 6,700 hail claims were filed, two and one half times as many as have been suffered in any previous year.

Dividends of 20 per cent on expiring fire and extended coverage policies

L. E. Lingenfelter

Others do not realize the extent to which they are liable. Fifteen farmers were required last year to show financial responsibility when their tractor was involved in an accident on the highway.

In some cases drivers licenses and all motor vehicle licenses have been revoked after tractor accidents. This might not have happened if the farmers involved had been properly insured.

Country Life Insurance Company reported a total of $348,635,402 of life insurance in force at the end of the operating year, Sept. 30, 1948. New business for the year totaled $46,447,840, a record in new business acquired, exceeding any year in the company's 20 years of existence.

The three general agents whose counties produced the largest per cent of their assigned goals this year were: Jasper DeMonbrun, Monroe county, $626,757 in sales, 272 per cent of quota; Walter Specht, Clay county, $492,000, 265 per cent; William C. Linker, Whiteside, $1,732,204, 208 per cent.

pany, continued its steady growth. It has registered an increase in number of policies in force for each of the 21 years it has been in business.

The Casualty Company has had but one rate increase since the war and this applied only to property damage and collision. In contrast, insurance rates in general since the war have risen about 100 per cent.

"The tremendous growth of the company is emphasized by the fact that 3 out of 10 policies in force have been added in the past two years," Frank V. Wilcox, manager, said.

Country Mutual Casualty Company provides one of the most popular of all Farm Bureau services. Wilcox said that 80 per cent of all Farm Bureau members have a policy in the company.

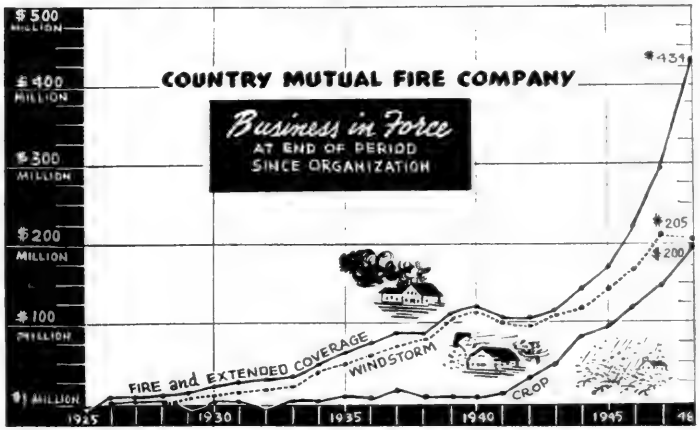
Country Mutual Fire Company had $433,977,687 of fire and extended coverage and $205,467,325 of wind insurance in force at the close of their fiscal year.

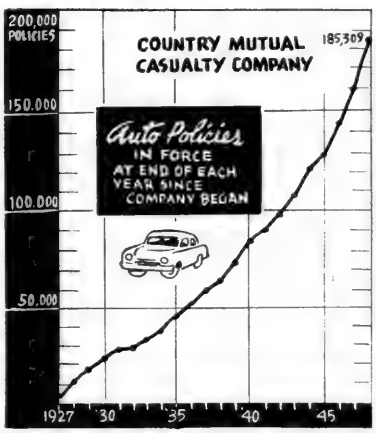
During the year the company also wrote $200,537,775 of hail insurance on crops.

"The fire and windstorm insurance written during the year has kept pace with the greatly increased value of farm property," L. E. Lingenfelter, president, said of the year's business written by the company.

"Losses in the fire division have not been high," he said, "but destruction by windstorms, two of tornado velocity, added to the claims paid by the company."

Hail losses, however, were the most severe in the company's history. "Losses will run over $3,000,000 this year," he said. More than 6,700 hail claims were filed, two and one half times as many as have been suffered in any previous year.





Dividends of 20 per cent on expiring fire and extended coverage policies

RESOLUTIONS ADOPTED BY BOARD OF DELEGATES AT 34TH ANNUAL MEETING IN CHICAGO, NOVEMBER 18, 1948

I. LONG RANGE FARM PROGRAM

The Illinois Agricultural Association vigorously supported the long-range farm program bill as enacted by the last session of Congress. We recognize that many of the provisions of this legislation were the result of compromise and that changes and amendments may be necessary. However, we believe that the basic principles of this legislation are sound. We favor the use of flexible price supports as floors to protect farm prices from collapse rather than high support levels which would result in fixed prices and rigid controls.

Farmers should not be penalized for increased production in response to governmental requests. We suggest that careful studies be made of existing agricultural legislation to determine means of further improvement.

II. TAXATION OF COOPERATIVES

Vicious attacks upon farmer cooperatives continue, disguised as attempts to secure tax adjustment or reform. The real purpose of these attacks is to destroy farmer cooperatives and eliminate their competition. We have repeatedly stated that we do not seek unfair tax advantage for farmer cooperatives. It is our position that the earnings retained in the corporate structure and not currently distributed, either by a farmer cooperative or by a business corporation, should be subject to corporate income tax.

The portion of earnings distributed to shareholders as dividends upon capital stock, either by a farmer cooperative or by a business corporation, should not be subject to corporation income tax, since such income is taxable in the hands of the shareholders. Likewise, we insist that the portion of the earnings of farm cooperatives, which is currently distributed to members and patrons in the form of patronage refunds, should not be subject to corporation income tax, since such refunds are taxable in the hands of such members or patrons. We oppose double taxation in either case. We will vigorously defend our farmer cooperatives against such attacks.

III. COORDINATION OF FEDERAL AGRICULTURAL AGENCIES

During the last two decades numerous separate federal agencies have been created to meet specific agricultural problems. In many cases there has been a marked change in the nature and an increase in the scope of the operations of these agencies. We recognize that some progress has been made through reorganization and increased efficiency. However, there still is duplication of activities, unnecessary expense in their operations, and confusion among farm people served.

The work of United States Department of Agriculture agencies serving farmers falls into three broad classes, research, education and service functions. To reduce expense, minimize confusion and provide maximum service to farmers, we recommend that so far as reasonably possible all activities in each of these fields be combined under the agency best fitted to perform the particular function.

IV. LABOR LEGISLATION

The Association reaffirms its support of national legislation which is fair to both labor and management and which recognizes the necessity of protecting the general welfare.

V. PRICE CONTROL

The Association reaffirms its opposition to the reimposition of direct price control which must, of necessity, be accompanied by both rationing and/or production control. Such measures will require a vast bureaucratic, regulatory and enforcement body in order to make these measures work, and will inevitably result in the loss of individual freedom which must be preserved if democracy is to survive.

VI. FEDERAL AID

The Illinois Agricultural Association opposes excessive increases in federal aid to local governmental units. Necessary appropriations should be made in such manner as will preserve essential local control and will supplement, not replace, local effort. We oppose any further federal aid to schools except to those in states which prove this aid to be absolutely necessary to provide adequate public education and then only to publicly supported schools.

VII. OLEOMARGARINE TAX

The passage of legislation imposing taxes on yellow oleomargarine by Congress was a recognition of the need to protect both the dairy industry and consumers against imitation and fraud. The need for this protection is no less today than it was when existing legislation was passed.

Illinois is a prominent dairy state and ranks fifth in the United States in milk production. Last year five and one-half billion pounds of milk were produced on Illinois farms. In 1947, Illinois produced 35.96 per cent of the total national soybean crop. Cooperative marketing associations affiliated with the Illinois Agricultural Association last year handled 2,625,000,000 pounds of milk and in excess of 15,000,000 bushels of soybeans. Our organization is interested in legislation as it affects the general welfare of agriculture. We are not representing the special interests of either the dairy or the soybean producers.

We will not oppose removal of the taxes on oleomargarine, provided some other means of preserving the identification as between oleomargarine and butter is developed. We believe that such identification provided by law would be fair to all interests and in harmony with our American ideal of fair competition. We will support only legislation which provides that oleomargarine be clearly identified so that consumers may choose on the merit of the product.

VIII. AMENDMENT OF STATE CONSTITUTION

A number of the provisions of our present state constitution are obsolete and not adapted to present day conditions. We recognize the need for change in this basic law. We authorize the board of directors to take such action as may appear advisable in order to obtain constructive revision of our Illinois Constitution.

IX. GASOLINE TAX

It appears that substantially increased funds are necessary to provide for the rebuilding and maintenance of our state highway system, for county and local roads and bridges, and for city streets. The users of the highways should provide these increased funds. We will support a substantial increase in the gasoline tax in order to provide these funds. We insist that an equitable amount of any increased funds be definitely allocated and earmarked for farm-to-highway roads and the bridges on these roads.

X. ENFORCEMENT OF WEIGHT LIMITS ON HIGHWAYS

We reaffirm our opposition to legislation increasing the maximum weight limits for trucks and buses using our state highways. Many of our highways were not designed to carry the maximum loads now permitted by law.

Axle and gross weight restrictions provided by the present law should be rigidly enforced to preserve and protect our highways. Inadequate enforcement of existing laws and regulations pertaining to overloading has been responsible for much of the excess wear and destruction of our highway system. It has been estimated that 5,000 miles of our primary system is in need of immediate reconstruction.

Weighing stations equipped with scales capable of weighing the entire vehicle and load would aid in the enforcement of the gross weight limitation law. We request the Association to sponsor or support such measures as will aid in the enforcement of traffic laws and regulations.

Resolutions Committee

F. E. Morris, Sangamon County, Chairman; Frank Loucks, Will; James F. Holderman, Grundy; Tom Richolson, Ogle; Edwin Weber, Adams; Lester E. Leigh, Marshall-Putnam; E. B. Radliff, Ford; Ernest Sedgwick, Cumberland; Carl Heerdt, Moultrie; Carl V. Riley, Pike; L. J. Todt, Montgomery; G. G. Pape, Madison; Raymond Baumgart, Wabash; Russell Hayes, Randolph; R. V. McKee, Marshall; K. T. Smith, Greene; D. L. Clarke, Sangamon; J. King Eaton, Madison; Albert Webb, Franklin.

XI. INCREASED STATE AID

We reaffirm our previously expressed policy of encouraging the improvement of rural schools through the reorganization of school districts and other means. We recognize and approve the fine spirit in which most counties and communities accepted their responsibility for carrying out the provisions of the County School Survey Law. We especially commend local communities for the quality of leadership contributed by them to this program. Upon request, we shall continue to extend such help to local groups in reorganization efforts as this Association can give.

We urge the board of directors and officers of the Association to cooperate with other interested groups in the preparation of new or corrective legislation (1) to promote needed reorganization where previous efforts have failed, (2) to improve the services of new districts already established, and (3) to secure a substantial increase in the state support of schools which will provide sufficient funds in all efficiently organized school districts to finance a reasonable standard of education. This additional money from the state should be distributed only on an equalization basis and in such manner as will encourage further reorganization of the kind generally conceded to be educationally superior.

XII. PUPIL TRANSPORTATION IN NON-HIGH TERRITORY

Despite efforts toward school reorganization, many scattered pieces of non-high school territory remain in some counties. Rural children living in this non-high territory are often unable to attend high school because

1949 Membership Goal - 165,000

"We Can Reach This New Goal If We Repeat Successes of 1948. We Have Most Influential Farm Organization in The Nation" — Brissenden

OUR goal for '49 — 165,000 members.

This was the challenge thrown out by O. D. Brissenden, IAA director of organization, during the annual meeting in Chicago.

"We can reach this new goal if we repeat our great membership successes of this year. We have the most influencial farm organization in the nation. Let's keep her strong with 10,000 new members," Brissenden said at the annual organization conference.

He praised the workers in organization for their part in making 1948 the most successful year in the history of the IAA.

This success was reflected in the 50-foot-wide banner that hung in the general assembly hall at the Hotel Sherman during the IAA convention.

On the banner in large numbers was displayed the IAA's record membership attained this year — 155,791 Illinois farm families.

This record of 155,791 Farm Bureau members represents an increase of 9,940 members over last year, and maintains the IAA's position as the largest state farm group in the nation. In 1947 membership in the IAA stood at 145,851.

Actually an entire "city" of farm families were signed in county Farm Bureaus and the Illinois Agricultural Association this year. There were 17,525 new members signed for the net gain, mentioned above, of 9,940. The difference between these two figures represents cancellations due to deaths, delinquency, and other causes.

Art Page (right), WLS Dinner Bell hour announcer interviews Asa B. Culp, McLean County C.O.D. during convention.

Southern Illinois deserves special mention for their achievements this year. More than any other section of the state, they have made possible the record membership in 1948.

This year southern Illinois exceeded their quota of new members by 151 per cent, an almost unheard of achievement. In addition, nine of the 10 high counties on a basis of a percentage increase, and seven of the 10 high on a quota basis, were southern Illinois counties.

The 10 high counties on the basis of a percentage increase in membership were:

Cumberland, 23.7 per cent; Monroe, 19.3; Jefferson, 19.2; Wayne, 18.7; Perry, 17.2; Jackson, 15.4; Marion, 14.8; Vermilion, 14.3; Hamilton, 13.8; and Richland, 13.3. All but Vermilion were in the southern Illinois district.

The 10 high on the basis of exceeding their quota were:

Jefferson, 298 per cent; Jersey, 278; Williamson, 252; Will, 250; Monroe, 234; Gallatin, 216; Franklin, 209; Kendall, 205; Jackson, 204; and Logan, 204. All but Will, Kendall, and Logan were in the southern Illinois district.

Most of the 10 high counties in total membership were located in northern and north central Illinois where counties are larger in area.

Cook county at the end of the fiscal year still maintained its lead over McLean for first place although Asa Culp, McLean county organization director, said at the IAA convention in Chicago that he thought McLean at the moment was leading Cook by a narrow margin.

The 10 high counties were: Cook, 4,067; McLean, 4,017 La Salle, 3,920; Champaign, 3,645; Will, 3,008; Sangamon, 2,906; Whiteside, 2,886; Iroquois, 2,804; Henry, 2,789; and Livingston, 2,760.

One of the best skits presented at any

time during the IAA convention was the "VAPOO" clinic put on by county organization directors. VAPOO stands for the Value And Power Of Organization.

In the skit a very sick patient (the most mutilated, crippled, and ailing mortal human eyes have seen) by the name of Podunk County Farm Bureau got a thorough examination by a corps of doctors, represented by the county organization directors.

The kill or cure treatment recommended by the doctors included a blood transfusion by the Rural Youth organization, conditioning of the budget gland, and help in curing a rare disease, non-enthusiasticitis.

During the organization conference L. A. Evans, supervisor of the membership records department, and for 28 years an IAA employee, announced his retirement to the assembled county organization directors. He started with the IAA in 1920.

GOOD YEAR AHEAD

Hog Producers Hear Prediction That '49 Will Be Excellent Year For Pig Production With No Sudden Drop in Pork Prices Expected

A GOOD year ahead for hog producers with no sudden drop in hog prices was foreseen during the annual meeting of the Illinois Farm Bureau Serum Association held during the IAA convention.

This prediction was made in a price outlook talk by L. H. Simerl, associate professor in the department of agricultural economics at the University of Illinois College of Agriculture.

"A sudden deflation as we had in 1920 is unlikely," Simerl said. "Consumer demand is strong and increasing. This will help sustain prices."

A 1949 spring crop of only 15 to 20 per cent higher than this year is predicted, Simerl said. He said that usually with a crop as large as that grown this year farmers would increase their crop by at least 25 per cent.

Simerl said that if we assume a 20 per cent larger 1949 spring pig crop, then hog prices next fall and winter probably would drop 30 per cent. This would mean $17.50 hogs instead of the $25 hog market we now have.

At $17.50 a hundred livestock farmers should still be able to make a profit because of the bumper grain crop harvested in 1948.

Contrary to experiences in past years when record corn crops were harvested, farmers will not glut the market next fall for three reasons, Simerl predicted. These are:

1. Many farmers are satisfied with their income from other sources and will not want to increase hog production.

2. Many fear a big drop in prices such as occurred in 1920. They fear this drop will come before they can get their pigs to market.

3. Others prefer the certainty of government support prices over the uncertainty of hog production.

Although hog production may be up no more than 20 per cent over 1948 figures, hogs will still account for most of the increase in meat reaching city consumers, President Russell V. McKee, Marshall-Putnam county, said during the association's meetings.

He said hogs are traditionally the best way to market large surpluses of corn and that one-half billion pounds more meat should be marketed next year. In 1948 21.5 billion pounds of meat were marketed.

In reporting on the year's activities of the serum company, Manager Cecil Musser said it continues to be the largest single purchaser of hog cholera serum and virus in the United States.

In 1948 the serum association handled more than 40,000,000 cubic centimeters of anti-hog cholera serum and virus.

Musser said that although there were three per cent less hogs in Illinois this year, sales of serum and virus were almost the same as the previous year.

The 10 high counties in volume of sales were: Knox, Henry, McDonough, Warren, McLean, Pike, Fulton, Peoria, Stark, and DeKalb.

The 10 high on the basis of exceeding their quota were:

Jefferson, 298 per cent; Jersey, 278; Williamson, 252; Will, 250; Monroe, 234; Gallatin, 216; Franklin, 209; Kendall, 205; Jackson, 204; and Logan, 204. All but Will, Kendall, and Logan were in the southern Illinois district.

Most of the 10 high counties in total membership were located in northern and north central Illinois where counties are larger in area.

Cook county at the end of the fiscal year still maintained its lead over McLean for first place although Asa Culp, McLean county organization director, said at the IAA convention in Chicago that he thought McLean at the moment was leading Cook by a narrow margin.

The 10 high counties were: Cook, 4,067; McLean, 4,017 La Salle, 3,920; Champaign, 3,645; Will, 3,008; Sangamon, 2,906; Whiteside, 2,886; Iroquois, 2,804; Henry, 2,789; and Livingston, 2,760.

'THE DIAGNOSIS'

Left: A group of "specialists" confer over an ailing Farm Bureau represented by County Organization Director Rex Rhea, DeWitt county, at "Vapoo" Clinic. The specialists (left to right) E. L. DeLay, Marion county C.O.D.; Gene Stadel, Jo Daviess farm adviser; Asa B. Culp, McLean C.O.D.; Otto Steffey, IAA board member from Henderson county; R. J. Ash, Morgan C.O.D.; B. H.

'THE PRESCRIPTION'

Wanstreet, Hamilton C.O.D.; and E. C. Herriott, former president, Champaign County Farm Bureau. Right "Professor" Steffey decides the patient needs a good shot of axle-grease . . er . . we mean . . lifeblood. "Specialist" DeLay takes a sounding while "Chief Surgeon" Culp decides to operate with the first butcher knife he can reach.

time during the IAA convention was the "VAPOO" clinic put on by county organization directors. VAPOO stands for the Value And Power Of Organization.

In the skit a very sick patient (the most mutilated, crippled, and ailing mortal human eyes have seen) by the name of Podunk County Farm Bureau got a thorough examination by a corps of doctors, represented by the county organization directors.

The kill or cure treatment recommended by the doctors included a blood transfusion by the Rural Youth organization, conditioning of the budget gland, and help in curing a rare disease, non-enthusiasticitis.

During the organization conference L. A. Evans, supervisor of the membership records department, and for 28 years an IAA employee, announced his retirement to the assembled county organization directors. He started with the IAA in 1920.

GOOD YEAR AHEAD

Hog Producers Hear Prediction That '49 Will Be Excellent Year For Pig Production With No Sudden Drop in Pork Prices Expected

A GOOD year ahead for hog producers with no sudden drop in hog prices was foreseen during the annual meeting of the Illinois Farm Bureau Serum Association held during the IAA convention.

This prediction was made in a price outlook talk by L. H. Simerl, associate professor in the department of agricultural economics at the University of Illinois College of Agriculture.

"A sudden deflation as we had in 1920 is unlikely," Simerl said. "Consumer demand is strong and increasing. This will help sustain prices."

A 1949 spring crop of only 15 to 20 per cent higher than this year is predicted, Simerl said. He said that usually with a crop as large as that grown this year farmers would increase their crop by at least 25 per cent.

Simerl said that if we assume a 20 per cent larger 1949 spring pig crop, then hog prices next fall and winter probably would drop 30 per cent. This would mean $17.50 hogs instead of the $25 hog market we now have.

At $17.50 a hundred livestock farmers should still be able to make a profit because of the bumper grain crop harvested in 1948.

Contrary to experiences in past years when record corn crops were harvested, farmers will not glut the market next fall for three reasons, Simerl predicted. These are:

1. Many farmers are satisfied with their income from other sources and will not want to increase hog production.

2. Many fear a big drop in prices such as occurred in 1920. They fear this drop will come before they can get their pigs to market.

3. Others prefer the certainty of government support prices over the uncertainty of hog production.

Although hog production may be up no more than 20 per cent over 1948 figures, hogs will still account for most of the increase in meat reaching city consumers, President Russell V. McKee, Marshall-Putnam county, said during the association's meetings.

He said hogs are traditionally the best way to market large surpluses of corn and that one-half billion pounds more meat should be marketed next year. In 1948 21.5 billion pounds of meat were marketed.

In reporting on the year's activities of the serum company, Manager Cecil Musser said it continues to be the largest single purchaser of hog cholera serum and virus in the United States.

In 1948 the serum association handled more than 40,000,000 cubic centimeters of anti-hog cholera serum and virus.

Musser said that although there were three per cent less hogs in Illinois this year, sales of serum and virus were almost the same as the previous year.

The 10 high counties in volume of sales were: Knox, Henry, McDonough, Warren, McLean, Pike, Fulton, Peoria, Stark, and DeKalb.

High Costs, Falling Prices May Bring Dis

IAA President Warns Public That a Healthy Economy Requires a Healthy Agriculture, and That A Sick Agriculture Eventually Will Drag Industry Down With It

YEAR after year as the Illinois Agricultural Association has grown in size and prestige, our annual meeting has increased in importance. Today, in welcoming you to this 34th Annual Meeting, I want to emphasize the magnitude of your responsibilities as members and delegates to carefully review the activities of the last year and to establish policies for the future guidance of your Board of Directors and staff.

With a membership of 155,791, with affiliated organizations serving directly practically every farm family in Illinois, and with millions of dollars in assets invested by these farmers in their own organizations, we, assembled at this convention, as well as every other member throughout the state must realize the powers we have developed and thus must weigh our decisions with increasing care. A strong organization cannot afford to make serious mistakes. The impact of our decisions affects not only our own membership, but to some degree the entire society in which we live. Let us weigh each action carefully to be sure that we cast our influence on the side of justice and equity for all.

The Illinois Agricultural Association is primarily a service organization. The Association and its activities have grown in scope and size as farm people have turned to it for the solution of more and more of their problems in our increasingly complex modern civilization.

Farmers are rapidly becoming a minority group in a great urban industrial society. Under these conditions it is imperative that we in agriculture be represented by a single, strong voice. Building this single, strong voice is the central objective of your organization. We must constantly examine our various service activities to make sure that they support this objective of one voice for Agriculture.

Last year I discussed the work of your Association from the standpoint of the seven divisions of the organization. This year I have attempted to classify our activities as to function. Of the seven divisions of the Illinois Agriculture Association: organization, marketing, legal, secretary, treasurer, comptroller and general service, all are concerned with each of the functional operations.

This voice of Agriculture can be powerful if it is supported by sustained numerical strength. We can serve farmers best by providing the kind of organization that merits their continued support and then having the machinery to make certain that every farmer has the opportunity to become an active, loyal and conscious member.

That we have this kind of machinery in successful operation is demonstrated by the increase in I. A. A. — Farm Bureau membership to the all-time high mark of 155,791 at the close of the current fiscal year. This is 9,940 more members than we had at this same time last year or an increase of 6.82 per cent.

An analysis of the financial report of the Association reveals the fact that a high proportion of the annual expenses are chargeable to the maintenance of the organizational machinery. This cost is amply justified if we succeed in maintaining an informed, participating membership and an adequate leadership training program. The strength of the Voice of Agriculture depends upon numerical strength and capable leadership.

The early history of farm organizations in America discloses that farmers have long realized the necessity of having strong cooperative marketing, purchasing and service agencies. These cooperatives have, in fact, become essential farm tools that serve both by providing needed competition for the huge corporations and by providing entirely new services for farm people. Farm organizations have long accepted their responsibility of assisting in the formation of these cooperative associations.

On this and succeeding pages we are publishing excerpts from the speech delivered by President Shuman at the IAA annual meeting. The full speech may be obtained by writing to the IAA Record, 43 East Ohio, Chicago 11, Ill.

It remained for the early leadership of the Illinois Agricultural Association to conceive of the idea of one voice for agriculture and to develop the plan which has united many of our Illinois cooperatives with our general farm organizations to form this one voice. Once the idea was adopted, it was not too difficult to follow this successful pattern when new cooperatives were organized.

During recent years much time and thought has been given to the problem of closer coordination between the older cooperatives and our organization. The voice for agriculture will continue to split into a conflicting and ineffective babel unless a greater degree of unity is obtained. I am glad to be able to report that definite progress has been made in Illinois during the past year.

The Illinois plan of coordination is based upon the premise that the general farm organization should be the sole spokesman and representative of farm people in the fields of legislation, social action and national policy making. Our cooperatives are rendered of no less importance by confining their activities to the fields of service and business and by being directly affiliated with the County Farm Bureaus and the Illinois Agricultural Association. On the contrary, both the Farm Bureau organization and our affiliated cooperatives have benefited by this "one voice" approach.

With the close working relationship which comes with the Illinois plan of coordination there exists a definite responsibility upon the Illinois Agricultural Association to see that there is a true unity of action and purpose. This is, in part, the function of the Illinois Agricultural Service Company which is wholly owned and controlled by the Illinois Agricultural Association. The Service Company is a corporate management operation and its success in turn depends upon the efficiency and capacity for growth of the Illinois Agricultural Association itself. In other words, we must move forward

n Disaster — Shuman

President Shuman delivers his annual address to the assembled voting delegates.

together if the voice for agriculture is to be well balanced and wisely used.

Farmers have placed a great financial trust in the Association and its affiliated companies. The Board of Directors of the Association are increasingly aware of the huge responsibility which rests on them as a result of the tremendous investment which farmers have in their own organizations. Some idea of the magnitude of this responsibility is reflected by the increase from $14,691,637.-19 total assets in 1938 to a total of $64,350,525.92 in 1947. Country Life Insurance Company alone now has investments totaling more than $43,000,000.

The Illinois Agricultural Association itself is in excellent financial condition. However, expenses have been increasing at a much more rapid rate than has income. This same situation faces many of the County Farm Bureaus. Either income must be increased or services now deemed essential must be eliminated. The American Farm Bureau Federation faced with a similar dilemma is proposing an increase in membership dues to be voted upon at the forthcoming annual meeting.

The first concern of the Illinois Agricultural Association in building One Voice for Agriculture is to train leadership and maintain a large participating membership. We have just discussed the second, but no less important, function of the Association which is to provide the means of fitting the necessary business service and marketing cooperatives into their proper places as an integral part of the Voice of Agriculture. We have built this coordinated program in Illinois on the principle of Farm Bureau membership control through the use of corporate management and voting stock to insure that our cooperative organizations have sound business and financial management and continue to work in harmony with the general farm organization.

Building good public relations is the third broad function of the Illinois Agricultural Association in fulfilling our objective of developing a single strong voice for agriculture. During recent months farmers have been convinced of the need for a better public relations program for agriculture as we have felt the sting of unfavorable public opinion resulting from increasing food costs. There are two phases of this public relations problem; first, the need for a program of better information and improved relationships within the agricultural field itself, and secondly, the need for a program which will reach the general public.

Your organization has developed a very successful information and publicity program which reaches practically every member. The Illinois Agricultural Association RECORD is an attractive magazine and is read by more Illinois farmers than any other publication. News releases from the Association are generally well received by the downstate press. Other membership relations activities have been maintained at a high level. The Illinois Farm Sports Festival, with its thousands of participants, is truly the greatest farm folk and sports event in America. Membership interest and participation in annual meetings, leadership meetings and special conferences continues quite active.

The division of General Services has the task of stimulating local interest in the action programs of the Association. We have had excellent cooperation from the counties in establishing the statewide plan for uniform county committees through which our department directors are attempting to carry out local action programs in taxation, rural school problems, safety and health, better roads, conservation, animal health and legislation. The greatest hindrance to the most effective use of this plan is the lack of sufficient manpower in most counties to fully implement these activities. Proper use of these committees, coupled with active local community organization would both increase the effectiveness of our organization and insure increased membership participation.

In general, the membership relations program of the Association is fairly effective and does show considerable improvement. Our great unsolved problem is in the field of public relations with the general public. Our weakness here is a result of the great influence wielded by the powerful metropolitan press and radio. Every available opportunity has been used to secure a fair hearing for Agriculture.

The most dramatic function of your

Two leaders in Illinois agriculture are honored by the Illinois Agricultural Association for long years of faithful service to agriculture. IAA President Charles B. Shuman presents awards to (left) Prof. J. C. Spitler, state leader of farm advisers, and (right) J. E. Hill, state supervisor of vocational agricultural education.

IAA HONORS 42

Farm Advisers, Vocational Ag Teachers Receive Awards in Recognition of 25 Years Of Faithful Service to Illinois Agriculture

AWARDS in recognition of long and faithful service to Illinois agriculture were presented to 42 county farm advisers and vocational agricultural teachers and two state agricultural leaders by President Charles B. Shuman at the Illinois Agricultural Association annual meeting in November.

The awards were made during the Wednesday evening general session in the grand ballroom of the Hotel Sherman. Prior to the award ceremony, the local agricultural leaders were dinner guests of the officers and directors of the Association.

The awards were in the form of gold lapel buttons set with diamonds and inscribed with the words, "25 Years Service to Illinois Agriculture."

To be eligible for this award, the local leader had to have served 25 years either as a farm adviser or vocational agricultural teacher, or have a combined service record from both fields of 25 years. The recipient also had to be in service at the time the award was made or to have retired during the period Oct. 1, 1947 to Sept. 30, 1948.

Among the major contributions of these agricultural leaders are the Future Farmers of America and 4-H club programs which are carried on under their direction. The IAA and county Farm Bureaus have always been closely allied and interested in these youth programs. Many of the directors in Farm Bureau and associated cooperatives have received their early training from the local leaders who were honored.

The two state leaders honored were Prof. J. C. Spitler, Urbana, state leader of farm advisers, U. of I. College of Agriculture, and J. E. Hill, Springfield, state supervisor of vocational agricultural education.

Farm advisers who received the awards were: Calhoun, J. H. Allison, Hardin; Carroll, M. P. Roske, Mt. Carroll; Champaign, W. B. Bunn, Champaign; Cook, C. A. Hughes, Arlington Heights; Edgar, L. E. McKinzie, Paris; Fulton, J. E. Watt, Canton; Jasper, R. E. Apple, Newton; Lawrence, H. C. Wheeler, Lawrenceville; Lee, C. E. Yale, Amboy.

Marion, F. J. Blackburn, Salem; Menard, L. W. Chalcraft, Petersburg; Moultrie, Paul M. Krows, Sullivan; Perry, J. G. McCall, Pinckneyville; Pope, Glenn C. Smith, Golconda; Rock Island, George H. Reid, Moline; Sangamon, Edwin Bay, Springfield; St. Clair, B. W. Tillman, Belleville; Stephenson, V. G. Banter, Freeport; Warren, E. H. Walworth, Monmouth; Whiteside, F. H. Shuman Morrison.

Vocational agricultural teachers receiving awards as follows: C. L. Kutil, Antioch; L. F. Lentz, Belleville; T. W. Clarida, Centralia; W. A. Newlin, Casey; W. R. Queen, Cuba; E. B. Henderson, Hutsonville; P. M. Furr, DeKalb; A. T. Martin, Delavan; S. J. Fleming, Leland; L. A. McKean, Le Roy; R. O. Robinson, Mendon; L. N. Patton, Momence.

W. G. Warnock, Mt. Carroll; L. T. Clark, Olney; M. R. Malsbury, Rantoul; G. E. Newburn, Rushville; Ben Eade, Sandwich; Walter Baysinger, Streator; John E. Shields, Sugar Grove; R. W. Terrell, Sycamore; Guy Husted, Virginia; C. W. Hatland, Walnut.

IAA President Shuman To Appear On Farm And Home Week — Jan. 31-Feb. 3

FARM machinery, soil conservation, small grain, and livestock meetings will highlight the first day's program of the 48th annual Farm and Home Week to be held Jan. 31-Feb. 3 at Urbana. Principal speaker will be Dr. George D. Stoddard, president, University of Illinois.

IAA President Charles B. Shuman will discuss "Our Program for Agriculture" at the concluding general session Thursday.

Talks on livestock feeding, farm prices and policies, and a demonstration on how to select livestock will be featured the second day. The speaker for the general session will be L. F. Livingston, manager, extension Division, E. I. DuPont DeNemours and Company.

Scheduled for the third day are discussions on farm leases, dairy marketing, and weed, crop, and orchard spraying equipment. The principal speaker will be Pauline Park Wilson, dean, School of Home Economics, University of Georgia. Grain marketing, farm management, and farm buildings will be featured also during the Thursday program.

IAA Grain Co-op Starts Buying Operations on Chicago Market

WE ARE doing business in the Chicago grain market. This was the good news the Illinois Grain Terminals Company gave to its members at its annual meeting held recently during the IAA convention in Chicago.

The establishment of a Chicago office climaxes two years of organization work for the new IAA-affiliated grain cooperative. The Chicago office was opened early in November.

Sam Hassell, Buffalo, N. Y., recently employed as manager of Illinois Grain Terminals, was introduced to many of the members of the association during the annual meeting. Hassell took charge of the company Oct. 15.

Illinois Grain Terminals Company has taken over Hassell's Buffalo office and will continue to operate it as an eastern outlet for Illinois grain. The Buffalo office will be used also by other grain cooperatives in the Midwest.

Other developments in the grain merchandising program were outlined by George H. Iftner, grain marketing director for the IAA. Two river houses at Lacon and Hennepin were completed during the year.

These elevators have a capacity of about 200,000 bushels each. They will be managed by river operating companies of Illinois Grain Terminals Company.

A third river elevator at Havana with a capacity of 100,000 bushels was completed in 1947. This is operated by the Havana River Grain Company.

Five new county grain companies were organized during the year—in Marshall-Putnam, La Salle, Edgar, Henderson, and Peoria counties.

A campaign to raise $500,000 for operating capital for the new company has been underway for several months. Much of the capital is being raised from local elevators and the river operating companies.

Additional funds for the new company may be needed if terminal elevators are built or purchased in Chicago or East St. Louis. A terminal site on the Calumet river in Chicago was purchased recently. The site contains 11.6 acres of land and 1300 feet of water frontage on the Calumet river south of 106th street.

In East St. Louis a suitable building site has been selected and terms for a long-time lease have been completed.

Iftner said that a Chicago terminal elevator would have a capacity of some three million bushels and would be equipped to handle lake boats, river barges, rail cars and trucks.

An elevator in the East St. Louis area would have a capacity of some two million bushels. It would be located on the Mississippi river.

At present there are 16 county grain companies, seven county service companies, and 11 local elevator companies organized on a Farm Bureau type cooperative basis. Seven other county grain companies are seeking ways to get started into the grain business soon.

IAA Sponsors Co-op School For Young Farm Leaders

IF YOU want to know more about the workings of a farm cooperative, ask one of the 200 or more young farmers who will attend the Co-op Training Course to be held this month at Urbana.

After they complete this four-day course they should know most of the answers. For the IAA, as the sponsor, plans to give them a complete course in co-ops — including the facts you learn only in the school of hard knocks and experience.

"We're trying to do for our young farmers what Standard Oil Company, International Harvester Company, and others, are doing for their young men," I. E. Parett said in announcing the course.

"We are sponsoring this course," Parett continued, "because we feel we are the group best able to talk about farm cooperatives in Illinois." Parett is director of general services for the IAA and is in charge of the Co-op Training Course.

The course is open to three young men from each county between the ages of 17 and 25. Participating counties are asked to select their own delegates, picking one man from a 4-H Club, one from a Rural Youth group, and one from a Future Farmer's club in their county. The young men must be unmarried.

"After most young men leave Rural Youth groups and get married, they have little chance to get formal training in cooperatives," Parett said.

"And yet they are asked to become directors in co-ops — many of them million dollar concerns — without the right kind of a background. This school should make their duties easier."

The school will be held between semesters at the University of Illinois during the same week as Farm and Home Week, and will be conducted on the campus of the College of Agriculture.

The dates have been advanced one day to Jan. 30-Feb. 2 from the original dates announced in the December issue of the RECORD. This was done to avoid the housing problem that would result from Illinois students returning Feb. 3 for second semester registration. Several minor program changes also have been made since last month's article in the RECORD.

IAA President Charles B. Shuman will give the address of welcome and will outline the aims and purposes of the course on co-ops.

IAA department heads and company managers as well as staff members of the College of Agriculture will act as instructors during the course.

The cost of conducting the school will be assumed by the IAA. The county Farm Bureaus are being asked to pay for cost of room, board, and transportation for each student attending the course. This is not expected to be more than $25 per pupil.

During the final day of the course, the students, drawing on material presented during the sessions, will set up their own farm cooperative.

They will first determine its need, then appoint an organizing committee, draw up articles of incorporation, elect a board of directors, select a manager, and sell stock.

If the course proves fruitful in the opinion of the young farmers and members of the IAA staff, the Co-op Training Course may become an annual affair.

A Big Year For DAIRY CO-OPS

PRAIRIE Farms ice-cream will be sold throughout Illinois in 1949. It will be the first of a new series of dairy products to be sold under the Prairie Farms brand.

This enlarged merchandizing program was announced during the annual meeting of Prairie Farms Creameries held in Chicago recently during the Illinois Agricultural Association convention.

Local plants have been marketing ice-cream, cottage cheese, bottled milk, and other dairy products in recent years at an increasing volume, and particularly since the war.

The only product which has been sold on a statewide basis has been Prairie Farms butter. Prairie Farms ice-cream is a logical companion product to butter, in the opinion of the managers and farm leaders associated with the creameries.

Forrest C. Fairchild, manager of the state association of Prairie Farms Creameries, said that Illinois Farm Bureau members themselves constitute a large market for Prairie Farms ice-cream.

He said there are already enough deep freeze units on the farms of members to create a big market for home deliveries. Several of the member plants are scheduling ice-cream routes for the new Prairie Farms product. One truck should be able to handle up to 600 farmer customers by making occasional deliveries.

Prairie Farms ice-cream is only a start, Fairchild said. In many areas the IAA-affiliated cooperatives plan to market a complete line of Prairie Farms dairy products.

The problems involved will be many times greater than those faced when only butter was merchandized alone, Fairchild said, but the gains to Illinois farmers also will be many times greater.

Fairchild managed the plant at Bloomington for 20 years until he came with the state company last November. The 10 Prairie Farms plants are located at Bloomington, Carbondale, Carlinville, Galesburg, Henry, Moline, Mt. Carroll, Mt. Sterling, and Olney.

Full of enthusiasm for the Prairie Farms product is state manager, Forrest C. Fairchild (center) shown with Judson Grove, Carroll (left), new PFC director and Prairie Farms board president, A. Oliver Bower, Champaign, at annual meeting of Illinois Agricultural Association in Chicago.

For the future of Prairie Farms Creameries, Fairchild sees a more highly integrated statewide operation, and more day by day team work among member plants. We'll probably have a greater interchange of milk between plants — and probably a higher degree of specialization in member plants, Fairchild said.

There is still a strong demand for grade A milk, Fairchild said, and it would pay Illinois farmers to convert to grade A milk production.

Dairymen are being paid a premium averaging 50 cents for each 100 pounds of grade A milk produced. This soon pays for any additional equipment needed in most milk sheds.

A. Oliver Bower, Champaign county, president of Prairie Farms Creameries, gave a progress report on the creamery being organized at Carlyle.

He said that land has been purchased at Carlyle during the year and stock is being sold to finance the operation. Construction of the building will probably start in 1949. This plant was to have been located at Centralia.

The financial reports of the member plants showed that butterfat purchases this year totaled 12,530,797 pounds, an increase of about 27 per cent over 1947. To handle this volume Illinois farmers have invested in land, buildings, and equipment, more than $2,839,513 in the 10 member creameries.

FEWER dairy cows and a heavy demand for milk spell a favorable year ahead for Illinois dairymen.

This was the outlook for 1949 presented during annual sessions of the Illinois Milk Producers Association held during the 34th annual convention of the Illinois Agricultural Association in Chicago.

Prices for milk in 1949 probably will average about the same as this year, speakers said. They based their estimates on reports issued by the U. S. Department of Agriculture Bureau of Agricultural Economics.

Milk production is expected to be slightly greater than in 1948, although farmers will milk fewer cows in 1949 than any year since the early '30's. Supplies of feeds will be greater and heavier feeding is expected.

Heavy consumption and an increase in the population were seen as factors strengthening demand for dairy products.

The Illinois Milk Producers Association is a federation of all dairy marketing cooperatives affiliated with the Illinois Agricultural Association.

It has a widely diverse membership. Twenty-one bargaining associations or producer dairies and the 10 Prairie Farms Creameries belong to the organization.

The 10 Prairie Farms Creameries are located at Bloomington, Carbondale, Carlinville, Champaign, Galesburg, Henry, Moline, Mt. Carroll, Mt. Sterling, and Olney.

IMPA members, organized as bargaining associations, are located at Canton, Decatur, DeKalb, Freeport, Galesburg, Kewanee, Ottawa, Peoria, Pontiac, Rockford, St. Louis, Mo., Spring Valley, Springfield, and Streator.

IMPA members maintaining receiving and manufacturing plant facilities are located at Champaign, Moline, and Chicago (the Pure Milk Association with 10 plants).

IMPA members operating cooperative

Fluid Milk, Butterfat, and Dairy Supply Purchases Were Highest In History of The Three IAA Dairy Co-ops. Continued Prosperity For Dairy Farmers Seen For Year Ahead. Creameries To Sell Prairie Farms Brand Ice Cream.

J. O. Hays, extension dairyman at Michigan State College, had his audience rolling in the aisles with his humorous talk on the dairy cow at the Illinois Milk Producers Association and Prairie Farms Creameries joint banquet during the IAA annual meeting. He is shown putting a model cow together.

dairies engaged in bottling milk and manufacturing milk products are located in Danville, Jacksonville, Peoria, Quincy and Springfield.

One of the problems currently being studied by the Association, and discussed at their annual meeting, is the wide variation in prices paid dairymen for milk.

It was mentioned that during the month of September members of the Association handling Grade A milk showed a variation in prices paid to farmers for 3.5 per cent milk ranging from $4.14 to $5.46 a hundred pounds.

These differences occur regularly, the speakers said. And the variation in retail prices is not as great as that reflected in prices paid to farmers.

O. H. Ryan, La Salle county, president of Illinois Milk Producers Association, praised the directors and manager of Prairie Farms Creameries for their close cooperation with his association during the year.

O. H. Ryan

"The fine showing financially of the Illinois Milk Producers Supply Company shows clearly the mutual advantage cooperatives experience when they are able to work closely together," Ryan said.

It was reported at the IMPA meeting that a study of milk prices in Illinois markets was made by Dr. R. W. Bartlett of the University of Illinois. The three principal conclusions of this study were:

1. Member associations should try to establish the going condensery price as the minimum acceptable price for fluid milk.

2. Prices established for Grade A milk in any fluid milk market in Illinois should not be less than the Grade A price in St. Louis or Chicago, less transportation costs to these markets.

3. Producer prices in fluid milk markets should be related to current manufactured milk prices and should be designed to encourage a more even supply of milk throughout the year.

The IMPA this year, in cooperation with Prairie Farms Creameries, furnished the University of Illinois with funds to prepare and circulate one chart each month on some issue close to the dairy industry.

The Supply Company

The Illinois Milk Producers Supply Company finished a highly-successful year in 1948. It made one of the most rapid gains in volume on a percentage basis of all the IAA-affiliated companies.

Sales of supplies and equipment increased from $187,772.72 a year ago to $617,870.41 for the fiscal year ending Sept. 30, 1948. Net income increased from $11,626.79 to $30,954.12.

In his report to members during the supply company's annual meeting held in conjunction with the IAA convention recently in Chicago, Judson P. Mason, manager, said this increase resulted in large part from the addition of the Prairie Farms Creameries to the membership of Illinois Milk Producers Supply Company.

The supply company this year for the first time became the purchasing agent for all cooperative dairy marketing organizations affiliated with the IAA.

Total sales and savings of this four-year-old cooperative are compared to those of previous years:

Year	Volume of Sales	Earnings
1948	$617,870.41	$30,954.12
1947	$187,802.71	11,626.79
1946	98,832.71	7,128.36
1945	43,651.03	2,466.74

Mason explained that these savings are made by the purchase of supplies and equipment at terms more favorable than can be obtained by individual member cooperatives.

The company has a continuous record of paying interest on preferred stock and substantial patronage refunds. Patronage refunds to member companies of $24,-181.80 have been declared and are payable Jan. 1, 1949. It handles items used to produce and process milk.

The supply cooperative purchases directly from manufacturers whenever possible or works with other groups to cut costs of equipment and supplies to its members.

Competitive prices are charged member cooperatives and savings distributed as patronage refunds. They work closely with the Land O'Lakes Creameries, Inc., Equipment Division, Minneapolis, Minnesota, and the United Cooperatives, Alliance, Ohio.

In addition to the 10 Prairie Farms Creameries the supply company handles purchases for the 21 cooperative dairies, bargaining associations, and manufacturing plant members of the Illinois Milk Producers Association.

A Big Year For DAIRY CO-OPS

Full of enthusiasm for the Prairie Farms product is state manager, Forrest C. Fairchild (center) shown with Judson Grove, Carroll (left), new PFC director and Prairie Farms board president, A. Oliver Bower, Champaign, at annual meeting of Illinois Agricultural Association in Chicago.

PRAIRIE Farms ice-cream will be sold throughout Illinois in 1949. It will be the first of a new series of dairy products to be sold under the Prairie Farms brand.

This enlarged merchandizing program was announced during the annual meeting of Prairie Farms Creameries held in Chicago recently during the Illinois Agricultural Association convention.

Local plants have been marketing ice-cream, cottage cheese, bottled milk, and other dairy products in recent years at an increasing volume, and particularly since the war.

The only product which has been sold on a statewide basis has been Prairie Farms butter. Prairie Farms ice-cream is a logical companion product to butter, in the opinion of the managers and farm leaders associated with the creameries.

Forrest C. Fairchild, manager of the state association of Prairie Farms Creameries, said that Illinois Farm Bureau members themselves constitute a large market for Prairie Farms ice-cream.

He said there are already enough deep freeze units on the farms of members to create a big market for home deliveries. Several of the member plants are scheduling ice-cream routes for the new Prairie Farms product. One truck should be able to handle up to 600 farmer customers by making occasional deliveries.

Prairie Farms ice-cream is only a start, Fairchild said. In many areas the IAA-affiliated cooperatives plan to market a complete line of Prairie Farms dairy products.

The problems involved will be many times greater than those faced when only butter was merchandized alone, Fairchild said, but the gains to Illinois farmers also will be many times greater.

Fairchild managed the plant at Bloomington for 20 years until he came with the state company last November. The 10 Prairie Farms plants are located at Bloomington, Carbondale, Carlinville, Galesburg, Henry, Moline, Mt. Carroll, Mt. Sterling, and Olney.

For the future of Prairie Farms Creameries, Fairchild sees a more highly integrated statewide operation, and more day by day team work among member plants. We'll probably have a greater interchange of milk between plants — and probably a higher degree of specialization in member plants, Fairchild said.

There is still a strong demand for grade A milk, Fairchild said, and it would pay Illinois farmers to convert to grade A milk production.

Dairymen are being paid a premium averaging 50 cents for each 100 pounds of grade A milk produced. This soon pays for any additional equipment needed in most milk sheds.

A. Oliver Bower, Champaign county, president of Prairie Farms Creameries, gave a progress report on the creamery being organized at Carlyle.

He said that land has been purchased at Carlyle during the year and stock is being sold to finance the operation. Construction of the building will probably start in 1949. This plant was to have been located at Centralia.

The financial reports of the member plants showed that butterfat purchases this year totaled 12,530,797 pounds, an increase of about 27 per cent over 1947. To handle this volume Illinois farmers have invested in land, buildings, and equipment, more than $2,839,513 in the 10 member creameries.

FEWER dairy cows and a heavy demand for milk spell a favorable year ahead for Illinois dairymen.

This was the outlook for 1949 presented during annual sessions of the Illinois Milk Producers Association held during the 34th annual convention of the Illinois Agricultural Association in Chicago.

Prices for milk in 1949 probably will average about the same as this year, speakers said. They based their estimates on reports issued by the U. S. Department of Agriculture Bureau of Agricultural Economics.

Milk production is expected to be slightly greater than in 1948, although farmers will milk fewer cows in 1949 than any year since the early '30's. Supplies of feeds will be greater and heavier feeding is expected.

Heavy consumption and an increase in the population were seen as factors strengthening demand for dairy products.

The Illinois Milk Producers Association is a federation of all dairy marketing cooperatives affiliated with the Illinois Agricultural Association.

It has a widely diverse membership. Twenty-one bargaining associations or producer dairies and the 10 Prairie Farms Creameries belong to the organization.

The 10 Prairie Farms Creameries are located at Bloomington, Carbondale, Carlinville, Champaign, Galesburg, Henry, Moline, Mt. Carroll, Mt. Sterling, and Olney.

IMPA members, organized as bargaining associations, are located at Canton, Decatur, DeKalb, Freeport, Galesburg, Kewanee, Ottawa, Peoria, Pontiac, Rockford, St. Louis, Mo., Spring Valley, Springfield, and Streator.

IMPA members maintaining receiving and manufacturing plant facilities are located at Champaign, Moline, and Chicago (the Pure Milk Association with 10 plants).

IMPA members operating cooperative

Fluid Milk, Butterfat, and Dairy Supply Purchases Were Highest In History of The Three IAA Dairy Co-ops. Continued Prosperity For Dairy Farmers Seen For Year Ahead. Creameries To Sell Prairie Farms Brand Ice Cream.

J. G. Hays, extension dairyman at Michigan State College, had his audience rolling in the aisles with his humorous talk on the dairy cow at the Illinois Milk Producers Association and Prairie Farms Creameries joint banquet during the IAA annual meeting. He is shown putting a model cow together.

dairies engaged in bottling milk and manufacturing milk products are located in Danville, Jacksonville, Peoria, Quincy and Springfield.

One of the problems currently being studied by the Association, and discussed at their annual meeting, is the wide variation in prices paid dairymen for milk.

It was mentioned that during the month of September members of the Association handling Grade A milk showed a variation in prices paid to farmers for 3.5 per cent milk ranging from $4.14 to $5.46 a hundred pounds.

These differences occur regularly, the speakers said. And the variation in retail prices is not as great as that reflected in prices paid to farmers.

O. H. Ryan, La Salle county, president of Illinois Milk Producers Association, praised the directors and manager of Prairie Farms Creameries for their close cooperation with his association during the year.

O. H. Ryan

"The fine showing financially of the Illinois Milk Producers Supply Company shows clearly the mutual advantage cooperatives experience when they are able to work closely together," Ryan said.

It was reported at the IMPA meeting that a study of milk prices in Illinois markets was made by Dr. R. W. Bartlett of the University of Illinois. The three principal conclusions of this study were:

1. Member associations should try to establish the going condensery price as the minimum acceptable price for fluid milk.

2. Prices established for Grade A milk in any fluid milk market in Illinois should not be less than the Grade A price in St. Louis or Chicago, less transportation costs to these markets.

3. Producer prices in fluid milk markets should be related to current manufactured milk prices and should be designed to encourage a more even supply of milk throughout the year.

The IMPA this year, in cooperation with Prairie Farms Creameries, furnished the University of Illinois with funds to prepare and circulate one chart each month on some issue close to the dairy industry.

The Supply Company

The Illinois Milk Producers Supply Company finished a highly-successful year in 1948. It made one of the most rapid gains in volume on a percentage basis of all the IAA-affiliated companies.

Sales of supplies and equipment increased from $187,772.72 a year ago to $617,870.41 for the fiscal year ending Sept. 30, 1948. Net income increased from $11,626.79 to $30,954.12.

In his report to members during the supply company's annual meeting held in conjunction with the IAA convention recently in Chicago, Judson P. Mason, manager, said this increase resulted in large part from the addition of the Prairie Farms Creameries to the membership of Illinois Milk Producers Supply Company.

The supply company this year for the first time became the purchasing agent for all cooperative dairy marketing organizations affiliated with the IAA.

Total sales and savings of this four-year-old cooperative are compared to those of previous years.

Year	Volume of Sales	Earnings
1948	$617,870.41	$30,954.12
1947	$187,802.71	11,626.79
1946	98,832.71	7,128.36
1945	43,651.03	2,466.74

Mason explained that these savings are made by the purchase of supplies and equipment at terms more favorable than can be obtained by individual member cooperatives.

The company has a continuous record of paying interest on preferred stock and substantial patronage refunds. Patronage refunds to member companies of $24,181.80 have been declared and are payable Jan. 1, 1949. It handles items used to produce and process milk.

The supply cooperative purchases directly from manufacturers whenever possible or works with other groups to cut costs of equipment and supplies to its members.

Competitive prices are charged members cooperatives and savings distributed as patronage refunds. They work closely with the Land O'Lakes Creameries, Inc., Equipment Division, Minneapolis, Minnesota, and the United Cooperatives, Alliance, Ohio.

In addition to the 10 Prairie Farms Creameries the supply company handles purchases for the 21 cooperative dairies, bargaining associations, and manufacturing plant members of the Illinois Milk Producers Association.

NEW IAA DIRECTORS

New Men Have Long Years of Service With Their County Farm Bureaus

THREE new men were elected to the Illinois Agricultural Association board of directors at the 34th annual meeting held in late November at the Hotel Sherman in Chicago. The following are thumbnail sketches of the new men elected to serve for a period of two years.

Lester S. Davison

LESTER S. DAVISON, 51, of Minonk in Woodford county, was elected to represent the 17th IAA district which includes Livingston, McLean, Ford, Logan, and Woodford counties. He succeeds Edward T. Culnan, Logan county. He was born on the farm he operates and is the fourth generation of his family on the place.

Davison has two sons, John, 25, and Harry, 24, and a daughter, Betty, 19. He operates the 560-acres farm in partnership with his sons. Betty is in her second year at James Milliken University, Decatur.

Director Davison's father, Paul, lives in Minonk. He was a charter member of the Woodford County Farm Bureau. The new director was graduated from Minonk high school and attended the University of Illinois for one year but left to go home to produce food during World War I. During World War II, son John was a navy airman and son Harry was an army airman. They fly their own plane.

The Davisons are general grain and livestock farmers and raise a considerable amount of hybrid seed corn.

Director Davison was president of his county Farm Bureau from 1939 to 1945, and has been president of the county service company for the past three years. His brother Victor, was president of the county Farm Bureau from 1939 to 1945,

Mrs. Davison is the former Doris Kerrick. Davison met her while she was a student at Illinois Wesleyan University from Idaho.

He is a member of the Pioneer Farm Bureau-Farm Management Association which classifies the Davison place as a high-return low-labor-machinery-cost farm.

Davison is a member of the Minonk Baptist Church and the Minonk Lions Club. He was a member of the local school board for 10 years.

Thomas H. Lloyd

T. H. LLOYD, 56, of Girard in Macoupin county, was elected to represent the 21st IAA district which includes Sangamon, Christian, Montgomery and Macoupin counties. He succeeds Dan L. Clarke, Sangamon county.

He was born on the farm he now operates, part of which was bought by his father about 70 years ago. He was graduated from Girard high school and with the class of 1915 from the University of Illinois College of Agriculture. He spent one year at the University doing graduate work then went back to the home farm in 1917.

Lloyd has three sons, all destined like their father, to be graduates of the University of Illinois College of Agriculture. Jerry, 28, finished in 1942; Dean, 26, will finish this month; and Bill, 24, will graduate in 1950. Jerry is married, farms with his father, and lives in a house nearby. Dean, also married, expects to join the partnership soon when the Lloyds expect to rent additional land to enlarge the 240-acre farm.

★ ★ ★

The Lloyds engage in general livestock farming. Soybeans are their principal cash crop with small acreages of certified wheat. They feed an average 100 cattle and raise 250 to 300 hogs.

The Lloyds are a University of Illinois family. Mrs. Lloyd, the former Evelyn Gehant of Lee county, met her husband as a home economics student at Urbana where she was graduated. Director Lloyd's brother, J. H. Lloyd, served as farm adviser in Hancock county for 14 years and state director of agriculture for part of the Horner administration.

Director Lloyd is a charter member of the Macoupin County Farm Bureau and a member of the Girard Kiwanis Club and Masonic Lodge. He is now serving his third three-year term on the Farm Bureau board of directors. He is district director of his county soil conservation district and a member of the county co-op elevator board. He attends Girard Christian Church.

Frank L. Simpson

FRANK L. SIMPSON, 52, of Farmer City of DeWitt county was elected to the Illinois Agricultural Association board of directors to represent the 19th IAA district which included the counties of Macon, Piatt, Shelby, Moultrie, Coles, Douglas, Champaign, and DeWitt. He succeeds Milton W. Warren of Piatt county.

Simpson was born on a farm in LeRoy in McLean county and is a charter member of the DeWitt County Farm Bureau. He is a general grain and livestock farmer.

Serving as president of his county Farm Bureau for 16 years, Simpson takes pride in the fact that he has never missed a meeting during those 16 years. He farms 760 acres, most of it owned, just outside Farmer City.

Simpson raises an average 400 to 600 hogs a year and feeds two to four carloads of cattle. His principal grain crops are corn and soybeans with plenty of clover included in his rotation scheme.

Mrs. Simpson is the former Elma Bailey of LeRoy. They have two children, Mrs. Donna Howe, 23, of Farmer City and Ellen, 13, at home.

IAA Director Simpson is a director of the DeWitt County Service Company, vice president of the Corn Belt Electric Co-op (REA) at Bloomington, a member of the school council at Farmer City, and a trustee of the Prairie Chapel Church.

Dan L. Clarke | Edward T. Culnan | Milton W. Warren

RETIRING DIRECTORS

Three Farmers Give Much Time and Effort For The Betterment of Illinois Agriculture

LONG years of selfless devotion to the cause of Farm Bureau in their counties and at the state level mark the careers of the three men who retired in November from the board of directors of the Illinois Agricultural Association.

DAN L. CLARKE, 60, of New Berlin in Sangamon county, retires as IAA director from the 21st IAA district after serving the farmers of that area since November, 1945. With his retirement from the board, Clarke leaves the Illinois Grain Terminals board and the business service committee of the IAA board.

Clarke succeeded Floyd E. Morris from the 21st district when Morris was elected IAA vice president. Clarke owns and operates 350 acres midway between New Berlin and Pleasant Plains, and he operates another 100 acres owned by his sister. He is chiefly a cash grain farmer planting heavily in corn and soybeans. He also has raised an average 400 hogs each year.

During the war he was active in Red Cross, Community Fund and Savings Bonds campaigns. He has been active in the move to improve the schools of his area even though the Clarkes have no children.

A member of the Sangamon County Farm Bureau for more than a quarter of a century, Clarke served for several years as director, then two years as vice president, then four years as president before going to the IAA board.

MILTON W. WARREN, 51, of Mansfield in Piatt county, retires as IAA director from the 19th IAA district after three years of service on the state board. Warren also retires as a member of the finance committee of the IAA board. In recent months he had been unable to devote his full energies to his work because of ill health.

Warren succeeded Charles B. Shuman in November 1945 when Shuman became president of the IAA. He operates a 450-acre farm devoted to general farming. He owns a small milking herd, a purebred Aberdeen-Angus herd, and feeds out a number of cattle.

Warren carried a joint Farm Bureau membership with his father after his graduation from the University of Illinois from 1921 to 1923. Since then he has taken a deep interest in Farm Bureau activities. He served eight years as director of the Piatt County Farm Bureau and 12 years as its president. He was on the Production Credit Association Board at Champaign for six years, on the AAA committee for seven years, and for several years on the board of the Mansfield Co-op Locker board. For more than a decade he served as a member of the Mansfield high school board of directors.

EDWARD T. CULNAN, 51, of Lincoln in Logan county, retires as IAA director from the 17th IAA district after two years of service on the state board. He also leaves the marketing committee of the IAA board and the board of directors of the Illinois Cooperative Locker Service.

Culnan succeeded Charles Lauritzen of Livingston county in November 1946. He owns and operates a 200-acre cash grain farm but is turning to more feeding and grazing.

His father was a charter member of the Logan County Farm Bureau. Retiring Director Culnan took a joint membership with his father in 1927 and a lively interest in Farm Bureau in the early 30's. He has been a member of the county Farm Bureau board since 1934 and board secretary since 1945. Since 1938 he has been president of Logan Producers' Supplies. He also was a member of his county cold storage locker board for eight years, has been township school treasurer since 1937, and is treasurer of his consolidated school district. Culnan is also a director of the Producers Hybrid Seed Company of Piper City and a member of the Sangamon Valley Farm Bureau-Farm Management Service.

The eight operating farmers below were elected to the IAA board of directors during the annual meeting in Chicago. Left to right; the first five were returned to the board the last three were elected for the first time: Curtiss, Hughes, Webb, Gumm, McCord, Simpson, Davison, and Lloyd.

Frank L. Simpson Thomas H. Lloyd Lester S. Davison

NEW IAA DIRECTORS

New Men Have Long Years of Service With Their County Farm Bureaus

THREE new men were elected to the Illinois Agricultural Association board of directors at the 34th annual meeting held in late November at the Hotel Sherman in Chicago. The following are thumbnail sketches of the new men elected to serve for a period of two years.

Lester S. Davison

LESTER S. DAVISON, 51, of Minonk in Woodford county, was elected to represent the 17th IAA district which includes Livingston, McLean, Ford, Logan, and Woodford counties. He succeeds Edward T. Culnan, Logan county. He was born on the farm he operates and is the fourth generation of his family on the place.

Davison has two sons, John, 25, and Harry, 24, and a daughter, Betty, 19. He operates the 560-acres farm in partnership with his sons. Betty is in her second year at James Milliken University, Decatur.

Director Davison's father, Paul, lives in Minonk. He was a charter member of the Woodford County Farm Bureau. The new director was graduated from Minonk high school and attended the University of Illinois for one year but left to go home to produce food during World War I. During World War II, son John was a navy airman and son Harry was an army airman. They fly their own plane.

The Davisons are general grain and livestock farmers and raise a considerable amount of hybrid seed corn.

Director Davison was president of his county Farm Bureau from 1939 to 1945, and has been president of the county service company for the past three years. His brother Victor, was president of the county Farm Bureau from 1939 to 1945.

Mrs. Davison is the former Doris Kerrick. Davison met her while she was a student at Illinois Wesleyan University from Idaho.

He is a member of the Pioneer Farm Bureau-Farm Management Association which classifies the Davison place as a high-return low-labor-machinery-cost farm.

Davison is a member of the Minonk Baptist Church and the Minonk Lions Club. He was a member of the local school board for 10 years.

Thomas H. Lloyd

T. H. LLOYD, 56, of Girard in Macoupin county, was elected to represent the 21st IAA district which includes Sangamon, Christian, Montgomery and Macoupin counties. He succeeds Dan L. Clarke, Sangamon county.

He was born on the farm he now operates, part of which was bought by his father about 70 years ago. He was graduated from Girard high school and with the class of 1915 from the University of Illinois College of Agriculture. He spent one year at the University doing graduate work then went back to the home farm in 1917.

Lloyd has three sons, all destined like their father, to be graduates of the University of Illinois College of Agriculture. Jerry, 28, finished in 1942; Dean, 26, will finish this month; and Bill, 24, will graduate in 1950. Jerry is married, farms with his father, and lives in a house nearby. Dean, also married, expects to join the partnership soon when the Lloyds expect to rent additional land to enlarge the 240-acre farm.

RETIRING DIRECTORS

Three Farmers Give Much Time and Effort For The Betterment of Illinois Agriculture

LONG years of selfless devotion to the cause of Farm Bureau in their counties and at the state level mark the careers of the three men who retired in November from the board of directors of the Illinois Agricultural Association.

DAN L. CLARKE, 60, of New Berlin in Sangamon county, retires as IAA director from the 21st IAA district after serving the farmers of that area since November, 1945. With his retirement from the board, Clarke leaves the Illinois Grain Terminals board and the business service committee of the IAA board.

Clarke succeeded Floyd E. Morris from the 21st district when Morris was elected IAA vice president. Clarke owns and operates 350 acres midway between New Berlin and Pleasant Plains, and he operates another 100 acres owned by his sister. He is chiefly a cash grain farmer planting heavily in corn and soybeans. He also has raised an average 400 hogs each year.

During the war he was active in Red Cross, Community Fund and Savings Bonds campaigns. He has been active in the move to improve the schools of his area even though the Clarkes have no children.

A member of the Sangamon County Farm Bureau for more than a quarter of a century, Clarke served for several years as director, then two years as vice president, then four years as president before going to the IAA board.

MILTON W. WARREN, 51, of Mansfield in Piatt county, retires as IAA director from the 19th IAA district after three years of service on the state board. Warren also retires as a member of the finance committee of the IAA board. In recent months he had been unable to devote his full energies to his work because of ill health.

Warren succeeded Charles B. Shuman in November 1945 when Shuman became president of the IAA. He operates a 450-acre farm devoted to general farming. He owns a small milking herd, a purebred Aberdeen-Angus herd, and feeds out a number of cattle.

Warren carried a joint Farm Bureau membership with his father after his graduation from the University of Illinois from 1921 to 1923. Since then he has taken a deep interest in Farm Bureau activities. He served eight years as director of the Piatt County Farm Bureau and 12 years as its president. He was on the Production Credit Association Board at Champaign for six years, on the AAA committee for seven years, and for several years on the board of the Mansfield Co-op Locker board. For more than a decade he served as a member of the Mansfield high school board of directors.

EDWARD T. CULNAN, 51, of Lincoln in Logan county, retires as IAA director from the 17th IAA district after two years of service on the state board. He also leaves the marketing committee of the IAA board and the board of directors of the Illinois Cooperative Locker Service.

Culnan succeeded Charles Lauritzen of Livingston county in November 1946. He owns and operates a 200-acre cash grain farm but is turning to more feeding and grazing.

His father was a charter member of the Logan County Farm Bureau. Retiring Director Culnan took a joint membership with his father in 1927 and a lively interest in Farm Bureau in the early 30's. He has been a member of the county Farm Bureau board since 1934 and board secretary since 1945. Since 1938 he has been president of Logan Producers' Supplies. He also was a member of his county cold storage locker board for eight years, has been township school treasurer since 1937, and is treasurer of his consolidated school district. Culnan is also a director of the Producers Hybrid Seed Company of Piper City and a member of the Sangamon Valley Farm Bureau-Farm Management Service.

The eight operating farmers below were elected to the IAA board of directors during the annual meeting in Chicago. Left to right; the first five were returned to the board the last three were elected for the first time: Curtiss, Hughes, Webb, Gumm, McCord, Simpson, Davison, and Lloyd.

Manager Howard McWard of Illinois Grain Corporation presides at the annual dinner meeting of the IAA grain brokerage affiliate during IAA convention.

GRAIN DEMAND STRONG

World-Wide Need For Illinois Grain Expected To Last At Least Five Years; Exports will Not Fade Away Rapidly

STRONG DEMAND and world-wide need for the grain from Illinois farms will exist for the next five years. This world demand will be expressed in exports of 200-250 million bushels of grain for the years ahead.

This was the opinion of Roy F. Hendrickson, Washington representative of the National Federation of Grain Cooperatives and principal speaker at the annual meeting of Illinois Grain Corporation.

Hendrickson said this demand for American grain will come from the countries of western and southern Europe and the areas occupied by the U. S. army in Germany, Austria, Korea, and Japan.

"Exports will not fade away rapidly," Hendrickson said. "While the trend from now on definitely will be downward, we are far away from the low volume of the '30's when exports on wheat dropped as low as 20 million bushels in one year."

Grain farmers depend on exports to siphon off surpluses not needed in American markets. A number of reasons were listed by Hendrickson for continued strong export demands.

Europe can finance her imports of foods from funds provided as grants or loans under the Marshall plan, a source of financing she did not have in the '30's, Hendrickson said.

Grain exports will be needed in the occupied areas to help fill the vacuum caused by a world rice shortage. He said that before the war rice was a bigger item in international trade than wheat.

Grain will be needed to feed the increase in population. He emphasized that the world now has 200 million more people than it had in 1940.

Manchuria no longer dominates the world market in oilseeds. Europe is fat-hungry, and flaxseed and soybeans as well as oilseed meals are going abroad this winter to fulfill this need.

Industrial recovery and restoration of livestock production in Europe, and lack of trade between Western and Eastern Europe were other factors Hendrickson listed as important in sustaining exports of grains from the United States.

Illinois Grain Corporation is a marketing agency which operates on the terminal markets in Illinois. It is owned and controlled by Illinois grain farmers through their local cooperatives, county Farm Bureaus, and the Illinois Agricultural Association.

Illinois Grain Corporation acts as a cooperative commission company, operating on the Chicago Board of Trade, the St. Louis Merchants Exchange, and the Peoria Board of Trade.

Charles Schmitt, Beason, president, announced earnings by Illinois Grain Corporation before deduction for patronage dividends and income taxes amounting to $341,575. This represented earnings amounting to nearly one and one-half cents a bushel on the volume of grain sold.

Schmitt said that during the year three companies were added to the membership, bringing the total to 125.

Howard McWard, manager, said at the annual meeting that the operations of the company, though not as large as last year in volume, have been profitable. Volume was down because of the smaller crops raised in 1947.

The volume of cash grain handled last year totaled about 20,000,000 bushels, of which 7,000,000 were handled for Iowa and Indiana grain cooperatives.

Illinois Grain Corporation has a reciprocal marketing agreement with the Farmers Grain Dealers Corporation of Iowa, the Indiana Grain Cooperative, Inc., Farmers Union Grain Terminal Association of St. Paul, Farmers Union Jobbing Association of Kansas City, Mo., and Westcentral Cooperative Company of Omaha.

The 7,000,000 bushels of grain received from these regionals during the last year have reduced the cost and increased savings on the grain handled for Illinois farmers by the Illinois Grain Corporation.

Roy F. Hendrickson (center), Washington representative of the National Federation of Grain Cooperatives and principal speaker at the Illinois Grain Corporation annual meeting, discusses the grain situation with Carl O. Johnson (left), Marshall-Putnam, and H. T. Marshall, La Salle, officers of Prairie Grain Company, affiliate of the IAA's Illinois Grain Terminals Company.

IAA Asks For Increase In Motor Fuel Tax

A SUBSTANTIAL increase in the Illinois motor fuel tax has been recommended by the IAA road committee.

This was reported during the road improvement and property taxation conference held during the annual meeting of the Illinois Agricultural Association.

The committee making the report discussed at the conference consists of 20 Farm Bureau leaders who have been studying the problems of rural roads and rural road financing for more than six months.

It also was reported at the roads conference that the IAA road committee has recommended the reorganization of road districts in the state.

They have suggested that one road district be set up to serve an entire county. They recommended unanimously that the state road laws be amended to permit such a county unit system.

The committee, in asking for an increase in the motor fuel tax, pointed out that the motor fuel tax in Illinois is lower than in neighboring states, and that these neighboring states are contemplating increases.

The present fuel tax in Illinois is three cents. The present distribution of the tax is one cent for bond issues for hard roads, one cent for cities, and one cent for counties.

The IAA rural roads committee recommended that if the tax were to be increased three cents a gallon that this increase be distributed as follows:

VERNON C. VANIMAN

One-half cent for state highways, one-half cent for cities, one-half cent for counties, one cent for townships, and one-half cent for bridge purposes.

In a discussion of state and local taxes, Bert Vandervliet, IAA director of property taxation, urged Farm Bureau members to take a greater interest in township and county tax problems.

He said these local taxes have increased by at least 25 per cent, and in many cases more, in most Illinois counties since 1946.

Vandervliet said more tax money is needed for bridges. Bridges have been built for horse and buggy days, he said, and are in poor shape to withstand present heavy traffic.

He also pointed out the difficulties county Farm Bureau tax committees experience in digging out tax information.

DeKalb County Farm Bureau has found it advisable to employ a full-time tax assistant to assist the Farm Bureau in tax matters, he said.

Addressing the road improvement and property taxation conference during IAA annual meeting is Charles Mayfield, director of road improvement. Others at speaker's table are (left to right) C. J. Elliott, La Salle county, IAA board member and chairman of the conference; Bert Vandervliet, director of property taxation; and E. E. Elsbury, Lake county.

V. C. Vaniman Dies Suddenly In Nebraska

VERNON C. VANIMAN, 65, midwest regional director of organization for the American Farm Bureau Federation for the past 13 years, died suddenly Nov. 30. He was stricken with a heart attack in Lincoln, Neb., where he was attending the annual meeting of the Nebraska Farm Bureau.

"Van" as he was known to thousands of Farm Bureau friends throughout the Midwest was employed by the Illinois Agricultural Association for 11 years before leaving in 1935 to join the staff of the AFBF.

On learning of his death, IAA President Shuman said: "Van's life was devoted to improving the opportunities and welfare of farm people throughout America. His was a life of service and of devotion to Christian ideals. His vitality, enthusiasm and wonderful personality contributed materially to the success of various programs of the IAA and AFBF. He rightfully earned a place in the hearts of farm people everywhere."

He helped organize 17 county Farm Bureaus in Illinois. He helped organize the Illinois Agricultural Auditing Association and later the IAA insurance companies now known as Country Mutual Fire Company, Country Mutual Casualty Company, and Country Life Insurance Company. He served as IAA director of insurance until 1934 when he became director of organization.

During the early days of Farm Bureau when organization work was no easy task, Van brought in results that amazed his colleagues. His boundless energy and enthusiasm and his perpetual smile always worked wonders on the people he dealt with.

Mr. Vaniman's youth was spent on a farm near Virden in Macoupin county where he farmed after his graduation from the College of Agriculture at the University of Illinois. Before going to the IAA he was assistant state leader of farm advisers with the U. of I.

He is survived by his widow, the former Norma Showalter; a son, Jack, a student at the University of Illinois; and a daughter, Mrs. Fred Bauer, Chicago.

Among those attending from the American Farm Bureau Federation were Allan Kline, president, and Wilfred Shaw, Secretary.

Manager Howard McWard of Illinois Grain Corporation presides at the annual dinner meeting of the IAA grain brokerage affiliate during IAA convention.

GRAIN DEMAND STRONG

World-Wide Need For Illinois Grain Expected To Last At Least Five Years; Exports will Not Fade Away Rapidly

STRONG DEMAND and world-wide need for the grain from Illinois farms will exist for the next five years. This world demand will be expressed in exports of 200-250 million bushels of grain for the years ahead.

This was the opinion of Roy F. Hendrickson, Washington representative of the National Federation of Grain Cooperatives and principal speaker at the annual meeting of Illinois Grain Corporation.

Hendrickson said this demand for American grain will come from the countries of western and southern Europe and the areas occupied by the U. S. army in Germany, Austria, Korea, and Japan.

"Exports will not fade away rapidly," Hendrickson said. "While the trend from now on definitely will be downward, we are far away from the low volume of the '30's when exports on wheat dropped as low as 20 million bushels in one year."

Grain farmers depend on exports to siphon off surpluses not needed in American markets. A number of reasons were listed by Hendrickson for continued strong export demands.

Europe can finance her imports of foods from funds provided as grants or loans under the Marshall plan, a source of financing she did not have in the '30's, Hendrickson said.

Grain exports will be needed in the occupied areas to help fill the vacuum caused by a world rice shortage. He said that before the war rice was a bigger item in international trade than wheat.

Grain will be needed to feed the increase in population. He emphasized that the world now has 200 million more people than it had in 1940.

Manchuria no longer dominates the world market in oilseeds. Europe is fat-hungry, and flaxseed and soybeans as well as oilseed meals are going abroad this winter to fulfill this need.

Industrial recovery and restoration of livestock production in Europe, and lack of trade between Western and Eastern Europe were other factors Hendrickson listed as important in sustaining exports of grains from the United States.

Illinois Grain Corporation is a marketing agency which operates on the terminal markets in Illinois. It is owned and controlled by Illinois grain farmers through their local cooperatives, county Farm Bureaus, and the Illinois Agricultural Association.

Illinois Grain Corporation acts as a cooperative commission company, operating on the Chicago Board of Trade, the St. Louis Merchants Exchange, and the Peoria Board of Trade.

Charles Schmitt, Beason, president, announced earnings by Illinois Grain Corporation before deduction for patronage dividends and income taxes amounting to $341,575. This represented earnings amounting to nearly one and one-half cents a bushel on the volume of grain sold.

Schmitt said that during the year three companies were added to the membership, bringing the total to 125.

Howard McWard, manager, said at the annual meeting that the operations of the company, though not as large as last year in volume, have been profitable. Volume was down because of the smaller crops raised in 1947.

The volume of cash grain handled last year totaled about 20,000,000 bushels, of which 7,000,000 were handled for Iowa and Indiana grain cooperatives.

Illinois Grain Corporation has a reciprocal marketing agreement with the Farmers Grain Dealers Corporation of Iowa, the Indiana Grain Cooperative, Inc., Farmers Union Grain Terminal Association of St. Paul, Farmers Union Jobbing Association of Kansas City, Mo., and Westcentral Cooperative Company of Omaha.

The 7,000,000 bushels of grain received from these regionals during the last year have reduced the cost and increased savings on the grain handled for Illinois farmers by the Illinois Grain Corporation.

Roy F. Hendrickson (center), Washington representative of the National Federation of Grain Cooperatives and principal speaker at the Illinois Grain Corporation annual meeting, discusses the grain situation with Carl O. Johnson (left), Marshall-Putnam, and H. T. Marshall, La Salle, officers of Prairie Grain Company, affiliate of the IAA's Illinois Grain Terminals Company.

IAA Asks For Increase In Motor Fuel Tax

A SUBSTANTIAL increase in the Illinois motor fuel tax has been recommended by the IAA road committee.

This was reported during the road improvement and property taxation conference held during the annual meeting of the Illinois Agricultural Association.

The committee making the report discussed at the conference consists of 20 Farm Bureau leaders who have been studying the problems of rural roads and rural road financing for more than six months.

It also was reported at the roads conference that the IAA road committee has recommended the reorganization of road districts in the state.

They have suggested that one road district be set up to serve an entire county. They recommended unanimously that the state road laws be amended to permit such a county unit system.

The committee, in asking for an increase in the motor fuel tax, pointed out that the motor fuel tax in Illinois is lower than in neighboring states, and that these neighboring states are contemplating increases.

The present fuel tax in Illinois is three cents. The present distribution of the tax is one cent for bond issues for hard roads, one cent for cities, and one cent for counties.

The IAA rural roads committee recommended that if the tax were to be increased three cents a gallon that this increase be distributed as follows:

VERNON C. VANIMAN

One-half cent for state highways, one-half cent for cities, one-half cent for counties, one cent for townships, and one-half cent for bridge purposes.

In a discussion of state and local taxes, Bert Vandervliet, IAA director of property taxation, urged Farm Bureau members to take a greater interest in township and county tax problems.

EVENTFUL YEAR

Illinois Farm Supply Company Shows Increases In All Lines Of Business During 1948: Year Is Characterized As "Most Dramatic"

ILLINOIS farmers heard 1948 referred to as the "most successful and most eventful" in the history of Illinois Farm Supply Company during its annual meeting held in conjunction with the 34th annual convention of the Illinois Agricultural Association in Chicago in November.

Characterizing the past year as "the most dramatic and eventful year in our history," Manager C. H. Becker reported to the delegates that "weather, mechanization, and cooperation have all played their parts to give Illinois its record-breaking crops of 1948." "However," he continued, "the huge corn, wheat, and soybean production of our state would not have been possible without the power produced from the 180,000,000 gallons of petroleum and 209,000 tons of plant food supplied by our organization."

More than 600 Farm Bureau members and official delegates from each of the 105 affiliated member companies of Illinois Farm Supply Company attended the meeting.

Business of the Illinois Farm Supply Company, which serves as the purchasing agent for its 105 affiliated member companies, continued to increase in almost every department during the past fiscal year, Becker reported.

The total wholesale volume jumped from $31,000,000 to $44,000,000. Petroleum gallonage increased from 174,000,000 to 180,000,000. Fertilizer tonnage jumped from 180,000 tons to 209,000 tons. Feed rose from 64,000 to 86,766 tons.

Patronage refunds of $926,516.49 and capital stock dividends totaling $156,908.09 were declared for distribution to affiliated member companies prior to the close of the fiscal year, Aug. 31. Surplus was increased by an amount of $500,000. This represents a larger amount added to surplus than in past years, but it is necessary to protect the invested capital and to provide adequate production facilities.

During the year $3,500,000 worth of class "D" 5 per cent cumulative preferred stock was allocated for purchase to class "A" member companies. At the close of the fiscal year, more than 90 per cent had been taken up. In order to purchase this stock, member companies raised funds through the sale of a like amount to individual Farm Bureau members. Approximately $1,000,000 of additional stock was sold by member companies to satisfy their own increasing financial requirements.

Farm Investment

Illinois farmers have directly and indirectly invested in Illinois Farm Supply Company and its 105 member companies $10,707,750. On the other hand, the fixed assets of these companies at depreciated values total $10,868,700.

Income Tax

Delegates to the annual meeting also learned that the combined federal income tax payments of Illinois Farm Supply Company, its affiliates and member companies will total nearly $1,000,000 in 1948.

Expansion Program

During the past year, Illinois Farm Supply Company has had to expand its facilities considerably. Such action was imperative in order to secure the needed petroleum products and other supplies used by Illinois farmers in the production of their crops and livestock. To make available these needed supplies, Manager Becker pointed out that decisions of far reaching consequence have been faced squarely and decisions were made — but not hastily. Decisions were made only after thorough discussion at all levels — by local member company boards, by Illinois Farm Supply Company, and by the Illinois Agricultural Association.

All expansion programs, either in the county companies or by the Illinois Farm Supply Company, Becker reported, have been financed by money invested by farmers in their local county companies, and these local companies have invested a part of this money in capital stock of Illinois Farm Supply Company. The

expansion of the company's facilities, Becker emphasized, has not come from retained tax-free earnings.

The expansion program during the past year includes the purchase of the Pana Refining Company, Pana, Ill., and the Premier Oil Refining Company, Longview, Texas. The latter company was purchased in partnership with two other large midwestern farmers' cooperatives. In addition, construction is well underway on the new fertilizer plant at Fairmont City and the new feed mill at Mendota, Ill.

Other phases of the expansion program include the erection of new warehouses at Mendota and Benton; also, the purchase of a new towboat and four new 12,000 barrel barges to be added to the present river transportation system.

Speaking before the Illinois Farm Supply Company Annual Meeting, IAA President Charles B. Shuman termed the company's 22nd year "one of great change and significance." He paid tribute to all of the people who worked so hard during the year to make the expansion programs of their local companies and the Illinois Farm Supply Company become a reality. "I want you to know," he said, "that we appreciate all you have had to conquer."

Shuman emphasized, however, that considerable adjustment was required to change a great cooperative distribution organization such as Illinois Farm Supply Company over to one which must produce supplies as well as distribute them. "Such a change," he stated, "has meant that additional capital was required in amounts which a few years ago farmers would have considered impossible to raise."

Expansion of such scope, according to Shuman, means doing without the same size patronage refunds for a few years, until the volume of business is increased sufficiently to operate this enlarged farming tool most efficiently. "Every farmer knows," he said, "that as he extends his operations he must have additional investments in capital for safety. He must have additional reserves for protection against the future. Putting a more efficient machine on the farm takes more capital to run it, and that's the way we must view this new expansion program. It is a more efficient tool for Illinois farmers and one which will produce better results, more efficient results, and better distribution."

Cooperatives are Farm Tools

In his annual address, I.F.S. Company President Fred E. Herndon discussed the importance and need for cooperatives, the farm tools of agriculture. "Cooperation is not new," he said. "It has been with us for a long time." Also, farming is now a business and farm cooperatives are tools of that business.

"Cooperative purchasing and marketing" he stated, "are now a segment of American business. They are democratic in principle and truly representative of the private enterprise system. Unlike chain stores and other multiple business corporations, the savings stay in the community where they are earned.

"Today each member should evaluate his cooperative and its place in his farm business. If we are to keep and extend this part of our farm business, we must invest capital in it and thus retain ownership and control of it as we would any other tool in our farm business."

Charles Haller, Peoria county, representing District III, was elected to the board of directors, replacing John P. White, Tazewell county, who chose to retire after serving on the board since 1940. All incumbent directors were re-elected for the coming year.

Farmers Hear Discussions On Animal Disease

PRIDE in the progress of Illinois in the control of bovine tuberculosis, sheep scab, brucellosis, rabies, and Newcastle disease, was expressed by Dr. C. E. Fidler, superintendent, division of livestock industry, Illinois Department of Agriculture, during the IAA annual meeting in Chicago.

Dr. Graham

Dr. Fidler

Dr. Fidler spoke on animal disease control programs at the animal health and disease control conference.

Others on the program included: Edwin Gumm, Knox county, chairman; Dr. H. N. Howlett, inspector in charge, Illinois bureau of animal industry, U. S. Department of Agriculture; Dean Robert Graham, College of Veterinary Medicine, University of Illinois; Leo Swinford, Edgar county; and Dr. L. A. Dykstra, Aurora veterinarian.

Dr. Fidler described the work of the Illinois diagnostic laboratories and the necessity of establishing more. He

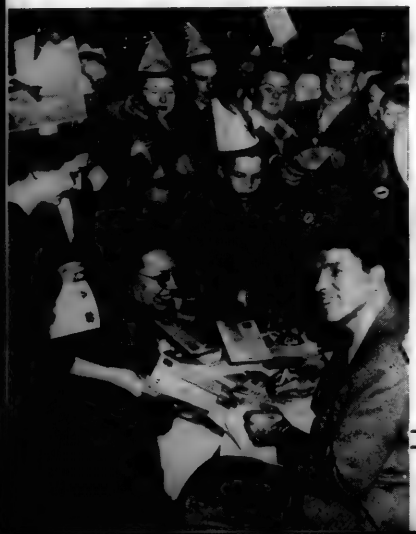
RECORD TURNOUT

IAA--4-H Club Dinner For Outstanding Farm Youth Packs Banquet Room To Door

●



Clamoring for his autograph, 4-H'ers crowd around table of Movie Actor Burt Lancaster during IAA's annual Illinois 4-H Club dinner.

JUDGING from the record turnout at the IAA's traditional 4-H Club banquet, Illinois' outstanding farm youth like the idea of getting together during the 4-H Club Congress in Chicago in December.

One youngster arrived breathless at the Morrison Hotel a few minutes before the dinner started saying he came up to Chicago just for the IAA-4-H Club banquet. His train had arrived a half hour late.

Harry Meloy

The banquet, complete with party favors and a musical trio, was well underway when Movie Actor Burt Lancaster arrived with stage makeup still on his face. Most of the boys and girls enjoyed the visit of the Hollywood celebrity and mobbed him for autographs.

Lancaster played principal roles in "Brute Force," "The Killers," and "Sorry, Wrong Number." He was introduced by Val Lauder, Keen Teens editor of the Chicago Daily News.

The dinner is an annual affair honoring outstanding 4-H Club boys and girls. IAA staff members, guests, leaders, farm advisers and parents of 4-H members swelled the attendance to about 500. Members of the IAA staff acted as hosts at each of the tables.

IAA Attorney Harry Meloy, master of dry humor, acted as toastmaster and gave the address of welcome.

Principal speaker was IAA President Charles B. Shuman. "We appreciate the honors," he said, "you have brought to Illinois. You have come a long way in a short time. Because I can remember when 4-H work did not enjoy the high status it does today.

"We are pleased that agriculture throughout the nation has seen fit to sponsor a youth program. You know 4-H work is a means to an end. You are aiming at the day when you will be operating your own farm and doing a better job of it than we are doing. We older farmers are ever aware that you are behind us ready to step into our shoes. We are proud to know you are the best in farm youth. There is no reason why agriculture shouldn't have the best young people."

Introduction of a number of 4-H members and announcement of their accomplishments was made by Mrs. Mary Hubbard and Herbert Deason, both of the University of Illinois extension service.

Responding for 4-H girls, Mary Lee Wilson, Montgomery county, expressed her appreciation to the IAA for the meeting and spoke of the "fun of learning the 4-H way." "I enjoy," she said, "the working together and the social relationships with other 4-H'ers and the feeling of working toward a common goal to make a better world for tomorrow."

Thomas Sussenbach, Bond county, responding for the boys, said he was pleased to be among IAA-Farm Bureau people "because I know they are the same people as myself." Sussenbach said farm youth faced a great responsibility but they knew it and were glad to take up the challenge.

John M. Budd, president of the C. & E. I. Railroad was introduced and spoke of the plan recently initiated by the railroad to present prizes to outstanding Illinois 4-H boys and girls in the counties through which the railway runs.

Roy Johnson, IAA director of special services, was in charge of arrangements for the banquet.

ILLINOIS AGAIN!

State Honors With 52 Championships and 106 First Places Go to Illinois at International Livestock Exposition

ILLINOIS farmers offered a repeat performance at the International Live Stock Exposition in Chicago last month by placing first among all states entered. Illinois won 52 championships and 106 first places. Indiana was second with 43 championships and 68 firsts.

Among the Illinois winners in grain classifications were: R. Howe, Farmer City; Clarence Walter, Grand Ridge; Kenneth Furr, Genoa; H. L. Stiegelmeier, Normal; J. R. Dunseth, Modesto; Leo Bollar, Ridgefarm; Jerry Shively, Cerro Gordo; Mrs. F. H. Flint, Bellflower; E. W. Doubet, Hanna City; Hunnerkoch Seed Co., Metropolis.

Horses — John W. Taft and Sons, Mechanicsburg; Frank J. Rathje, Palatine; E. A. South, Orion; Harold E. Stangle, Olney.

Cattle — Nelson Farms, Geneseo; Vandeveer Farms, Taylorville; Tilden J. Burg, Scioto; Richard Lacey and Son, Kansas; W. H. McDonnell, Yorkville; Mathers Brothers, Mason City; Otis A. Carter and Son, Eldorado; J. Garrett Tolan Farms, Pleasant Plains; Charles Daubs, McNabb.

Wool — Deep Valley Farm, Fiatt; William Duncan, Lake Villa. Sheep and Lambs — University of Illinois, Urbana; Alvin L. Helms and Son, Belleville; Deep Valley Farm, Fiatt; Robert M. Jackson, Seneca; Charles Dooley, Grayslake; C. P. Harding, Sigel.

Swine — E. G. Crandall and Sons, Erie; Oscar W. Anderson, Leland; Walter Schlichting, Apple River; Laurence Newcomer, Mt. Carroll; Hullinger and Roberts, McLean; Brusally Farm, Lake Forest; Perry A. Clauss, Mazon; Curtiss Company, Chicago; Wallace Norris, Normal; S. C. Moon, Towanda.

Junior Feeding, Cattle — Janet Shoger, Kendall; Jim Mills, Monmouth; Herman W. Alber Jr., Dixon. Swine — Morris Pratt, Cropsey; Rolland Anderson, Leland. Cattle — Victor ZeeDyke, Danforth; county group of three animals, Warren county including Dale Hanson, Carol Corzatt, and Jim Mills.

Pratt had the champion barrow and Alber had the champion Shorthorn steer of the junior livestock feeding contest.

In the 4-H Club contests held at the same time as the International, Martha Klempfer, 20, of Speer was awarded a $200 scholarship by the International Harvester Company for preserving 2,000 pounds of frozen foods. She specialized in frozen foods during the last five of her 10-year 4-H Club career.

H. L. Stiegelmeier was crowned reserve champion in the soybean contest with his Hawkeye variety. Stiegelmeier was also named champion in the open hybrid shelled corn class. In 1946 and 1947 he was champion in the soybean section of the International Hay and Grain Show. He has won more than 700 trophies and ribbons with his agricultural products. E. W. Doubet's corn won the reserve grand championship.

Frank Rathje won every title in the percheron mare championships in eight categories, except one.

Morris Pratt, 20, (left), Cropsey, Ill., is shown with his barrow which won junior feeding contest at International Live Stock Exposition. Above is Martha Piepfer, 20, of Speer, Ill., winner of a $200 4-H scholarship for her skill in preserving 2,000 pounds of frozen food.

Reisner Leaves IAA Staff To Go Into Farming

LEWIS REISNER, field editor for the IAA RECORD for the past two years, resigned effective Jan. 14 to farm near Warren in Jo Daviess county.

During the two years, Reisner traveled throughout the state for the IAA securing feature articles and photographs for the RECORD, and assisted in the general work of the publicity department.

He will operate a 200-acre dairy and grain farm which he owns in a partnership with his father.

Reisner farmed before the war, and during the war was an officer in the navy. He joined the IAA staff in July of 1945. He is married and has a son, David, 2.

Ask Farmers To Produce More

SENSING continued prosperity in 1949 the U. S. Department of Agriculture is asking farmers to produce extra poultry, pigs, milk, vegetables, sheep and lambs next year.

The USDA already had asked for a 17 per cent boost in the 1949 spring pig crop.

Goals call for a 10 per cent increase in young chickens and turkeys but that laying hens be cut 20,000,000 from 1948's 425,000,000. Milk — an increase in production by three per cent.

RECORD TURNOUT

IAA--4-H Club Dinner For Outstanding Farm Youth Packs Banquet Room To Door

JUDGING from the record turnout at the IAA's traditional 4-H Club banquet, Illinois' outstanding farm youth like the idea of getting together during the 4-H Club Congress in Chicago in December.

One youngster arrived breathless at the Morrison Hotel a few minutes before the dinner started saying he came up to Chicago just for the IAA-4-H Club banquet. His train had arrived a half hour late.

Harry Meloy

The banquet, complete with party favors and a musical trio, was well underway when Movie Actor Burt Lancaster arrived with stage makeup still on his face. Most of the boys and girls enjoyed the visit of the Hollywood celebrity and mobbed him for autographs.

Lancaster played principal roles in "Brute Force," "The Killers," and "Sorry, Wrong Number." He was introduced by Val Lauder, Keen Teens editor of the Chicago Daily News.

The dinner is an annual affair honoring outstanding 4-H Club boys and girls. IAA staff members, guests, leaders, farm advisers and parents of 4-H members swelled the attendance to about 500. Members of the IAA staff acted as hosts at each of the tables.

IAA Attorney Harry Meloy, master of dry humor, acted as toastmaster and gave the address of welcome.

Principal speaker was IAA President Charles B. Shuman. "We appreciate the honors," he said, "you have brought to Illinois. You have come a long way in a short time. Because I can remember when 4-H work did not enjoy the high status it does today.

"We are pleased that agriculture throughout the nation has seen fit to sponsor a youth program. You know 4-H work is a means to an end. You are aiming at the day when you will be operating your own farm and doing a better job of it than we are doing. We older farmers are ever aware that you are behind us ready to step into our shoes. We are proud to know you are the best in farm youth. There is no reason why agriculture shouldn't have the best young people."

Introduction of a number of 4-H members and announcement of their accomplishments was made by Mrs. Mary Hubbard and Herbert Deason, both of the University of Illinois extension service.

Responding for 4-H girls, Mary Lee Wilson, Montgomery county, expressed her appreciation to the IAA for the meeting and spoke of the "fun of learning the 4-H way." "I enjoy," she said, "the working together and the social relationships with other 4-H'ers and the feeling of working toward a common goal to make a better world for tomorrow."

Thomas Sussenbach, Bond county, responding for the boys, said he was pleased to be among IAA-Farm Bureau people "because I know they are the same people as myself." Sussenbach said farm youth faced a great responsibility but they knew it and were glad to take up the challenge.

John M. Budd, president of the C. & E. I. Railroad was introduced and spoke of the plan recently initiated by the railroad to present prizes to outstanding Illinois 4-H boys and girls in the counties through which the railway runs.

Roy Johnson, IAA director of special services, was in charge of arrangements for the banquet.

Clamoring for his autograph, 4-H'ers crowd around table of Movie Actor Burt Lancaster during IAA's annual Illinois 4-H Club dinner.

CONTINUE QUEST FOR BETTER SCHOOLS

Where Should the Greater Emphasis Be Placed—On the School Buildings and Equipment? Or on the High Quality Of a Teaching Staff? School Experts Try To Find Answer.

***Above:** Ralph L. Ostrander, (foreground) McHenry county, rises to ask a question in schools conference. **Below:** Luther Black, Springfield, addresses the meeting. At speaker's table are (left to right) M. F. Fulmer, Scott county; Chairman Earl M. Hughes, McHenry county; Joe Mason, Effingham; and Roy Fetherston, Springfield.*

HOW can we impress motorists with the necessity of stopping when approaching a school bus from the front as well as from the rear if the bus is stopped for loading or unloading children?

How can we acquaint people with the fact that safety regulations for pupil transportation apply as much to rural roads as they do to concrete highways? These were some of the questions raised at the schools conference held in the Sherman Hotel during the IAA annual meeting.

Others included: What is to be done with the offices of township trustee and treasurer under widespread school reorganization? How can the county superintendent of schools best fit into the reorganized 12-grade school system? Where should the greater emphasis be placed, on building or on what is done in the schools? Is this the time to build school buildings?

Attended by 250 farm leaders, the conference included seven members of the original IAA State Schools Committee as well as 20 members of county school survey committees. Also present were a number of prominent guests representing statewide organizations.

These included President Paul Grigsby and Wendel Kennedy of the Illinois Education Association; Mrs. Amber May, Illinois Congress of Parents and Teachers; Mrs. Paul Burdette, Illinois Federation of Women's Clubs; N. J. Ziener, Illinois Chamber of Commerce; Lee Wolfe, Illinois Manufacturers' Association; Dr. D. E. Lindstrom, College of Agriculture, University of Illinois; Joe Ackerman, Farm Foundation; Luther Black, acting secretary of the State Advisory Commission and assistant to the State Superintendent of Public Instruction; and Roy Fetherston, secretary of the Illinois Association of Schools Boards.

The conference was called to order by Earl Hughes, member of the IAA board of directors and member of the school survey committee in McHenry county.

Luther Black presented a summary of the progress of the school reorganization program. "There are fewer than 6,500 school districts in Illinois as of Nov. 1, 1948," said Black. "This includes 157 community unit districts. Four years ago there were 269 small two and three-year high schools in the state. This year there are only 29 open and operating. Two hundred-forty have been closed in the 4-year period."

Joe Mason, superintendent of the Effingham community unit school district, was asked to discuss the greater possibilities for service under the 12-grade unit. "The strength of the unit organization is built upon a continuity in the program," said Mason. "Better unified school facilities and increased efficiency should be the result of the unit organization as opposed to the dual system."

Chairman Hughes then called on M. J. Fulmer, superintendent of the Scott county 12-grade unit, to give some of his experiences in the new community unit district.

"Scott county was one of the first to organize into a community unit district," said Fulmer. "We are going along at present, very well and progressing satisfactorily. Our plan for enforcement is very flexible. We still have 19 one-room schools in the county as we are trying to move slowly and close schools only as they need to be closed. If it is more convenient for all concerned to retain the one-room rural school, or if it is the will of the people, then we do not close the school. However, with the exception of one, we have only six grades in any rural school.

A short session followed in which most of the discussion centered around greater safety on school buses. The chairman asked the first question.

Hughes: Shouldn't, or couldn't, the state highway department cooperate on the question of school bus safety on the highways? McHenry county had two such accidents in one school district recently, and we believe that people are not familiar with the laws regarding passing of school buses.

Black: This question merits the consideration of all concerned. The state highway department already has a man for this purpose, but it is necessary for the people in a given locality to take the responsibility of stressing school bus safety to their children and to insist upon the proper protection of their children to the proper authorities. The law is that a driver has to stop for a school bus which is stopped for loading or unloading, regardless of from which direction he is coming. Of course, the bus driver is required to give certain signals, too. The state department is willing to go the limit in giving information to bus drivers and the public at large.

Mrs. Burdette, DuPage county: Do people know that they should stop when

approaching a bus from the front?

Hughes: There must be more publicity regarding this.

Black: Statistics show that more cars strike a child when approaching from the front than from the rear because children run behind a bus, directly in front of any approaching car.

Mary Endres, McHenry county: If the driver does not put the "Stop" arm out, it is still the state law that an approaching driver stop when a school bus is stopped. The laws should be coordinated so that each state has the same laws.

Clyde Collinson, Knox county: In Knox County, several arrests were made because bus drivers were to take the numbers of any car passing a stopped school bus. The community put an end to that because there was a great deal of embarrassment to a good many people.

Mr. Lyman, Shelby county: One of the requirements is that when the child is let off the bus, he must wait till the bus is 400 feet down the road before crossing. Is it a good thing to let the child get across the road alone, perhaps in the midst of heavy traffic?

Black: It is my personal opinion that it might be better for the bus driver to remain stopped until the child gets across the road. (There seemed to be general approval of this point of view.)

Lyman: That was the practice in Shelby county because such a small child does not know when the bus is 400 feet down the road, and it seemed better to have the child cross the road while the traffic was stopped. In some counties an older child accompanies the child across the road in the evening. Also, in the morning an older child meets them.

Thurman Wright, Macon county farm adviser, suggested some kind of a flasher signal in addition to the "Stop" arm on a school bus so that a car behind another car can see it if he cannot see the arm.

John Scott, Ford county: If a bond issue has been passed after the formation of a district, can a part of the district petition out and relieve itself of the new bonded debt?

Black: No, they must assume their share of the bonded indebtedness, but the district into which they go usually assumes that responsibility. The amount taken out would be spread over the entire district into which the petitioned district went.

Following this discussion, Hughes introduced John K. Cox, IAA director of rural school relations. Cox then introduced Roy Fetherston, field secretary of the Illinois Association of School Boards, who showed some slides on school construction and costs. In a few preliminary remarks he suggested that it would be a good idea to begin now to plan for any

Speaking from a wide variety of experiences, these three farm advisers offer some tips on soil saving at the soil conservation conference of the IAA annual meeting. Left to right: Charles Yale, Lee; Frank Shuman, Whiteside; and W. C. Mummert, DeKalb.

Plant Foods Conference

Farm Advisers Warn Against Handling Commercial Fertilizers On a Hit or Miss Basis

TOO often when we buy fertilizers, we buy blindly. First, let's take an inventory of the soil.

This was the advice of Charles E. Yale, Lee county farm adviser, during a panel discussion by farm advisers on soil testing laboratories at the soil conference held during the convention of the Illinois Agricultural Association.

"When we buy a manufacturing plant, we make a careful inventory. We should do the same before spreading expensive commercial fertilizers," Yale said.

The growth of soil laboratories in Illinois shows that farmers appreciate the need for accurate testing, Yale indicated.

These cost from $250 to $1,000 each. About 75 per cent of them are on a pay-as-you-go basis. A nominal testing charge, Yale said, would be $3.85 for testing 40 acres.

During the panel talks on the county soil labs, three other farm advisers explained programs for their counties. These men were Frank Shuman, Whiteside, W. C. Mummert, De Kalb, and George Trull, La Salle county assistant farm adviser.

The importance of accurate soil tests and scientific research was emphasized by George D. Scarseth, director of the American Farm Research Association, an organization of the American Farm Bureau Federation.

"Through research in improving soil, corn yields have increased in the South from 12-20 bushels to 65-100 bushels an acre, and in the North from 40-50 bushel averages to 100-150 bushels," he said.

"Farmers," he said, "must continue to use plant food to replace what has been taken from the soil. Illinois soils are low in the element phosphorous. And potash exhaustion is more serious than many realize."

So far the nation's farmers are doing their share to feed the increase in population. This was pointed out by F. M. Atchley, director of research for the IAA.

"We are producing about a third more than in the years before the war," Atchley said. "And our production is still upward."

To get the most out of your fertilizer dollar, Atchley suggested a four point program: test your soil, fertilize according to test, buy high-test straight materials when possible, and follow the recommendations of the state experiment station and your farm adviser.

The demands for food during and following the war, coupled with the establishment of soil testing laboratories have sky-rocketed the use of plant food in this state.

Atchley said there was an average of 33,600 tons of fertilizer used in Illinois each year during 1935-39. This increased by 12 times to 417,000 tons in 1947-48, more than 2 tons for every Illinois farm.

Roger Gish, IAA director of soil conservation activities, outlined some of the projects he plans for the coming year. This department was reactivated this year.

He plans to continue the department's inspection of limestone quarries and will spot check samples for fineness of grinding and calcium carbonate equivalent.

CONTINUE QUEST FOR BETTER SCHOOLS

Where Should the Greater Emphasis Be Placed—On the School Buildings and Equipment? Or on the High Quality Of a Teaching Staff? School Experts Try To Find Answer.

'High Costs, Falling Farm Prices May Bring on Disaster'

(*Continued from page* 17)

organization in implementing the Voice for Agriculture consists of its program to represent farm people effectively at the seats of government in Springfield and in Washington. Many of you have heard our great former president, Sam H. Thompson, tell of his early experience in the halls of Congress when his authority to speak for the farmers of Illinois was questioned. Thousands of farmers answered that challenge by giving him their signed statement of support.

Today the right of the Illinois Agricultural Association to speak for the farmers of Illinois is never seriously questioned. The influence of your organization is so great that we must constantly be on guard to see that our spokesmen truly reflect the thinking of the farm people who have made this power a reality.

While the State Legislature was not in session during this year, your representatives were in frequent consultation with state government officials on many administrative and planning matters affecting agricultural welfare.

Recently we witnessed a very hotly contested state and national election campaign. Your directors, officers and staff have attempted to maintain a strictly nonpartisan attitude. At the same time we would have been grossly unfair and ungrateful had we not informed our membership of the attitudes and voting records of their representatives in Congress and in the Legislature.

The lack of activity on the state legislative front was more than compensated for by one of the most active sessions of the Congress in several years. While the Illinois Agricultural Association cooperates effectively with our national organization, the American Farm Bureau Federation, it often becomes necessary for the Association to supplement AFBF efforts by working closely with the Illinois delegation in Congress.

Testimony was presented before several of the major committees of the Congress and personal contacts made with all Illinois members of the House and Senate. Not all of these efforts were successful but we have had excellent cooperation and support from practically all downstate and several Cook County Congressmen. Both members of the Senate from Illinois were very effective in their support of the programs sponsored by the Association.

The most important issues which were successfully supported by the Association were the Aiken Long-Range Farm Program, the extension of the Commodity Credit Corporation, increased support for the R. E. A. and the Extension Service, further economies in federal government expenditures and the return of the control and support of Federal meat inspection to the government. Issues on which we failed to secure effective action were coordination of the activities of the agencies within the Department of Agriculture, Agricultural credit legislation and compromise legislation on the oleomargarine tax. The next session of the Congress presents a challenging opportunity to carry forward to completion much of the program of the American Farm Bureau Federation.

With the forthcoming 66th Session of the State Legislature at Springfield and the convening of the new Congress in Washington, the year ahead brings a heavy responsibility to the Association. It is very important that the delegates in this Annual Meeting give careful consideration to a wide variety of issues.

The Illinois Agricultural Association has repeatedly taken a position of leadership in attempting to secure revision by amendment, of certain sections of the state constitution. The difficulty of this approach is that the amending clause in the constitution requires a favorable majority of all those voting in the general election for the adoption of an amendment. Amendments are invariably defeated by those who ignore the special proposition.

We have supported the party circle method as a means of securing a change in the amending procedure. Other groups have urged that a constitutional convention be called with the purpose of completely revising the constitution. Your organization has not supported these suggestions because we have been convinced that complete revision was unnecessary and because of the very real difficulty of securing sufficient agreement of all groups on the resulting product of the convention to secure adoption by the voters.

We are now faced with making a choice as to whether we should continue our attempts to secure amendment of the constitution or whether we should support the efforts to call a constitutional convention. The possibility of securing satisfactory revision as a result of a constitutional convention is not too promising. However, the need for revision is so evident that we should carefully consider this method.

School reorganization activity has swept over the state of Illinois at a remarkably rapid pace. The Illinois Agricultural Association was largely instrumental in securing the enabling legislation which gave the opportunity for much of the progress attained. However, we have been increasingly concerned with the reckless haste that has characterized the movement for reorganization in some communities. A number of mistakes have undoubtedly been made. However, I am confident that the awakened interest of the voters will assure early correction of these errors. During this period of intense activity a number of deficiencies, duplications and conflicts have been discovered in our cumbersome school laws. Early action to bring about needed revision and clarification of these laws is essential.

With the constantly increasing importance of motor transportation to modern agriculture it is imperative that the problems of maintaining an adequate highway system be carefully considered. In-

flationary price levels have resulted in road maintenance costs which are far in excess of existing revenues. The last annual meeting of the Association authorized the appointment of a Road Study committee which has submitted a tentative report that should receive the careful consideration of every farmer in Illinois. No single panacea can be evolved which will solve our road problems. In fact, the development of a satisfactory farm-to-highway road system presents many problems that differ from those questions that must be faced in connection with our primary road network. Reorganization of road districts to obtain more efficient use of manpower, machinery and funds is certainly needed. Traffic controls to protect our highways from needless destruction must be enforced. Revenue for road building and maintenance must be increased.

Careful studies should be made and gasoline taxes increased if necessary to be sure that property owners do not unduly subsidize highway users. A continuing rural road research project should be established to develop improved methods and materials. In short, a permanent, long-time plan for an adequate rural road system must be adopted at an early date. City consumers as well as farmers pay a heavy penalty as a result of rapidly deteriorating rural roads in Illinois.

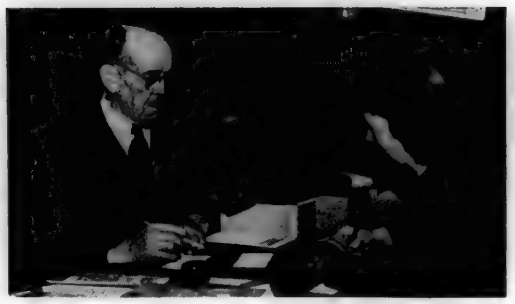
Economy in Government

With the increased drain upon the state treasury for welfare, education and all other state activity there is little possibility that the state of Illinois will continue to pile up a surplus. Farmers will continue to insist that every possible economy be made in the operation of government. There are thousands of employees on the government payrolls who would be of greater service if they were available for private employment.

College of Agriculture's Needs

Farmers are proud of the excellent state-owned colleges and universities in Illinois. We know the great service that has been rendered to all phases of agriculture by the College of Agriculture and Experiment Station at the University of Illinois. Each biennium the Board of Trustees goes before the Legislature for the operating and building needs for the entire University. The Illinois Agricultural Association has recognized the growing needs of a great university and has supported these requests. We have seen the huge new building programs include athletic, engineering, student housing, chemistry, art and airport facilities.

However, there has been no major agricultural structure erected in the last 24 years. During this period of time the research and educational needs of agriculture have expanded very rapidly. If Illinois is to continue to have an adequate Agricultural College and Experiment Station, we must have increased appropriations earmarked for both operating and building needs of the College of Agriculture. The major needs are for the Veterinary College, Home Economics, Agricultural Laboratory and Agricultural Engineering Buildings. Farmers will not permit this essential institution to continue to suffer from neglect.



The first president of the Illinois Agricultural Association, Herman W. Danforth, Iroquois county, registers for the 34th annual IAA convention. The girl taking the data is Grace Powell of the IAA office. Danforth was president in 1916.

Looking over the 1948 annual report of the IAA and Associated Companies issued during IAA convention are (left to right), Leo Swinford, Edgar county; Dr. A. E. Dickerson, veterinarian, Sangamon; Edwin Gumm, Knox, IAA director; and Albert E. Debatin, Clinton.

Today, as never before in the history of our country, the activities and policies of the Federal government influence to a marked degree the every-day life and business of all Americans. We live today in an artificial economy created by government as it struggles under the impact of the most destructive war in history, with its aftermath. The size of the national debt is almost beyond comprehension.

Demands for more and more government services and assistance have resulted in adding millions of persons to the federal payrolls and their numbers continue to increase. All of these factors contribute to the inflation that is rampant in America today. If there was ever a time for clear thinking and united action, that time is now. The American Farm Bureau Federation is one of the few national groups which has thus far developed a broad plan that charts a common-sense course of action.

During 1948, we have experienced still further inflation. Farm operating costs mounted rapidly as the general price level reached new all-time high peaks. Some of the contributing factors to this condition were continued high consumer purchasing power, heavy government spending, new rounds of industrial wage increases, huge exports to foreign countries to relieve suffering and an artificially pegged government bond market. A few feeble attempts were made to apply the brakes, but they were not sufficiently drastic to have much effect. Early in the year there was a slight adjustment in the bond market and more recently consumer credit restrictions were applied.

Your organization has long insisted that the most effective remedy for inflation is full and adequate production by all segments of the economy — labor, industry and agriculture. Farmers have responded to the incentive of high prices and, with the assistance of a favorable season, are flooding the markets with one of the largest crops in history. The result has been that many farm product prices have come crashing down, some of them to below parity levels.

If labor and industry would attempt to match this abundant production we could check inflation and adjust to new price levels without serious injury to any group. I regret to report that thus far there is no indication that either industry

organization in implementing the Voice for Agriculture consists of its program to represent farm people effectively at the seats of government in Springfield and in Washington. Many of you have heard our great former president, Sam H. Thompson, tell of his early experience in the halls of Congress when his authority to speak for the farmers of Illinois was questioned. Thousands of farmers answered that challenge by giving him their signed statement of support.

Today the right of the Illinois Agricultural Association to speak for the farmers of Illinois is never seriously questioned. The influence of your organization is so great that we must constantly be on guard to see that our spokesmen truly reflect the thinking of the farm people who have made this power a reality.

While the State Legislature was not in session during this year, your representatives were in frequent consultation with state government officials on many administrative and planning matters affecting agricultural welfare.

Recently we witnessed a very hotly contested state and national election campaign. Your directors, officers and staff have attempted to maintain a strictly nonpartisan attitude. At the same time we would have been grossly unfair and ungrateful had we not informed our membership of the attitudes and voting records of their representatives in Congress and in the Legislature.

The lack of activity on the state legislative front was more than compensated for by one of the most active sessions of the Congress in several years. While the Illinois Agricultural Association cooperates effectively with our national organization, the American Farm Bureau Federation, it often becomes necessary

Locker Co-ops Plan Complete Slaughter, Selling Operations

A NEW MARKET for meat and meat products is in the making for Illinois farmers through their cooperative frozen-food locker plants.

This was indicated during the annual meeting of the Illinois Cooperative Locker Association held recently in conjunction with the convention of the Illinois Agricultural Association.

The Illinois Cooperative Locker Association is an affiliated organization of the Illinois Agricultural Association. Member companies operate 104 locker and 25 slaughter plants in Illinois for more than 50,000 patrons.

Several county companies are making plans to wholesale meat and meat products processed at their plants to town patrons, hotels, stores and restaurants. This step would cut out the shipping costs to and from Chicago.

The Williamson County Cooperative Service is one of the most advanced of the county locker companies in providing a complete marketing and processing service.

At the locker and slaughtering plant at Marion they are rendering lard, and curing and smoking meats. They also are installing a sausage department where smoked sausage, pork sausage, wieners, bologna, and meat loaf products will be made.

A salesman is being employed who will sell direct to retail outlets, stores, and restaurants. This new venture into sausage making will operate somewhat as a test case, and if successful, may be duplicated in part by other county companies. Several farm groups

Dana Cryder, left, president, presides at locker meeting. At right is J. E. Mau, Lee county, a board member.

are helping in a limited manner to finance the experiment.

Other member companies are moving more and more into the marketing field. The McLean County Cold Storage Company recently purchased the Heller and Son's beef packing plant at Bloomington. They may add a hog slaughter line, with curing, sausage making, and other facilities, later.

Another trend in the frozen food locker industry has been the rapid increase in the number of home freezer units. J. L. Pidcock, manager of the Illinois Cooperative Locker Association, said that while processing of meats and poultry for home freezer units is not yet an important source of income it may in the future become more important than locker rentals.

He feels that locker plants will benefit from the increased use of home units if they provide a good processing service. An experiment carried on by a cooperative locker plant in New York state showed an increase of 50 per cent in processing income due to

William Temple, La Salle county, president of Illinois Wool Marketing Association, presents annual report of the organization during annual meeting. Left to right are Arlette Englund, office secretary; Dale Rouse, manager; Temple; and board member J. King Eaton, Madison county.

Co-op Will Buy Wool Clip Direct In Spring of '49

THE Illinois Wool Growers Association is making plans to buy wool direct from farmers at county pools during the coming clipping season.

This was announced at the annual meeting of the company held in Chicago during the annual convention of the Illinois Agricultural Association.

William Temple of Serena, president, said the new program would be of benefit particularly to farmers who have only a small number of sheep. Most Illinois farm flocks are small.

At present the Association is handling wool on a consignment basis with final payment sent to wool growers after their wool has been sold.

This year the association bought its own warehouse at Paris in Edgar county where it receives, grades, and prepares for sale all wool assembled in county wool pools.

Temple said that because of the new building, the wool marketing cooperative was able to keep its wool grading on a day-to-day basis. Advance payments were mailed in most cases to growers within 24 hours after the wool had been received from the country.

It was also possible to correct errors promptly and to explain to growers problems arising regarding the grading of their wool.

Temple said the Wool Growers marketed 248,124 pounds of wool cooperatively in 1948. This was an increase of 38,000 pounds over the preceding year.

The association this year made advance payments beginning at 40 cents a pound. Wool growers will soon receive final settlement on their 1948 wool clip which will bring their final payment substantially above this 40 cent advance.

Dale Rouse, manager, said that Illinois Wool Marketing Association has been a strong factor in supporting the price level of wool throughout the state.

This was particularly true early in 1948, he said, when the price offered for choice wool was 35 cents a pound in many areas. On April 6 the Association announced its schedule of advance payments beginning at 40 cents a pound.

The price level was immediately advanced to 42 cents in most counties and to 43 cents and 44 cents in others. This meant a 7 cent increase, or more, in the price level throughout much of the state.

HOME BUREAU CONFERENCE

THREE hundred Home Bureau women attended the women's conference held in conjunction with the 34th annual meeting of the Illinois Agricultural Association in Chicago. Miss Myra Robinson, president of the Illinois Home Bureau Federation, presided at both sessions. Kelso Sharp, Elwood, opened each session with a group of songs.

In her talk before the morning session, Miss Celeste Carlyle, style consultant of Chicago, urged the women to buy fewer and better clothes. She advised them to purchase one really good outfit each season, then wear it. It is poor management, she said, to buy good, fashionable clothes and then take such good care of them that they are out of style before they are worn. A well-chosen costume should be wearable for four or five years.

A becoming color should be selected, one that will fit with the other clothes in the wardrobe. Then everything should be chosen to harmonize with this color. Gray is a good color this year and a coat, hat and dress of this color might be selected. Variation and contrast can be achieved through the use of accessories, she said.

Miss Carlyle suggested that homemakers should make special efforts to be attractively dressed when they are at home with their families. "After all," she said, "the family is the group that the homemaker holds most dear and it is too bad if she must wear her old, unattractive dresses before them."

Most women need very little make-up if their skins are healthy and radiant. Miss Carlyle did not advocate plucking the eyebrows. Only the patch over the nose should be plucked. She brought out the fact that the eyes need heavy brows or they wouldn't grow that way. The brows may be nicely shaped by brushing and a girl should start shaping them when she is young.

Miss Carlyle suggested that rouge, lipstick and powder be bought in small ten cent packages for trial. When the most becoming color has been chosen the other packages should be given away or sold but certainly not used to just keep from wasting them. Larger amounts may be bought after the selection has been made. Most beauticians' blending powders work under artificial lights so the color tones cannot be depended upon.

Hair is an important factor in a woman's appearance. It should be arranged to bring out the beauty of the face. The woman with a short neck should have her hair cut short or combed up at the back, in no case should she have a fluff of hair around her neck.

The sides should be close to the head with heighth given by combing the hair up in front. The woman with a long narrow face will find a hair-do wide on the sides and low over the forehead becoming. The person with a very low forehead will find that very short bangs will give the illusion of heighth to the forehead.

At the afternoon session, Mrs. John Jennings, Joliet, spoke on "Flower Arrangements and Table Decorations". She demonstrated to the homemakers ways in which they could use the materials available in their yards and along the roadside to make attractive arrangements that could be used on their dining tables or for living room decoration.

Mrs. Jennings gave a few general rules. The heighth of an arrangement should always be at least one and one half times the heighth of the vase or one and one half times the width if a flat container is being used. Every arrangement should have balance.

Mrs. Jennings advocated the use of a needlepoint holder to keep material in place. She anchored the holder firmly to the container with modeling clay. This can be done only when both the holder and the container are absolutely dry. After the arrangement is made the holder should be concealed with leaves or other harmonizing material.

The table should be attractively set for family meals. If it is too much work to wash and iron tablecloths attractive place mats are available that can be wiped clean. The family should use their good linens and nice dishes often enough so they feel at home with them

(*Continued on page* 50)

Mrs. Jennings advocated the use of a needlepoint holder to keep material in place. She anchored the holder firmly to the container with modeling clay. This can be done only when both the holder and the container are absolutely dry. After the arrangement is made the holder should be concealed with leaves or other harmonizing material.

The table should be attractively set for family meals. If it is too much work to wash and iron tablecloths attractive place mats are available that can be wiped clean. The family should use their good linens and nice dishes often enough so they feel at home with them

(Continued on page 50)

Thinking about buying toys for the kids back home during IAA convention in Chicago are (left to right) Mrs. Ronald Holt, Henry county; Mrs. Joseph Puetz, La Salle; and Mrs. Eldon Harms, Edwards. The salesman is Charles Sarnoff.

Organize New Co-op To Unify Illinois Livestock Marketing

ILLINOIS Livestock Marketing Association made the most rapid growth this year of any of the IAA-affiliated cooperatives.

Sales of livestock through the association were doubled. It handled 478,283 head of livestock, mostly hogs, valued at $29,074,515 through its sales office in Decatur.

This rapid progress was reported by Mont Fox, Vermilion county, president, and H. W. Trautmann, manager, during the annual meeting of the marketing association held recently in Chicago.

Fox pointed out that the increase in sales was made possible by adding new outlets and expanding old ones. Seven new member companies were organized this year.

In a discussion of the hog market in 1948, Trautmann said that this year was one of erratic markets caused by high prices.

"Throughout the year the hog market was very sensitive to supply. Packers continued to operate on a current cut out basis," Trautmann said.

"Any slowing of consumer demand was immediately reflected in prices paid to farmers. The wave of consumer strikes against high prices which occurred in the summer had the effect of checking a price rise which might have exceeded previous high marks."

He said that during February and March with corn at $2 a bushel, and up, many heavy hogs and packing grades sold well below the government support level.

The tie-up in the major packing plants during April and May prolonged a distressed market, but as soon as the strike was settled prices rose rapidly, Trautmann said. An all-time high of $31.45 was registered on the Chicago hog market on Aug. 16.

The Illinois Livestock Marketing Association is rapidly becoming one of the largest cooperative order buying companies for hogs in the country.

In the last few years it has established a number of buying points in the heavy hog producing areas in Illinois. The points are organized on a county-wide basis.

Hogs are bought and paid for in cash by the Illinois Livestock Marketing Association at these county concentration points. Orders for hogs are taken for all the points by the state sales office in Decatur.

Throughout the areas where the county points have operated, prices on hogs have increased by 25 to 50 cents a hundred from the savings resulting from this kind of cooperative and large-scale handling.

Farmers say they like the service because they can learn the current hog quotations by calling their local yards, and what they will be paid, before their hogs leave the farm.

New buying points were organized this year at Bluffs in Scott county, Rushville in Schuyler, Cambridge in Henry, Erie in Whiteside, Princeton in Bureau, Elizabeth in Jo Daviess, and Camp Point in Adams county.

Other buying points are located at Bloomington, Champaign, Decatur, Aledo, Danville, Shelbyville, Paris, Stronghurst, Elvaston, and Freeport. Shelbyville maintains a branch at Effingham, and Freeport a branch at Lena.

Two other county groups, Ogle and Boone-Winnebago, were organized after the close of the association's fiscal year on Sept. 30.

In keeping with the general policy of all the subsidiaries of the IAA, Illinois Livestock Marketing Association surrendered its letter of exemption from income tax at the beginning of its fiscal year.

Federal taxes paid by the Illinois Livestock Marketing Association for the current fiscal period amounted to $2,244.08.

Members of the Illinois Livestock Marketing Association not only buy direct but also ship to producer agencies on the terminal markets.

This year they shipped 6,947 cattle, 3,188 calves, 9,129 hogs, and 8,694 sheep to the Producer agencies.

A number of animals were sold at home by local managers to locker plants or to producers for further feeding or breeding: 2,229 cattle, 815 calves, 12,392 hogs, 966 sheep. A total of 522,643 head of animals were handled by the combined units.

A NEW livestock marketing cooperative is being organized in Illinois under the proposed name of the Illinois Livestock Producers Association. Its purpose is to develop a unified marketing system among the six existing livestock marketing cooperatives in Illinois.

The organization of the Illinois Livestock Producers Association has been recommended by a committee appointed by President Charles B. Shuman of the Illinois Agricultural Association to work out a plan to coordinate the activities of the various cooperative marketing associations in Illinois.

Their recommendations have been approved by the boards of directors of four of the five Producer agencies operating in Illinois, as well as the board of directors of the Illinois Livestock Marketing Association and the Illinois Agricultural Association.

In announcing this new coordination program, President Shuman emphasized that each of the agencies will retain its own identity and will continue its present operations, but all will be guided and advised by the new statewide company.

The first step in the creation of the new company is now being carried out in the selection of a board of directors by the various groups concerned.

The first board will consist of 15 members. A director will be selected from the board of directors of each of the Producer livestock marketing cooperatives at Chicago, Peoria, St. Louis, Bushnell, and Springfield. One director will be selected also from the board of the Illinois Livestock Marketing Association, and one from the board of the Illinois Agricultural Association. In addition, one director will be elected from each of eight districts representing all counties in Illinois.

Several of the Producer agencies already have picked a member to represent their group on the governing body of the new cooperative. A board member from each of the eight districts will be picked by the counties after the program has been explained fully. Each county will have equal vote.

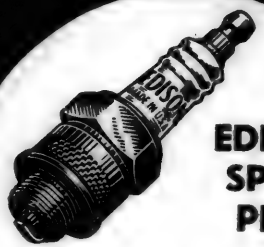
OIL FILTERS

A dirty oil filter can cause much trouble in winter. It may freeze up and block off the flow of oil. Replace with Blue Seal Oil Filter Cartridges.



EDISON SPARK PLUGS

A good, hot spark on a cold morning means a quick start. Replace faulty plugs with Edisons. They are the ones with the spun-on gaskets and the aluminum oxide insulators.

HOW'S YOUR COLD WEATHER PERFORMANCE?

Are you getting maximum performance from your farm truck, car or tractor these days?

Trouble-free performance is a matter of attention to several details which can cause serious trouble. Among these is anti-freeze. Be sure to keep enough anti-freeze in the radiator for low temperature protection.

Check frequently and be safe!

Batteries, spark plugs and tires should also be checked frequently.

BLUE SEAL SERVICE — ILLINOIS FARM SUPPLY COMPANY

BLUE SEAL DUAL TRACTION TIRES

For best performance in mud and snow, we recommend the Blue Seal Dual Traction tires. They're tough!

BLUE SEAL LAX-O-GAS

Six ounces of LAX-O-GAS added to ten gallons of fuel will improve the performance of your motor. It aids top cylinder lubrication and makes for easy starting.

BLUE SEAL BATTERIES

For quick winter starting you need a good, strong charge. Here is the battery that has that power. It is made of the best materials and will give excellent service.

RURAL YOUTH

Merle Miller Wins IAA Talk Fest But Is Disqualified for National Meet; Canadian Youth Visit Convention

By ELLSWORTH D. LYON
Director, Youth Peoples Activities

ILLINOIS Rural Youth activities got off to a good start Monday night, Nov. 15, with a large Rural Youth party. Since there was a possibility of less than 100 young people being present on the eve of Rural Youth Day, plans were made to hold the party in one of the smaller rooms at the Hotel Sherman, but when around 200 Rural Youthers appeared a shift was made to a larger room. We appreciate the help of E. H. "Duke" Regnier.

The Talk Fest on Tuesday, Rural Youth Day, held in the grand ballroom of the Sherman Hotel, was attended by approximately 1,200 people. The usual 18 talkers were present and the talks were on a high level of excellence. High point speaker was Merle Miller, 16, of Clinton, DeWitt county.

His talk, "Should Illinois Continue the Fly-Free Program in 1949?" was delivered in real top-notch style and packed with good content. Due to a new regulation of the AFBF as to age limits, 18-28, for participation in the National Talk Meet, Merle will be too young to take part at Atlantic City, N. J. His high rating among 17 other farm youths, all older than he, points to his outstanding ability at such an early age.

Mary Alice Roser, who placed second, will be the only representative from Illinois in the National Talk Meet at Atlantic City. Her topic was "Getting Along with the Family." Her rating was just two points below Merle's. The other top-notch speakers were: Norma Allen, Marion; Udell Wehling, Alhambra; and Fremond Settles, Macomb. Those receiving honorable mention were: William McDonald, Winnebago; and Virginia Johnson, Plainville.

One member of the new state committee who is also a member of the national committee, Doreen Marti, Greenville, and Ruth Huser, Morton, who is retiring from both the state and national youth committees, will represent Illinois Rural Youth at the Atlantic City youth conference. The four other new members of the state committee are Janet Jacobsen, Sheffield; George Johnson, North Henderson; Ray Eichelberger, Rantoul; and Bob Sievers, Milan.

Of outstanding interest to both young people and adults who attended the afternoon Rural Youth conference on Tuesday was the address by Bert Vandervliet, director, department of taxation, IAA, upon the theme "Democracy at the Local Level." Vandervliet stressed seven main points bearing upon this important theme.

Illinois Rural Youthers were again favored by visitors from another country. This year four visitors were present from the Junior Farmers' Association of Ontario, Canada. They were: Miss Dorothy McLaughlin, Miss Olive Maltby, Comrie Ward, and Ross Beattie, president of the Junior Farmers' Association.

Their talks before the Rural Youth conference, their association with the assembled Rural Youthers, and the tour to various points of interest with our state committee in northern and central Illinois, will be remembered as a warm and friendly return of a visit by our state committee to the Junior Farmers' Association Annual Meeting at Guelph, Ontario, in April 1948. E. D. Lyon and Clareta Walker accompanied the Illinois tour.

Extracts from the short talks of our visitors will be of interest to the readers of the RECORD. Beattie gave an over-all picture of the youth program which includes an organization in size equal to Illinois Rural Youth, around 10,000 members, covering an area four times as large as Illinois. The province is divided into 16 districts made up of two to five counties each. Each district sends one delegate to the provincial board which elects the president from this group.

He said, "Our work corresponds very closely to yours. Our aims and objectives are almost identical and I would say to you as farm boys and girls of Illinois and to you as farm boys and girls of Canada that we should be proud to be boys and girls from the farms of two great countries, and the destiny of these two great countries will be determined from the way we accept our responsibilities as rural youth in the years to come by the training we receive."

Ward's short talk was built around the Junior Farmers' slogan "Self-Help and Community Betterment". "The slogan is being carried out in such studies as banking, municipal, county and provincial government, taxation and laws by which we live. Activities receiving much emphasis are speech, in which both prepared and impromptu speaking is emphasized as well as entertainment, field days, scheduling baseball, track and other athletic events.

"In winter hockey and skating are held. Choir festivals helped in developing some good choirs. These choirs are used mostly in our church services planned by Junior Farmers."

He said further, "I feel that both our organizations, the Rural Youth of Illinois and our Junior Farmers at home, are working along the same lines and toward the same goals."

Miss McLaughlin spoke of the help which local groups in Ontario receive from the home economists who are sent out through the Women's Institute branch of the Department of Agriculture to teach leaders in the local groups who, in turn, go back to their groups with helpful information. She spoke especially of the garden projects that are carried on by the girls. She said that home economists point out that as they travel through the counties they can tell where the girls live by the beautiful gardens and attractive home grounds. This fact, Miss McLaughlin thinks, is a good recommendation for the garden projects.

Miss Olive Maltby said, "Our association as Junior Farmers with our Senior Women's Organization has been likened unto a mother-daughter relationship and we enjoy our association with our senior organization and we get a great deal out of it. The girls' section of our local Junior Farmer groups are known as Junior Institutes.

"We carry on programs of interest to the girls. It may be grooming, the care of clothes, or perhaps leadership training, book reviews, music appreciation and home economics, or anything that we ourselves are interested in, and the girls in the clubs carry on these programs themselves. We prepare the papers and give demonstrations."

The Junior Farmer representatives from Ontario and the IAA state committee of five members toured the offices of the IAA following the annual meeting of the IAA. From there they went to the Curtiss Farm at Cary, Illinois, to see the pure bred livestock. On Thursday evening the Rural Youth group of Mercer County sponsored a party at Viola in honor of the visiting Canadians.

The words "Welcome Canadians" made of large letters stood out as a warm handshake to our friends from

across the border. The entire group was entertained for the night in the homes of Rural Youthers of Mercer county.

Thursday afternoon we visited the home of Mr. and Mrs. Clarence Ropp. Ropp is a successful farmer and past president of the McLean County Farm Bureau. The executive committee of the McLean County Rural Youth group planned a dinner for the touring group of Illinois Rural Youth representatives and the young Canadians, following which slides were shown by George Matthews covering events and scenes in connection with the annual meeting of the Junior Farmers' Association which Illinois young people attended early this year. On Saturday Prairie Farms Creamery at Bloomington was visited as was the Funk Farms south of Bloomington. At noon a luncheon

(*Continued on page* 48)

The five top speakers in the Illinois Rural Youth Talk Fest pose together after learning of the results. Left to right: Merle Miller, DeWitt county; Mary Alice Roser, White; Udell Wehling, Madison; Norma Allen, Williamson; and Fremond Settles, McDonough. Selected to represent Illinois in the national Talk Fest, Miller was disqualified by the AFBF rule which sets the minimum age at 18. Miller is 16. Illinois will be represented at Atlantic City by Miss Roser. She is 18.

Robert Roselius Wins Safe Driving Contest

DRIVING a new car through the wind and rain Robert Roselius, 21, Iroquois county, was adjudged best driver in the State Skilled Drivers' Contest sponsored for Rural Youth by the Illinois Agricultural Association safety department.

The final contest, in which nine district winners took part, was held at Soldier Field on Chicago's windswept lake front in November during the IAA annual convention. Mahlon Lindgren, Mercer county, placed second.

Judging was done by three members of the traffic safety section of the division of state police. Points were awarded for safe, sensible driving under varying circumstances. Out of a possible score of 100, Roselius scored 89. His nearest rival scored 59. He lost seven points on skills and four on city driving..

W. W. Whitlock, former IAA director of safety and now head of the Illinois Farm Supply Company safety department, was in charge of the contest. Curt Kenyon, University of Illinois extension specialist in Rural Youth, was official scorekeeper.

Commenting on the excellent response of Rural Youth in participating in the contests from the district to the state, IAA Youth Activities Director Ellsworth D. Lyon said: "It is hoped that each county in the state carrying a Rural Youth program will engage in the study of safety on the highway in 1949 and will hold actual driving contests for their members. Rural Youth will want to do their part to make our highways safe. Support the Skilled Driving Contest in 1949."

Robert Roselius, 21, Iroquois county, receives trophy from W. W. Whitlock (center) of the Illinois Farm Supply safety department after the young farmer won the IAA-Rural Youth safe driving contest. State safety section policemen are Sgt. F. E. Piper (left) and Sgt. T. O. Coughlin, and Sgt. B. J. Behler (right).

Members of the Illinois Rural Youth state committee are shown together shortly after their election at the Rural Youth conference held in conjunction with the IAA convention. Left to right: Robert Sievers, Rock Island county; Dorene Martl, Bond; Ray Eichelberger, Champaign; Janet Jacobsen, Bureau; and George Johnson, Mercer.

RURAL YOUTH

Merle Miller Wins IAA Talk Fest But Is Disqualified for National Meet; Canadian Youth Visit Convention

By ELLSWORTH D. LYON
Director, Youth Peoples Activities

ILLINOIS Rural Youth activities got off to a good start Monday night, Nov. 15, with a large Rural Youth party. Since there was a possibility of less than 100 young people being present on the eve of Rural Youth Day, plans were made to hold the party in one of the smaller rooms at the Hotel Sherman, but when around 200 Rural Youthers appeared a shift was made to a larger room. Sees A Bumper Apple and Peach Crop In 1949

A BUMPER crop of apples and peaches for Illinois in 1949 was predicted by R. S. McBride, manager of the Illinois Fruit Growers' Exchange, during the recent IAA annual meeting.

Apple and peach trees are in a healthy condition and have been showing numerous buds. Only a severe winter kill would reduce next year's crop prospects, McBride said.

Fruit growers have made more money this year than last, McBride said, although they have not benefited as much from general prosperity as have other farmers.

The Illinois Fruit Growers' Exchange is a marketing cooperative organized to sell fruits and vegetables for members, most of whom are concentrated in southern Illinois.

Sales for the Exchange are handled from the Carbondale office. Apples, peaches, strawberries, and tomatoes are the principal crops marketed.

More and more stress is being placed by the Exchange on quality. This year it introduced a new label, Prairie Chief, which is used only on top quality U. S.-No. 1 fruit. McBride said it was well received throughout the trade. Their more widely known Illini label is used only on U. S. - Fancy.

The Exchange also continued its program of federal inspection on all fruits shipped by rail. All cars of peaches were pre-cooled to insure better delivery.

The cold storage building at Carbondale built and owned by the Exchange was used during the 1947-48 season for the first time.

The 59,000 bushels of apples put into this storage space came out in excellent condition, McBride said. About three-fourths of the space already had been rented in early fall by fruit growers for the coming fall and winter season.

The growing season this year was earlier than in 1947, McBride said, and growing conditions generally were better. Crops, he said, were lighter throughout the state but harvesting came at a better time in relation to markets.

The total volume handled by the Exchange as compared to 1947 gives a fair picture of the yields of the crops for the state as a whole during 1948 and 1947. Following are the 1948 volumes with the 1947 volumes in parentheses:

Apples 389,277 bushels (192,354), peaches 134,529 (225,735), strawberries 14,766 crates (23,141), tomatoes 21,736 (5,806), and miscellaneous 1,500 (913).

IAA membership department personnel are given helpful suggestions for the last time by L. A. Evans, on his retirement Dec. 1. Making mental notes of the procedures to be followed are, left to right: Ella Koch, Hilda Hanson, Blanche Hews, Sophia Bauman, Theresa Henz, Mary Lynch, who succeeds Evans as department supervisor, and Margaret Welsh.

Evans Retires After 28 Years On IAA Staff

L. A. EVANS, for 28 years an employee of the Illinois Agricultural Association, retired under the Illinois Agricultural Association retirement plan Dec. 1. Evans, supervisor of the membership records department, was the Association's oldest employee in point of service and worked continuously in the same department.

After four months on a temporary basis in the summer of 1920, he was permanently employed by the IAA on Feb. 1, 1921.

The oldest of four boys and a girl, Evans was born in Farwell, Mich. His father was a country doctor in that lumber woods area.

After completing the country school grades, he lived with an uncle on a farm in Ohio while attending high school. Then he studied at Olivet College in Ypsilanti, Mich.

When Evans came to the IAA, it was as a traveling man. The membership records were kept in each county Farm Bureau office, so his work took him around the state by train from three to seven times annually. In the early 1930's, he switched to auto travel.

The membership records were transferred to Chicago in 1934 and 1935, since which time Evans' work has been centered entirely in the home office.

The dean of IAA employees has seen the Association grow from a membership of 58,000 in depression years to the nation's leading state Farm Bureau with almost 156,000 members. Likewise he has seen the office and field staffs grow from a mere 10 people to today's 1,100.

Mr. and Mrs. Evans, whose home is in Brookfield, a suburb of Chicago, plan to spend the winter in Compton, California, with their son Kenneth, a junior college teacher.

The Evans' have three other children: Dr. R. N., an osteopath in LaGrange; Mrs. Alice Lefler, Brookfield, and Mrs. William Heilmann, Bridgeport, N. J. Six youngsters in the family address Mr. Evans as "Grandpa."

Honor Farm Advisers Tarble, Kemp, Kibler

THREE Illinois farm advisers were among the 113 from 36 states to be awarded distinguished service certificates presented by the National Association of County Agricultural Agents at their annual banquet held recently in Chicago.

The three Illinois farm advisers honored were Charles Tarble, Cumberland county, Clarence T. Kibler, Jersey, and Arnold R. Kemp, Knox.

They received this honor for outstanding educational and organizational work, 4-H club work, and other phases of the extension service program.

Receive Awards

MRS. ENA K. CHESNEY and Mrs. Helen Volk, Illinois home advisers, were honored for their outstanding service in home economics extension work at the meeting of the National Home Demonstration Agents Association in Chicago recently.

Mrs. Chesney has been adviser in Stephenson county for 15 years and Mrs. Volk has worked in Lake county for 15 years. Both received their B.S. degrees in home economics from the University of Illinois.

'High Costs, Falling Farm Prices May Bring on Disaster'

(*Continued from page* 42)

or labor is ready to abandon the drastic production control practices which they have employed for years to maintain prices and wages.

Farmers, therefore, are now faced with a situation very similar to the conditions that prevailed just after the first World War. Farm prices are falling rapidly while all other costs and prices rise. Unless checked soon, this two way trend can have but one result — a repetition of the disaster which befell this nation in 1929. Agricultural income and agricultural spending remain as one of the most important factors determining the trend of national income and general price levels. The industrial economy might coast along for a few months or years without our support but sooner or later the drag of a prostrate agriculture would cause a crash.

It would be in the entire national interest if some means could be discovered to add greater stability to the general price level. Agriculture, in particular, is interested because farm commodity prices fluctuate more widely and violently than do other prices. Last year I used a simple example to illustrate one of the causes of these wide fluctuations in price levels. A dollar bill which purchased 280 pounds of shelled corn in 1932 would buy only 25 pounds of the same shelled corn in 1947. Today, twelve months later, the value of a dollar in terms of shelled corn is up to 50 pounds of corn.

Other Inflationary Factors

There are many other factors within the control of government which contribute to the inflationary price spiral. Artificially low government bond rates have been maintained with the objective of saving millions of dollars in carrying charges on the national debt. Low interest rates have discouraged savings and accelerated spending, thus forcing prices higher. It is probable that the resulting increased cost of operating the government has more than offset the savings in carrying charges. This program has been continued so long now that any upward adjustment in interest rates must be very gradual or our entire economy might be disrupted.

Continued increases in government payrolls and government spending is highly inflationary. Your organization has repeatedly urged that this trend be reversed and that all non-essential spending be eliminated immediately.

During the last two weeks we have heard many statements to the effect that the public has given a mandate to our representatives in government to do certain things. Farmers recognize that the decision of the people reflected the thinking of American citizens on many different issues. We do not recognize any clear mandate to turn backward. We will continue to insist that legislative action be constructive. We will continue to aggressively support the essential and constructive features of the Taft-Hartley labor relations law. We will continue to insist that our system of free enterprize in America is preferable to a governmentally regulated socialistic economy. We reiterate our opposition to the return of unworkable federal price control legislation whether under the name of O.P.A. or any other form of government control. We shall insist that we move in the direction of less rather than more government controls.

Support Prices

During recent months as food prices have soared upward the government agricultural price support program has been under attack. City consumers have been told that high food prices are caused by the parity price supports and that farmers are becoming wealthy as a result of government price guarantees. What are the facts?

Wartime price support legislation was enacted by Congress to encourage needed expansion in production. This encouragement was necessary because farm products were subject to rigid price ceiling control under the O.P.A. The price supports were continued after the war to encourage production necessary to meet the greatly enlarged domestic and foreign needs. However, as a result of this great demand, farm prices have with few exceptions remained much higher than the 90 per cent of parity support levels. Consumers themselves, not government supports, have forced food prices higher and higher.

The Long-Range Farm Program

Through a bitter congressional battle the American Farm Bureau Federation aggressively supported the Aiken Long-Range Farm Program bill which was enacted during the closing hours of the 80th Congress. This bill consists of a number of amendments to existing agricultural legislation. Many of the provisions in this bill were the result of compromise and further amendment will

undoubtedly be necessary. However, I believe that the principle of using government price supports as floors to protect farm prices from collapse rather than for rigid price fixing is sound. Also, the idea of injecting some degree of flexibility into the support price structure has considerable merit.

Coordination of Government Agencies

The Illinois Agricultural Association is proud of the fact that one of the chief objectives of the organization through the years has been to foster and encourage an aggressive educational program to bring to individual farmers the opportunity to increase their productive efficiency. The relationship in Illinois between the College of Agriculture, Extension Service and the County Farm Bureau organizations has been both efficient and ethical. Farmers, in contributing from their own funds for the financial support of the county extension workers, naturally take a greater interest in seeing that the program is effectively used. Without this kind of support, the extension program would of necessity be drastically curtailed.

During recent years as the U. S. Department of Agriculture has attempted to serve Agriculture in more and more ways a host of new agencies have developed within the Department. Practically no correlation of activity exists at the national level. As a result farmers witness considerable duplication of effort as each agency attempts to justify its independent existence. Considerable money will be saved and a more effective program developed when the work of all agencies dealing with agriculture is correlated from the national level down to the county. In this picture the Experiment Stations should conduct all research and the Extension Service should carry on all educational work. There will continue to be a need for Soil Conservation Districts, County Production Program Committees and other local organizations to be responsible for the action programs.

Farm Cooperatives

The last year has brought a continuation of the vicious attack upon our farmer cooperatives. Although disguised under various other slogans, the real purpose of these attacks is to discredit and destroy these essential farm tools. Farmers and the nation itself sorely need the healthy competition provided by the farm cooperatives. It is one of our few means of defense against the monopolistic practices used by huge corporations.

The position of the Illinois Agricultural Association is clear. We do not ask for, nor do we have unfair tax advantages. We recognize that earnings of cooperatives which are retained within the cooperative structure and not distributed as patronage dividends to members should be subject to the same treatment as funds so retained within the corporate structure of a private business corporation. However, cooperative earnings upon member business which are returned to members as patronage dividends, either in cash or stock and are taxable to the members, should not be subject to tax against the cooperative.

Public Relations

The number one unsolved problem confronting American agriculture lies in the field of Public Relations. With a constantly diminishing proportion of the population engaged in agriculture it becomes increasingly more difficult for farmers to carry their case to the American public. Years ago most of our city residents were closely related to some farm family. That condition does not prevail today. More and more urban residents turn to the metropolitan press and radio for their information regarding agriculture. Farmers and their organizations do not have huge advertising budgets, thus the press and radio are not too much concerned with our welfare. As farmers, our greatest hope for improved public relations depends upon how strongly and wisely we build our One Voice for Agriculture. If the Voice of Agriculture is a single voice it will command greater respect and attention. If the Voice of Agriculture is strong and powerful it will be heard by more of the people. If the Voice of Agriculture presents a righteous program that is just and fair to all groups it will be accepted.

May God grant us farmers the wisdom to think clearly and fairly on all of these problems whose solution means so much to the future welfare of our democracy.

Kenneth Cheatham, 19, of Greenville in Bond county, receives check for $1000 after being chosen Star Farmer of America at the 20th annual convention of Future Farmers of America in Kansas City, Mo. Presenting check is J. M. Collins, editor of the Weekly Kansas City Star. Cheatham was chosen from 214 FFA members who received American Farmer degrees at the Kansas City convention.

Continue Quest For Improved Rural Schools

(*Continued from page* 31)

buildings which one might want to build in about five years. The prices of the buildings depend on the architect's ability and willingness to utilize the materials which will cut costs. The present rates run from 57 cents to $1.16 per cubic foot.

Lindstrom: Wouldn't it be better to keep the elementary schools small and close to the children and use them as community centers rather than put money into big buildings where it doesn't mean anything to the majority of the people?

Fetherston: Put the building in the hands of the architect with the idea that "Here are our educational needs. Design a building to house these needs."

Cox then suggested two films for school groups — "School House in the Red" and "Priceless Cargo." He reported that he had been assured that the office of the state superintendent would furnish a copy of either film to local groups free of charge with sound machine and operator upon request.

Cattron, Fulton county: What is the function of a county superintendent in a unit district?

Cox: The county superintendent has some functions which the district superintendent in a unit district cannot assume. There is still need of a link between the state and the local school district although the county superintendents' duties will have to be redefined in counties where there has been widespread reorganization.

Question: Does the district have the right to petition out once it has been voted into a unit district?

Cox and Black: Yes.

Listening to a discussion during the Farm Bureau Presidents and Farm Advisers luncheon are (left to right) Paul Pittman, White county farm adviser; Leslie Broom, Pulaski-Alexander farm adviser; J. H. Kelker, retiring manager, Country Mutual Fire Company; L. E. Lingenfelter, president, Pulaski-Alexander Farm Bureau; George D. Perisho, Bond county farm adviser; and Earl Purdue, president, Marion County Farm Bureau.

Dairy Farmer Charles Smith, Madison county, gets a good-natured ribbing about the whiskers he said would "sweep the floor until Truman went back into the White House." He kept them for the IAA convention. Left to right: Rudolph Hans, Madison; George Metzger, IAA field secretary; Smith, and J. King Eaton, IAA director from Madison county.

'High Costs, Falling Farm Prices May Bring on Disaster'

(*Continued from page 42*)

or labor is ready to abandon the drastic production control practices which they have employed for years to maintain prices and wages.

Farmers, therefore, are now faced with a situation very similar to the conditions that prevailed just after the first World War. Farm prices are falling rapidly while all other costs and prices rise. Unless checked soon, this two way trend can have but one result — a repetition of the disaster which befell this nation in 1929. Agricultural income and agricultural spending remain as one of the most important factors determining the trend of national income and general price levels. The industrial economy might coast along for a few months or years without our support but sooner or later the drag of a prostrate agriculture would cause a crash.

It would be in the entire national interest if some means could be discovered to add greater stability to the general price level. Agriculture, in particular, is interested because farm commodity prices fluctuate more widely and violently than do other prices. Last year I used a simple example to illustrate one of the causes of these wide fluctuations in price levels. A dollar bill which purchased 280 pounds of shelled corn in 1932 would buy only 25 pounds of the same shelled corn in 1947. Today, twelve months later, the value of a dollar in terms of shelled corn is up to 50 pounds of corn.

Cox and Black: Yes.

Kelker Retires After 23 Years As Manager of Country Mutual Fire Co.

John H. Kelker (left), retiring manager of Country Mutual Casualty Company, chats with his successor, Darrell L. Achenbach, during IAA annual meeting at Hotel Sherman in Chicago.

JOHN H. KELKER has retired as manager of the Country Mutual Fire Company effective Dec. 31. He has been manager of the company since it was first organized in 1925.

He is succeeded by Darrell L. Achenbach, 38, who since 1946 has been secretary-treasurer of the Fox Valley-Joliet Production Credit Association in Geneva. Achenbach was born and reared on a farm near Taylorville in Christian county.

Kelker will continue to work in the field of insurance. He is planning to assist the Mutual Casualty Company of the Missouri Farm Bureau in organizing a fire, wind, and hail insurance division. He and his wife plan to live in Jefferson City, Mo.

Kelker has worked for the Illinois Agricultural Association for 25 years. He was employed in 1923 as office manager and comptroller.

A self-educated man, Kelker started to work at the age of 15 after completing one year of high school. He attended public schools at Quincy, where he was born and lived before moving to Chicago.

He worked for three years in a factory as a machine operator and then, after reaching the required age of 18, worked as a letter carrier at the Quincy post office.

He continued in this job for 16 years during which time he studied accounting nights by subscribing to a course from a Chicago correspondence school.

In 1919 Kelker entered private practice as an accountant and three years later, in 1922, accepted an appointment as chief deputy collector in the Quincy area for the internal revenue department.

He was advanced the following year to head a division for the internal revenue service comprising the area south of Springfield. Later in 1923 he came with the IAA as its office manager and comptroller.

Kelker passed the state examination for public accountant in 1932 and in 1943 received a certified public accountant's certificate.

"Careful, Son,
Winter Roads Mean DRIVE SLOWLY!"

"Just one crack-up due to wintertime carelessness and there could go your driving license! Every trip into town on errands, you've got to respect that ice and snow by driving just as slowly and carefully as you know how. One skid — one second while the car is out of control — and LOOK OUT! And if you're lucky enough to get by without getting hurt, with just your license revoked, what then? Think you'll get places faster walking than you would have driving slowly?

"Myself, I've got two-way protection. ONE, by driving as carefully on icy roads as if the back seat were packed with dynamite. TWO, by insurance protection with Country Mutual Casualty Company who's giving us Farm Bureau members a break with low insurance rates because we're considered PREFERRED RISKS.

"Don't spoil our record, Son. You'll get there faster, in better shape, by taking your time on roads like these, or any roads for that matter.

A group of University of Chicago agricultural economics and political science students listen intently to farmers speaking their minds before an open hearing of the IAA resolutions committee. Left to right: Mrs. and Mr. Walter Kirchner, Kenosha, Wis.; Daniel M. Ogden, Spokane, Wash.; Lester P. Wohlers, Yakima, Wash.; and Howard Friedman, Oklahoma City, Okla.

RESOLUTIONS

(*Continued from page* 13)

of lack of transportation. In order to guarantee every pupil in non-high territory an opportunity to attend high school, and to eliminate certain irregularities now existing, we will sponsor or support legislation to require each board of a non-high district to provide transportation for its pupils to a fully recognized public high school that seems in the judgment of the non-high board to be most convenient and accessible.

XIII. CONSERVATION TRAINING

Additional emphasis must be placed on conservation of the soil and other natural resources. The continued exploitation of these resources will eventually lower our standard of living.

It is important that school children be properly instructed in the conservation and appreciation of all our natural resources. Teachers should be required to have conservation training.

We pledge the support of the Association in the promotion of conservation instruction in our elementary schools, high schools and colleges.

XIV. BRUCELLOSIS CONTROL

The control of bovine brucellosis is of vital concern to all producers of cattle in Illinois. Commendable progress has been made in recent years toward the control of this disease. The United States Livestock Sanitary Association has proposed a uniform brucellosis control program which has the approval of the Bureau of Animal Industry of the United States Department of Agriculture. Most of the Illinois Bang's Disease Control Law is in agreement with the proposed uniform program. There are, however, some desirable features in this plan which are not in the Illinois law. We recommend that the Illinois law be modified to conform generally with the proposed uniform program.

We will support amendments to our law which will require (1) all cattle owners in a given area to participate in the program when a substantial majority of the owners in such area are cooperating under the program, (2) the permanent identification of infected reactor animals, and (3) more stringent regulations governing the sale of cattle within the state.

IAA Vice President Floyd E. Morris (above) reads aloud the proposed IAA resolutions as they were presented to the voting delegates for their approval or disapproval.

XV. 4-H PREMIUMS

We recognize that 4-H club work is an outstanding rural project and that Illinois has a record which is enviable. Our organization has been and will continue to be a staunch supporter of 4-H projects and 4-H activities. County Farm and Home Bureaus have contributed liberally through direct payment for the services of county 4-H leaders, travel costs, supplies, office expense and cash premiums.

For several years, Illinois 4-H club shows have been allotted premium money from state funds to the extent of $2.20 for each member enrolled in boys work and $1.20 for each member enrolled in girls work, with a limitation of $1,000 per county applicable to boys work and $480 to girls work.

The state funds are not sufficient to provide awards comparable to premiums recently awarded in junior classes at county fairs and local shows not restricted to 4-H members. We favor raising state contributions by increasing the amount allowed per member enrolled and through removal of the county limitation features. Higher premiums will stimulate future growth and development of 4-H club work. We pledge the support of the Association in securing these funds.

XVI. COLLEGE OF VETERINARY MEDICINE BUILDING

The Illinois Agricultural Association vigorously supported the establishment of a College of Veterinary Medicine at the University of Illinois. A small first-year class has been enrolled and instruction in the professional college has begun. However, the physical facilities for the proper training of students are entirely inadequate. Immediate action should be taken to provide these essential facilities. We will sponsor emergency legislation in the next General Assembly making an appropriation for the construction of this urgently needed building.

XVII. HOME ECONOMICS BUILDING

The present facilities for home economics training at the University of Illinois are inadequate in space and efficient arrangement. Scientific infor-

mation available to Illinois homemakers is restricted under existing conditions because of research limitations.

The Illinois Agricultural Association will join with the Illinois Home Bureau Federation in sponsoring in the next General Assembly a legislative appropriation for a new home economics building.

XVIII. AGRICULTURAL ENGINEERING AND LABORATORY BUILDINGS

The agricultural engineering department of the College of Agriculture is handicapped by poor housing and inadequate facilities. Even though agricultural engineers are in great demand, few Illinois students specialize in this field. Illinois farms are highly mechanized and our farmers look to the college for guidance in the selection, care and maintenance of their machinery.

To keep pace with developments in the field of agriculture, our university also needs laboratory space for all phases of agricultural research. Present facilities are not adequate for modern scientific research.

We will support legislation for the construction of both agricultural engineering and agricultural laboratory buildings at the University of Illinois.

XIX. STRIP MINING

The productivity of large acreages of farm lands has been destroyed by strip mining operations. Many additional thousands of acres are leased for future strip mining operations. These lands will be lost as a source of taxable wealth for the support of governmental institutions. The areas left after strip mining form a barrier between communities. The spoil banks become breeding places for rodents and predatory wild animals. The run off water from the spoil banks and the overflow during flood periods from the pools of stagnant water pollutes the streams which flow through adjoining property. Long established drainage systems are destroyed. The value of adjacent lands is substantially reduced. We urge the Association to support any practical plan which may be presented for protection against the waste and destruction of our resources by strip mining operations.

XX. DAYLIGHT SAVING TIME

Farmers almost unanimously oppose the use of so-called daylight saving time during the summer months. Many farm operations, particularly at harvest time, are dependent upon the sun and cannot be moved forward with the hands of the clock. The use of two standards of time results in confusion, disrupts community life and activities and severely handicaps farmers in the performance of many farm operations.

We urge the Association and the American Farm Bureau Federation to support efforts to secure the use of standard time and outlaw the use of daylight saving time. If the use of daylight saving time is not otherwise outlawed, we favor and request the Association to sponsor legislation providing for a statewide referendum on the question of barring the use of daylight saving time in Illinois.

Right: M. O. Lambert, Hancock county, presents an idea at an open hearing for farmers before the IAA resolutions committee during the IAA annual meeting in Chicago. Below: Voting delegates follow closely the reading of the resolutions by IAA Vice President Floyd E. Morris. IAA resolutions must meet with the approval of the voting delegates. Below, right: Charles Haller, Peoria county, appears before the committee during open hearings.

A group of University of Chicago agricultural economics and political science students listen intently to farmers speaking their minds before an open hearing of the IAA resolutions committee. LOCKERS . . .

(*Continued from page* 34)

the servicing of a large number of home units.

Dana Cryder, Kendall county, president of Illinois Cooperative Locker Service, called on county companies to work closely with the state locker organization, particularly in the purchase of supplies. He said that savings on such items as containers are increased materially when they can be purchased in carload lots, which only the state company, buying for a number of member companies, is in a position to do.

Several changes and additions to the services offered by the state company were mentioned by Pidcock during the annual meeting of the locker association.

Last spring Robert E. Montgomery was employed as a consulting engineer and B. L. Williams in charge of inspection and maintenance service.

These state engineers have visited each member company plant in the state and have made a survey of refrigeration equipment in use in each locker and slaughter plant, as a basis for planning a regular inspection and service program.

A program has been started to standardize on carton and wrapping materials to be handled by the state company in order to allow it to buy in carload lots and receive larger discounts.

The financial condition of most locker plants continued on a sound basis, Pidcock indicated. He pointed out that gross income increased about enough throughout the state to compensate for the increase in operating expenses.

Total gross income increased 16 per cent giving an average income of $29.74 per locker, while total operating expenses increased 18 per cent to an average of $27.09 per locker. After deduction of income and other taxes, net savings averaged $2.65 per locker.

RURAL YOUTH . . .

(*Continued from page* 39)

was served in Champaign by the Alpha Gamma Rho fraternity of which Rex Emory, one of our outgoing committeemen, is a member.

An important recommendation was made and unanimously passed by the coordination committee which is made up of the IAA state committee and the Farm and Home Week and state camp continuation committee representatives. The recommendation reads: "When Rural Youthers marry they are not eligible to participate from the date of their marriage in any Rural Youth activities of sports festivals, skilled drivers' contests, folk festivals, talk fests, election of state committees, or any other competitive activities." It recommended, "That the motion be given publicity through the University of Illinois and IAA press channels and that publicity be channelled through the specific statewide activities mentioned in the motion."

The Rural Youth breakfast was attended by 161 Rural Youth members and adult leaders. At this breakfast our Canadian guests answered many questions asked by Illinois Rural Youth delegates.

Rural Youth's final part in the activities of the annual meeting of the IAA was in the organization conference in which Ruth Huser, Rex Emory, and Glenn Niehaus took part in the "Vapoo Clinic." The new state committee was introduced.

Long-Range Farm Program — What is It?

(*Continued from page* 9)

level of price supports to the discretion of the Secretary of Agriculture. Some flexibility is needed because the direction of production for all farm products will not necessarily respond in the same way to the same price support schedules. This provision could be misused to the advantage of some products over others and cost the taxpayers large sums of money, but a wise Secretary of Agriculture would not depart from the price supports in the act except in real emergency.

Following Dr. Case's discussion of the farm program, Earl C. Smith, former IAA president, was asked by conference chairman K. T. Smith for comment.

The former IAA leader said that he had read several versions of the present legislation as it was being developed and also appeared at one of the committee hearings on farm legislation held at Peoria by the Senate agricultural committee.

Smith said that he did not agree with some who were suggesting 100 per cent price supports. He suggested that the legislation be amended so as to make the principle of the Steagall Amendment operate the first year of the program and then let the flexible provision operate the next year. He recommended that a good strong floor be provided in the first year.

Smith's other comment was that good, sound business principles can be crucified by poor management or unsympathetic or neglectful administration. He suggested that Farm Bureau leaders get their legislation in reasonable shape and then give some authority to administrators to go ahead with it.

Dr. T. K. Cowden, director of research for the American Farm Bureau Federation, who discussed stabilizing prices through money and credit policies, said that monetary systems must be reviewed in the light of current conditions.

Dr. Cowden asserted that such a review must be made by a bi-partisan monetary commission. He added that a monetary system won't serve all our ills, but it can alleviate a "1929-33." He reminded his listeners of the Biblical proverb that the love of money is the root of all evil, and said that he was sure farmers were sincerely interested in seeing that money does not become the root of our economic ills.

BLUE SEAL BREEDER FEEDS

Blue Seal helps get high hatches of strong chicks.

The hatchability of eggs and the strength, vigor and early growth of chicks hatched from these eggs will depend on the completeness of the ration fed the breeding hens.

Blue Seal Breeder feeds are especially fortified to meet the critical needs of the flock which produces hatching eggs.

FOLLOW ONE OF THESE BLUE SEAL FEEDING METHODS

BREEDER SUPPLEMENT "FREE CHOICE"

Free access to Blue Seal Breeder Supplement and farm grains is allowed the hens at all times. This eliminates grinding and mixing and allows the hens to balance their own ration according to individual requirements.

BREEDER MASH AND GRAIN

Blue Seal Breeder Mash is kept before the flock at all times and whole farm grains are fed. Where plenty of farm grains are available an economical breeder mash can be made by mixing ground grains with Blue Seal Breeder Supplement according to directions on the tag.

the servicing of a large number of home units.

Dana Cryder, Kendall county, president of Illinois Cooperative Locker Service, called on county companies to work closely with the state locker organization, particularly in the purchase of supplies. He said that savings on such items as containers are increased materially when they can be purchased in carload lots, which only the state company, buying for a number of member companies, is in a position to do.

Several changes and additions to the services offered by the state company were mentioned by Pidcock during the annual meeting of the locker association.

and 10 per cent on wind storm have been maintained during the year, according to J. H. Kelker, manager. A dividend of 40 per cent was paid on 1947 hail insurance compared to 25 per cent in 1946.

With the tremendous losses suffered by farmers during the past season, it is very doubtful if any dividends will be declared on hail policies this year. "There is one thing you can always depend on in the Farm Bureau companies," Richardson said. "If there is a savings in any year on coverages, this savings will be returned to members."

MARKETING CO-OP

(*Continued from page* 36)

The board of directors of the Illinois Livestock Producers Association has been empowered to employ a full-time manager.

It is proposed that after a manager has been appointed, a complete study and analysis be conducted on all types of livestock marketing in Illinois — with emphasis on hogs.

It has been recommended also that the new agency continue in the development of a stocker and feeder program in Illinois, a program already underway.

It has also been suggested by the IAA committee making the coordination study that the new organization be given the duty of gathering current market information from all sources for the benefit of the cooperative marketing agencies in Illinois. This would not duplicate work now being carried on by the National Livestock Producers Association.

Financing of the Illinois Livestock Producers Association will be made by payment of a fee on a per car basis. The rate will be $1 for a single and $1.50 for a double-decked car shipped by rail, and an equivalent fee for livestock shipped by truck. This should make available annually an estimated $40,000 to finance the new cooperative.

DISEASE CONTROL

pointed out that Illinois is one of the leading states with animals blood tested for Bang's disease. His division he said is doing its best and will try to do even more in the control of animal disease.

Dr. Howlett pointed out the minor differences that exist between the Illinois Bang's disease control law and the proposed national uniform program. He expressed the opinion that in most cases he would favor the adoption by Illinois of the provisions included in the national program.

Brand Reactors

Dr. Graham discussed the training of veterinarians in Illinois through the new College of Veterinary Medicine at the University of Illinois.

Swinford expressed the opinion that better regulations were needed on Bang's disease and said he thought reactors should be branded.

Dr. Dykstra pointed out the need for more confidence and understanding in scientific investigations and warned against the imposition of restrictions upon the use of experimental animals.

Chatting during the annual conference of the Illinois Livestock Marketing Association are (left to right), J. J. Coultas, Scott county; L. J. Todt, Montgomery; Willard Jones, president of Indianapolis (Indiana) Producers; Carl M. Johnson, DeKalb; and B. C. Fulling, Crawford.

a brown pottery plate. For a Thanksgiving table a basket was tipped on its side with fruits and vegetables spilling out signifying the over abundance of the harvest. A Christmas arrangement was made by placing several foot high branches of pine on needlepoint holders on a wooden plaque. Behind the pine branches were placed three tall white candles. In front was placed a white figurine of a fawn. The result was quite different from the usual red and green Christmas decoration.

Suggestive of New Year's was the pottery head of a young girl placed on a teakwood stand. Behind the head were pine branches with very tall white candles behind them. The front of the arrangement might be a circlet of low white flowers or candles. Evergreen may be pruned at Christmas time to furnish the basis for many delightful arrangements that are very inexpensive. A foundation arrangement may be made which will keep for many weeks. This may be varied by the use of flowers or berries, changing them as they fade or become tiresome.

The afternoon was concluded with a visit to the Art Institute to see the American Rooms in Miniature exhibit by Mrs. James Ward Thorne. These were accurate reproductions of rooms in American homes made on the scale of one inch to the foot. Most of the rooms were from Colonial homes but there were a few contemporary rooms.

LET'S STRETCH IT TO A 365-DAY WEEK

STRETCHING Fire Prevention Week into 365 days is the ONLY way to stop farm fires before they start. Fires don't appear on schedule — just during the seven days that we've set aside to be most on guard. They break out EVERY HOUR of EVERY DAY the whole year 'round. Unless we're constantly on the alert every day of the 365, farm fires will continue to strike when least expected . . . and where you thought *it couldn't happen to you.*

The added protection of a Country Mutual Fire insurance policy will make you *doubly* safe from fire losses. Thousands of Farm Bureau members have come to rely completely upon their own company — Country Mutual Fire — for that extra measure of safety made available especially to them at the lowest possible rates.

"NO NEW YEAR'S RESOLUTIONS FOR ME!"

"What chance has a little fella like me to make any plans at all — when Daddy has the whole year mapped out in advance with Farm Bureau. First, in the spring, he'll buy our seed, fertilizers, tractor oil and all that, cooperatively, with other Farm Bureau members. Then the summer work routine begins, with all these newfangled improvements that save so much time and effort! In the fall, more Farm Bureau plans to sell grain and livestock cooperatively. Makes more money that way, he says. Fire, life and auto insurance purchased the same way — from companies owned cooperatively by Farm Bureau members.

'Gold Bricks'

By President C. B. Shuman

HAVE YOU EVER been tempted to buy a "sure thing?" Gold mining stock, oil leases, Florida real estate, lottery tickets or other "gold bricks." The lure of getting "something for nothing" is age old in its temptations and delusions. Farmers are not gullible; they know that for everything they get they must give something in return. This rule applies to the favors and guarantees of government as well as to those from any other source.

Charles B. Shuman

TODAY FARMERS are being tempted with another sure thing. It is imperative that we examine the various price support proposals carefully.

SUPPOSE YOU WERE asked, "Do you want the government to support farm prices at 90 per cent of parity?" The easy but thoughtless answer would be "yes." However, most Illinois farmers will want to weigh well the consequences of going the route of high, rigid government fixed prices. What does it involve?

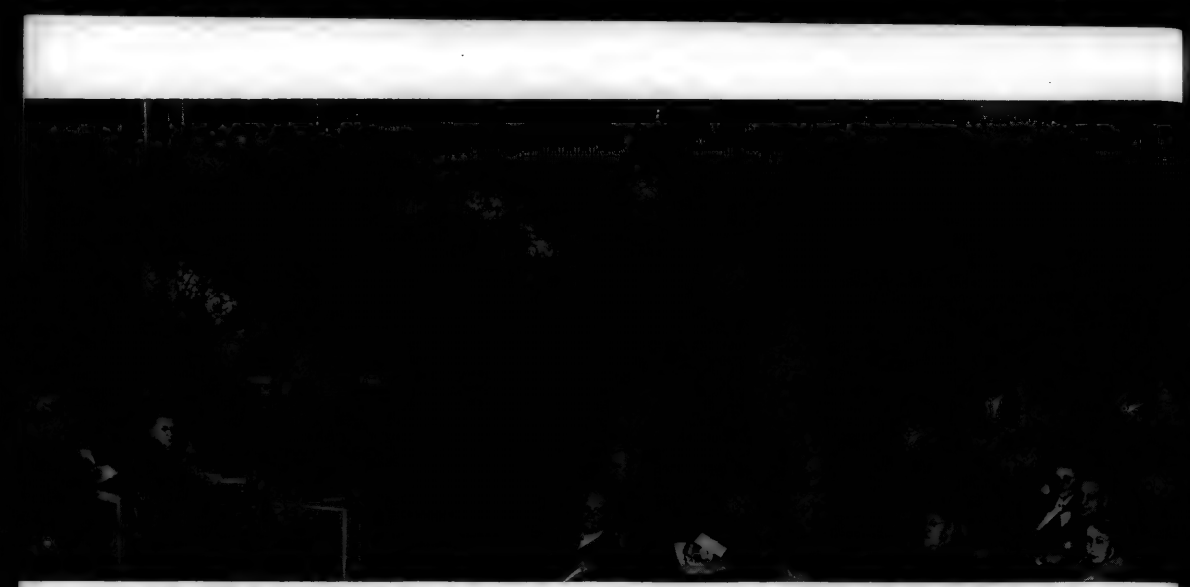
IF WE TURN TO government for high support prices, then we must be prepared for rigid crop controls to protect the government from heavy financial loss that would result from excessive production and surpluses. Experience with the potato support program proves that taxpayers will not permit the expenditure of billions of federal monies to destroy our surplus crops—surpluses that would certainly come with unlimited production at a high guaranteed price.

OUR EXPERIENCE with acreage controls during the thirties demonstrated that they didn't cut production to any great extent. The only way to make a 90 per cent of parity price guarantee program effective would be through the imposition of marketing quotas on every type of crop and livestock enterprise in America.

THIS WOULD MEAN that each farmer would be visited annually by a federal government agent and told exactly how many pounds of grain, livestock, milk and other crops that he would be permitted to sell during the year. Heavy fines or prison terms would await those who ignored these orders. A vast army of secret agents would be needed to police six million independent farmers.

IN ENGLAND, under a similar plan to regulate all farm production, repeat violators of the quota rules are forced to leave their own farms in favor of more "co-operative" operators selected by government agents. There is another danger that should be considered. It is quite possible that a 90 per cent of parity government support price would prove to be a ceiling as well as a floor and result in drastically reducing farm income during years of short production. Before we accept this 90 per cent gold brick it would seem wiser to consider some alternate plan.

(*Continued on page 30*)



Agriculture at the Crossroads

The year 1949 appears to be a year of great decision on issues of vital concern to farmers as the nation moves toward a long-range farm program.

FOR American agriculture the year 1949 could well be one of great decisions. It is certain to be a year when agricultural policies and programs will be discussed and debated. It is equally certain that the Farm Bureau will have to use its ever-increasing influence in establishing and protecting a sound, workable farm program.

The battle lines are already forming. On one side are the advocates of a rigid fixed price support system with detailed controls on the producer. On the other side are those favoring the flexible price support system with a minimum of production control.

The flexible support system is part of the Agricultural Act of 1948 which the American Farm Bureau Federation helped to have passed by Congress in the summer of 1948. The Illinois Agricultural Association is on the side of the flexible support system because it is believed to be sound and in the best interests of the farmer.

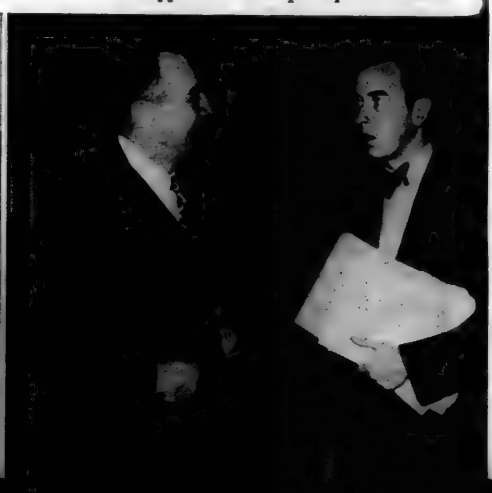
At the 30th annual meeting of the American Farm Bureau Federation in Atlantic City in December of 1948, the major provisions of the Agricultural Act were endorsed by the voting delegates.

The delegates in resolution said in part:

"We commend Congress for its recognition of the need of a long-range farm program in the enactment of the Agricultural Act of 1948. We believe that the major provisions of this Act, which provide a modernized parity formula and variable price supports, are sound and in the best interests of American agriculture.

In view of the clearly stated expressions of support for these principles embodied

(Left) IAA President Charles B. Shuman greets Secretary of Agriculture Charles F. Brannan at American Farm Bureau convention. (Right) AFBF President Allan B. Kline is interviewed by Edward Hughes of the Wall Street Journal.



More than 6,000 farm people attended the 30th annual convention of the American Farm Bureau Federation in Atlantic City in December. This is a view of one of the general sessions.

By
CRESTON FOSTER
Editor, IAA Record

in the Democratic and Republican platforms, we urge continued bipartisan congressional support of the principal provisions of this legislation during the coming years."

While voicing support of the major provisions of the Act, the delegates in resolution authorized the board of directors to seek such amendments to the Act as may be deemed to be in the interest of farm people and the national welfare.

The delegates in resolution also pointed out that:

"The flexible price-support program is one that recognizes the needs of consumers as well as the rights and needs of producers. This is essential, for unless we can maintain a sound, workable farm program, circumstances similar to those which brought disparity and ruin to farmers after World War I may again prevail."

The long-term part of the Agricultural Act is due to become effective Jan. 1, 1950. It stipulates that prices of basic farm commodities (wheat, corn, cotton, rice, tobacco and peanuts) shall be supported at from 60 to 90 per cent of parity, depending on whether supplies are larger or smaller than normal. A 10-year moving average basis for computing parity is also included in the law.

Price supports of 90 per cent of parity are provided on the basic commodities and a few selected non-basic commodities through the crop year of 1949. In its resolutions at the convention, the Farm Bureau insisted that these commitments by the government for 1949 be kept.

Federation President Allan B. Kline in his annual convention address backed the Agricultural Act because it "was designed to fit a dynamic economy . . . . if a farmer wants a high standard of living he must protect the right to produce, with the resources at his command, the things best suited to market demand. These basic principles are sound. ."

Sen. George D. Aiken, one of the authors of legislation contained in the Agricultural Act, told Farm Bureau folks at the convention that "agriculture is at the crossroads."

"We can take one road with its cost-plus guarantees and easy money for perhaps two years more, with the certainty that controls, quotas and penalties will then overtake us.

"Or we can take the other road which leads to a long period of agricultural prosperity for America at a somewhat lower level, with the assurance that the farmer will remain free to run his own farm," Senator Aiken said.

He said that the Farm Bureau has long recognized this situation and went to work and got a long-range farm program adopted by Congress last summer. This program, now known as the Agricultural Act of 1948, was secured in the face of predictions that it couldn't be done, the Senator said in paying tribute to the Farm Bureau membership.

"Now that legislation is threatened by the advocates of permanent incentive price supports for farm commodities," Senator Aiken reported, "and the Farm Bureau again has its work cut out for it to defend and sustain those principles for which it has fought for many years."

Harold E. Stassen, former governor of Minnesota, whose address received much applause from the Farm Bureau convention, said he favored flexible price supports.

It would not be for the best interests of either the farmers or the people as a whole to ask the government to support farm prices at 90 per cent of parity regardless of the size of the crop or the amount of carryover, Stassen said.

"I therefore am opposed to any

Agriculture at the Crossroads

The year 1949 appears to be a year of great decision on issues of vital concern to farmers as the nation moves toward a long-range farm program.

FOR American agriculture the year 1949 could well be one of great decisions. It is certain to be a year when agricultural policies and programs will be discussed and debated. It is equally certain that the Farm Bureau will have to use its ever-increasing influence in establishing and protecting a sound, workable farm program.

The battle lines are already forming. On one side are the advocates of a rigid fixed price support system with detailed controls on the producer. On the other side are those favoring the flexible price support system with a minimum of production control.

The flexible support system is part of the Agricultural Act of 1948 which the American Farm Bureau Federation helped to have passed by Congress in the summer of 1948. The Illinois Agricultural Association is on the side of the flexible support system because it is believed to be sound and in the best interests of the farmer.

At the 30th annual meeting of the American Farm Bureau Federation in Atlantic City in December of 1948, the major provisions of the Agricultural Act were endorsed by the voting delegates.

The delegates in resolution said in part:

"We commend Congress for its recognition of the need of a long-range farm program in the enactment of the Agricultural Act of 1948. We believe that the major provisions of this Act, which provide a modernized parity formula and variable price supports, are sound and in the best interests of American agriculture.

In view of the clearly stated expressions of support for these principles embodied

in the Democratic and Republican platforms, we urge continued bipartisan congressional support of the principal provisions of this legislation during the coming years."

While voicing support of the major provisions of the Act, the delegates in resolution authorized the board of directors to seek such amendments to the Act as may be deemed to be in the interest of farm people and the national welfare.

The delegates in resolution also pointed out that:

"The flexible price-support program is one that recognizes the needs of consumers as well as the rights and needs of producers. This is essential, for unless we can maintain a sound, workable farm program, circumstances similar to those which brought disparity and ruin to farmers after World War I may again prevail."

The long-term part of the Agricultural Act is due to become effective Jan. 1, 1950. It stipulates that prices of basic farm commodities (wheat, corn, cotton, rice, tobacco and peanuts) shall be supported at from 60 to 90 per cent of parity, depending on whether supplies are larger or smaller than normal. A 10-year moving average basis for computing parity is also included in the law.

Price supports of 90 per cent of parity are provided on the basic commodities and a few selected non-basic commodities through the crop year of 1949. In its resolutions at the convention, the Farm Bureau insisted that these commitments by the government for 1949 be kept.

Federation President Allan B. Kline in his annual convention address backed the Agricultural Act because it "was designed to fit a dynamic economy . . . . if a farmer wants a high standard of living he must protect the right to produce, with the resources at his command, the things best suited to market demand. These basic principles are sound. ."

Sen. George D. Aiken, one of the authors of legislation contained in the Agricultural Act, told Farm Bureau folks at the convention that "agriculture is at the crossroads."

"We can take one road with its cost-plus guarantees and easy money for perhaps two years more, with the certainty that controls, quotas and penalties will then overtake us.

"Or we can take the other road which leads to a long period of agricultural prosperity for America at a somewhat lower level, with the assurance that the farmer will remain free to run his own farm," Senator Aiken said.

He said that the Farm Bureau has long recognized this situation and went to work and got a long-range farm program adopted by Congress last summer. This program, now known as the Agricultural Act of 1948, was secured in the face of predictions that it couldn't be done, the Senator said in paying tribute to the Farm Bureau membership.

"Now that legislation is threatened by the advocates of permanent incentive price supports for farm commodities," Senator Aiken reported, "and the Farm Bureau again has its work cut out for it to defend and sustain those principles for which it has fought for many years."

Harold E. Stassen, former governor of Minnesota, whose address received much applause from the Farm Bureau convention, said he favored flexible price supports.

It would not be for the best interests of either the farmers or the people as a whole to ask the government to support farm prices at 90 per cent of parity regardless of the size of the crop or the amount of carryover, Stassen said.

"I therefore am opposed to any

amendment of the Hope-Aiken Bill (Agricultural Act of 1948) which would fix a continuing rigid 90 per cent support," Stassen said.

The former governor of Minnesota gave three reasons for his position. With rigid 90 per cent supports, he said, the only way to keep surpluses of some crops from breaking the entire program would be through detailed, regulated production by the government. Such supports also would encourage centralization of farming with larger units and result in the gradual disappearance of the family-sized farm. Rigid supports would also lead to more regulation, growing resentment from the people and failure of the farm program.

"While I strongly advocate price supports, I urge that there should remain a degree of flexibility to permit the natural laws of supply and demand to have some effect on farming practices.

"And by that same safeguard, we can insure a better measure of future public support for agricultural programs and a greater freedom for those who are on the soil," Stassen explained.

Secretary of Agriculture Charles F. Brannan in his address to the convention also had something to say about price supports.

He said that while he believed in price supports as an important part of the farm program they were only one part. When other parts of the program worked well the problem of supporting prices was not so hard. If the farmer can get fair prices in the market place without actually using the support program, so much the better, Secretary Brannan said.

He also asserted that, "I consider it my job to help obtain and maintain parity at all times. If there is to be any downward adjustment to the national economy, we are not going to start this time with the farmer . . . We must make very sure that the farmer is not made the goat."

Secretary Brannan declared that the position of the American Farm Bureau Federation on farm legislation will be of great interest to him and to millions of people. Each farm organization, he said, has an important part to play in the work that lies ahead.

Just before the convention opened, President Truman sent a message to all delegates in which he declared that "only when farmers have confidence in their markets and in their farm programs can the nation expect continuation of record crops." He addressed his message "Fellow Members of the Farm Bureau."

President Charles B. Shuman of the Illinois Agricultural Association was re-elected to the board of directors of the American Farm Bureau Federation as a representative of the middle western region. In this same region, Curtis Hatch, Dodgeville, Wis., was elected to the board to succeed Frank W. White of Minnesota.

Mrs. Raymond Sayre, Ackworth, Iowa, was elected president of the Associated Women of the Federation.

Sen. Arthur Capper of Kansas received the Federation's gold medal for distinguished service to agriculture. Senator Capper retired from the Senate after 30 years of service. The gold medal award has been given every year since 1929 to leaders who have performed outstanding services in advancing the well-being of farm people.

One of the stirring scenes of the convention was the minute of silent tribute paid to the memory of Vernon C. Vaniman, of Illinois, midwest organization director for the Farm Bureau who died suddenly Nov. 30.

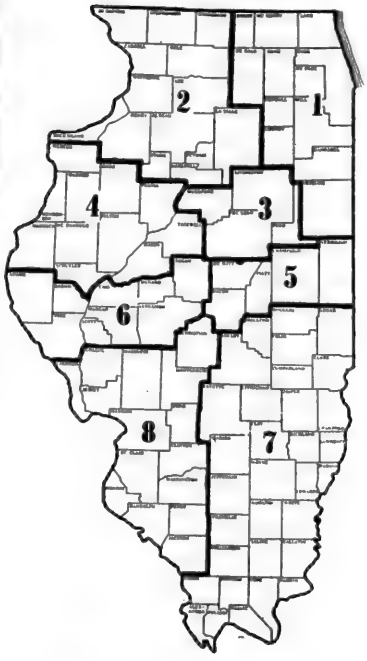
NEW DISTRICTS



Map shows new districts of Illinois Grain Corporation. Under reapportionment one director is elected from each of the districts and one appointed from IAA board.

ILL. GRAIN REORGANIZES

IAA Co-op Reshapes Its Districts, Elects A New Board of Directors, and Absorbs A Supply Cooperative in Reorganization Move

CHANGES in the districts and in the number of directors elected to the board of the Illinois Grain Corporation were voted by stock holders of the company at a meeting held Jan. 14 at the Pere Marquette Hotel in Peoria.

Changes in the districts have been under consideration for some time, Charles Schmitt, Logan county, president of the Illinois Grain Corporation, said at the meeting. He said that present and potential membership, the movement of grain to markets, the various grain growing areas, and other factors were considered in setting up the new districts.

The districts from which directors are elected have been increased from six to eight under the new reapportionment. However, the number of directors has been decreased from 15 to 9.

Previously two directors were elected from each district and three from the board of directors of the Illinois Agricultural Association, a total of 15. Under the revised plan one director is elected from each district and one from the IAA board, a total of nine.

The delegates also voted approval of a plan whereby the I.F.A. Elevators, Inc., will dissolve and their business taken over by the Illinois Grain Corporation. The board of the I.F.A. Elevators, Inc., agreed to dissolve prior to the Peoria meeting.

Illinois Grain Corporation is a grain brokerage cooperative affiliated with the Illinois Agricultural Association. It operates on the Chicago, Peoria, and St. Louis boards of trade.

I.F.A. Elevators, Inc., was organized this summer as a central buying agency for cooperative elevators in central Illinois. Its state headquarters have been at Pontiac.

The I.F.A. Elevators, Inc., will sell its assets to Illinois Grain Corporation and the latter organization will handle feed, fertilizers, and steel products for its members.

One of the provisions involved in the reorganization is that membership in Illinois Grain Corporation will continue to have as its only limitation that members be true Capper-Volstead Cooperatives. Future changes in membership requirements would be made only by voting members of Illinois Grain Corporation.

Members of the new board of directors are: Sam Yergler, Iroquois county, district 1; Carl O. Johnson, Marshall, 2; Arthur Bertsche, Livingston, 3; Leo Worden, Hancock, 4; John McCabe, Champaign, 5; Charles Schmitt, Logan, 6; J. Fred Romine, Douglas, 7; John Butterfield, Christian, 8; and C. J. Elliott, LaSalle, IAA. Officers elected were: Schmitt, president; Romine, vice-president; and Butterfield, secretary.

Leo Worden, Hancock county, was the only member elected to the new board of Illinois Grain Corporation who had not been a member of the old board.

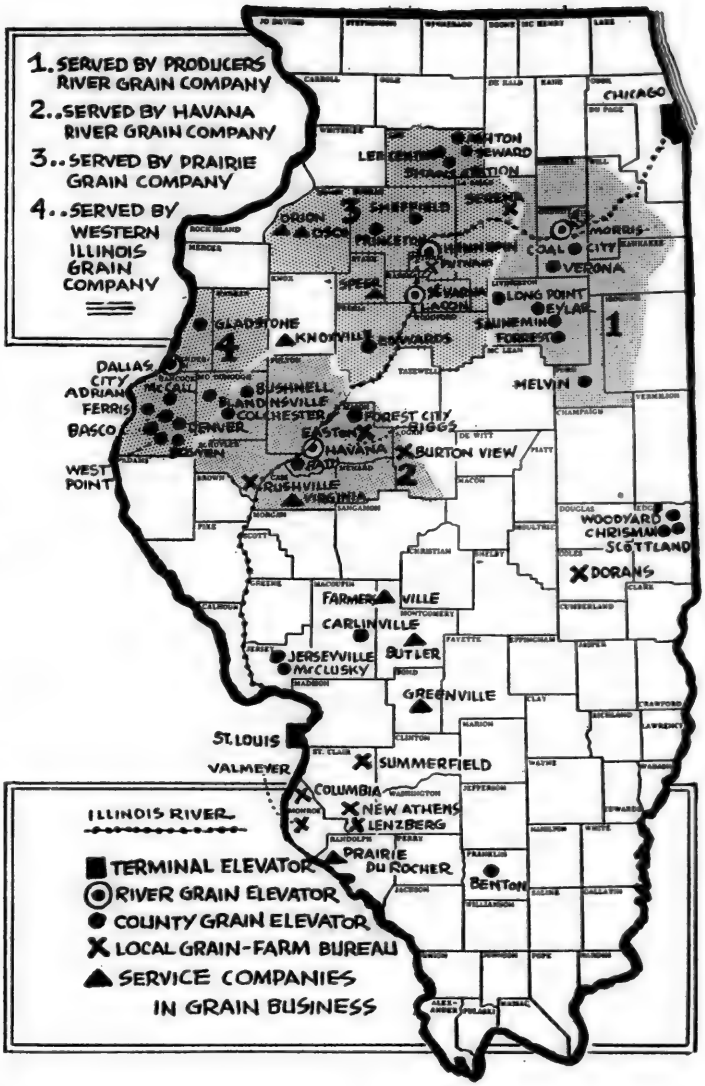
L. L. Colvis, IAA secretary of marketing, discussed the various changes in the program of Illinois Grain Corporation. "It will open the gate for grain cooperatives to do a better job of grain marketing," he said.

"We hope this merger will make our services available to an increasing number of farmers. If it does, we can feel we have been successful in our attempt," he concluded.

Necessary changes in the legal structure of Illinois Grain Corporation were explained to the delegates by Paul E. Mathias of the IAA legal department.

ILLINOIS GRAIN TERMINALS PROGRAM

Four County Companies Spend Million Dollars On Sub-terminal Facilities



THE steady growth of the Illinois Grain Terminals Company working to tie the state together into a large, farmer-owned, grain marketing cooperative is shown on the adjoining map.

Greatest growth is evident in the areas along the Illinois and Mississippi rivers where the Illinois Agricultural Association grain marketing affiliate has set up sub-terminal river elevators at Morris, Lacon, Hennepin, Havana, and Dallas City.

Grain originating at inland elevators and accumulated at the river sub-terminals will eventually be marketed through terminal elevators at Chicago and East St. Louis. Sites have been chosen on waterfronts in both cities.

The Illinois Grain Terminals plan is designed to bring about a condition Illinois farmers have long hoped for—control of some of the grain from their own farms to the processor.

Grain producing areas have been organized by counties and the counties by districts under the Illinois Grain Terminals plan now in operation. Four districts (see map) have been organized so far and all are in the north central area of the state—The Producers River Grain Company around Morris; The Prairie Grain Company around Ottawa, Hennepin, and Lacon; The Havana River Grain Company around Havana; and The Western Illinois Grain Company around Dallas City on the Mississippi river.

These four companies already have spent about one million dollars to prepare sub-terminal facilities. Most of the money has been raised from stock purchased by inland elevators and farmers.

At present a half million dollars is being raised for operating capital for the state company which has opened an office in Chicago under the management of Sam L. Hassell, a successful grain salesman in Chicago and Buffalo for many years. A branch office also has been opened at the eastern milling center at Buffalo. Terminal facilities in Chicago and the St. Louis area may be rented. If elevators are built, however, more capital may be needed. Plans are for a three-million bushel capacity elevator in Chicago and two million bushel elevator at East St. Louis.

Besides the four district companies, there are 16 county grain companies, seven county service companies, and 11 local elevator companies organized on a Farm Bureau-type cooperative basis.

LaFLEUR RESIGNS

REX LaFLEUR, manager of the Champaign office of Illinois Grain Corporation, resigned Jan. 15 because of ill health. Carl Kaiser of Alexander has been named acting manager.

Kaiser started with Illinois Grain Corporation last July 1 and has been serving as relief branch office manager at Champaign and Jacksonville. He graduated from Illinois College at Jacksonville and studied at the University of Illinois. He taught at the Illinois School For The Blind at Jacksonville.

IAA Livestock Marketing Cooperative

★ ★ ★ ★ ★

EXPANDING from six members into a booming statewide marketing cooperative in two years marks the Illinois Livestock Marketing Association as the most rapidly growing cooperative affiliated with the Illinois Agricultural Association.

Its most recent expansion has moved its marketing service into the two northern tiers of counties in Illinois.

New points have been organized in recent months at Elizabeth in Jo Daviess county, Lena in Stephenson, Byron in Ogle, and at Perryville in the Boone-Winnebago area.

Sales through the state office at Decatur have doubled in the last year. In 1948 the Decatur office handled 478,283 head of livestock, most of which were hogs, valued at $29,074,515. In 1946, before expansion, 183,680 animals were handled.

Throughout Illinois where competition from its local buying points are a factor, the price of hogs sold locally has been increased from 25 to 50 cents a hundred. This is the report from farmers in county after county where points have been established.

As the accompanying map indicates, 21 buying points have been established by county marketing associations and operate under the state sales office at Decatur.

All of the buying points operate on a cash basis in buying hogs and veal calves, paying farmers for their stock as soon as it is weighed in at the local yards. Not all points buy veal calves. Cattle and sheep are shipped for patrons to terminal markets but are generally not purchased outright.

If you want to sell direct you can get the day's quotation on hogs by phoning the yard nearest your farm. Most of the hog and veal calf sales are made by phone, and are bought according to weight and quality.

If you have hogs to sell, and have not already tried this new kind of marketing service, here are the towns with established yards: Elizabeth, Lena, Freeport, Perryville, Byron, Erie, Cambridge, Princeton, Aledo, Stronghurst, Elvaston, Camp Point, Rushville, Bluffs, Bloomington, Champaign, Danville, Paris, Shelbyville, and Effingham. Many purchases of hogs are made from farmers living outside the county. (See map)

The triangle symbols on the map indicate that Winnebago and Ogle counties have organized points but have not yet started buying. Since the map was drawn both points have started handling livestock and buying hogs.

One of the most recently organized county points is located at Elizabeth in Jo Daviess county. Manager Russel Philbrick said the Jo Daviess yard bought more than 4,000 hogs its first month of operation, in November.

They are buying veal calves one day a week, on Monday, and also ship cattle and sheep on a consignment basis for their patrons.

The IAA is also helping to organize a new marketing cooperative under the proposed name of the Illinois Livestock Producers Association. This new agency would have as members all the cooperative groups, including Illinois Livestock Marketing Association.

The purpose of this new cooperative will be to develop a unified marketing system among the six livestock cooperatives operating in Illinois.

The first step in the creation of the new marketing cooperative has been completed by the selection of a board of directors by the various groups concerned.

It consists of 15 members picked from the boards of each of the Producer agencies at Chicago, Peoria, St. Louis, Bushnell, and Springfield; one director each from the boards of the Illinois Livestock Marketing Association and the Illinois Agricultural Association; and one director each from eight districts representing the county Farm Bureaus in Illinois.

At its first meeting the new board is expected to select a manager. After a manager has been appointed, a complete analysis of all types of livestock marketing in Illinois will be made. Special emphasis will be placed on the marketing of hogs.

The new company will permit farmers the choice of selling on a terminal or country market on a cooperative basis.

It has been empowered to carry on a statewide information and acquisition program among livestock producers to get more livestock moving through cooperative marketing channels.

After a complete study and analysis has been made, the new organization has been granted the authority to proceed with any program that would benefit the livestock farmer.

In short, the first purpose of the new cooperative will be to coordinate hog marketing in Illinois, and then to consider the marketing of other species of livestock if conditions warrant change.

The new agency will help to develop the stocker and feeder cattle program in Illinois. This program has been underway for several years.

It will also gather current market information for the benefit of its members but will not duplicate the work being carried on by the National Livestock Producers Association.

In announcing the new cooperative, President Charles B. Shuman of the IAA, emphasized that each of the existing groups would retain its identity and would continue its present operations, but that all would be guided and advised by the new statewide agency.

The new company will be financed by the payment of a fee on a per car basis on livestock handled by members.

The rate will be $1 for a single and $1.50 for a double-decked car shipped by rail, and an equivalent fee for stock shipped by truck. This should make available annually about $40,000.

Board members for the new cooperative from the eight Illinois districts are: William Temple, La Salle county, district 1; Frank P. Norrish, Whiteside, 2; R. D. Armstrong, McDonough, 3; L. E. Mathers, Mason, 4; Lester E. Martin, Morgan, 5; Clark E. Wise, Champaign, 6; J. P. Redman, Alexander, 7; Marion A. Fry, Shelby, 8.

Members from the Producer agencies are: Carl M. Johnson, DeKalb, Chicago Producers; John Stout, Sangamon, Springfield Producers; and Maurice Holmes, Peoria, Peoria Producers.

Ray Ihrig, Adams county, has been selected to represent the Illinois Livestock Marketing Association. As we go to press, the Producer agencies at Bushnell and St. Louis, and the board of directors of the Illinois Agricultural Association have not yet named a member to represent their organizations on the board of the new cooperative.

Rigid Supports Mean Rigid Controls

From the Saturday Evening Post, Jan. 1, 1949

A PHENOMENON we never expected to see in our time was the stand taken by an impressive list of farm organizations in favor of flexible price supports, as opposed to the rigid 90-per-cent-of-parity plan, which the despised and rejected Eightieth Congress wisely amended. The Iowa Farm Bureau Federation at its November meeting supported the flexible principle on the ground that too high price supports would produce unwieldy crop surpluses, with disastrous results. One such result, as pointed out in a similar resolution passed by the Illinois Agricultural Association, would be "fixed prices and rigid controls."

Unfortunately, President Truman seems to interpret his election triumph as an endorsement of rigid supports at 90 per cent of parity. Certain farm organizations like the National Farmers Union are attempting to confirm this impression, and, since easy money is very tempting to most people, including farmers, the higher support rate is easier to sell than the sounder flexible system. Rigid price supports, with the certain consequence of acreage control and price fixing, are naturally favored by left-wing groups now eagerly nosing along the fence for any rut leading to "planning." Nevertheless, support of the Aiken Bill —providing flexible price supports—is reported from so many farm groups in the Middle Western states, several of which supported President Truman, that the sky's-the-limit element in Congress may meet with more resistance than seemed likely at first.

Even at their best, price supports are a ticklish business. In a recent news article from Washington, Mark Sullivan showed how government support of the price of potatoes had resulted in American pressure on the Canadian Government to put an embargo against Canadian potatoes destined for the United States. That resulted in glut in Canada, and, of course, a support price for Canadian potatoes. In the meantime American farmers increase their acreage devoted to crops enjoying price supports, and the Government's effort to dispose of surplus potatoes, without letting anybody eat them, becomes more desperate. Inevitably this problem will become still tougher if the 90-per-cent-of-parity scale is maintained, and our progress toward a so-called planned economy will be speeded up.

The attitude of the Truman Administration will be interesting to watch. Secretary Brannan supported the Aiken Bill during the last session of Congress, as did the Grange, Farm Bureau Federation and most of the other important farm organizations. The mere fact that President Truman took the Farmers Union-CIO attitude during the campaign hardly justifies reversal on a program which was carefully worked out and agreed to by agricultural authorities in both parties. Senator Aiken himself expects the flexible principle to stand and describes the promises to repeal it as "seasonal campaign arguments." Maybe so, but Mr. Truman is certain to be beseiged by leftist agrarians who won't be put off so easily. As usual, the issue will be between those who dread controls and those who want them. In making up its mind, Congress can hardly fail to understand that. If the issue is understood, Congress will not change the agricultural program for the worse, even if President Truman's campaign promises are made to look a little silly.

From the Des Moines Register
December 27, 1948

PRODUCTION and marketing administration officials have been campaigning to create dissatisfaction among farmers with the flexible price support system of the 1948 farm price act. These officials believe that a high, fixed support system—at 90 per cent of parity—backed up by acreage restrictions and marketing quotas would return farmers higher incomes. (It also would give P.M.A. a bigger job to do and increase its importance as a federal agency.)

The method of this campaign is to ask the farmers whether they would prefer to have prices of their products at 90 per cent of parity or at 60 per cent, the lower level of the sliding scale for basic crops under the 1948 act.

This is pure demagoguery.

Of *course* any farmer would answer 90 per cent. *Of course* any farmer would like to have prices as high as he can get—*if other factors are left out of the picture.* Why stop at 90 per cent? Why not 100 or 125 per cent of parity?

But merely *wanting* high prices will not get them—through government legislation or any other way. Farmers, like other groups, have to consider what is politically and economically possible.

They also have to consider whether *prices alone* are what they really want. The highest prices do not mean the most income over the long run. Prices pegged at 90 per cent of parity can only be obtained by cutting down on the supply that reaches the market. Income is the product of supply multiplied by the price. The gain in income that farmers can make by restricting production is limited, therefore.

Farmers also must consider whether production control can be effective. One thing is certain: Controls would have to be much tighter than they were under AAA in the Thirties in order to get the job done.

Corn acreage limitation was designed to hold down total feed output and curtail livestock production. It didn't work. Farmers raised as much corn as before by using better methods, more fertilizer, and better seed on their most fertile acres. The replacement crops for corn—alfalfa, clover, and other legumes—produced as much feed as before.

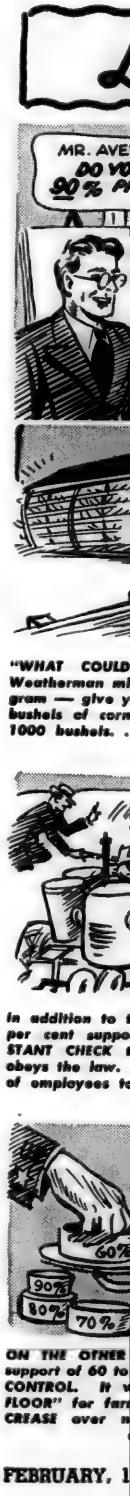
Since Corn Belt farmers get most of their income from livestock, they cannot use monopoly economics to raise their returns *unless they effectively restrict livestock output to boost prices.* Working on corn alone is only part of the task.

But even assuming that farmers could raise their incomes by a restrictive program that kept prices high, would it be worth the candle? It would mean a tight control of farmers' plantings and of their marketings.

It would prevent natural shifts in production brought about by changing markets and changing production methods. It might be expected to do for Corn Belt farmers about what the cotton control program did for the South—invite competition from other countries in overseas markets and from rayon in domestic markets.

When advocates of 90 per cent of parity ask farmers what level of prices they want, they should also explain the grief involved in fixing and holding a high level.

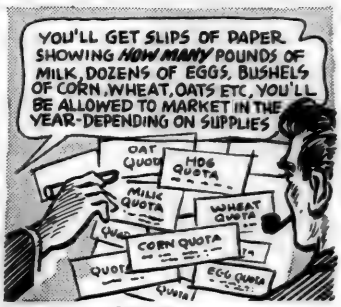
National Publications See Wisdom in Flexible Support Prices and Ask Advocates of 90 Per Cent of Parity to Explain Grief Involved in Fixing High Support Prices At a High Level.



Let's Look at PRICE SUPPORTS...

"WHAT COULD HAPPEN IS THIS: Mr. Weatherman might not know of your program — give you good weather and 1300 bushels of corn instead of your quota of 1000 bushels. . . So you store 300 bushels. . . .

BUT . . . You have another good crop next year, and instead of 700 bushels you planned for you raise 1300 again! You then think, "I'll feed more hogs;" but you have a QUOTA on hogs — you can't increase 'em!



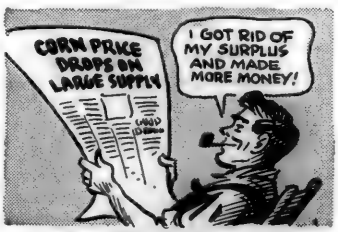
You say — "Well, I'll just put it in pasture" — but you can't use the pasture for INCREASED milk production because you have a QUOTA ON MILK! Eastern dairy farmers would object to midwestern surpluses anyway.

In addition to these problems, a rigid 90 per cent support would require a CONSTANT CHECK to see that every farmer obeys the law. This would mean an army of employees to enforce the program. . .

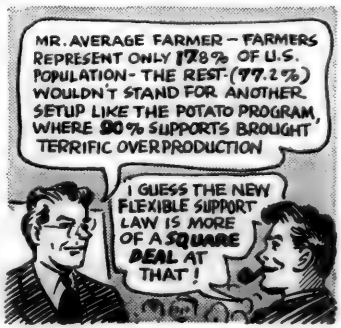
Are farmers in other states as honest as they are in Illinois? If you check on other states, they have a right to see that YOU stay in line . . . PENALTIES will have to be SEVERE FOR VIOLATORS!

TO SUM IT UP — 90 per cent PRICE SUPPORT means RIGID QUOTAS ON FARM PRODUCTS — No immediate use for surpluses — A HUGE EXPENSE IN ENFORCEMENT, SEVERE PUNISHMENT FOR VIOLATORS . . . .

ON THE OTHER HAND: A FLEXIBLE price support of 60 to 90 per cent will mean LESS CONTROL. It will act as a "STOP LOSS FLOOR" for farm prices. As supplies INCREASE over normal, the support price drops. . . .



Such a floor will STABILIZE the market, but will require a minimum of controls. The factors of SUPPLY and DEMAND will be able to operate.



A leader training meeting on the Simplified Illinois Farm Record Book, led by George B. Whitman (left), state project leader, is held in the offices of the Champaign County Farm Bureau. Seated next to the blackboard is W. B. Bunn, Champaign county farm advisor. Others are vocational agricultural students from the College of Agriculture at Urbana.

EASY FARM ACCOUNTS

Here is a Simple Farm Account Book You Can Use For Record Keeping. It Can Save Hours of Work and Worry Over Income Taxes

HAS that year-end trouble maker thrown you for a loss again? We refer to the job every farmer votes the meanest chore of the year—filling out the 1948 income tax return.

It's no fun at best. But at least if it's tough it is tolerable for the 25,000 Illinois farmers who have been keeping their accounts during the past year in one of the new College of Agriculture farm record books.

These books were introduced last spring to farmers in 58 northern Illinois counties and will be introduced to 43 southern counties this winter.

They are simple record books, with pages to show income and outgo. All entries are keyed to fit the farm income tax form 1040F which makes up the last pages of the book.

The book comes in two parts. Part I is a record of receipts and expenses. Part II is a record of depreciation schedules and inventories. Part II is a record of depreciation of farm machinery. This part of the book is kept in use for six years.

The income tax feature is the biggest selling point for the new book. The books are available at your Farm Bureau office at a cost of 45 cents. They are well worth the price, which just covers the cost of printing.

If you would like to look forward to an easier time around the kitchen table next year, we suggest that you look into these record books. They can do a lot to ease your income tax worries.

Farmers who have used the book for a year agree that it has four principal uses. Since you are almost forced into the keeping of some kind of a financial record, why not use a book that can help in more than one way? Here are its advantages:

1. The book provides you with a simplified and dependable record for filling out your income tax form.

2. It makes possible a continuous study and application of basic farm management. It helps answer such questions as which pays more on my farm, hogs or cattle?

3. It makes possible credit statements. If you know how much you are making, you know how much you can borrow safely.

4. It contains a depreciation schedule and inventory for your personal property, including farm machinery. You know how much you are worth—without holding a farm sale.

One of the big advantages of the book is its feature of "business analysis". That is the ultra-practical feature of the record book, and one no other farm account book in the country has to offer. It is a new approach to self-study of the farm business.

This business analysis is done by means of a sheet or form which the farmer fills out himself. He can then compare his results with the "standards" for his county.

If his results are below average, he can make a check-off of suggested improvements which should help him during the next year.

If your crop yields are below average, as an example, you probably could not check the "yes" column on the business analysis sheet for all these questions: Do you treat seed for disease control? Do you plow under all stalks and straw not used for bedding? Has all your soil been tested? Etc.

The success of the book has been widespread. It has reached more Illinois farmers than any other single extension program. In its first year more than 25,000 farmers used it for their record keeping. Last fall 65,000 books were printed for use in 1949.

At the close of each year farmers who use the book are invited to group meetings where farm advisers or trained local leaders help them in a study of their farm business, and also to give assistance in making out income tax reports.

Front Cover

TWENTIETH in our series of picturesque and historical Illinois scenes is the famous Saint-Gaudens statue of Lincoln in Chicago's Lincoln Park. At its unveiling Oct. 22, 1887 by Abraham Lincoln, a grandson of the president, it was widely acclaimed as the nation's ideal and the greatest portrait statue of Lincoln.

It was the joint work of Sculptor Augustus Saint Gaudens and Architect Sanford White. The statue was a gift to the city by Eli Bates, a Lincoln admirer who left $40,000 for its construction. It is 11½ feet high and was cast in bronze. A copy of it stands before Westminster Abbey in London.

RURAL YOUTH

Illinois Sends Three Delegates and Talk Fest Winner to AFBF Convention

By ELLSWORTH D. LYON,
Director, Young People's Activities

ILLINOIS Rural Youth, true to its reputation of representation at national Farm Bureau meetings, sent three delegates to the AFBF meeting at Atlantic City in December.

The young people going from Illinois were: Ruth Huser, Morton, retiring member from the State and National Rural Youth Committees; Doreen Marti, Greenville, newly elected member to State and National Committees; and Mary Alice Roser, Carmi, who was our representative in the National Talk Meet. Mary Alice did not place first. But, nevertheless, she gave an excellent speech and was the only speaker who drew laughs from the audience. Mary Alice is new in Rural Youth. Her warm and friendly attitude and sympathy toward people and their problems and her willingness to work soon made a place for her in her county program. Winner of the National Talk Meet was Donald McKnight who is from the recently organized Maryland Rural Youth group.

Outstanding among future plans made by the Rural Youth delegates was a Rural Youth Leaders' Conference to be held at Gilbertsville, Ky., near Paducah, March 7, 8, and 9, 1949. Ten people will be privileged to attend from each of the states and a Rural Youth program under Farm Bureau instruction will be given in organization, educational and recreational programs, and community service, and special projects.

COMMUNITY SERVICE

Counties served by the G.M.&O. railroad are streamlining their programs in order to meet the high standard of community service as outlined in the community service project of this railroad. Madison has appointed a committee consisting of Vera Mae Kleuter, Harold Thurnau, Loretta Shermann, Dorothy Schillinger and Beatrice Hastings whose duties will be to work for membership maintenance and attendance and to find leaders among the members who will serve as leaders in 4-H, Red Cross, and church activities, community projects and in county, state, and national Rural Youth activities. Faithful reporting to this committee or to Rudy Viere is asked so that adequate information may be relayed to A. F. Stephens of the G.M.&O. and to Clareta Walker and Curt Kenyon of the University of Illinois.

St. Clair voted to give a prize for faithful attendance at the monthly meetings. If the prize winner is not present when announced, the money for same will be given to a charitable organization.

Mr. and Mrs. Spencer McCully, recently married, attend Woodford County Rural Youth annual banquet as special guests. Dinner was held Dec. 4 at Metamora.

COUNTY ACTIVITIES

Edgar helped plan and serve two dinners, Jan. 5 and 14, to Farm Bureau leaders in connection with the annual county Farm Bureau membership drives. While a small profit was realized for these two dinners, the help of Rural Youth was a distinct service.

Woodford invited its most recently married couple to its Annual Banquet held on Dec. 4 in Metamora. This couple was Mr. and Mrs. Spencer McCully. Mrs. McCully was formerly Barbara Fisher of Roanoke. Spence was president of his county group. One year ago he attended the IAA Short Course in Chicago, Jan., 1948, and has been a song leader in county banquets and other Rural Youth meetings. Barbara was a member of Rural Youth a short time. They are living on a farm at Washburn.

Other big county banquets of recent date were Adams, Tazewell, McHenry, Stevenson, Schuyler, McDonough, and Richland.

A number of counties assisted in the CROP program. Whiteside reports that Rural Youth took charge of the program for the entire county and collected $4,000 in cash and 12,000 bushels of corn.

Donald McKnight, 24-year-old Maryland dairy farmer, won first place in the fourth annual Rural Youth Talk Meet at the AFBF convention. At right is Illinois representative in Talk Meet, Mary Alice Roser, 18, White county.

Mrs. Don Cowling sends in the following letter:

This is the final report of the year on the Rural Young Married Couples of Edwards County. We had our banquet on Dec. 6 with 34 members and 18 guests present. The tables were decorated for Christmas.

Our speaker of the evening was Rev. H. L. Metcalf of the Albion Methodist Church, who spoke on "The Home." Mrs. H. L. Metcalf gave two piano specials. Each person received a gift from the grab bag.

The officers for our coming year are chairman, Robert Roosevelt; vice-chairman, Clara Faye Lankford; Sec.-Treas. Laura Mae Seigert; Song leader, Mary Betty; Assistant song leader, Vertis Neal.

At the present time we have 64 members which is a gain of 20 during the year. We've had an average of 31.8 persons at each meeting.

Our financial score is rather lean at the present. We have a balance of $2.76.

Forrest Schave (left), who has taken over operation of the home farm, signs up as the 1600th Farm Bureau member in Rock Island county. Volunteer worker at the right is Wilbur DeVinney who signed up 15 members on the drive — his first.

Typical of the panels heard during the Midwest Conference of Agriculture, Industry and Labor at Decatur in mid-January was this one on world trade. Left to right: E. E. Lindsay, editorial director of Decatur Newspapers, Inc.; O. R. Atkinson, Cincinnati, of the International Brotherhood of Railway and Steamship Clerks, A.F. of L.; H. M. Busch, professor of sociology, Western Reserve University, Cleveland; Dean H. R. Bowen, University of Illinois College of Commerce; Asher Hobson, head, department of agricultural economics, University of Wisconsin, and W. J. Parker, president, Manitoba Pool Elevators, Winnipeg, Canada. The conference was sponsored by the Macon County Farm Bureau, Decatur Association of Commerce, labor groups and others.

World Trade Vital To

FARM INCOME

AMERICA can't afford to abandon the Marshall plan of aid to Europe according to the views presented at the Midwest Conference of Agriculture, Industry and Labor held in Decatur in mid-January.

It was admitted that much of the ECA is a give-away program and the United States won't be paid back for much of it, but it's to America's best interests to get Western Europe back on its feet. Most of the countries do not have the necessary dollar exchange to make repayment, and anyway it would be better if America were paid back in strategic raw materials such as petroleum, uranium, copper, manganese and lead.

Discussion at the conference also pointed out that it was to America's best interests to help raise living standards abroad. By raising living standards, it was argued, these European countries become better customers for American goods.

The vital need of world trade to the American farmer, laborer and businessman was stressed repeatedly at the Decatur conference. Agriculture with an expanded production of 25 per cent over prewar is especially in need of an outlet for her produce beyond domestic needs.

The ECA is taking a part of the agricultural output of the United States at the present time and the experts are wondering what will happen when the foreign relief program ends.

One of the top officials of the ECA told the conference that while aid program food amounted to only 10 per cent of the total diet of Western Europe, it was a key 10 per cent. Our grain shipments make up two out of every five loaves of bread consumed by the Western European. Bread grains are exceedingly important to their living.

Food trains from America like the CARE and Christian Rural Overseas Program are received with gratitude out of all proportion to the amount of food involved, Dennis A. FitzGerald, director of the ECA's food and agricultural division, said.

FitzGerald said the Marshall plan is working and of this country's five billion dollar authorized aid, four billion has been allotted and 3 billion dollars worth of goods was shipped by the end of 1948.

Marshall plan aid has totalled only five per cent of all European resources, but he said it is like a much needed sparkplug on a motor that has been misfiring.

European agricultural workers are producing "as much as can reasonably be expected with the available resources," FitzGerald said. Industrial workers are keeping up their end about as well as the farmers except for those areas where Communist doctrines have taken hold.

Of the four-billion dollar allotment, 1.9 billions went for industrial goods, 1.8 billions for food and farm produce and the remainder of 300 million dollars for shipping expenses.

Western European industrial production is on the upgrade, FitzGerald said, and Europe had a good crop year.

One of the big problems facing the United States is how to balance exports with imports. He said that if the European nations are to buy our goods, they must have something to sell America. This calls for an examination of our tariff levels and import quotas. When Western Europe buys more than it sells, someone has to pay the difference. Today the American taxpayer is footing the bill through the ECA, but that can't go on forever.

The solution of this problem of world trade will determine the prosperity of the American farmer, business man and worker.

President Charles B. Shuman of the Illinois Agricultural Association told the conference in a discussion panel on world peace that the United States can make the greatest contribution by demonstrating how well our form of government works.

In this connection, President Shuman said that we must beware of "big government" as it leads the people away from democracy. He cited as a trend toward big government the agitation by some for high rigid price supports for farm commodities. Such price supports he said lead to rigid production controls and large numbers of government administrators. Hassil Schenck, president of the Indiana Farm Bureau, another speaker for agriculture at the conference, said that we are headed for disaster unless we can maintain a high national income. Such high income is needed to carry our national debut. National income must average more than twice that of the prewar level, he said.

Enactment of a national land use policy was advocated at the conference by E. H. (Zack) Taylor, associate editor of Country Gentleman. He also approved recommendations for reorganization of the Department of Agriculture made to the Hoover committee by a task force headed by Dean H. P. Rusk of the University of Illinois College of Agriculture.

Taylor said that soil conservation is divided among too many different government agencies.

1949 OUTLOOK

FARM economics at the University of Illinois College of Agriculture have taken a look into the farmers' future for the New Year, and they say that future is generally favorable.

Here, briefly, are their views on the 1949 farm outlook.

DEMAND for farm products will be good through 1949, but probably somewhat weaker than in 1948.

PRICES for individual farm products will shift upward or downward according to changes in supply.

OPERATING COSTS for farmers will go up.

PROFITS from farming will go down moderately.

LAND PRICES may decline slightly because of the lower net farm income.

LIVING COST will average somewhat lower.

Conservation Pays Off in Dollars

CONSERVATION farming pays off in cold cash to the tune of from $4.17 to $10.63 an acre if you're willing to wait a while for your money.

This has been found through a continuing study of conservation measures on Illinois farms made by E. L. Sauer, soil economist employed jointly by the University of Illinois College of Agriculture and the federal Soil Conservation Service.

Although returns are not immediate, long-term net profits ranged from $4.17 to $10.63 an acre more on various high-conservation farms than on similar low-conservation farms, Sauer said.

AFBF Dept. Head

Gerald Lee, a dairy marketing specialist from Portland, Oregon, has been employed as the director of the dairy department of the American Farm Bureau Federation.

Golden Anniversary

Mr. and Mrs. J. E. Moyer celebrated their golden wedding anniversary. Moyer has been organization director for the Wabash County Farm Bureau for the past nine years. Directors of the Wabash Farm Bureau attended the celebration as a body.

FIGHT WEEDS and INSECTS

Be Ready!

Knock Out Weeds and Insects as soon as they start!

Weeds rob crop production and waste time and profit. Knock these annoying pests out of every fence-row, lane, and farm stead. 2,4-D provides the easy way and gets rid of uncontrollable weeds growing in farm crops.

Flies are a deadly menace to health, farm animals, and farm production. DDT proved very effective last year, in ridding many Illinois farms of flies. It will do a good job for you again this year, if given a chance.

Your Blue Seal Trucksalesman will supply you with the right material at the right time.

50% DDT — **WETTABLE POWDER** is a very economical insecticide for controlling flies around livestock and farm buildings.

25% DDT — **EMULSION CONCENTRATE** is a liquid concentrate which mixes easily with water, and is very effective in controlling flies and farm insects.

2,4-D AMINE — **AMINE WEED KILLER** Liquid is a splendid selective weed killer for controlling many common farm weeds.

2,4-D ESTER — **ESTER WEED KILLER** is especially prepared for controlling hard-to-kill weeds and woody plants.

Get 2,4-D and DDT for your farm in time for early use!

ORDER NOW - SAVE 5%

Place your order during February and March, and save 5%. Your early order will insure delivery to your farm in April and May, ahead of your weed problems.

Typical of the panels heard during the Midwest Conference of Agriculture, Industry and Labor at Decatur in mid-January was this one on world trade. Left to right: E. E. Lindsay, editorial director of Decatur Newspapers, Inc.; G. R. Atkinson, Cincinnati, of the International Brotherhood of Railway and Steamship Clerks, A.F. of L.; H. M. Busch, professor of sociology, Western Reserve University, Cleveland; Dean H. R. Bowen, University of Illinois College of Commerce; Asher Hobson, head, department of agricultural economics, University of Wisconsin, and W. J. Parker, president, Manitoba Pool Elevators, Winnipeg, Canada. The conference was sponsored by the Macon County Farm Bureau, Decatur Association of Commerce, labor groups and others.

World Trade Vital To

FARM INCOME

MERICA can't afford to abandon the Marshall plan of aid to Europe according to the views presented at the Midwest Conference of Agriculture, Industry and Labor held in Decatur in mid-January.

It was admitted that much of the ECA is a give-away program and the United States won't be paid back for much of it, but it's to America's best interests to get Western Europe back on its feet. Most of the countries do not have the necessary dollar exchange to make repayment, and anyway it would be better if America were paid back in strategic raw materials such as petroleum, uranium, copper, manganese and lead.

Discussion at the conference also pointed out that it was to America's best interests to help raise living standards abroad. By raising living standards, it was argued, these European countries become better customers for American goods.

The vital need of world trade to the American farmer, laborer and businessman was stressed repeatedly at the Decatur conference. Agriculture with an expanded production of 25 per cent over prewar is especially in need of an outlet for her produce beyond domestic needs.

The ECA is taking a part of the agricultural output of the United States at the present time and the experts are wondering what will happen when the foreign relief program ends.

One of the top officials of the ECA told the conference that while aid program food amounted to only 10 per cent of the total diet of Western Europe, it was a key 10 per cent. Our grain shipments make up two out of every five loaves of bread consumed by the Western European. Bread grains are exceedingly important to their living.

Food trains from America like the CARE and Christian Rural Overseas Program are received with gratitude out of all proportion to the amount of food involved, Dennis A. FitzGerald, director of the ECA's food and agricultural division, said.

FitzGerald said the Marshall plan is working and of this country's five billion dollar authorized aid, four billion has been allotted and 3 billion dollars worth of goods was shipped by the end of 1948.

Marshall plan aid has totalled only five per cent of all European resources, but he said it is like a much needed sparkplug on a motor that has been misfiring.

European agricultural workers are producing "as much as can reasonably be expected with the available resources," FitzGerald said. Industrial workers are keeping up their end about as well as the farmers except for those areas where Communist doctrines have taken hold.

Of the four-billion dollar allotment, 1.9 billions went for industrial goods, 1.8 billions for food and farm produce and the remainder of 300 million dollars for shipping expenses.

Western European industrial production is on the upgrade, FitzGerald said, and Europe had a good crop year.

One of the big problems facing the United States is how to balance exports with imports. He said that if the European nations are to buy our goods, they must have something to sell America. This calls for an examination of our tariff levels and import quotas. When Western Europe buys more than it sells, someone has to pay the difference. Today the American taxpayer is footing the bill through the ECA, but that can't go on forever.

The solution of this problem of world trade will determine the prosperity of the American farmer, business man and worker.

President Charles B. Shuman of the Illinois Agricultural Association told the conference in a discussion panel on world peace that the United States can make the greatest contribution by demonstrating how well our form of government works.

In this connection, President Shuman said that we must beware of "big government" as it leads the people away from democracy. He cited as a trend toward big government the agitation by some for high rigid price supports for farm commodities. Such price supports he said lead to rigid production controls and large numbers of government administrators. Hassil Schenck, president of the Indiana Farm Bureau, another speaker for agriculture at the conference, said that we are headed for disaster unless we can maintain a high national income. Such high income is needed to carry our national debut. National income must average more than twice that of the prewar level, he said.

Enactment of a national land use policy was advocated at the conference by E. H. (Zack) Taylor, associate editor of Country Gentleman. He also approved recommendations for reorganization of the Department of Agriculture made to the Hoover committee by a task force headed by Dean H. P. Rusk of the University of Illinois College of Agriculture.

Taylor said that soil conservation is divided among too many different government agencies.

A FEW years ago I visited my Uncle Bill in Wisconsin. He took me to the barn to show me around. The hay mow was full. I picked up a handful of hay and said: "Why Uncle Bill this hay is mostly timothy."

"Yes," he replied, "I haven't had such good luck with my clovers these last few years."

"Why do you have the hay chopped up with an ensilage cutter?" I asked.

"They eat it better that way."

"How do they milk on it?"

"Not so bad when you feed them some oilmeal."

"Isn't that pretty expensive?"

"Yes, but the price of milk is pretty good now too, and besides we get a check from the government that helps out some."

"But Uncle Bill, wouldn't you be better off if you used the necessary lime, phosphate, and potash needed on your fields so you would have the barn full of clover or alfalfa hays that contain as much as 15 to 18 per cent protein instead of having the barn full of this timothy hay that contains only six to eight per cent protein? Because I dare say your cows would milk about as well on high quality, high protein, legume hay without the expensive concentrated feeds as they are now doing with this low-protein grass and weedy hay plus the expensive oilmeal you use to build up the protein for these cows."

"That's what my son Jack says, but fertilizers are expensive too."

There is a real tragedy in the truth of the above story.

I'll quote another all too common case that involves a close personal friend of mine, and through kindness I will withhold his name. We will call him Frank for convenience here. Frank's farm is fairly steep. He inherited it from his father, who in turn inherited the land from his pioneering father, who cleared it of trees and stumps. The whole family has a history of fine citizenship, public spirit. They are good supporters of schools and the church and ready with a welcome meal and hospitality to anyone that drops in.

Last summer I walked over the fields with Frank. His son Jim had been in 4-H Club work and had become very much interested in soil conservation. Jim had even gotten his father to put all the fields into a contour strip farming system. The crops were in standard, well adjusted rotations. The land had been limed according to recommendations. *But not one pound of phosphate or potash in fertilizers had ever been put on the ground.*

The manure from the very excellent dairy herd was always carefully put on the fields that were to go to corn. Friend Frank thought he was doing a better than average job of farming. This he was doing, but yet it was not good enough as to efficiency in costs of production, and it was not on a durable basis with regard to the land. I could see this farm abandoned in a few more generations. This has already happened to four other farms in this community.

Some would argue, "Good, such land should not have been farmed in the first place". The fact is human beings aren't just efficiency machines. This community was once a place of neighbors that loved one another, lived happily and believed in God, America and the value of individuals. I see this community on the way out. It will be a local and national loss. Yet this need not be so.

Frank's strips of meadow were largely timothy. Here and there a few clumps of clover showed. The clover had been seeded, but "These last years we haven't had clovers like in the past". There was unmistakable evidence of both phosphate and potash hunger. "Yes, we buy a lot of concentrated feed for the pigs as well as the cows". His wife made such beautiful drapes for the windows with the sacks. The brood sows were in a dusty lot. "Alfalfa doesn't hold out well on this ground".

"We figure that with lime and the manure we get, that we don't need the commercial fertilizers".

I did a little pencil work on the hay rack board. "Look here. One ton of alfalfa carries off about 40 pounds of potash. One ton of manure contains about 10 pounds of potash. Therefore, it takes about four tons of manure to balance this potash — not counting any losses by erosion and leaching. To make four tons of alfalfa on an acre would require about 16 tons of manure to supply the potash carried off".

Here he butted in with — "Gosh, I guess with 16 tons of manure on one acre one should really make alfalfa".

My reply was, "Surely, but your alfalfa should last for six to seven years, and to get the needed potash for this, let's see — seven years times four tons of alfalfa times four tons of manure equals 112 tons of manure". By now, he lost interest. Such talk can't make sense.

"I couldn't afford the fertilizers", he said. He meant he didn't have the money. Jim needed a hernia operation. Frank's wife really should have a goiter operation too. He needed some new store teeth. So it goes. Next winter the cows will need feed, so Frank will drive 10 miles to town to buy it. "Got to buy it. Cows don't milk when they eat only timothy hay. Even the calves die then".

WITH bountiful grain harvests in 1948, Illinois farmers also harvested their regular heavy harvest of accidents. The farm is still a dangerous place to live. Here are some of the more freakish accidents that happened on Illinois farms in 1948. Be careful. Accidents like these can happen to you!

Trying to enter his home through a window, an Oregon farmer was trapped when the sash fell on his back and caused him to smother to death. Fighting off a swarm of bees, a Farmer City young man swung at them with a knife and gashed himself.

In another accident involving bees, a Greenup man tried to smoke them out of his house. Throwing kerosene on some old sacks the fuel exploded and burned him to death.

A Sterling boy shot at a rat; the bullet ricocheted and killed his father. A Robinson boy killed his brother when he shot at a rabbit. The bullet glanced off a stone and struck the youth.

A Dakota, Ill., farmer was leaning on his front gate when a hinge broke. He was thrown against the head of a calf and suffered a fractured cheek bone. While sharpening implements on a grindstone, the stone shattered and killed an Avon farmer. A Long Point man broke his arm when he pushed on a stuck gate.

Running from a swarm of bees a Mt. Auburn youth fell on a sharp stick which ripped open his leg. A Buffalo youth broke a leg and badly injured himself when he fell into an operating concrete mixer. A LaHarpe farmer had his eyeball cut when the cow he was milking flicked her tail. An Eldorado boy had his eyeball cut by a corn stalk leaf. A Dongola man absent-mindedly stuffed two of his fingers into a meat grinder.

A Joliet man had a thumb torn off while storing baled hay. The rope hoist powered by a tractor pulled him up to the top of the barn by the thumb. A Washington Grove man did the same thing but was hoisted up by the hand and was not seriously injured.

A Peru man was milking a cow when it moved away from him; as he pulled his stool closer the cow moved back knocking him against a hinge which injured his spine. A Caseyville young man, believed to have spotted a fox, grabbed a shotgun from a shelf. The weapon exploded and killed him. A Ramsey woman's arm was broken when a calf she was feeding pushed her against a post.

A Cabery farmer drove his tractor over a bridge which collapsed throwing tractor and rider into a creek. He was only slightly injured. A veteran working on a farm wasn't so lucky. While disking a field his tractor slipped into a drainage ditch, turned over, and pinned him beneath the water until he drowned. A Chester baby was bitten to death by a rat.

A Mt. Carbon woman placing a fruit jar over a plant to protect it from freezing pushed too hard and broke the glass. Her hand was impaled on a jagged edge. She was in a serious condition from loss of blood. Working with a circular saw, a Galena man got his jacket caught in the shaft. He wrenched his body away from the saw but his foot flew up into the blade which cut off four toes.

A five-year-old Roseville boy followed his dad out to the barn and was hit by a bale of hay tossed down from a hayloft by the father unknowingly. The boy didn't suffer a broken neck or a broken collar bone; his leg was fractured.

Tractors cause a great many of the accidents on Illinois farms. Here's one which gave its driver trouble indirectly. A St. Charles youth drove to a windmill to get water. On driving off, the tractor exhaust caught a support bar on the windmill causing it to topple and crash on top of tractor and driver. The boy was critically injured.

HELP PREVENT FARM ACCIDENTS BY USING GOOD JUDGEMENT AND CAUTION IN EVERYTHING YOU DO!

A Rochelle boy was badly cut in the face when he ran into the blade of an ax. A Rockford farm hand slipped while putting a can of milk in a cooling tank. He apparently fell, struck his head, and was knocked unconscious. He was found drowned in the cooling tank.

And there still are buggy accidents. A Round Lake man jumped when his buggy started to upset. He sprained his ankle and was unable to walk. A young Randolph farmer was badly burned in trying to burn out some coons in a hollow tree. He threw gasoline which flashed back.

A Toluca woman fell through a gap in the closet floor of her uncompleted home, was stunned by the fall and drowned in her flooded cellar. A one-year-old Edwardsville baby playing around a partly-filled bucket of water, fell in head first and drowned. A Maple Park youth narrowly escaped death when silage caved in on him. Luckily his father was nearby to dig him out.

A Milford man was severely burned when he fell into a vat of scalding water while preparing to butcher. A Kane dairyman broke his wrist when a cow kicked him. A 31-year-old Kankakee farmer was cranking his tractor when the crank slipped and struck him on the side of the head. When the accident was reported he was in serious condition suffering a blood clot in the brain.

Clearing timberland near Plymouth, a farmer was seriously injured when a chain fastened around a tree broke under tension and struck him a severe blow across the stomach.

A Ridott man was badly burned when the tractor he was driving burst into flames and sprayed gasoline on him. A Hookdale man suffered a broken vertebra when a plow handle struck him in the back.

Luckily his father was nearby to dig him out.

A Milford man was severely burned when he fell into a vat of scalding water while preparing to butcher. A Kane dairyman broke his wrist when a cow kicked him. A 31-year-old Kankakee farmer was cranking his tractor when the crank slipped and struck him on the side of the head. When the accident was reported he was in serious condition suffering a blood clot in the brain.

Clearing timberland near Plymouth, a farmer was seriously injured when a chain fastened around a tree broke under tension and struck him a severe blow across the stomach.

A Ridott man was badly burned when the tractor he was driving burst into flames and sprayed gasoline on him. A Hookdale man suffered a broken vertebra when a plow handle struck him in the back.

Prairie Farms plant managers meeting at Urbana to discuss their new research program are, left to right: Robert Erickson, Mt. Sterling; Bart Mullooly, Galesburg; Forrest Fairchild, Chicago, state sales manager; L. B. Howard, head, food technology department, University of Illinois; A. Oliver Bower, Bushton, president, Prairie Farms Creameries; Frank Mleynek, Olney; I. C. Hochstrasser, Champaign; Harold Brackett, Carbondale. Back to camera are John Raab, Henry, and Fletcher Gourley, Carlinville.

PFC RESEARCH PROGRAM

Prairie Farms Creameries Plan New Research On Ice Cream Mixes, Frozen Desserts, To Market Milk Surpluses

PRAIRIE Farms Creameries laboratory in Chicago has developed a new and superior dairy cleaner which will be sold this year to housewives and dairy farmers throughout Illinois.

The cleaner can be used for all household and dairy cleansing needs. It leaves dishes cleaner than dishes rinsed with clear water, and does an excellent job on milk pails and strainers.

This new cleansing powder—it is not a soap—has been developed by E. L. Andersen. He is in charge of the laboratory in Chicago for Prairie Farms.

Andersen described the cleaner as a light powder, milky cream in color. He said it is compounded from the new super phosphates and new wetting agents being introduced to industry.

Forrest C. Fairchild, state manager of the creameries, said that it will be used in the 10 member plants of Prairie Farms Creameries and will be sold by them to housewives and dairy patrons.

This is the first product to be developed by the creamery laboratory in Chicago. Fairchild said that any income from this product will be used to expand the research program.

At a meeting recently held in Champaign, plant managers suggested several research projects which could be developed by the Chicago laboratory.

They suggested that work be done to expand existing outlets and to create new markets for milk solids other than cream. They asked that work be done on the vitamin fortification of semi-solid buttermilk.

Ice cream mixes and other frozen desserts also were suggested as possible research projects which might yield profitable results.

The laboratory in Chicago has been set up primarily to perform quality control work. Work is centralized there for all member plants.

Sweet Is Named New Director Of Road Improvement

CULLEN B. SWEET, 45, superintendent of the Community unit school at Barry in Pike county since 1936, has been employed, effective Feb. 1, as director of road improvement for the Illinois Agricultural Association. He succeeds Charles F. Mayfield who recently became assistant director of organization.

C. B. Sweet

Sweet was born on a farm near Franklin in Morgan county which has been in the family for more than a century. Following graduation from Franklin high school, he attended James Milliken University at Decatur and Illinois College at Jacksonville from which was graduated in 1935. He earned his master's degree in school supervision at the University of Illinois in 1941.

Before going to Barry he taught at Kinderhook and Rockport. Sweet has shown a great deal of interest in rural road conditions through his work in planning school bus transportation. The road situation he considers a major problem for rural educators as well as farmers.

The new director of road improvement is married and has two children—a daughter aged 19, and a three-year-old son.

John Raab Succeeds Dave Smith As Manager Of Creamery At Henry

JOHN RAAB, plant superintendent at Carlinville, has been appointed to succeed Dave W. Smith as plant manager of the Prairie Farms Creamery at Henry.

Smith plans to continue working for Prairie Farms Creameries but in a position which will make fewer demands on his health. Smith worked in Chicago for the state company for 10 years before going to Henry as plant manager.

Raab has worked for the Carlinville plant since 1947, and before that worked two years for Golden State, Inc., a California dairy company.

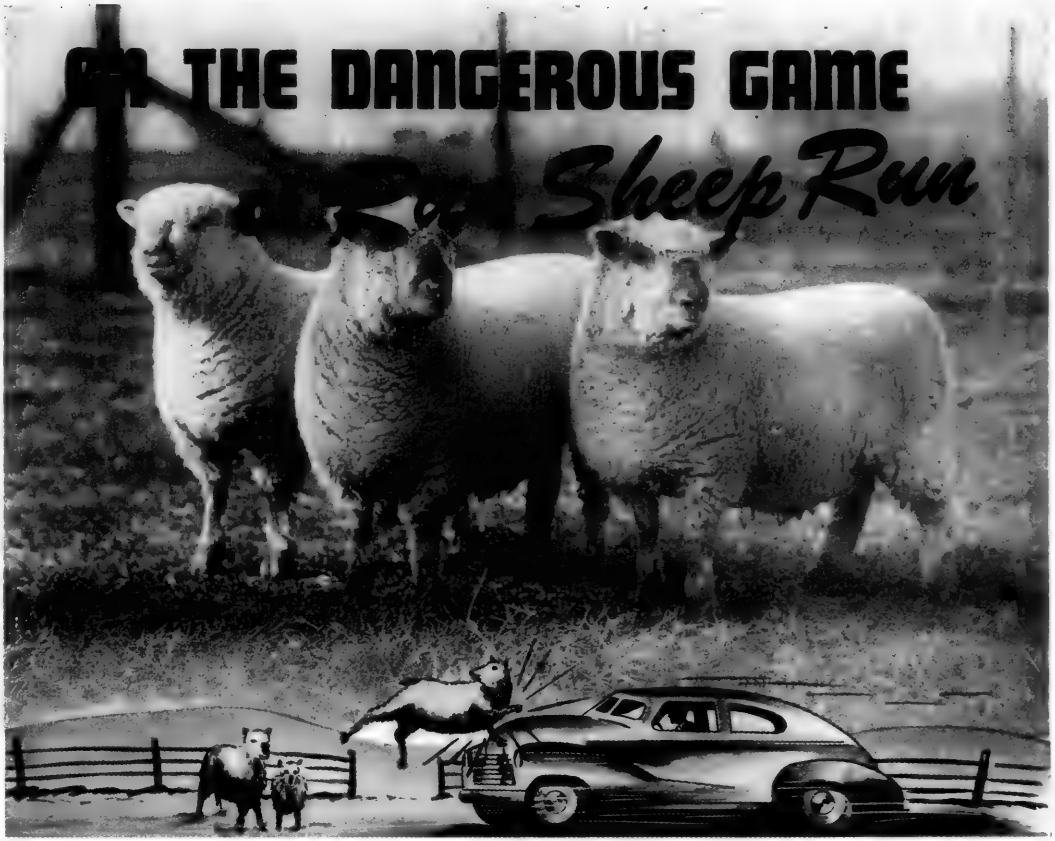
He was reared at Belleville in St. Clair county and was graduated from the University of Illinois in 1941. After graduation he served in the army for four years. During his last year in the army he served as a purchaser of dairy products in the Chicago area.

Beware Of Cholera

A NORTHERN Illinois farmer had tough luck with his fall pigs. He lost 41 out of 49 from hog cholera. It could have been prevented.

Proper vaccination would have done it, Dr. M. E. Mansfield, extension veterinarian with the College of Veterinary Medicine, Urbana, says.

Cholera strikes most often in the fall, Mansfield says, although outbreaks can occur anytime.



There's trouble ahead for these sheep and for YOU if they bolt out onto the highway. Any accident caused by your livestock, no matter where they might stray, leaves you wide open for a costly damage suit. So watch those fences! And insure yourself against such risks with liability protection from Country Mutual Casualty Company.

It costs so little to BE SAFE; it costs SO MUCH to take the chance. Ask the insurance agent at your Farm Bureau office about the Farmers General and Employers Liability policy that covers EVERY liability emergency in your farming operation. You can't afford to gamble when a small investment may save you thousands of dollars.

LETTERS TO THE EDITOR

THANKS FROM CANADA

IT IS a pleasure for me, on behalf of the Junior Farmer's Association of Ontario and the group who recently were guests of the Illinois Agricultural Association, to thank you for the privilege of visiting with you and for the grand hospitality shown to us while in Illinois.

We were very much impressed with the extensive agricultural organization in your state and the great service it is rendering to the farm people. The enthusiasm of the young people for their organization was very inspiring to say the least. I shall never forget their friendliness and generosity and the way they made us feel so much at home.

We four delegates have gained much personally from our visit and our organization will benefit from the many ideas we brought home with us. All in all, our visit to Illinois was one of profit, and I feel it has added one more link to the chain that binds two great countries together.

Once again, accept my sincere thanks and appreciation.

Ross Beattie
President
Junior Farmers' Association of Ontario

I AM glad that the Ontario Junior Farmer delegation to your Annual Meeting fitted in so well with your programme. From reports I know that they had a good time and I think the value of these visits is in the making of new contacts and the comparisons which are made between the two organizations.

OBJECTS TO ARTICLE

THREE years ago I wrote a letter to the head of the Pure Milk Association, Mr. Lauterbach I believe, in answer to an article he wrote deploring the fact that when the war market ceased, the price of dairy products would tumble because the demand would decrease a great deal. I said in that letter that I thought demand would stay up if prices did not go too high, because I thought the potential demand had never been felt prior to the war.

You have a similar article on page 6 in the December IAA RECORD giving the impression that the demand in this country is above normal now, and that we will get back to a normal demand.

This cannot be true. Our population is increasing at an accelerated rate while our farmers are decreasing in numbers. The number of farmers who raise all their food is consequently less and the farmer gets into the food market wanting the best there is because he is used to eating good food. The implications of the cartoon illustrating your article are that the wage earner is now asking quality foods which he couldn't buy in the thirties; the article in column 1 page 7 bottom implies that he doesn't really deserve to buy so much with his money because the Russian worker can't. Why didn't you make the comparison with workers of another country which did not experience the invasion of armies, say Sweden? You make the odious comparison between deserving farmers and undeserving workers who "probably has little or nothing invested in the factory where he works". Why?

Farm workers or city workers — their interests economically are the same. Give the city worker a chance to own his industry cooperatively and see if he won't work as hard as the farmer who owns his farm. The city worker has his very life invested in the factory where he works: and remember . . . . a good many former farmers are in those factories because some absentee landlord bought up too much land and the tenant farmer and his family gave place to a farm manager without a family.

Please don't continue this sort of farmer against city worker stuff. It just isn't so.

Arnold H. Nelson
Knox County

Editor's Note: The main premise of the article entitled "Consumer Demand For Quality Foods Boosts Prices," was that farmers are not to blame for the high cost of food. They have done their best to produce record food crops. For proof look at the 1948 *harvest. We tried to make it clear that the high prices were caused by* (1) *abnormally high demand,* (2) *consumers calling for the better foods, and* (3) *the rising cost of food marketing.*

This is a front view of the La Salle County Farm Bureau building which was remodeled throughout and completed recently. The building was formerly an old high school. The La Salle County Farm Bureau now has one of the most spacious Farm Bureau buildings in the state. The remodeling cost $70,000.

LIKE IAA TOURS

I WANT to take the opportunity at this time to thank the Illinois Agricultural Association for a most pleasant trip. I don't think there was anything left undone to make it most enjoyable in every detail. We thought it better (if that could be) than the California trip.

Mrs. J. D. Watkins
Macon County

I'M taking this opportunity of expressing my thanks to all who participated in planning and carrying out our recent enjoyable trip. We enjoyed every bit of it. I hope I may have the pleasure of enjoying a few more of these prearranged guided tours.

Mrs. Ruby Winn
Arthur, Ill.

THIS is a note to thank you for the wonderful time I had. You never know how many friends you have until you meet in just such a way as you folks had it planned.

Mrs. Elizabeth Barcus
Champaign County

I WISH to express appreciation for the opportunity of attending the American Farm Bureau Federation convention in Atlantic City as a delegate representing the Illinois Agricultural Association. It was a wonderful meeting and I enjoyed every session of it.

Mrs. Adam McWilliam
Stark County

BIERER RESIGNS

FRED J. BIERER, manager of the Illinois Fruit Growers' Supply Company for the past several years, resigned Jan. 15 to work for the Ruhm Phosphate Company. The Fruit Growers' Supply Company is a subsidiary of the Illinois Fruit Growers' Exchange at Carbondale.

Bierer was graduated from the University of Illinois College of Agriculture and worked for the Farm Security Administration before going with the Illinois Agricultural Association affiliate.

Buy PLANT FOOD NOW

Accept delivery early and make sure of getting the better grades.

MIXED FERTILIZERS

Experience the last few years has proven the advisability of farmers getting their mixed fertilizer early. Again this spring there will not be enough of the better grades to go around. See your local Blue Seal fertilizer distributor now and take delivery of the grades you need.

POTASH

Does your soil test show you need potash? If so this is good news. Potash supplies are increasing. See your local distributor for your needs.

TRIPLE SUPERPHOSPHATE

Triple Superphosphate is a high analysis carrier phosphate. In this form, phosphates are available to plants immediately upon coming in contact with soil moisture. If your soil test shows need for phosphates see your local Blue Seal fertilizer distributor now. Get increased small grain yields and better legume stands with triple superphosphate.

List IAA Associated Companies' Directors

FOLLOWING are the new boards of directors of the Illinois Agricultural Association's statewide associated companies as announced after elections at the IAA annual convention in Chicago in November.

Cooperative Locker Service

Dana Cryder, Minooka; Carl J. Bates, Kewanee; J. E. Mau, Harmon; H. J. Dahmer, Marion; E. L. Wenzel, Kirkland; John Tate, Kansas, and Ray Ihrig, Golden. New directors are Tate and Ihrig.

Country Mutual Fire Insurance Company

L. E. Lingenfelter, Ullin; J. M. Beckett, Blue Mound; F. E. Morris, Buffalo; George F. Hayes, Galva; Chester H. McCord, Newton; Albert Webb, Ewing; Lyman Bunting, Ellery; Clifton Davis, Jacksonville; Claud Hiestand, Salem; E. B. Reeves, Morris; and Ore Ross, Rossville.

Illinois Agricultural Auditing Association

B. W. Horan, Aledo; Dana Cryder, Minooka; Lyman Bunting, Ellery; I. M. Graham, Carthage; E. Y. Naffziger, Walnut; and Mark C. Harry, Humboldt. New director is Harry.

Illinois Farm Bureau Serum Association

R. V. McKee, Varna; Ray Cunningham, Alvin; Jesse E. Tuttle, West York; E. G. Reynolds, Jacksonville; K. T. Smith, Greenfield; Ben Bodecker, Sutter; and J. W. Cory, Earlville.

Illinois Farm Supply Company

Fred E. Herndon, Macomb; J. L. Berry, Cerro Gordo; F. J. Flynn, Murrayville; Otto Steffey, Stronghurst; F. E. Morris, Buffalo; G. H. Geiter, Orangeville; Charles Keslinger, La Fox; George Chapple, Dwight; Charles Haller, Edwards; J. P. Redman, Cairo; and R. H. Monke, Litchfield. New director is Haller.

Illinois Grain Corporation

Charles Schmitt, Beason; Carl O. Johnson, Varna; J. H. Butterfield, Pana; Leo Worden, Hancock; Sam Yergler, Cisna Park; Arthur Bertsche, Pontiac; John McCabe, Ludlow; J. Fred Romine, Tuscola; C. J. Elliott, Streator. New directors are Worden and McCabe.

Illinois Grain Terminals

Homer Curtiss, Stockton; C. J. Diehl, Columbia; J. F. Holderman, Morris; C. E. Studley, Sheffield; C. J. Schmitt, Beason; Carl Johnson, Varna; Marion Herzog, Blandinsville; and J. H. Stone, Mason City. New director is Johnson.

Illinois Livestock Marketing Association

Mont Fox, Oakwood; M. Ray Ihrig, Golden; C. A. Lage, Saybrook; La Rue Tice, Shelbyville; Glen Ackerman, Ridott; B. W. Horan, Aledo; Edwin Gumm, Galesburg; and R. V. McKee, Varna. New director is Tice.

Illinois Milk Producers' Association

O. H. Ryan, Tonica; Harry Gehring, Altona; Delbert Freeman, Canton; G. I. Maxwell, Champaign; J. W. Ellis, Ridge Farm; R. H. Miller, Clinton; Bart Walsh, DeKalb; R. E. Stocker, Murrayville; D. R. Radford, Kewanee; Paul Bainbridge, Rockford; Charles Cameron, Peoria; Carl Eisele, Peoria; Mattie Nolan, Pontiac; C. W. Krell, Glenarm; W. J. Swayer, Gurnee; Walter Dodd, Loami; J. D. Ray, Vandalia; L. B. Coomber, Freeport; G. D. Tombaugh, Streator; Carl Geiger, Milan; Elmer Orendorff, Randolph, Ray Peart, Galesburg; H. J. Schumacher, Toluca; and E. M. Hughes, Woodstock. New directors are Schumacher and Hughes.

Illinois Wool Marketing Association

William Temple, Serena; August Eggerding, Red Bud; J. King Eaton, Edwardsville; John T. Evans, Hoopeston; and A. L. Doubet, Williamsfield.

Prairie Farms Creameries

A. Oliver Bower, Bushton; E. A. Fosse, Marion; H. J. Schumacher, Toluca; Judson J. Groves, Mt. Carroll; E. M. Hughes, Woodstock; Elmer Orendorff, Randolph; G. F. Henneghan, Jerseyville; Harry Gehring, Altona; Carl Geiger, Milan; Henry Vollmer, Quincy, and John Sterchi, Olney. New director is Groves.

Illinois Milk Producers' Supply Company

O. H. Ryan, Tonica; Harry Gehring, Altona; Charles Cameron, Peoria; H. J. Schumacher, Toluca; and Earl M. Hughes, Woodstock.

New Records Set At Chicago Yards

THE cattle market last year at the Chicago Stock Yards was marked by record-breaking prices.

The 1948 average for steer and yearling cattle soared to $31.35 a hundred for the year, 16 per cent higher than 1947, and the 10th consecutive year the average price for cattle at Chicago has broken preceding records.

At the same time a new all-time record top of $41.60 per hundredweight was established on Sept. 21. This top held for three days and was 60 cents above the previous record high in 1947.

Receipts for the year were estimated at 1,693,306 head of cattle. The domestic supply was augmented by 8,000 head of Canadian cattle after the embargo against shipments of beef cattle to the United States was lifted by the Canadian government.

A total of 21,000 head of Western range cattle was brought to Chicago during the year. Grass cattle from the West sold for as high as $31 in September.

Topping the market at $41.60 in September were Swanton Brothers and William Mommsen and Son of Iowa, and Tilden J. Burg, McDonough county, Illinois.

SCHOOL ACTIVITIES

By JOHN K. COX
Director, Rural School Relations

PROGRESS REPORT

THE State Advisory Commission in its Dec. 8 progress report on school reorganization reveals that Illinois has only 6,166 school districts now as compared to almost twice that number in 1945 when the School Survey Act was passed. A good deal of voting is yet to take place. Most of the changes so far and until March 1 are the result of recommendations made or action inspired by the County School Survey Committees.

The commission reports 168 new community unit districts as of Dec. 8, which figure is already out of date. For these districts already established rural people voted favorably by better than 2 to 1. Urban voters gave them a 7 to 1 edge. A spokesman for the State Superintendent's office recently said that a single salary schedule for grade and high school teachers had been adopted in practically all of the new community unit districts now in operation. Equal salaries for grade and high teachers will do much toward strengthening our grade school program and attracting much needed and better teachers into the elementary field. Under the single salary schedule for grade and high school teachers, teachers of equal training, equal experience and equal responsibility on the job will receive the same salary.

The average size of these 168 new unit districts is 117.4 square miles. The average enrollment is 791.33 with 220.97 of those pupils in the high school branch. The average assessed valuation per pupil is $21,120.

REPORT FROM INDIANA

Indiana followed rather closely the township pattern in her school reorganization of several years ago. The worst objection they are finding to that system is the prevalence of the small high school. The information discovered in a study there is remarkably similar to the results we have found in such studies in Illinois.

"An eight-month survey just completed by the Indiana School Study Commission reveals that small schools cost more and are less effective. In the 96 townships studied, where the average daily attendance at high schools was under 100 pupils, the median cost per pupil was found to be $79 higher than in similar schools with daily attendance of 200 or more.

"The most serious deficiency of the small high school, the commission reports, is that 'the school program is too narrow and restricted to meet their needs for living in a modern complex world.' Not only do the smaller schools spend two and three times as much as they should per pupil, but they also have more difficulty getting and keeping qualified teachers."

•*New York Times, November* 21, 1948.

WHAT SHOULD A SCHOOL TEACH?

Edward Tuttle, editor-in-chief of Row, Peterson and Company, recently handed me a copy of a portion of a letter which had been written by a former high school student, now a voter and father, to his former principal. The ex-high school student wrote as follows:

"I wish I had been taught more about family relationships, child care, getting along with people, interpreting the news, news writing, paying off a small mortgage, household mechanics, politics, local government, carpentry, the chemistry of food, how to budget, the value of insurance, how to enjoy opera over the radio, how to detect shoddy goods, how to distinguish a demagogue from a statesman, how to grow a garden, how to paint a house, how to get a job, how to be vigorous and healthy, how to be interesting to others, how to be popular, how to be thrifty, how to resist high-pressure salesmanship, how to buy economically and intelligently, and the danger of installment buying."

NEW SCHOOL BUILDINGS

Some building of new school houses is necessary in the next few years in many communities due to the wearing out of old buildings, the increased enrollment because of the higher birth rate, and school reorganization. Higher building costs now are only partially offset by lower interest rates. However, building is a "must" in some areas now. Many suburban areas are affected. Chicago had 6,000 more elementary pupils this year than last and the five-year increment is expected to reach 50,000. Mrs. Mulberry of the Chicago school board has supplied some information on their cottage type housing. I am including the information here because there may be some rural interest in securing similar two-room removable housing in rural areas. Here it is as it came to us:

"The buildings were designed by the bureau of architecture to be demountable in sections that will permit re-use of the buildings many times as needed.

"The buildings are 24 feet by 80 feet in size. Each building contains two class rooms that are 23 feet wide and 27 feet long. There is a wardrobe adjacent to each class room from which an exit door is provided. Toilets for boys and girls and a heater room are also included in the building.

O. M. Klie, author of "The Farm Bureau Through Three Decades," autographs a copy of his book for Dan L. Clarke, Sangamon county, former IAA board member, at Farm Bureau convention.

IAA Director Dies Month After He Leaves Office

FARM BUREAU ranks suffered the loss of a loyal leader in December with the death of Milton W. Warren, Mansfield, Piatt county, who had just retired from the board of directors of the Illinois Agricultural Association.

Milton W. Warren

Mr. Warren who had been in ill health for more than a year, died Dec. 17, at his home. Services were held Dec. 20 in Mansfield. A delegation from the IAA board of directors including President Charles B. Shuman and Vice-President F. E. Morris as well as farm advisers from the district attended the services.

Mr. Warren retired last December as IAA director from the 19th district after three years of service. During his service on the board he was a member of the finance committee. During 1948 Mr. Warren was unable to devote his full energies to his work because of ill health.

Mr. Warren succeeded Mr. Shuman on the board in November when the latter was elected president of the IAA. Mr. Warren operated a 450-acre farm devoted to general farming.

Mr. Warren was long interested in Farm Bureau and served eight years as a director of the Piatt County Farm Bureau and 12 years as its president. He was on the Production Credit Association board at Champaign for six years, on the AAA committee for seven years and for several years on the board of the Mansfield Co-op Locker board. For more than a decade he served as a member of the Mansfield high school board of directors.

A hard and conscientious worker in his community and school affairs, Mr. Warren made a major contribution to the welfare of his neighbors through his unselfish endeavors. The loss of his influence and leadership will be greatly felt in the community as well as in Farm Bureau affairs.

Mr. Warren is survived by his wife. An only son was killed in an auto accident at the age of 17 several years ago.

Get 'em Young!

A good time to vaccinate pigs is when they are 6 to 8 weeks old. At that age they are cheaper to vaccinate and are easier to handle.

SCHOOL ACTIVITIES

By JOHN K. COX
Director, Rural School Relations

PROGRESS REPORT

THE State Advisory Commission in its Dec. 8 progress report on school reorganization reveals that Illinois has only 6,166 school districts now as compared to almost twice that number in 1945 when the School Survey Act was passed. A good deal of voting is yet to take place. Most of the changes so far and until March 1 are the result of recommendations made or action inspired by the County School Survey Committees.

The commission reports 168 new community unit districts as of Dec. 8, which figure is already out of date. For these districts already established rural people voted favorably by better than 2 to 1. Urban voters gave them a 7 to 1 edge. A spokesman for the State Superintendent's office recently said that a single salary schedule for grade and high school teachers had been adopted in practically all of the new community unit districts now in operation. Equal salaries for grade and high teachers will do much toward strengthening our grade school program and attracting much needed and better teachers into the elementary field. Under the single salary schedule for grade and high school teachers, teachers of equal training, equal experience and equal responsibility on the job will receive the same salary.

The average size of these 168 new unit districts is 117.4 square miles. The average enrollment is 791.33 with 220.97 of those pupils in the high school branch. The average assessed valuation per pupil is $21,120.

REPORT FROM INDIANA

Indiana followed rather closely the township pattern in her school reorganization of several years ago. The worst objection they are finding to that system is the prevalence of the small high school. The information discovered in a study there is remarkably similar to the results we have found in such studies in Illinois.

> "An eight-month survey just completed by the Indiana School Study Commission reveals that small schools cost more and are less effective. In the 96 townships studied, where the average daily attendance at high schools was under 100 pupils, the median cost per pupil was found to be $79 higher than in similar schools with daily attendance of 200 or more.
>
> "The most serious deficiency of the small high school, the commission reports, is that 'the school program is too narrow and restricted to meet their needs for living in a modern complex world.' Not only do the smaller schools spend two and three times as much as they should per pupil, but they also have more difficulty getting and keeping qualified teachers."

•*New York Times, November* 21, 1948.

WHAT SHOULD A SCHOOL TEACH?

Edward Tuttle, editor-in-chief of Row, Peterson and Company, recently handed me a copy of a portion of a letter which had been written by a former high school student, now a voter and father, to his former principal. The ex-high school student wrote as follows:

> "I wish I had been taught more about family relationships, child care, getting along with people, interpreting the news, news writing, paying off a small mortgage, household mechanics, politics, local government, carpentry, the chemistry of food, how to budget, the value of insurance, how to enjoy opera over the radio, how to detect shoddy goods, how to distinguish a demagogue from a statesman, how to grow a garden, how to paint a house, how to get a job, how to be vigorous and healthy, how to be interesting to others, how to be popular, how to be thrifty, how to resist high-pressure salesmanship, how to buy economically and intelligently, and the danger of installment buying."

NEW SCHOOL BUILDINGS

Some building of new school houses is necessary in the next few years in many communities due to the wearing out of old buildings, the increased enrollment because of the higher birth rate, and school reorganization. Higher building costs now are only partially offset by lower interest rates. However, building is a "must" in some areas now. Many suburban areas are affected. Chicago had 6,000 more elementary pupils this year than last and the five-year increment is expected to reach 50,000. Mrs. Mulberry of the Chicago school board has supplied some information on their cottage type housing. I am including the information here because there may be some rural interest in securing similar two-room removable housing in rural areas. Here it is as it came to us:

> "The buildings were designed by the bureau of architecture to be demountable in sections that will permit re-use of the buildings many times as needed.
>
> "The buildings are 24 feet by 80 feet in size. Each building contains two class rooms that are 23 feet wide and 27 feet long. There is a wardrobe adjacent to each class room from which an exit door is provided. Toilets for boys and girls and a heater room are also included in the building.

'GOLD BRICKS'

(*Continued from page 3*)

The last session of Congress adopted the long-range flexible support price program sponsored by the American Farm Bureau Federation. The voting delegates at the recent Illinois Agricultural Association annual meeting supported the basic principle of this act that government price supports should be used to protect farm prices from collapse rather than to definitely fix prices. The level at which prices are supported will vary from 90 per cent to 60 per cent of parity depending upon supply and demand factors. Naturally, like all new legislation, it will probably need some amendment. However, thinking farmers will certainly demand that this new program be given a fair opportunity to prove its worth before drastic changes are made.

GROW MORE . . .

(*Continued from page 20*)

So the land goes on starving. Soils don't die in a fast dramatic way. A community doesn't die so fast either. Folks move out and find other ways to live. Some said it would be better if farmers on such land would stop flooding the market with high cost surplus products anyhow.

We have the know-how to make Frank's farm and community permanent and the producer of happy people. We must find a way to get these into action on all farms. Education in a dynamic manner so people will fully understand is more important than any effort to safeguard America largely through military security. To understand is to see great possibilities for the future. One that sees great possibilities finds enthusiasm filling his days. He puts out extra effort — takes the chances and wins, because facts are on his side. That is what our forefathers did — and we need to do it too.

NOTICE
ILLINOIS AGRICULTURAL ASSOCIATION ELECTION OF DELEGATES

Notice is hereby given that in connection with the annual meetings of all County Farm Bureaus to be held during the month of February, 1949, at the hour and place to be determined by the Board of Directors of each County Farm Bureau, the members in good standing of such County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the Association, including the election of officers and directors, as provided for in the By-Laws of the Association.

During February, annual meetings will be held in Coles, DeKalb, Douglas, Effingham, Grundy, Lake, McDonough, Monroe, Wayne, Whiteside, Will and Winnebago Counties.

The U. S. Department of Agriculture announced recently a 1949 support program that will provide a national average wool price of about 42 cents a pound, grease basis. This will approximate the 1948 support level.

AGRICULTURE . . .

(*Continued from page 6*)

Illinois and Iowa were awarded certificates by the American Farm Bureau Federation for reaching their "two million member" goal for the second year in a ceremony honoring states and counties for outstanding progress in the Farm Bureau's membership drive.

Illinois, Iowa and North Carolina were honored for reaching the "million and a half" member goal for the third successive year.

Twenty-two Illinois County Farm Bureaus received awards at the AFBF annual meeting for obtaining for the second year their share of the million and a half membership goal of the national Farm Bureau. Sixty-eight Illinois counties had achieved this two-year distinction in 1947, making a total of 90 counties which have achieved this goal.

Twenty-one Illinois County Farm Bureaus received awards for attaining their share of the Farm Bureau's 1950 two million membership goal for the second year. Forty-nine Illinois counties earned this distinction in 1947. This makes a total of 70 Illinois counties that have now made the 1950 two million membership goal for two consecutive years.

Delegates also voted to increase state dues to the American Farm Bureau Federation to 75 cents a year starting in 1950. Dues are now 50 cents a year.

Board of directors of the American Farm Bureau Federation hold organization meeting following general sessions at Atlantic City. Left to right are: IAA President Charles B. Shuman, Moultrie county; Hawley, New York; Mrs. Raymond Sayre, Iowa, president of Associated Women; Heaps, Maryland; Shaw, North Carolina; Praeger, Kansas; Gillespie, Washington; Randolph, Alabama; Shaw, secretary, Illinois; President Kline; Short, vice-president, Arkansas; Wilson, California; Wingate, Georgia; Allen, Kentucky; Rowland, Connecticut; Hammond, Texas; Schenck, Indiana; Slusher, Missouri; Schenk, Utah; Roberts, New Mexico; and Hatch, Wisconsin.

NEWS and VIEWS

At left Mrs. C. W. Sewell, administrative director, Associated Women, fastens a diamond Farm Bureau pin on AFBF President Allan B. Kline. At right are Illinois Home Bureau delegates to AFBF convention. Left to right: Mrs. Cecil Smittkamp, Edgar county; Miss Myra Robinson, Illinois Home Bureau Federation president, Edgar; and Mrs. Adam McWilliam, Stark county.

Farm Women Pick Leaders At Atlantic City

MRS. Raymond Sayre, of Iowa, was elected president of the Associated Women of the American Farm Bureau Federation at its 14th annual convention in Atlantic City in December. The Associated Women held its meeting in conjunction with the AFBF.

Mrs. Sayre, former vice president, replaces Mrs. Roy C. F. Weagly of Hagerstown, Md., who has served in this post since 1944. The new president was nominated by Mrs. Weagly and elected by majority vote of the delegates.

New vice president of the organization is Mrs. Paul Palmer of Missouri, who formerly served as recording secretary.

The voting delegates, of whom there were several hundred present, re-elected Mrs. M. L. Reeder of Utah as regional director for the Far West.

They also voted to retain Mrs. Philip Jones, of Connecticut, as regional director for the Northeast.

Preceding the election ceremony, AFBF President Allan Kline welcomed the delegates and praised their part in helping to maintain a sound and progressive agriculture.

Among the other highlights of the two-day meeting was a plea by Representative Walter Judd (R., Minn.) for "a more realistic and effective" U.S. leadership in the realm of world affairs.

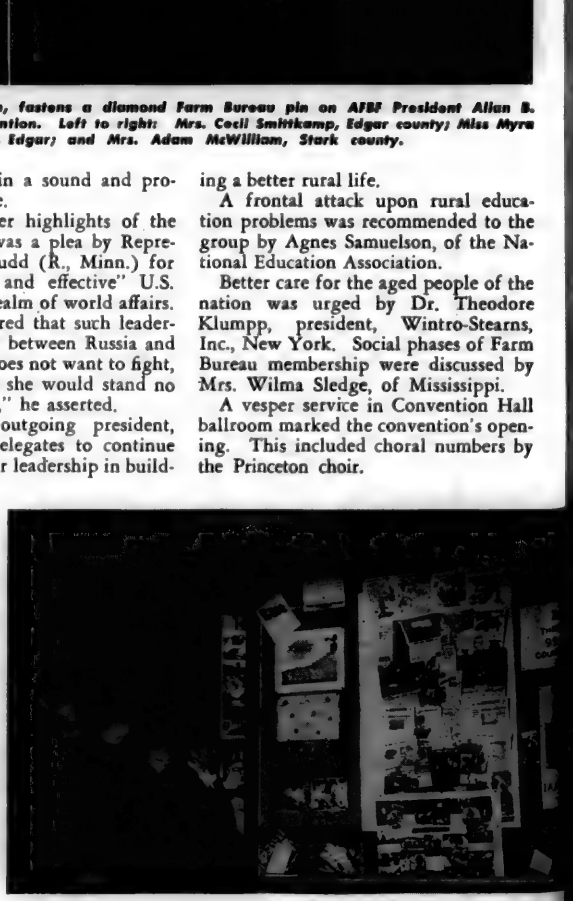
Rep. Judd declared that such leadership can avert war between Russia and the U. S. "Russia does not want to fight, because she knows she would stand no chance of winning," he asserted.

Mrs. Weagly, outgoing president, called upon the delegates to continue and strengthen their leadership in building a better rural life.

A frontal attack upon rural education problems was recommended to the group by Agnes Samuelson, of the National Education Association.

Better care for the aged people of the nation was urged by Dr. Theodore Klumpp, president, Wintro-Stearns, Inc., New York. Social phases of Farm Bureau membership were discussed by Mrs. Wilma Sledge, of Mississippi.

A vesper service in Convention Hall ballroom marked the convention's opening. This included choral numbers by the Princeton choir.



Illinois' exhibit had a prominent place at the Farm Bureau convention in Atlantic City. Illinois women looking it over, left to right, include: Mrs. Edwin Gumm, Knox county; Mrs. J. S. Woodburn, Rock Island; Mrs. W. F. Staggs, Fulton, and Mrs. M. R. Staggs, Fulton.

for HOMEMAKERS

Falls Can Claim First Place For Home Accidents

BETTER be safe than sorry! This is the warning of Miss Gladys Ward, home management specialist at the University of Illinois College of Agriculture.

She says too many homes are unsafe.

Most accidents can be prevented, she says. In 1947 34,500 persons died from burns, falls, and other home accidents.

To check your home's safety rating, Miss Ward has prepared a hazard sheet you may have by writing the University of Illinois College of Agriculture, Urbana.

She says falls are the No. 1 cause of home-accidents. To make your home fall-proof she asks:

"Do you immediately wipe up spilled water and fat from kitchen, laundry and bathroom floors? Are there two secure handrails for each stairway, inside and outside? Are halls and stairs well lighted?"

Living Costs-Dropping?

CONSUMERS should have a better year in 1949, home economics specialists at the University of Illinois College of Agriculture believe.

Living costs in general should be lower while the supply of high-quality merchandise will be greater. They predict good buys in home furnishings, electrical equipment and clothing.

Food prices should be much lower, but clothing prices are expected to stay high. They see lower prices for cotton goods this spring and summer. Good-quality building materials for home improvements should be available.

SLEEVELESS SWEATER

If there's a man in your family, you can make him happy with this sleeveless sweater in a herringbone pattern. It's handy to have for cool spring and summer evenings. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois.

Mastitis Is Most Costly Dairy Disease

Mastitis costs Illinois dairymen more than any other disease. And no other disease contributes more to the yearly 25 per cent turnover of cows being milked, Dr. J. O. Alberts, University of Illinois veterinarian, reports.

Want To Make Better Pickles? Try These Tips

MAKING prize-winning pickles depends a lot on the ingredients used.

Miss Frances Cook, foods and nutrition specialist, University of Illinois College of Agriculture, gives these steps to pickling success.

Pickle fresh, high-quality vegetables—or fruits as the case may be. Cucumbers and green tomatoes are best processed within 24 hours of picking.

Cider vinegar of 4 to 6 per cent acidity is recommended for all but light pickles. The light ones keep their natural color best with white vinegar.

If you can get pure coarse salt, like dairy or meat salt, it is preferable, says Miss Cook.

For flavor, use fresh spices. Tie them together in cheesecloth so that they can be removed from the pickles before they are put into jars. Spices may cause cloudiness.

Cover pickles completely with liquid when packing them into jars. If there isn't enough pickle sirup to do this, fill out with full-strength hot vinegar.

Better Jam This Way

WHEN you make preserves, it's wise to cook the fruit in a heavy aluminum pan, say food specialists at the University of Illinois College of Agriculture. The preserves will take less stirring and won't need to be watched so carefully.

Thousands participated in the impressive candle lighting ceremony during the vesper service opening the Associated Women's annual meeting at Atlantic City.

NEWS and VIEWS

At left Mrs. C. W. Sewell, administrative director, Associated Women, fastens a diamond Farm Bureau pin on AFBF President Allan B. Kline. At right are Illinois Home Bureau delegates to AFBF convention. Left to right: Mrs. Cecil Smittkamp, Edgar county; Miss Myra Robinson, Illinois Home Bureau Federation president, Edgar; and Mrs. Adam McWilliam, Stark county.

Farm Women Pick Leaders At Atlantic City

MRS. Raymond Sayre, of Iowa, was elected president of the Associated Women of the American Farm Bureau Federation at its 14th annual convention in Atlantic City in December. The Associated Women held its meeting in conjunction with the AFBF.

Mrs. Sayre, former vice president, replaces Mrs. Roy C. F. Weagly of Hagerstown, Md., who has served in this post since 1944. The new president was nominated by Mrs. Weagly and elected by majority vote of the delegates.

New vice president of the organization is Mrs. Paul Palmer of Missouri, who formerly served as recording secretary.

The voting delegates, of whom there were several hundred present, re-elected Mrs. M. L. Reeder of Utah as regional director for the Far West.

They also voted to retain Mrs. Philip Jones, of Connecticut, as regional director for the Northeast.

Preceding the election ceremony, AFBF President Allan Kline welcomed the delegates and praised their part in helping to maintain a sound and progressive agriculture.

Among the other highlights of the two-day meeting was a plea by Representative Walter Judd (R., Minn.) for "a more realistic and effective" U.S. leadership in the realm of world affairs.

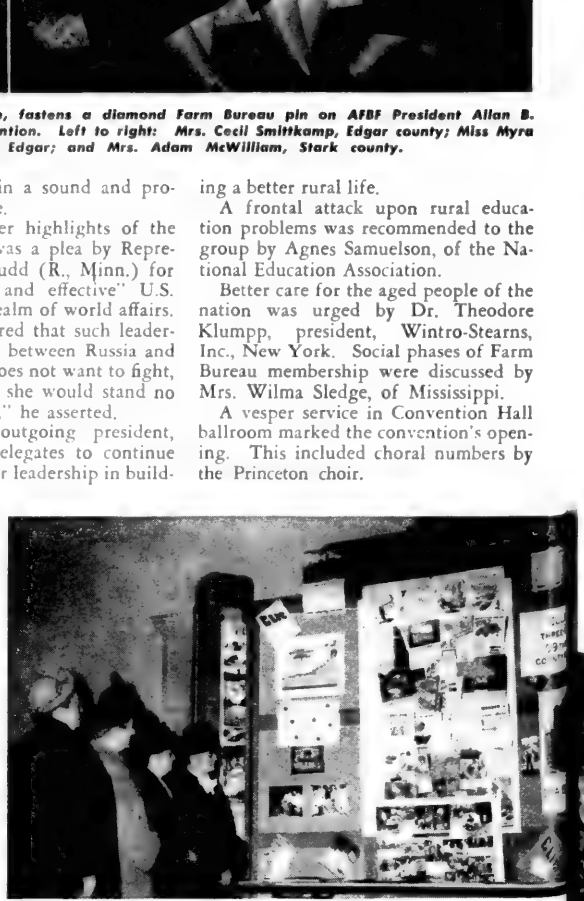
Rep. Judd declared that such leadership can avert war between Russia and the U. S. "Russia does not want to fight, because she knows she would stand no chance of winning," he asserted.

Mrs. Weagly, outgoing president, called upon the delegates to continue and strengthen their leadership in building a better rural life.

A frontal attack upon rural education problems was recommended to the group by Agnes Samuelson, of the National Education Association.

Better care for the aged people of the nation was urged by Dr. Theodore Klumpp, president, Wintro-Stearns, Inc., New York. Social phases of Farm Bureau membership were discussed by Mrs. Wilma Sledge, of Mississippi.

A vesper service in Convention Hall ballroom marked the convention's opening. This included choral numbers by the Princeton choir.



Illinois' exhibit had a prominent place at the Farm Bureau convention in Atlantic City. Illinois women looking it over, left to right, include: Mrs. Edwin Gumm, Knox county; Mrs. J. S. Woodburn, Rock Island; Mrs. W. F. Staggs, Fulton, and Mrs. M. R. Staggs, Fulton.

Falls Can Claim First Place For Home Accidents

BETTER be safe than sorry! This is the warning of Miss Gladys Ward, home management specialist at the University of Illinois College of Agriculture.

She says too many homes are unsafe.

Most accidents can be prevented, she says. In 1947 34,500 persons died from burns, falls, and other home accidents.

To check your home's safety rating, Miss Ward has prepared a hazard sheet you may have by writing the University of Illinois College of Agriculture, Urbana.

She says falls are the No. 1 cause of home-accidents. To make your home fall-proof she asks:

"Do you immediately wipe up spilled water and fat from kitchen, laundry and bathroom floors? Are there two secure handrails for each stairway, inside and outside? Are halls and stairs well lighted?"

Living Costs-Dropping?

CONSUMERS should have a better year in 1949, home economics specialists at the University of Illinois College of Agriculture believe.

Living costs in general should be lower while the supply of high-quality merchandise will be greater. They predict good buys in home furnishings, electrical equipment and clothing.

Food prices should be much lower, but clothing prices are expected to stay high. They see lower prices for cotton goods this spring and summer. Good-quality building materials for home improvements should be available.

SLEEVELESS SWEATER

If there's a man in your family, you can make him happy with this sleeveless sweater in a herringbone pattern. It's handy to have for cool spring and summer evenings. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois.

Co-op Institute To Be Held At Madison August 22-28

THE American Institute of Cooperation will meet at the University of Wisconsin Aug. 22-28 in response to an invitation from the university and the Wisconsin Council of Agricultural Cooperatives.

President Karl Butler of the Institute, Milo Swanton of the Wisconsin Council of Agriculture, and Dean R. K. Froker of the College of Agriculture will handle preliminaries of the 1949 summer institute.

Inquiries or requests should be addressed to: Maurice White, Agricultural Hall, Madison, Wis.

Plant Food Needed

ESTIMATES made by the University of Illinois College of Agriculture show that at least 16½ million acres of Illinois farm land need applications of rock phosphate fertilizer. It will take 8 million tons of rock phosphate to satisfy the needs of the land.

The estimate shows that 1,729,351 tons of phosphate were applied from 1944 through 1947. This was enough to take care of the needs of 3½ million acres of farm land.

Audit Head Returns

C. E. Strand has returned as manager of the Illinois Auditing Association on request of the board of directors of the auditing company. Strand has been employed as interim comptroller of the Illinois Farm Supply Company since September of 1948.

Has Land Hit Peak?

Are land prices at a peak? Many think the peak has been passed. But this point of view has not yet been confirmed by official government reports. The rate of climb has slowed down and March 1 reports should tell the story. In Illinois prices for farm land have increased only about one per cent during the four months prior to Nov. 1.

Appoint Standing Committees Of IAA Board For New Year

STANDING committees of the Illinois Agricultural Association board of directors for the coming year have been announced by President Charles B. Shuman.

The committees are as follows: finance, F. E. Morris, Sangamon, chairman; R. V. McKee, Marshall-Putnam, and Edwin Gumm, Galesburg.

Organization-information, Otto Steffey, Henderson, chairman; John T. Evans, Vermilion; Albert Webb, Franklin.

Public relations, K. T. Smith, Greene, chairman; Earl M. Hughes, McHenry; Morris, Sangamon, and Thomas Lloyd, Macoupin.

Business service, Lyman Bunting, Edwards, chairman; Chester McCord, Jasper, and Frank L. Simpson, DeWitt.

Marketing, Homer Curtiss, Jo Daviess, chairman; C. J. Elliott, LaSalle; J. King Eaton, Madison, and Lester Davison, Woodford.

MARCH-1949

DEATH MARCH

In the autumn of 1943, three men lifted their faces toward the sky and started on a long journey. There were no tearful goodbyes — not then. For no one knew they were leaving. They started up the ladder of a concrete block silo, laughing and joking. They were filling silo and the job was almost done.

The silo never was filled. The three men never returned. A few minutes later the silo collapsed. Three human beings plunged to their death on the concrete lot below — a fourth trapped below.

Farm accidents do not always take so many lives. They do not always even take a life. But they do maim and cripple and incapacitate. That's why Farm Bureau members have banded together in Country Mutual Casualty Company to spread and share the many casualty risks of farming. See your Country Mutual Casualty representative today and learn how little it really costs to be protected against a ruinous casualty loss.

Free Markets

By Charles B. Shuman

A FEW days ago I stood in the visitors gallery above the trading floor of the Chicago Board of Trade and watched the traders in the corn and wheat pits go wild. The "bears" really "cleaned up" that day as they hammered prices down the limit. On the basis of a rumor regarding pending legislation, the value of corn stocks held by Illinois farmers was reduced by $30,000,000 in one day. This was certainly a market free to reflect changes in supply and demand — free even to reflect rumors.

C. B. Shuman

That same day, attracted by a sale ad, I walked into a shoe store. I soon found that the only reductions were on odd sizes and unknown brands. The well-known shoe that I wanted carried a price tag affixed by the manufacturer and could not be sold for one cent less. In vain, I pointed out that leather was lower in price and that due to reduced sales the factory was laying off workers. This was another kind of free market — I was free to walk out, which I did with some little satisfaction.

SELLING as they do in a free market, and buying in a fixed price market, it is little wonder that farmers have demanded some degree of price protection. This price protection is contained in the Agricultural Act of 1948 which provides for flexible supports designed to prevent collapse of farm prices.

OUR ACCEPTANCE of price protection, however, does not mean that we will not attack the monopolistic production control and price fixing practices of business and labor on every front. If we could eliminate these practices and their accompanying price rigidity, we might not need to have government price protection in agriculture. We would be operating in a truly free economy with labor and industry following the abundant production practices of agriculture. But labor will not give up its feather-bedding, make-work practices and rigid wage structure without a fight. And it will not be easy to secure tariff reductions, repeal of the Miller-Tydings and state fair trade practice laws used by industry to maintain fixed prices. If industry and labor would encourage greater flexibility in their pricing systems it would reduce the need for government price support programs.

ORGANIZED agriculture is aggressively attacking the fixed price system on two fronts. We are urging action by Congress to reduce or eliminate the many legislative barriers to free prices and abundant production in business, industry and labor. The other attack is through expansion of our farm cooperatives. Cooperatives in the fields of marketing, processing and distribution can do much to increase competition and bring about a more flexible pricing system. I hope every farm family in Illinois will actively support their own Farm Bureau-type cooperatives with their investment, membership and patronage.

Farm and Home Week visitors get some points on livestock judging from university extension specialists.

Farm Economists Still Optimistic But Cautious

Government Expert Predicts U. S. Still Has At Least One More Year Of Prosperity Even Though We Appear To Be Near The End Of Inflationary Period.

By CRESTON FOSTER
Editor, IAA Record

THERE probably will be less money in farming this year than last. Farm prices seem to be leading the way downward while the things that farmers buy are staying up. However, a disastrous price decline is not expected in 1949, even though we appear near the end of inflation.

These were some of the opinions voiced at the economic sessions of the 48th annual Farm and Home Week in February on the University of Illinois campus.

One speaker, V. L. Bassie, director of the Bureau of Economic and Business Research, said that the high rate of government spending plus the current construction boom assure the U.S. of at least one more year of prosperity.

Another economist, Walter E. Hoadley, Jr., Federal Reserve Bank of Chicago, said "there's nothing in the foreseeable future to indicate a panic."

The economists were cautious in their predictions but generally agreed that a moderate price decline of farm prices could be expected in 1949.

To the farmer eyeing the market breaks in corn and cattle, this forecast by the experts seemed almost optimistic.

Today's farmer is in a much more serious position when prices drop because he has so much cash expense in his operation, Prof. R. H. Wilcox reported.

He pointed out that the cash cost of growing corn had doubled in the last 35 years as the farmer shifted from horse power to tractors. In the old days the cost of hay and oats for the horses went up and down with farm income. But today changes in the prices of tractors and fuel are not related particularly to the prices of farm products. And a good share of the total cost of growing corn is direct cash expense, much of it for fuel, machinery and labor.

By substituting tractors for horses and mules, farmers have committed themselves to a form of farm power that requires the expenditure of cash regardless of the price of farm products, Wilcox explained.

Maybe the horse and buggy days weren't so bad after all.

Farm land prices came in for some discussion at the sessions of Prof. C. L. Stewart who reported that farm land and buildings in Illinois have been selling recently at prices almost the same as in 1920. At that time the state average was $187.59 per acre, an all time high.

The price of the average farm in some central Illinois counties stands between $65,000 and $75,000, or about $10,000 more than in 1920.

Present land prices are precariously high in several ways, Stewart said. High taxes and high production and marketing costs may cut net farm income despite best efforts to get high yields and hold down operating costs.

High interest rates on farm mortages in the 1950's could halt the rise in price of farm lands even if net farm income remains high, Stewart said.

Rounding up the economic picture, Dr. H. C. M. Case, head of the agricultural economics department of the university, said he favored flexible price supports rather than rigid fixed supports for farm commodities. He pointed out that the flexible price support plan allows supply and demand to operate at least three-fourths of the time so market prices guide production.

President Charles B. Shuman of the Illinois Agricultural Association who addressed the closing session of Farm and Home Week also emphasized the soundness of the flexible price support program.

"I am sure that farmers recognize a difference between their desire to have an opportunity to scure a parity price in a free market as contrasted to the suggestion that government guarantee a high fixed support price," President Shuman said.

"Farmers must make a choice between a fixed government price program with a government administered agriculture as opposed to a flexible price support program and a greater degree of freedom.

"I am sure that they will decide to give the law now enacted a chance to prove its value before drastic amendments are made.

"The program provides for price supports for farm commodities on a variable schedule depending upon the supply produced. It provides for floors under farm

New officers and directors of the Illinois Association of Farm Advisers named during Farm and Home Week, front row, left to right, are: O. O. Mowery, Macoupin, secretary-treasurer; L. E. McKinzie, Edgar, past president and ex-officio member of board; H. M. Myers, DeWitt, president, and V. J. Banter, Stephenson, vice-president. Second row: E. H. Anderson, Jackson, district six, and Kenneth Imig, Iroquois, district three. Fred J. Blackburn, Marion, district seven, was absent when picture was taken.

prices to prevent ruinous collapse rather than the fixing of farm prices at rigid levels.

President Shuman paid tribute to the College of Agriculture as a great research and educational institution which continues to point the way to a better agriculture. He also commented on the fine relationship between the Extension Service and the IAA and Farm Bureau and the important contribution Dean H. P. Rusk of the College of Agriculture has made to it.

On the scientific side, several new developments were reported of major interest to farmers.

Prof. R. R. Snapp reported a new hormone, stilbestrol, which acts on the thyroid gland and speeds growth and fattening of cattle. Cost of injecting the new hormone under the skin is about six cents per head. Further tests must be made, however, before it can be recommended to cattle feeders.

Winners in the official 10-acre corn contest of the Illinois Crop Improvement Association revealed that most big yields were with corn grown after clover on soil that had been limed and phosphated. Additional fertilizer was used by many contestants.

Oscar Leighty who was named corn king had a score of 83.52 based on yield, cost of production and quality of corn. He had a yield of 155.98 bushels per acre. The corn field of the champion is a 98-acre field. It was spring plowed and disked and harrowed twice after plowing. Forty acres, including the 10-acre plot, were side dressed with 100 pounds of ammonium nitrate at the second cultivation.

Highest yield in the 10-acre contest was credited to James Yontz, Tazewell county, who had 190.06 bushels per acre. He was third with 82.61 points.

Some of the contestants with high yields mixed two or more varieties of hybrid corn in their fields. Early planting was generally noted in the high yield reports, but the Leighty field was planted May 24, 25 and 26.

Yontz planted his top yielding corn in a 53-acre field that had been in pasture. He plowed in April and planted on May 11, using three varieties of hybrids, in rows spaced 40 inches apart, hills 17 inches in the row, two kernels per hill.

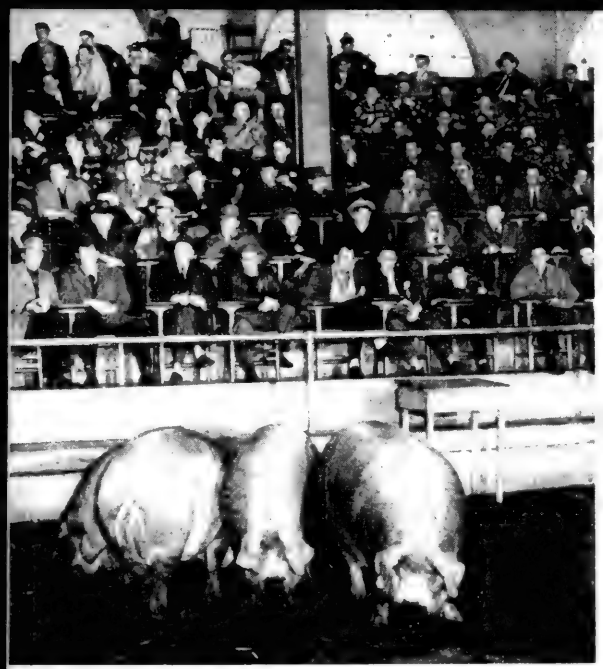
Aden A. Danielson, LaSalle county, was named soybean king with a score of 88.9 in the official 10-acre contest. He had a yield of 54.20 bushels per acre with Hawkeye soybean seed. He used only 20 to 30 pounds of seed per acre in 40 inch rows planted May 25 and 26.

Early in February, J. C. Hackleman, extension agronomist at the university, reported that 50,000 bushels of Hawkeye soybean seed was available. Price of the new Hawkeye seed varies widely in counties, but a ceiling of $6 a bushel has been set. Hackleman said that he did not expect the supply to last too long and recommended early ordering. Farm advisers in the county Farm Bureaus have lists of Hawkeye growers for the area.

Prof. R. I. Shawl explains a few points about a butane burning tractor to Farm and Home Week visitors.

Oscar Leighty, corn king, Lawrence county, left, and Aden Danielson, La Salle county, right, soybean king, show their trophies to Dr. W. L. Burlison, university agronomy head, center.

Weed spraying equipment received considerable attention at Farm and Home Week this year. Left to right are Allan Zehr, Robert Swanson and C. V. Swanson, all of Champaign county.



Farm and Home Week visitors get some points on livestock judging from university extension specialists.

Farm Economists Still Optimistic But Cautious

Government Expert Predicts U. S. Still Has At Least One More Year Of Prosperity Even Though We Appear To Be Near The End Of Inflationary Period.

By CRESTON FOSTER
Editor, IAA Record

THERE probably will be less money in farming this year than last. Farm prices seem to be leading the way downward while the things that farmers buy are staying up. However, a disastrous price decline is not expected in 1949, even though we appear near the end of inflation.

These were some of the opinions voiced at the economic sessions of the 48th annual Farm and Home Week in February on the University of Illinois campus.

One speaker, V. L. Bassie, director of the Bureau of Economic and Business Research, said that the high rate of government spending plus the current construction boom assure the U.S. of at least one more year of prosperity.

Another economist, Walter E. Hoadley, Jr., Federal Reserve Bank of Chicago, said "there's nothing in the foreseeable future to indicate a panic."

The economists were cautious in their predictions but generally agreed that a moderate price decline of farm prices could be expected in 1949.

To the farmer eyeing the market breaks in corn and cattle, this forecast by the experts seemed almost optimistic.

Today's farmer is in a much more serious position when prices drop because he has so much cash expense in his operation, Prof. R. H. Wilcox reported.

He pointed out that the cash cost of growing corn had doubled in the last 35 years as the farmer shifted from horse power to tractors. In the old days the cost of hay and oats for the horses went up and down with farm income. But today changes in the prices of tractors and fuel are not related particularly to the prices of farm products. And a good share of the total cost of growing corn is direct cash expense, much of it for fuel, machinery and labor.

By substituting tractors for horses and mules, farmers have committed themselves to a form of farm power that requires the expenditure of cash regardless of the price of farm products, Wilcox explained.

Maybe the horse and buggy days weren't so bad after all.

Farm land prices came in for some discussion at the sessions of Prof. C. L. Stewart who reported that farm land and buildings in Illinois have been selling recently at prices almost the same as in 1920. At that time the state average was $187.59 per acre, an all time high.

The price of the average farm in some central Illinois counties stands between $65,000 and $75,000, or about $10,000 more than in 1920.

Present land prices are precariously high in several ways, Stewart said. High taxes and high production and marketing costs may cut net farm income despite best efforts to get high yields and hold down operating costs.

High interest rates on farm mortages in the 1950's could halt the rise in price of farm lands even if net farm income remains high, Stewart said.

Rounding up the economic picture, Dr. H. C. M. Case, head of the agricultural economics department of the university, said he favored flexible price supports rather than rigid fixed supports for farm commodities. He pointed out that the flexible price support plan allows supply and demand to operate at least three-fourths of the time so market prices guide production.

President Charles B. Shuman of the Illinois Agricultural Association who addressed the closing session of Farm and Home Week also emphasized the soundness of the flexible price support program.

"I am sure that farmers recognize a difference between their desire to have an opportunity to scure a parity price in a free market as contrasted to the suggestion that government guarantee a high fixed support price," President Shuman said.

"Farmers must make a choice between a fixed government price program with a government administered agriculture as opposed to a flexible price support program and a greater degree of freedom.

"I am sure that they will decide to give the law now enacted a chance to prove its value before drastic amendments are made.

"The program provides for price supports for farm commodities on a variable schedule depending upon the supply produced. It provides for floors under farm

New officers and directors of the Illinois Association of Farm Advisers named during Farm and Home Week, front row, left to right, are: O. O. Mowery, Macoupin, secretary-treasurer; L. E. McKinzie, Edgar, past president and ex-officio member of board; H. N. Myers, DeWitt, president, and V. J. Banter, Stephenson, vice-president. Second row: E. H. Garlich, Morgan, district four director; A. J. Rehling, Henderson, district two; M. E. Tascher, Grundy, district one; Glen Sons, Shelby, district five; W. C. Anderson, Jackson, district six, and Kenneth Imig, Iroquois, district three. Fred J. Blackburn, Marion, district seven, was absent when picture was taken.

prices to prevent ruinous collapse rather than the fixing of farm prices at rigid levels.

President Shuman paid tribute to the College of Agriculture as a great research and educational institution which continues to point the way to a better agriculture. He also commented on the fine relationship between the Extension Service and the IAA and Farm Bureau and the important contribution Dean H. P. Rusk of the College of Agriculture has made to it.

On the scientific side, several new developments were reported of major interest to farmers.

Prof. R. R. Snapp reported a new hormone, stilbestrol, which acts on the thyroid gland and speeds growth and fattening of cattle. Cost of injecting the new hormone under the skin is about six cents per head. Further tests must be made, however, before it can be recommended to cattle feeders.

A MAJOR battle is expected in this session of the state legislature over a proposal backed by the Illinois Agricultural Association to use part of the state gasoline tax for township roads. Rural roads have never shared in the gas tax before and it is probable there will be bitter opposition to the idea from some groups.

The proposal for sharing the funds has been recommended by the Illinois Highway and Traffic Problems Commission which has been making an exhaustive study of the state's road problems. The Commission, authorized by the 1947 session of the legislature, has tentatively decided to recommend that the gasoline tax be increased from three to five cents.

It is proposed that 12½ per cent of the net receipts from the entire tax of five cents would go to township and road districts for local roads. It is estimated that this would provide approximately 10½ million dollars per year to the township districts.

The state would get 37½ per cent from the net receipts of the tax for state roads, the counties would get 25 per cent for county roads and the cities 25 per cent for city streets. This distribution would give the state a substantial increase and the counties and cities a slight increase.

Earl C. Smith, former IAA president, is a member of the Commission and has been spokesman for those members on the Commission who were trying to get a share of highway user funds for local roads. Mr. Smith and those who have supported his position have done an excellent job in getting the Commission to see the problems of paying for the cost of rural roads and bridges.

If the Commission in its final reports sticks to the recommendation that rural roads share in the gasoline tax fund, the next job will be to get the Illinois legislature to adopt it.

In the last two sessions of the state legislature, the IAA has been successful in securing two special appropriations of 15 million dollars each for local roads. However, the IAA has maintained that it is only fair that the state recognize its responsibility in improving rural roads by the sharing of gasoline tax, motor vehicle or other tax monies.

Another recommendation that the Commission is considering and which the IAA will support if it is contained in the final report has to do with the size of road districts.

The Commission is considering a proposal that after a short period, two or three years, state funds will not be allocated to a township or road district unless the district has a minimum of at least 40 or 50 miles of local roads to maintain.

This will require in many instances that two or more townships be consolidated for road purposes. It has been suggested that in the consolidated township districts, the supervisor and town clerk of the townships which are combined might constitute a board of highway commissioners which would employ a road supervisor and in general direct the highway program in the township. This would give all areas in the combined district representation and the persons on the board would be acquainted with conditions in their own areas.

The IAA recognizes that the state cannot be expected to allocate funds indefinitely to units which are too small for efficient administration. There will have to be some consolidation for highway administration purposes.

The question of tractor licenses also has come before the Commission. One of the charges made before the Commission is that farm tractors are using the highways for the transportation of farm products and supplies without payment of any license fee.

It is probable that the Commission will recommend that a license be required for wagons or trailers pulled behind a farm tractor and used for hauling farm products or supplies.

Wherever the tractor is used to pull a wagon or trailer that is transporting property, a license on the wagon or trailer would be required. A license would not be required where the tractor is pulling a plow, disc, or other farm implement over the highway. The licenses for wagons or tractors would be interchangeable.

The Illinois Agricultural Association legislative committee working in the interests of farmers at Springfield in-

cludes K. T. Smith, Greene county, chairman of the public relations committee of the Association's board of directors Paul E. Mathias, IAA secretary and member of the legal department, and John K. Cox, director of rural school relations for the IAA. They will be assisted by other staff members as occasion may arise.

The IAA legislative committee invites suggestions and inquiries from the members of the County Farm Bureau legislative committees upon legislative matters affecting agriculture.

Any Farm Bureau member who has suggestions is invited to contact his County Farm Bureau legislative committee.

The IAA legislative committee serves as a watchdog for the farmers' interests at the state capital. It examines each of the bills which are introduced. It makes the position of the IAA known with reference to those bills which affect agriculture or organizations and activities affiliated with the IAA and County Farm Bureaus.

The size of the legislative committee's job can well be seen when it is realized that as of Feb. 1, 87 bills have been introduced in the House and 81 bills in the Senate and the legislature only convened Jan. 5.

LOSES HIS SHIRT

F. E. Loy, right, manager of the Edgar county locker plant, lost his shirt to C. W. Holman, general agent of the county insurance service, in a recent Farm Bureau membership campaign. Some 122 new members were signed up in a contest in which the Edgar County Farm Bureau associated companies each sponsored three townships. Holman's townships topped the list with 42 new members.

In the cash grain area of Illinois almost 70 per cent of the farmland is tenant-operated.

Miller Named Illinois Farm Supply Finance Director

STUART B. MILLER has taken over his duties as controller and director of finance for the Illinois Farm Supply Company.

Stuart B. Miller

Miller comes from the National Pressure Cooker Company at Eau Claire, Wis., where he was employed as controller. He is a native of Connecticut and attended Columbia University. He was certified by New York state as a certified public accountant.

He was controller for Steinway and Sons in New York City for five years and for some time with French and Hecht of Davenport, Ia. He is married and has a son, aged 22.

Illinois soils come in three colors — black, yellow and light gray.

ILLINOIS FARM SUPPLY COMPANY, CHICAGO

THE PESKY FLY has been named public enemy No. 1 again for 1949. Yessir, that's right. There's going to be another fly free campaign this year, reports George E. Metzger, field secretary of the Illinois Agricultural Association.

You can't get too much of a good thing and that's about the way it is with killing off flies with DDT.

When the results of the 1948 fly campaign were tallied by H. B. Petty of the Illinois Natural History Survey, they showed that the program had really worked. The figures indicated that about 95,000 farmers sprayed their premises against flies. But here's something of equal importance—93 per cent of the cooperating farmers expressed completed satisfaction with the results they got on their farms and in their homes.

About 73 per cent of the dairy cattle in the state were sprayed against flies in 1948 and about 50 per cent of the beef cattle.

It is estimated that the savings to dairymen and beef cattle producers due to the fly campaign was about three million dollars. Now it hardly seems posssible that flies can cause that much trouble around the barn, feedlot and pasture, but the specialists didn't just guess at that three million dollars.

At any rate when the board of directors of the Illinois Agricultural Association looked at the result of the 1948 campaign they decided it would be decidely worthwhile to have another this year.

The same groups that cooperated with the IAA in 1948 are ready to pitch in again this year. These include the Extension Service of the University of Illinois, the Illinois Natural History Survey, and the State Department of Public Health.

County Farm Bureaus and farm advisers working with city health authorities will direct the local drives.

The drive will start in April in Southern Illinois and work north. First step will consist of ridding farms and cities of fly-breeding sources. These include decaying plant and animal matter—manure, garbage and rotting straw.

The cleanup work should be finished before the middle of May in Southern Illinois and before Memorial Day in the Northern area to rob flies of a place to lay their eggs.

The second step in the state-wide drive will be the farm-by-farm spraying with fly-killing DDT.

City people as well as farm people will be asked to join in the campaign. The aid of local Chambers of Commerce, Rotary, Kiwanis, Lions and Exchange clubs will be sought as well as the local health officer, druggists, hardware dealers, women's clubs, American Legion, VFW, local editors, etc.

THE statue named "Madonna of the Trail" is the 21st of our series of picturesque and historic scenes of Illinois. It stands a stone's throw from the old statehouse at Vandalia in Fayette county.

The statue is situated on Route 40 at what was once the western terminus of the Cumberland Road. This road was the overland route of many pioneers moving west. It was built by the federal government with the authorization of President Jefferson and Congress in 1806.

The statue was built as a memorial to the "pioneer mothers of the covered wagon days" by the Daughters of the American Revolution.

Shown signing the agreement which made the merger official of the Illinois Grain Corporation and IFA Elevators, Inc., are left to right (seated) IFA President Robert Otto, IGC President Charles B. Schmitt, IGC Manager Howard McWard, and A. B. Scheeler, IFA Secretary; (standing) Paul Zimmerman, IFA supply manager; John Butterfield, IGC secretary; J. Fred Romine, IGC director; Ed Kazmarek, IGC; Guy Jones, IFA grain manager; and D. F. Dreyer, IFA fieldman.

GRAIN CO-OP MERGER

Illinois Grain Corporation Buys IFA Elevators' Assets and Plans to Sell Supplies Through Member Elevators to Farmer Patrons

FINAL steps in the merger of Illinois Grain Corporation and IFA Elevators, Inc., were taken during the past month following a meeting of IFA shareholders.

IFA shareholders agreed to the sale of their assets, sales and purchase contracts to Illinois Grain Corporation, a commission and brokerage firm operating on the Chicago, St. Louis, and Peoria boards of trade.

It is an affiliated organization with the Illinois Agricultural Association and has offices in the board of trade building in Chicago.

In taking over the facilities of IFA Elevators, a central buying agency for 60 cooperative elevators in central Illinois, Illinois Grain Corporation moves into some lines of the farm supply business for the first time.

Illinois Grain Corporation will start its new venture with a nucleus of 60 elevators organized by IFA in central Illinois.

The service will be offered in the near future to another 150 grain elevators, most of which already are affiliated with Illinois Grain Corporation.

The new operations of Illinois Grain Corporation will give more farmers the benefit of larger centralized purchases of farm supplies. Membership in Illinois Grain Corporation will continue to have as its only limitation that members be true Capper-Volstead cooperatives.

With the taking over of the assets of IFA Elevators, Illinois Grain also announced the reorganization of its board of directors. The number of directors has been decreased from 15 to nine. One each from eight Illinois districts and one from the IAA board of directors.

The new board of directors consists of Charles B. Schmitt, president, Beason; J. Fred Romine, vice-president, Tuscola; John H. Butterfield, secretary, Pana; Sam Yergler, Cissna Park; Carl O. Johnson, Varna; Arthur Bertsche, Pontiac; Leo Worden, LaHarpe; John F. McCabe, Ludlow; and Charles J. Elliott, Streator.

Until reorganization of the distribution system has been effected, personnel of IFA Elevators will continue to operate from Pontiac as before. They are Guy Jones, grain branch manager; Paul Zimmerman, supply manager; Daniel F. Dreyer, fieldman; and Ivan L. Bedwell, retail salesman.

Tenth Annual Farm Sports Festival To Be Held Thurs., Fri., Aug. 25-26

THE 10th annual Illinois Farm Sports Festival will be held Thursday and Friday, Aug. 25 and 26 at the University of Illinois, Champaign-Urbana.

Several changes in the sports festival program have been made under the direction of the sports festival committee. This group has been charged with the job of recommending a comprehensive sports program which will be as practical as possible for all counties.

This year bowling scores are being certified in the counties of the players and must be sent to the office of the Illinois Agricultural Association in Chicago before March 15. Scores will be rated in the state office and the high scoring team and two high scoring individuals will be announced for each district.

Finals of the bowling will be held March 30 in Springfield according to arrangements now being made. Participation points will be awarded for county bowling. Districts will be the same as last year.

Bowling classes also will be the same as last year and include: men—team and singles; women—team and singles; Rural Youth boys—team and singles; Rural Youth girls—team and singles; Rural Youth—mixed doubles.

The committee has recommended dropping some of the folk festival events. This recommendation is based on the belief that it is unwise to stress competition of the type which normally is not held in hot weather.

The committee recommended further, however, that folk festival events be brought back to their normal number in 1950 when they could be held in connection with Farm and Home Week. Some of the festival events will be held this year, however.

The trap and skeet shoot events will be held in early August. The exact date and place will be announced later.

Archery and golf are to be dropped this year because of lack of interest.

Members of the committee recommending the changes include: Myra Robinson, president, Illinois Home Bureau Federation; George Metzger, IAA; Bernice Engelking, DeKalb county home adviser; I. E. Parett, IAA; Louise Rice,

Members of the new Illinois Livestock Producers Association board of directors pose for a picture during their first meeting in Chicago. Left to right: (seated) Marion Fry, Lester E. Martin, Carl M. Johnson; William Temple, Otto Steffey, and Ray Ihrig; (standing) Sam Sparks, J. P. Redman, Clark E. Wise, R. D. Armstrong, H. L. Combs, Frank P. Norrish, and Maurice Holmes. Not present was L. E. Mathers who was in Scotland judging a Shorthorn contest.

Coordinated Marketing

New Illinois Livestock Producers Association Ready to Adopt Bylaws, Elect Officers, Employ Manager

THE NEW Illinois Livestock Producers Association will meet March 11 to adopt bylaws, elect officers, and employ a manager.

The new organization will, in effect, be an association of Illinois' six livestock marketing cooperatives designed to (1) Strengthen present livestock marketing cooperatives; (2) establish additional markets or agencies where needed or where desirable, and (3) coordinate selling.

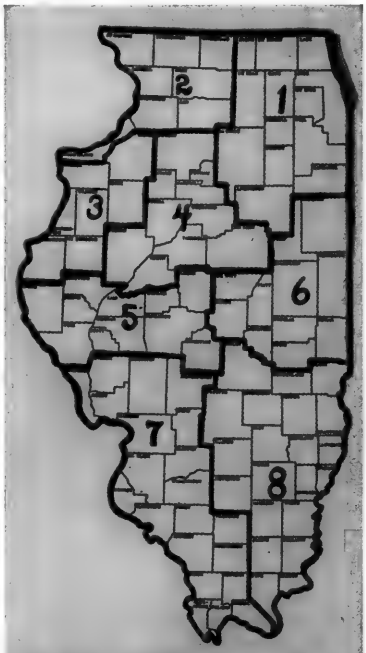
Chief purpose of the new organization will be to develop a unified marketing system among the six livestock marketing co-ops operating in Illinois to assure the farmer the most efficient and most economical methods of marketing and thereby assure him highest money returns.

Boards of directors of the six producers' agencies met in Chicago last October and approved of the plan of coordination in the interests of the livestock producer.

Contracts will be entered into with each of the six livestock co-ops in the state and membership agreements will be drawn up.

Financing of the new organization will be done through a checkoff of a certain fee to be agreed upon against each carload of stock marketed.

The new organization also will gather and disseminate marketing information among its agencies coordinate feeder and stocker sales, and conduct an analysis of hog marketing throughout the state. This analysis will be used as a basis for efficient and economical hog marketing on a statewide basis.



Map above shows districts from which eight members to the livestock board have been chosen to represent county Farm Bureaus. (See story for names).

Each of the six livestock marketing co-ops will retain its identity and continue its present operations but all will be guided and advised by the new statewide agency.

The board is to be made up of 15 members. Eight, from eight districts, represent the Farm Bureaus. They are: William Temple, La Salle county, Dist. 1; Frank P. Norrish, Whiteside, Dist. 2; R. D. Armstrong, McDonough, Dist. 3; L. E. Mathers, Mason, Dist. 4; Lester E. Martin, Morgan, Dist. 5; Clark E. Wise, Champaign, Dist 6; J. P. Redman, Alexander, Dist. 7; and Marion A. Frey, Dist. 8.

Six represent the six producers' agencies and one represents the Illinois Agricultural Association. The IAA representative is Otto Steffey, Henderson. Representatives of the Producers' agencies on the board are: Springfield, Sam Sparks, Logan; Chicago, Carl M. Johnson, DeKalb; Peoria, Maurice Holmes, Peoria; Bushnell, Henry L. Combs, Mc Donough; Illinois Livestock Marketing Association, Ray Ihrig, Adams. The St. Louis Producers representative was expected to be named in early March.

Prof. Spitler Plans To Retire Sept. 1

PROF. J. C. SPITLER, associate director of the Illinois Extension Service and state leader of farm advisers, will retire from active service Sept. 1.

Prof. Spitler received an award for distinguished service to Illinois agriculture at the Illinois Agricultural Association annual meeting last November.

A graduate of the university in 1907, he joined the Extension Service as an assistant state leader of farm advisers in September, 1919, after having helped to establish a statewide food production program during World War I.

Announce 4-H Club Delegates to Washington

FOUR Illinois 4-H club members who will represent this state at National 4-H Club Camp in Washington, D. C., next June have been announced.

They are: Dorothy Giese, 19, Peru, La Salle county; Pauline McMillan, 18, Pleasant Plains, Sangamon; Robert W. Builta, 18, LeRoy, McLean, and Lyle P. Schertz, 19, Benson, Woodford.

The state delegation was selected by the 4-H club staff at the university on the basis of demonstrated qualities of leadership, outstanding 4-H achievements, and participation in project and community activities.

BLUE CIRCLE

A New, Improved Regular-type MOTOR OIL

GOOD NEWS FOR FARMERS

Illinois farmers can now get a new, IMPROVED *regular-type* motor oil, especially suited for farm engines.

The new Blue Circle Motor Oil contains special ADDITIVES which make the new oil greatly superior to old *regular-type* motor oils. These additives give your engine EXTRA PROTECTION—protection against oil oxidation and deterioration, protection against sludge and varnish formation, protection against bearing corrosion.

The new Blue Circle Motor Oil is made from top-quality paraffin-base lube oil stocks from our own Premier Petroleum Company. Over a period of years, these Premier mid-continent stocks have built up an enviable record of service in motor oils for trucks, buses, tractors, and automobiles. Because of this record, Premier stocks are very popular in the petroleum industry. Now these same top quality stocks are available to Illinois farmers in the new *regular-type* Blue Circle Motor Oil.

Exacting tests in actual engines have proved the superiority of the new Blue Circle Motor Oil. One of these tests is equivalent to running a stock car engine at 60 miles per hour continuously for 36 hours without stopping and without changing the oil. Careful examination of the engines at the end of these test runs proves that Blue Circle Motor Oil will assure you of:

(1) Safe lubrication
(2) A cleaner engine
(3) Modern protection against sludge and piston varnish
(4) Longer bearing life.

BLUE CIRCLE IS A "REGULAR" OIL

The petroleum industry has worked together to classify oils into three general types according to the service the oils are to perform.

REGULAR-TYPE. "Regular" motor oils, as the name implies, are for use in engines that receive good care under average operating conditions. The majority of cars, light trucks, and tractors in use today will give excellent service on this type of oil. Our new Blue Circle Motor Oil ranks at the very top of this classification.

PREMIUM-TYPE. "Premium" motor oils have service qualities not found in regular oils. Premium oils are usually solvent refined and they have properties that enable them to give extra performance under more severe operating conditions. Our popular Illini Motor Oil continues to excel in the premium classification.

HEAVY DUTY-TYPE. "Heavy Duty" motor oils are designed for the most severe service found in such engines as army tanks, heavy trucks and buses, and large diesels. In average Illinois farming operations, the principal uses for this type of oils are in diesel engines and in trucks hauling heavy loads at high speeds. Our I.F.S. Heavy Duty is a top-quality heavy duty oil which meets the exacting requirements of the U. S. Army tests known as "2-104 B."

CONSIDER PRICE AND QUALITY TOGETHER

Price comparisons between classes of oils or within classes of oils can be misleading. There are wide ranges of quality in each of the three type classifications. Some are cheaper than others. Some are better than others. Therefore, price and quality must be evaluated together. In the final analysis, the good name of the supplier should be given full consideration.

TO HELP OUR PATRONS BUY WISELY . . .

Buying motor oils is like selecting coal There are different kinds of stoves—hard coal stoves, soft coal stoves, wood burning stoves. To buy high cost anthracite coal for a wood burning stove can be just as ill-advised as buying a heavy duty motor oil for an engine that works efficiently and more economically on a "regular" motor oil.

If you have been using Illini Premium Motor Oil and if your motors call for a Premium motor oil, we do not advise you to change. However, if you have been using our regular Blue Seal Motor Oil or some other good regular motor oil, you can now change to the new improved Blue Circle Motor Oil and have every assurance of getting the very best in quality—and safe lubrication at very reasonable cost.

For more detailed information on this new product, see your salesman who drives the blue and white truck.

BLUE CIRCLE MOTOR OIL IS SOLD EXCLUSIVELY BY

Farm Bureau Folks In Pictures

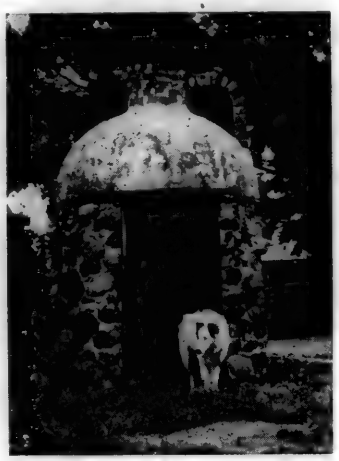
Lassie appears to wonder what kind of a creature Myrtle the Turtle really is. The pets are owned by Joe and Judy Barcroft, Lawrence county.

Peggy Ann Hallen, Cook county, says "Gee Grandpa what're you doing," as she watches him divide iris roots at their flower and truck farm.

Harlen Reed holds potato which grew between the points of a horseshoe dug up on the farm of Clarence Schmitz, Shelby county.

Miss Leona Fischer, Stephenson county, sends along this impressive shot she took at Montmorency Falls, Quebec, Canada.

Entries are judged on originality, clearness, and interest. Avoid shots of persons merely looking toward camera. Best picture receives $5, others published $1. If you wish to have photographs returned enclose a self addressed stamped envelope.



H. T. Marshall, La Salle county, was impressed by this smoke house of colored stones he saw while visiting in Iowa.

Left: Melvin and Harley Dahler, Montgomery county, refuel "George" their model airplane which they fly to their heart's content. Right: A Peoria county group enjoys the sun at Cypress Gardens in Florida during IAA tour. Left to right: Charles Haller, Mrs. Haller, Mrs. John Morris, Mrs. Albert Hayes, Hayes and Morris. Model plane picture wins $5 award.

Young Farmers Approve Co-op Courses

SURPRISE at the scope of farmer-owned and operated business enterprises in Illinois was expressed by young farmers attending the IAA short course at the University of Illinois, Jan. 30 through Feb. 3.

Sponsored by the Illinois Agricultural Association during Farm and Home Week, the IAA Co-op Training Course For Farm Youth presented a highly-concentrated four-day program aimed at acquainting 255 outstanding farm youth with the operations of the IAA's 16 farmer-owned and controlled associated companies.

"I thought farming was just knowing how to run a farm efficiently," one lad confessed. "Now I can see that you can be a good farmer and still lose out if you don't back your farm co-ops and the Farm Bureau."

Although many were surprised at the extent of farmer-controlled business activity in Illinois, they didn't stay off-balance for long. As IAA staffers fired more and more facts at the young farmers a chain reaction was set off. The young men became more and more curious and kept asking questions.

An IAA officer who has spoken before hundreds of farm groups said "I never heard anything like it. They bristled with curiosity. And they ask more intelligent questions than most adult audiences."

"What," they asked, "is the relationship between the Board of Trade and the Illinois Grain Corporation?" "How can the IAA insurance company sell auto insurance so cheaply?" "How can we safeguard our farm co-ops from communistic influences?" "How can we educate the public to understand co-operatives?" "Why do we let city people join Farm Bureau when all they want is the benefit of the low-cost car insurance?" "Will farm co-ops lower the standard of living of non-farm groups?" "What is a mutual insurance company?" "Will an increase in the gas tax actually help country roads or will most of it go for paved highways?"

These were some of the thought-provoking questions asked by the young farmers representing Rural Youth, 4-H Clubs, and Future Farmer organizations from every section of the state.

Let's Follow a Student

To show what a typical farm youth did during the IAA Co-op Training Course for Farm Youth, the IAA cameraman followed Clyde Miller, 18, around from the time he registered (left) until he bade his newly-made friends goodbye. Clyde is from Erie in Whiteside county where he and his father farm 372 acres. He plans to farm two years before entering the College of Agriculture. He has a brother and two sisters, is a member of Rural Youth and has served as president and secretary of his FFA chapter.

Left: Clyde Miller, Whiteside county, registers with John Cox, IAA director of rural school relations, for IAA Co-op Training Course. Lower left he checks in at dormitory, unpacks bag, and chats with Hugh Wetzel, his youth leader. Below: Miller (center) talks over the school with other students. Left to right: Dale Anderson, James Free, Ray Musser, all of Henderson county; Miller; Don Hand, and Dave Stone, Whiteside; and Paul Rabe, Adams. *(See next two pages).*

Dollars for questions is what Illinois Farm Supply President Fred Herndon is offering young farmer students at IAA Training Course during panel discussion.

Co-op Training Course in Pictures

7. With Bob Heggemeier (right), Washington county, Miller meets IAA President Charles B. Shuman. 8. Miller stays after class to ask a question about co-ops.

9. Miller hears J. G. Dorward, manager of the Pana Refinery owned by Illinois Farm Supply, explain petroleum processing. 10. He takes part in public speaking contest preliminaries and qualifies. 11. He is elected to a mock co-op board of directors with six other co-op training course students which is shown interviewing a candidate for manager at right. President Shuman urges the young men in attendance to keep well-informed on farm topics. 13. Miller takes time to write home explaining his experiences and the progress of the school to his folks.

14. Miller plays leading role in unrehearsed comedy skit. 15. He is elected secretary of mock co-op board. Pres. Charles Thornton looks on.

1949 BOARD of DIRECTORS
Cooperative Training For Farm Youth

1. Student Clyde Miller, Whiteside, (extreme top left) slips into first class session. 2. He listens intently to 3. George Metzger, IAA field secetary, explain the history of Farm Bureau. 4. Classes are held in College of Commerce building at Champaign. 5. Miller (second from left) discusses first day's classes with other students. 6. During small discussion session dealing with various phases of marketing, Miller receives answer to question he asked George H. Iiftner, IAA director of grain marketing (standing).

...ller role in unrehearsed ...le is elected secretary ... Pres. Charles Thorn...ets on.

16. Miller returns to smaller classroom session. 17. He hears Dr. L. F. Stice of the College of Agriculture discuss causes of farm price trends. 18. He has a smile of triumph as he is named a finalist in speaking contest with five others. 19. On the last day of the school, Miller bids IAA Sec'y of General Services I. E. Parett goodbye as they leave the College of Commerce where school was held. 20. Miller returns to University dormitory, packs his bag and prepares to take leave of left to right; Dave Stone, Whiteside; Virgil Mittelberg, Adams; and Gerald Miller, Lee, (at right, bottom step).

Nothing For Agriculture

While Three Engineering Buildings Near Completion at State University Ag College Lacks Veterinary, Home Economics, and Engineering Facilities

THE PICTURES of four buildings on this page tell one of the reasons why young farm boys leave the profession of agriculture to become engineers in the city.

The wooden frame structure in the picture at the bottom of the page is the present agricultural engineering building on the University of Illinois campus.

It was built in 1905-06 at a cost of about $40,000. It is wholly inadequate for training young farmers in modern day mechanized farming.

Contrast this with the pictures of the three modern engineering buildings being completed on the same campus at a total estimated cost of $6,835,000.

The Chemistry and Chemical Engineering building will be ready in September, 1949. It is estimated to cost $3,402,000.

The Electrical Engineering building is ready now at an estimated cost of $1,661,000.

The Mechanical Engineering building will cost $1,772,000.

If your boy wants to be a chemical engineer, electrical engineer or mechanical engineer, he has the most modern building in the world where top technical facilities can be housed and used.

If your boy wants to study agricultural engineering and keep up with the latest research and advances in mechanization, he is handicapped by lack of facilities.

The present agricultural engineering building is structurally substandard, and a potential fire and accident hazard. It was erected more than 40 years ago for the farm mechanics division of the department of agronomy.

Since that time there has been a revolution in the business of farming. Agricultural engineering is important in today's agriculture because of advances in mechanization, soil and water conservation, rural electric service, building and housing needs, and emphasis on food preparation, processing and storage.

It doesn't take too much figuring to see that a new agricultural engineering building is needed.

As President Charles B. Shuman of the Illinois Agricultural Association has said, "The College of Agriculture building program has been too long neglected."

That is why the IAA is pledged to support appropriations for an agricultural engineering building, an agricultural laboratory building, a veterinary college building and a home economics building.

A bill seeking an appropriation of $2,250,000 for building and equipping a veterinary college has already been introduced. Bills on the other agricultural buildings will be introduced later.

To illustrate our argument that the building program of the University of Illinois College of Agriculture has been sadly neglected take a look at the agricultural engineering building (below) and compare it with the chemical, electrical and mechanical engineering buildings (left).

Extra fertility means higher yields—and higher yields mean added income from the same acreage of crops.

Crops require an adequate supply of essential plant food nutrients if they are to produce maximum yields. Nitrogen—phosphorus—potash—these are the essential plant foods usually deficient in our Illinois soils. A lack of any one or more will limit crop yields.

FOLLOW THIS 3-POINT PROGRAM—

1. Have your soil tested.
2. Consult with your Farm Adviser.
3. Apply recommended plant foods to deficient soils.

Offer Wool Services

Grower Can Sell His Clip Through IAA Marketing Co-op on (1) Basis of Grade and Quality or (2) Simply Sell Outright at Shearing Time

TWO WOOL marketing services for the 1949 clip year are being offered by the Illinois Wool Marketing Association, an affiliate of the Illinois Agricultural Association.

First, the grower who wishes to market his wool on the basis of grade and quality may do so; and second, the wool grower who wishes to sell his wool outright at shearing time may do so.

Under the first or consignment method, the grower delivers his wool to the representative of the Illinois Wool Marketing Association in the county where he lives. This man will weigh the wool, mark it for shipment and will then issue a receipt covering the weight of the wool. It is then shipped to the Association's warehouse at Paris in Edgar county where it will be graded.

Following grading, an advanced payment will be mailed direct to the grower. When the wool is sold the grower will receive a final payment representing the full sale price of the wool less the Association handling charge. All wool marketed by this method is completely covered by insurance protecting against loss from fire, theft, water damage, etc.

The Association also will furnish wool bags and twine free of charge to farmers who market their wool through the IAA affiliated wool marketing organization. This latter method of marketing assures the grower full market price for his wool based upon grade and quality.

Under the second or purchase method there is provided a daily cash market for wool based on average market quotations prevailing at the time. These prices are subject to change at any time and will be based upon clear, native fleece wool with discounts applied to wools carrying burrs, chaff, haystems, and seeds, black and gray wools, and the short staple lamb and fed wools.

The grower using this program will deliver his wool to the county representative of the Illinois Wool Marketing Association which will inspect the wool, weigh it and pay for the wool based upon that inspection and weight.

Sam Sorrells Retires

Sam Sorrells, Ass't Secretary of Marketing, Retires This Month After 27 Years with IAA

WHEN farmers and Farm Bureau employees refer to someone as "one of the old-timers in Farm Bureau" you can bet they say so with reverence and respect. Because it was these men, battling discouraging odds, who did so much to make Farm Bureau the strong champion of agriculture it is today.

One of these organization pioneers in the middle years (early twenties to early thirties) of Farm Bureau was Sam Sorrells of Montgomery county who retires this month after 27 years association with the Illinois Agricultural Association.

Sam Sorrells (left) drops in to see Sam Russell, IAA director of livestock marketing, before retiring from 27 years of service with the IAA. They are shown discussing their favorite subject — livestock marketing.

Sam has done a little of everything in Farm Bureau from serving as an IAA director to traveling the southern part of the state as a livestock fieldman. His latest title was assistant secretary of marketing. He operated a farm at Raymond now being run by his only son, Merrill.

As a charter member of the Montgomery County Farm Bureau he helped organize and served on the board of his county shipping association. In 1922 he was asked by the IAA to go to Wayne county to help set up a shipping association. Two years later he was elected to the IAA board on which he served until 1937.

He helped organize the Illinois Farm Supply Company and served on the first board of directors besides serving 14 years on his own county service company board.

In 1924 he helped organize the Illinois Farm Bureau Serum Association and served on the first board of directors from '24 until '35 as director and president.

He helped organize the Illinois Livestock Marketing Association and served as its president from 1931 until 1937. He was also a member of the board of the National Livestock Marketing Association for two years.

Sorrells was elected to the St. Louis Producers' board in 1931 and was a member until 1940. He also served on the board of the old Illinois Soybean Marketing Association and was chairman of the marketing committee of the IAA board from 1926 to 1937.

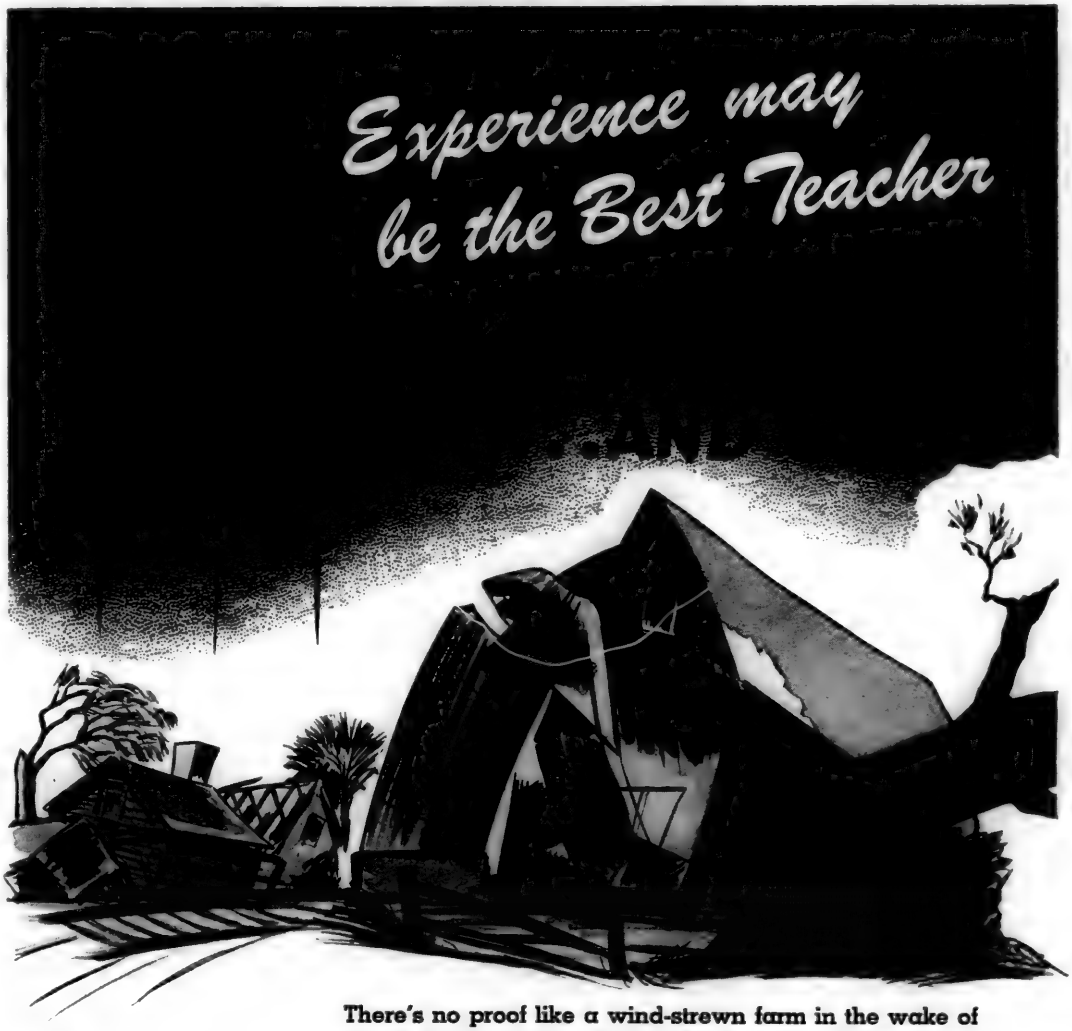
On March 1, 1940, Sam joined the field staff of the IAA livestock marketing department until several months ago when he became assistant secretary of marketing. During his career as livestock fieldman, he covered 34 southern Illinois counties and became one of the best known IAA men in the area.

Complimented on his long years of service and on his contribution to Farm Bureau, Sam said "It's been a great experience working for the good of Illinois agriculture, but to tell you the truth, I believe I got more out of Farm Bureau than Farm Bureau got out of me." Sam said he will take things easy for a while. He had no definite plans for the future.

ILLINOIS PLANT FOOD

Last year Illinois farmers spread about a million tons of rock phosphate, enough to treat about one million acres, used 5.3 million tons of limestone, and 11,000 tons of potash, all the potash that was available.

Experience may be the Best Teacher



There's no proof like a wind-strewn farm in the wake of a bad storm to argue the need for windstorm insurance. Chances are that a windstorm won't strike at your farm this year. But the trouble is that you never KNOW . . . until it comes . . . when the damage is done. And experience is a costly teacher! Over 1,000 Farm Bureau members who prefer not to take the chance COLLECT windstorm claims every year. Before summer storms threaten your security, ask your Country Mutual Fire representative how little it costs to shelter our buildings under the protection of a windstorm policy.

RURAL YOUTH ACTIVITIES

By ELLSWORTH D. LYON, Director
Young People's Activities

E. D. Lyon gives each of the winners in the IAA Co-op Training Course talks fest finals envelopes containing new dollar bills. Left to right: (seated) Don Hand, Robert Walker, David Stolz, and Glen Renken; (standing) Charles Van Bogaert, Clyde Miller, Charles Thornton, Robert Builta, Dale Espel and Russell Scheeler. Absent when picture was made were: Harold Holz and Robert Ripplemeyer.

Co-op Training Course

Rural Youth, FFA, and 4-H boys lost their identity as members of particular organizations in common fellowship at the IAA sponsored Co-op Training Course held at the University of Illinois during Farm and Home Week. They ate together, sat in the same classes, sang together, visited in the barracks, and under expert leadership from U. of I. and IAA and affiliated cooperatives engaged in a discussion of the common financial problems facing young farmers.

The 255 young farmers present from 94 counties together with the earnest participation on the part of all enrolled, stand as positive witness to the popularity of the Co-op Training Course. Of the 255 present, 51 took part in the talk fest. A number of young men who did not speak said that if they ever had another opportunity like that again they would surely take part. Talkfesting among Rural Youth groups has been a great factor for many years in personality and leadership development. Top-notchers in the talk fest were: Robert Builta, McLean county; Harold Holz, Will; Clyde Miller, Whiteside; Charles Thornton, Sangamon; Dale Espel, Bureau; Russell Scheeler, Peoria; and Charles Van Bogaert, Kane. Top-flyte speakers were: Robert Walker, Johnson; Donald Hand, Whiteside; David Stolz, Tazewell; Glen Renken, Mason; and Robert Ripplemeyer, Monroe.

An outstanding feature of the Co-op Training Course was the formation of the Illini County Service Company under the direction of W. B. Peterson, Director of Distribution, Illinois Farm Supply Company. The officers and directors of this imaginary service company were made up of the top-notch speakers in the talk fest. Charles Thornton was elected president, Clyde Miller secretary, and Harold Holz treasurer. For the position of manager a number of top-flyte talkers were interviewed by Peterson and the board. Don Hand was chosen manager. Awards in addition to the places on the co-op board were crisp one dollar bills, three each for top-notchers and one for top-flytes.

Cooperation of the counties throughout Illinois in preparing for the Co-op Training Course was of the best. First of all there was universal acceptance of the idea of a Co-op Training Course. Then came cooperation between FFA, 4-H and Rural Youth leaders in selecting the members from each of the three organizations. This cooperation really is not surprising, but it is appreciated. For some time there had been a demand that the IAA engage in some special activity for the training of farm youth to enable them to carry on the various agricultural activities developed by their parents. The response by the county leaders and by the youths themselves is an indication that a need is being met in the Co-op Training Course. From a questionnaire filled out by the students enrolled in the course it was found that there was a wholehearted request for the continuance of the Co-op Training Course. About one-fourth of the answers recommended continuance on the county level only. The majority of the remainder thought that instruction should continue on both the county and the state levels.

Community Service Program

On Feb. 8, 9, and 10, district meetings were held in Belleville, Jacksonville, and Pontiac to point up the Community Service Achievement Program sponsored by the GM&O Railroad through the University of Illinois. The features of this program are of such fine quality that all of the counties of Illinois will be helped in community activity projects when the details are finally outlined.

County News

Rural Youth played important roles in the music and drama festival at Farm and Home Week. Perry county's Rural Youth trio sang "Oh, Dear, What Can the Matter Be" and "Make Believe," and received an "A" rating.

Will's one-act play "Hugo in a Hurry" placed with an "A-".

Washington's duet sang "Pagan Love Song" and "Rose Marie" and rated "A".

Madison's one-act play, "High Windows," received a "B+" rating.

The Belleville Exchange Club was host to St. Clair in January showing the group through the Federal Reserve Bank at St. Louis, and the St. Louis Star Times. A system of visiting back and forth was begun three years ago between the Rural Youth and the Exchange Club so that there might be mutual understanding between them about country and city problems. Good reports indicate that the relationship has been pleasant.

Brown had the privilege recently of listening to local talent at a Rural Youth meeting where Mayor Leonard Robins of Mount Sterling, manager of the local Honey Producers' Cooperative spoke on "Bees and their Value to Farmers."

Whiteside's big invitational basketball tournament is scheduled for March 12. Team participation was determined by intra-county plays among the four Rural Youth groups. A number of the surrounding counties will participate in this annual event. Play will begin at 10 a.m.

Stephenson cooperated with the county and state health program in January by visiting the X-ray unit for chest examinations. This program provides a good opportunity for real com-

IAA, AFBF Stand Firm on Flexible Support Prices

Illinois Congressmen are entertained in Washington at a dinner given by the Illinois Agricultural Association. President Charles B. Shuman is sixth from right (standing). AFBF men attending were Tom Cowden (left), President Allan Kline (standing, second from left); Donald Kirkpatrick, (sixth from left, standing), and Roger Fleming (second from right, standing).

BOARD of directors of the American Farm Bureau Federation is standing firm in its backing of the Agricultural Act of 1948 and its provisions for flexible price supports.

This is the same position as the Illinois Agricultural Association.

The board of the national Farm Bureau took action to back up its original support of flexible price supports at a meeting in Washington late in January.

President Allan B. Kline of the AFBF in summing up the Farm Bureau's position said in part:

"The law (the Agricultural Act of 1948 providing flexible price supports) was passed last summer with practically unanimous support of the state Farm Bureaus, and with a strong bi-partisan support in Congress.

"President Truman had previously asked Congress to pass a bill with flexible price supports, and the platforms of both major political parties called for this type of price support.

"Since the present Congress has convened, President Truman's Council of Economic Advisers has pointed the necessity of maintaining adequate purchasing power, but called attention to the weakness of supports at too high levels, and endorsed the flexible price support provisions of the present law."

On the oleo-butter issue, the AFBF board adopted the following position:

"We favor removal of special taxes on margarine, if and when satisfactory means are taken to identify margarine and butter."

This position is the same as that taken by the Illinois Agricultural Association.

AFBF Secretary Wilfred Shaw, former director of milk marketing for the IAA, said he thought this position was fair to both consumer and producer.

Farmers do not believe in "penalizing the production or sale of any good food product by means of a special tax or other form of discrimination," Shaw said.

"But we do insist that consumers have the right to know what they are buying and that the dairyman is entitled to protection of butter's identity."

Knock Out Weeds and Insects as soon as they start!

Weeds rob crop production and waste time and profit. Knock these annoying pests out of every fence-row, lane, and farm stead. 2,4-D provides the easy way and gets rid of uncontrollable weeds growing in farm crops.

Flies are a deadly menace to health, farm animals, and farm production. DDT proved very effective last year, in ridding many Illinois farms of flies. It will do a good job for you again this year, if given a chance.

Your Blue Seal Trucksalesman will supply you with the right material at the right time.

50% DDT — **WETTABLE POWDER** is a very economical insecticide for controlling flies around livestock and farm buildings.

25% DDT — **EMULSION CONCENTRATE** is a liquid concentrate which mixes easily with water, and is very effective in controlling flies and farm insects.

2,4-D AMINE — **AMINE WEED KILLER** Liquid is a splendid selective weed killer for controlling many common farm weeds.

2,4-D ESTER — **ESTER WEED KILLER** is especially prepared for controlling hard-to-kill weeds and woody plants.

Get 2,4-D and DDT for your farm in time for early use!

ORDER NOW - SAVE 5%

Place your order during March, and save 5%. Your early order will insure delivery to your farm in April and May, ahead of your weed problems.

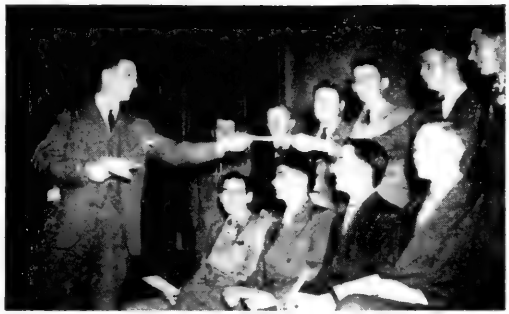
RURAL YOUTH ACTIVITIES

By ELLSWORTH D. LYON, Director
Young People's Activities



E. D. Lyon gives each of the winners in the IAA Co-op Training Course talks fest finals envelopes containing new dollar bills. Left to right: (seated) Don Hand, Robert Walker, David Stolz, and Glen Renken; (standing) Charles Van Bogaert, Clyde Miller, Charles Thornton, Robert Builta, Dale Espel and Russell Scheeler. Absent when picture was made were: Harold Holz and Robert Ripplemeyer.

Co-op Training Course

Rural Youth, FFA, and 4-H boys lost their identity as members of particular organizations in common fellowship at the IAA sponsored Co-op Training Course held at the University of Illinois during Farm and Home Week. They ate together, sat in the same classes, sang together, visited in the barracks, and under expert leadership from U. of I. and IAA and affiliated cooperatives engaged in a discussion of the common financial problems facing young farmers.

The 255 young farmers present from 94 counties together with the earnest participation on the part of all enrolled, stand as positive witness to the popularity of the Co-op Training Course. Of the 255 present, 51 took part in the talk fest. A number of young men who did not speak said that if they ever had another opportunity like that again they would surely take part. Talkfesting among Rural Youth groups has been a great factor for many years in personality and leadership development. Top-notchers in the talk fest were: Robert Builta, McLean county; Harold Holz, Will; Clyde Miller, Whiteside; Charles Thornton, Sangamon; Dale Espel, Bureau; Russell Scheeler, Peoria; and Charles Van Bogaert, Kane. Top-flyte speakers were: Robert Walker, Johnson; Donald Hand, Whiteside; David Stolz, Tazewell; Glen Renken, Mason; and Robert Ripplemeyer, Monroe.

An outstanding feature of the Co-op Training Course was the formation of the Illini County Service Company under the direction of W. B. Peterson, Director of Distribution, Illinois Farm Supply Company. The officers and directors of this imaginary service company were made up of the top-notch speakers in the talk fest. Charles Thornton was elected president, Clyde Miller secretary, and Harold Holz treasurer. For the position of manager a number of top-flyte talkers were interviewed by Peterson and the board. Don Hand was chosen manager. Awards in addition to the places on the co-op board were crisp one dollar bills, three each for top-notchers and one for top-flytes.

Cooperation of the counties throughout Illinois in preparing for the Co-op Training Course was of the best. First of all there was universal acceptance of the idea of a Co-op Training Course. Then came cooperation between FFA, 4-H and Rural Youth leaders in selecting the members from each of the three organizations. This cooperation really is not surprising, but it is appreciated. For some time there had been a demand that the IAA engage in some special activity for the training of farm youth to enable them to carry on the various agricultural activities developed by their parents. The response by the county leaders and by the youths themselves is an indication that a need is being met in the Co-op Training Course. From a questionnaire filled out by the students enrolled in the course it was found that there was a wholehearted request for the continuance of the Co-op Training Course. About one-fourth of the answers recommended continuance on the county level only. The majority of the remainder thought that instruction should continue on both the county and the state levels.

Early in February, Farm Bureau representatives testified before the House Committee on Education and Labor on the raising of the 40-cent minimum wage for the nation to 75 cents.

The Farm Bureau asked that all exemptions for agriculture in the present wage-hour act be maintained. It also asked that the minimum wage for non-agricultural workers be tied to a cost-of-living index if the law is revised .

The AFBF board also voiced its opposition to compulsory health insurance programs such as proposed in the Murray bill.

The board said, "We favor adequate health services, accessible at all times to citizens through voluntary programs providing hospital and medical care, facilities to train more doctors and nurses, establishment of local public health units and broad programs of health education."

Roy Yang, new director of agriculture for Illinois, shares Farm and Home Week platform with President Charles B. Shuman of the Illinois Agricultural Association and Dean H. P. Rusk of the University of Illinois College of Agriculture.

LETTERS TO THE EDITOR

REGARDS FROM ED O'NEAL

IT gave me a great thrill to see you folks, as it always has, during your visit to the TVA. I just wish the farmers of the U.S.A. would get our soil fertility bill that we proposed year before last passed. We certainly need it.

Warm personal regards to the farmers of Illinois.

Edward A. O'Neal
Florence, Ala.

DISAGREES

I CAN'T quite agree with the thinking of President Shuman; re-Gold Bricks and 90 per cent of parity per the February issue. I firmly believe we should have 90 per cent of parity for all we produce, regardless of what we produce. However, I don't believe we should produce so much and here is how I would recommend correcting the situation as listed under a 10 point program.

1. Estimate the Country and World needs with respect to grain or other products, on the basis of the last 20 years plus an ample reserve (after the first year the stocks on hand would supply the reserve.)

2. By statistics covering state averages and etc., divide the amount needed over the number of tillable acres under cultivation so that each farm has a base.

3. The balance of the acreage after a base had been established must by law be put into some soil conserving legume or grass other than grain or other products.

4. This type program should be voted in or out 100 per cent by the farmers themselves with 75 per cent of the farmers being (for or against) the determining factor. Either everyone in or everyone out of the program. The vote should be taken two months before the start of the next fiscal year.

5. Re-establishment of the steel type grain bins used under the "Ever Normal Granary Program".

6. Change our reserve of stored grain for current season grain each time production warrants it or grain authorities deem it feasible from the standpoint of grain deterioration.

7. Complete administration by representatives of farm organizations duly elected by the farmers in each individual state. Absolutely no government interference other than of a financial nature with backing on the basis of 90 per cent of parity. (The financial outlay should be small since production would not supply a ruinous surplus.)

8. A complete re-estimate and inventory as soon as the present crop is harvested so as in the case of wheat, for instance, the base could be established in time for fall plantings. Other products would give more time for estimates which could be determined before the start of the fiscal year.

9. Extremely stiff penalties for violators so as to make non-cooperation unprofitable.

10. Reasonable dues according to need to cover administration, research and etc. necessary to make such a program function. Too be divided on an acreage pro-rata basis.

This plan may still seem quite loosely thrown together, but it comes from a quite a bit of thought on the subject. If some program isn't followed the surplus will be tremendous regardless of the fact that the government may get down to 30 per cent of parity or below. Evidenced by the fact that in 1929-32 farmers still produced at full capacity even though prices were ruinously low. Furthermore we would be keeping our fertility on the farms where it belongs and still be adequately providing income for the farmers, food for the people and a reserve in the event of a crop below normal.

How about sponsoring a contest of some sort to get some ideas along this line from men who are much older and smarter than I am?

Oliver J. Hem
Kane County

In answer, President Shuman says in part: "I appreciate your thoughtful suggestions on the farm program. I believe your ideas would be very valuable if we do go to a constantly administered program. I can assure you that we will give your suggestions careful consideration."

BOUQUETS

I HAVE just finished digesting the January issue of the RECORD and I want to congratulate you for doing such a fine job.

I have been going to write to you for sometime to tell you that I think the RECORD is getting better and better, but this last annual meeting issue is the best yet.

L. M. Knox

NEWS and VIEWS

NEW ILLINOIS HOME BUREAU OFFICERS

New officers and directors named at the 25th annual meeting of the Illinois Home Bureau Federation, left to right, are: Mrs. Herman Stiehr, Lake county, vice-president; Mrs. C. B. Kull, Coles, treasurer; Mrs. Harold Bower, Kendall; Mrs. Edwin Schrader, Lawrence, and Mrs. Emmett Dunham, Warren, directors.

HOME BUREAU MEETS

Top Organization Project for 1949 is a New Home Economics Building at the University of Illinois

SECURING a new home economics building on the University of Illinois campus is one of the top projects of the Illinois Home Bureau Federation for 1949, according to the resolutions adopted at the 25th annual meeting held in February in conjunction with Farm and Home Week.

Mrs. George McCoy

A bill seeking appropriations for such a building is to be introduced into the state legislature under the joint sponsorship of the Federation and the Illinois Agricultural Association.

The home economics building is listed on the university's third list of proposed buildings with a priority "A" as adopted in preparation of the 1949-51 building program. The highest priority listing is "AAA."

Need for the new home economics building was explained to the Federation meeting by Mrs. Kathryn Van Aken Burns, acting head of the university home economics department.

Another project voted by the Federation was to cooperate with the Associated Women of the American Farm Bureau Federation in bringing a German woman from one of the newly organized women's groups there to the United States to study extension work. Such a delegate would live in a farm home and observe the part played by American women in the activities of their communities.

At least $1,000 is necessary to bring a German woman into an American farm home to live for a number of months. If the Federation is unable through voluntary contributions to raise $1,000 it will cooperate with another state federation in the program.

Miss Myra Robinson, Edgar county, Federation president, reported a gain of more than 8,000 active members during 1948. The total membership of the Federation on Jan. 1, of active and associate was 49,567.

Counties listed on the honor roll for making more than a 20 per cent gain in membership are as follows with their percentage gains: Lawrence, 63; Wayne, 52; White, 28; Richland, 27, and Sangamon, 21. Counties making more than 10 per cent gain with their percentages are: McLean, 14; Williamson, 13; Stark, 12; Stephenson, 11, and Schuyler-Brown, 10.

Champaign County Home Bureau was recognized with one of the Illinois Safe Home awards. Mrs George McCoy, Philo, received the award for the county which had 448 persons enrolled in the project. Richland county received the other award, with 136 persons enrolled and 80 reporting no accidents. Mrs. Lloyd Burgner, Dundas, accepted this award for her county.

Champaign county had the largest per cent of enrolled families reporting no home accidents in the program. There were 12,000 families in 49 counties participating in the safe home program.

Mrs. Helendeen Dodderidge, information specialist, production marketing administration, Washington, D. C., told the federation gathering that "rural women, generally speaking, know more about the role agriculture plays in our own economy than do urban people." But I am not certain that we as rural people thoroughly understand the interdependence of all of our people in maintaining a stable economy."

In the field of her topic, "International Understanding," Mrs. Dodderidge said that many of the things American women do are misinterpreted by women in other lands. Some of the things done with the best of intentions are construed as being detrimental to the interests of other countries by their inhabitants.

Mrs. Herman Stiehr, Waukegan, Lake county, was elected vice-president of the Federation at the annual business meeting. Mrs. C. B. Kull, Mattoon, Coles county, was elected treasurer. Other officers hold over for another year.

New directors named included: Mrs. Harold Bower, Oswego, Kendall county, northeast district; Mrs. Edwin Schrader, Bridgeport, Lawrence county, southeast district; Mrs. Emmett Dunham, Monmouth, Warren county, west central district.

The Home Bureau resolutions cited the fact that "facilities for higher learning for the youth of the state" in the southern third of the state are "glaringly inadequate," because there is only one university with a radius of 200 miles as

for HOMEMAKERS

RECEIVES AWARD

Mrs. Lloyd Burgner, Richland county (right) receives safe homes award for her county from Home Bureau President, Miss Myra Robinson.

compared with one for every 50-mile radius in the northern two-thirds of the state. The Home Bureau also pointed out that the state appropriations for colleges and universities for 1947-49 were in ratio of one to 17 in favor of the northern part of the state. Members were urged to contact the governor of Illinois and representatives to correct this situation.

Other Home Bureau resolutions urged the membership to be an active and informed electorate, condemned factors responsible for the acute housing shortage, recommended speeding up the present Rural Youth and 4-H programs by providing better facilities for recreation, increasing recognitions and procuring more trained leaders, demanded that rural health standards be improved by more health education, more rural doctors and more hospitals, and recommended that women take an active part in disseminating information about soil conservation.

The Home Bureau pledged its support to the IAA in efforts to get a building for the College of Veterinary Medicine.

LAMPSHADE SCHOOL

Kane County Home Bureau recently held a lampshade school at St. Charles Community Center. Silk, parchment, and pleated shades were made by the 50 women attending. Mrs. Louis Templin, Watch City, was instructor.

PEANUT MUFFINS

2 cups sifted enriched flour
3 teaspoons baking powder
¼ cup sugar
½ teaspoon salt
½ cup chopped peanuts
1 egg
4 tablespoons melted shortening

Sift together flour, baking powder, salt, and sugar. Add chopped peanuts. Beat egg and add shortening. Add to flour mixture and stir just enough to moisten the flour. Fill greased muffin pans half full and bake in moderately hot oven (425 degrees F.) 20 to 25 minutes. Yield: 16 muffins. Note: Other nuts may be used instead of peanuts.

LEARN RUG-MAKING

Randolph and Franklin county women joined last fall in a day-long meeting at Benton to learn ways to make rugs at home. They were taught by Miss Marian Kaeser, College of Agriculture specialist in home furnishings.

EVENING ACCESSORIES

An evening hood and matching bag are little luxuries that any young sewer can make and keep within her clothing budget. This set combines marquisette and taffeta in equal parts and a sprinkling of sequins. The hood features an off-the-face cuff and soft round collar of taffeta. The drawstring bag, circular at the bottom, turns back into a petal-shaped cuff at the top. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Ill.

DINNER CLOTH

An exquisite dinner cloth for special days can be made by any woman who crochets. Three wide bands of filet crochet are inserted between lengths of linen and the whole is edged with a dainty border. This takes far less time than crocheting an entire cloth and yet retains all the beauty of a handmade tablecloth. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois.

WINTER SET

This attractive hat, mitten and sock set is an excellent suggestion for a gift and you can easily make it yourself. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois.

NEWS and VIEWS

NEW ILLINOIS HOME BUREAU OFFICERS

New officers and directors named at the 25th annual meeting of the Illinois Home Bureau Federation, left to right, are: Mrs. Herman Stiehr, Lake county, vice-president; Mrs. C. B. Kull, Coles, treasurer; Mrs. Harold Bower, Kendall; Mrs. Edwin Schrader, Lawrence, and Mrs. Emmett Dunham, Warren, directors.

HOME BUREAU MEETS

Top Organization Project for 1949 is a New Home Economics Building at the University of Illinois

SECURING a new home economics building on the University of Illinois campus is one of the top projects of the Illinois Home Bureau Federation for 1949, according to the resolutions adopted at the 25th annual meeting held in February in conjunction with Farm and Home Week.

Mrs. George McCoy

A bill seeking appropriations for such a building is to be introduced into the state legislature under the joint sponsorship of the Federation and the Illinois Agricultural Association.

The home economics building is listed on the university's third list of proposed buildings with a priority "A" as adopted in preparation of the 1949-51 building program. The highest priority listing is "AAA."

Need for the new home economics building was explained to the Federation meeting by Mrs. Kathryn Van Aken Burns, acting head of the university home economics department.

Another project voted by the Federation was to cooperate with the Associated Women of the American Farm Bureau Federation in bringing a German woman from one of the newly organized women's groups there to the United States to study extension work. Such a delegate would live in a farm home and observe the part played by American women in the activities of their communities.

At least $1,000 is necessary to bring a German woman into an American farm home to live for a number of months. If the Federation is unable through voluntary contributions to raise $1,000 it will cooperate with another state federation in the program.

Miss Myra Robinson, Edgar county, Federation president, reported a gain of more than 8,000 active members during 1948. The total membership of the Federation on Jan. 1, of active and associate was 49,567.

Counties listed on the honor roll for making more than a 20 per cent gain in membership are as follows with their percentage gains: Lawrence, 63; Wayne, 52; White, 28; Richland, 27, and Sangamon, 21. Counties making more than 10 per cent gain with their percentages are: McLean, 14; Williamson, 13; Stark, 12; Stephenson, 11, and Schuyler-Brown, 10.

Champaign County Home Bureau was recognized with one of the Illinois Safe Home awards. Mrs George McCoy, Philo, received the award for the county which had 448 persons enrolled in the project. Richland county received the other award, with 136 persons enrolled and 80 reporting no accidents. Mrs. Lloyd Burgner, Dundas, accepted this award for her county.

Champaign county had the largest per cent of enrolled families reporting no home accidents in the program. There were 12,000 families in 49 counties participating in the safe home program.

Mrs. Helendeen Dodderidge, information specialist, production marketing administration, Washington, D. C., told the federation gathering that "rural women, generally speaking, know more about the role agriculture plays in our own economy than do urban people." But I am not certain that we as rural people thoroughly understand the interdependence of all of our people in maintaining a stable economy."

In the field of her topic, "International Understanding," Mrs. Dodderidge said that many of the things American women do are misinterpreted by women in other lands. Some of the things done with the best of intentions are construed as being detrimental to the interests of other countries by their inhabitants.

Mrs. Herman Stiehr, Waukegan, Lake county, was elected vice-president of the Federation at the annual business meeting. Mrs. C. B. Kull, Mattoon, Coles county, was elected treasurer. Other officers hold over for another year.

New directors named included: Mrs. Harold Bower, Oswego, Kendall county northeast district; Mrs. Edwin Schrader, Bridgeport, Lawrence county, southeast district; Mrs. Emmett Dunham, Monmouth, Warren county, west central district.

The Home Bureau resolutions cited the fact that "facilities for higher learning for the youth of the state" in the southern third of the state are "glaringly inadequate," because there is only one university with a radius of 200 miles as

for HOMEMAKERS

RECEIVES AWARD

compared with one for every 50-mile radius in the northern two-thirds of the state. The Home Bureau also pointed out that the state appropriations for colleges and universities for 1947-49 were in ratio of one to 17 in favor of the northern part of the state. Members were urged to contact the governor of Illinois and representatives to correct this situation.

Other Home Bureau resolutions urged the membership to be an active and informed electorate, condemned factors responsible for the acute housing shortage, recommended speeding up the present Rural Youth and 4-H programs by providing better facilities for recreation, increasing recognitions and procuring more trained leaders, demanded that rural health standards be improved by more health education, more rural doctors and more hospitals, and recommended that women take an active part in disseminating information about soil conservation.

The Home Bureau pledged its support to the IAA in efforts to get a building for the College of Veterinary Medicine.

Pure Milk Meeting

THREE thousand dairy farmers are expected to attend the 24th annual meeting of the Pure Milk Association to be held Saturday, March 12, at the Hotel Sherman, Chicago.

Pure Milk Association represents 14-600 Illinois, Wisconsin, Michigan, and Indiana farmers selling milk in the Chicago market.

Principal speakers will include Mrs. Haven Smith, vice president of the Nebraska Farm Bureau; Dr. J. O. Christianson of the University of Minnesota; and A. W. Colebank, federal milk market administrator.

A. H. Lauterbach, general manager of PMA who has been on leave of absence because of illness, will be present. Election of directors will be held.

Buffalo Manager

Tom Edwards, 39, Buffalo, N.Y., has been employed to manage the Buffalo, N.Y., branch office of the Illinois Grain Terminals Company.

Illinois Grain Terminals is one of the youngest of the Illinois Agricultural Association affiliated cooperatives. It will collect grain in member inland elevators and river sub-terminals before moving it to terminal elevators at East St. Louis and Chicago for direct sales to processors.

To widen the sales field, Illinois Grain Terminals recently opened a branch office in Buffalo, the great eastern milling center.

Rural Youth

munity service. We need more of such cooperation all over Illinois among Rural Youth groups.

It may be too late to write New Year resolutions, but it is not too late to quote in part from a series of resolutions found in Will's January issue of "Wee Will Tell." The following lines should start you thinking: "For Boys — I realize that some day in the future I will be taking the place of my father regarding Farm Bureau activities, and I Resolve to take more interest in farming operations. I also Resolve to learn more about Farm Bureau on the county, state and national levels. For Girls — I realize that some day in the future I will be taking the place of my mother in Home Bureau work and I Resolve to learn more about Home Bureau on the county, state, and national levels. I Resolve to take part in my Rural Youth program whenever asked. I Resolve to work on committees when appointed and I mean, really work, because I know a committee does no one any good unless those who are appointed on it really work and put thought into it."

It's Time to Measure *your Insurance Benefits*

They've Probably Grown

For Country Life insurance company, new *growth* has always meant new *benefits* for you, the policy-holder. That's why your Country Life policy today may hold some pleasant surprises for you, by way of new benefits provided since you took out that policy. Want to know what these new benefits are? Of course you do! And the man to explain them to you (because he really knows) is your friendly, experienced Country Life insurance representative at your Farm Bureau office. Call him in while you've got the time to give this important matter the time it deserves.

Yes, it's time to measure up those life insurance policies because they might be called on any time to do a really *man-sized* job — providing for your family for a sustained period of high living costs.

"The Future of Farming is what we make it"

Illinois
AGRICULTURAL
ASSOCIATION
AND 99 COUNTY FARM BUREAUS

We Farm Bureau members have a lot of accomplishments to look back on with pride. But we can't rest on our laurels. The future of farming is what we make it . . . today, and in the months ahead . . . by tackling bigger and better tasks that can be won only by organized farmers working together through their 99 County Farm Bureaus.

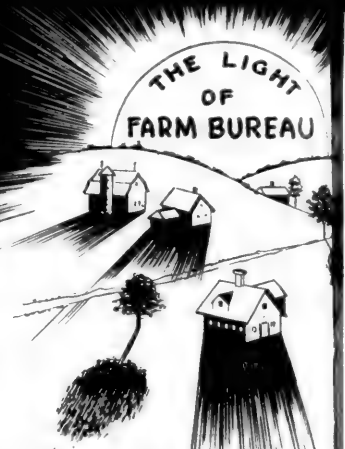
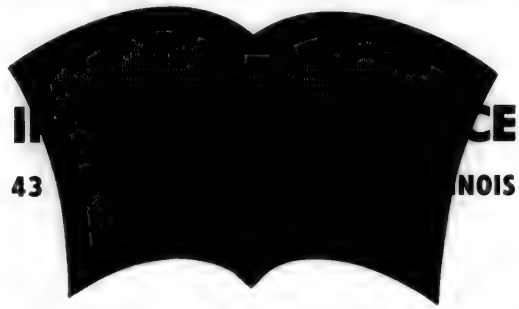
KEEP YOUR SONS IN AGRICULTURE



Talk with your son — if we can keep him in agriculture through a career with Farm Bureau, have him contact your Insurance Service, 43 E. Ohio St., Chicago 11, Illinois.



Your son is the greatest heritage which you can give to agriculture. For years he has worked at your side, cooperating with friends and neighbors in the building of a more abundant farm life through the Farm Bureau organization. The ever growing success of your great organization will be assured by having your philosophy toward agriculture passed along by your son.

AGRICULTURE IS LOSING TOO MANY GOOD FARM BOYS TO UNRELATED OCCUPATIONS. Many of these fine young men want to have business careers, and it is with considerable regret that we see them give up all the good things associated with farming and farm people. In every case they are giving up much of their vital training gleaned from the fields of experience on your farm.

Their training is basic because of your belief and understanding of farm problems and farming people — people with whom they have grown up. Your sons should be guided so as not to overlook their valuable background and they should be pointed in the direction of career opportunities offered in the betterment of agriculture through your Farm Bureau organization.

Farm Bureau Insurance Service is looking for young farm men, Farm Bureau sons, who are interested in a business career and who do not want to leave the good things of farming. We want farm boys who will learn to program the insurance needs of farm people just as they can today intelligently discuss the many other necessary phases of farming which you have taught them. These sons will be trained to work with and solve these problems — farmers' problems — and thus render another outstanding service typical of that now being carried to the door step of every Farm Bureau family throughout the state.

A New Farm Tool

By Charles B. Shuman

President Illinois Agricultural Association

EVERY farmer can remember the great thrill that came as he turned the first furrow with his own plow the year he started farming "for himself". It was a thrill to be repeated again and again as he added more efficient tools to his farming equipment. My first tractor of 1929 would make a sorry comparison with today's modern, speedy powerhouses of the fields. These rapid and revolutionary improvements in farm machinery have helped farmers increase their production efficiency and in turn their living standards. Yes, it costs money — big money to modernize agriculture.

C. B. Shuman

FARMERS have other valuable tools in addition to the implements of the field. Our farmer cooperatives have repeatedly proven themselves to be essential farm tools. They are making a great contribution toward a more stable and satisfactory American agriculture by injecting increased competition and efficiency in the fields of distribution and marketing. Yes, Illinois farmers have many millions of dollars invested in their cooperative tools — but not too many considering the size of the unfinished task.

A NEW cooperative tool has been purchased! The acquisition of a 2½ million bushel terminal elevator in Chicago by the Illinois Grain Terminals Company, in effect, gives the farmers of Illinois another powerful machine. This was not the result of a hasty decision or a sudden impulse.

OVER a period of several years a number of Farm Bureau type cooperative elevator companies have been formed with the intention of eventually merchandising grain. Two years of careful investigation have resulted in this decision to take another step towards the goal of bringing the producers and consumers closer together.

OUR cooperative grain commission and brokerage operations have been and will continue to be essential services. However, developments during recent harvest seasons have dramatized the need for a farmer-owned terminal grain storage and handling facility. New early maturing varieties of corn and soybeans harvested with our modern pickers and combines have resulted in a greatly increased early fall movement of grain.

THE grain trade and processors generally have taken advantage of the pressure of this movement and have extracted wide handling margins and large moisture discounts. The facilities purchased by Illinois Grain Terminals can handle approximately 15 million

BUY CHICAGO TERMINAL ELEVATOR

IAA's Grain Company Affiliate Will Enter Large Scale Terminal Operation June 1 With Two and One-half Million Bushel Elevator

New Venture Will Give Producer Unlimited Markets

HISTORY is being made in cooperative grain marketing in Illinois as the Illinois Grain Terminals Company, affiliate of the Illinois Agricultural Association, prepares to operate a 2½ million bushel grain terminal elevator in Chicago. This will mark the first time than an Illinois grain cooperative has had such a marketing outlet of its own.

Operation of a terminal elevator gives the Illinois farmer an unlimited market for his grain. It can move east, west north, south or for export abroad; wherever the best price beckons. It can move direct to the processor or other buyer.

A terminal elevator will enable the cooperative to clean, dry, and blend grain. Drying facilities are extremely important in wet years, and apparently since the widespread use of hybrid seed, are a necessary part of the grain marketing function, even in normal years. It is a well-known fact that a considerable portion of the farmer's grain dollar is being drained off in drying operations. Corn can be dried for a relatively small cost compared with the heavy discounts that farmers have been taking on high moisture grain.

In addition to the possibilities in the processing field, a terminal facility also makes it possible to sell grain in large lots and even in boat loads, rather than in just the amounts than can be shipped out by car from the individual member elevators.

Dr. L. J. Norton, University of Illinois economist, also points out that terminal elevators perform a valuable service by storing grain marketed by farmers that is not used up currently or does not go directly into processors' stocks.

These are just a few of the many advantages to be gained from terminal grain merchandising operations. Full details are being given at county grain meetings being held throughout the state.

Illinois Grain Terminals Company, under a purchase agreement signed in March, is scheduled to take over the Irondale terminal elevator situated at 107th Street and the Calumet River, South Chicago, on June 1, 1949.

This terminal is excellently located on 7.2 acres of land accessible to both rail and deep water transportation. Main unit of the elevator is an open type steel structure with a capacity of approximately 1 million bushels. A modern concrete annex has a capacity of approximately 1½ million bushels. There is ample room for the construction of additional storage capacity of 3 million bushels. The facilities will be developed to handle receipts of 50 cars and to ship out 60 cars daily, to unload 100,000 bushels from river barges, and to load 400,000 bushels on lake ships in 12 hours.

The purchase agreement for the terminal elevator was signed with the Chicago Grain Corporation, a subsidiary of the Norris Grain Company, which is now using the facilities.

The contract provides that present operating personnel of the Irondale elevator will continue to operate the elevator for the Terminals Company. The contract also includes terms for taking over inventories of grain on hand at the time the Terminals Company takes possession of the elevator. Financial consideration involved in the transaction was $1,300,000.

The Terminals Company will have a considerable volume of grain to draw upon from its affiliates, both inland and river, throughout Illinois. These marketing facilities include 24 county grain companies, 10 local elevators, and sub-terminal elevators on the Illinois River at Havana, Lacon and Hennepin and on the Mississippi River at Dallas City. These sub-

High Support Danger

AFBF President Says Leaning Too Heavily on Government Price Crutch Will Retard Farm Progress

IF FARMERS lean too heavily on a crutch of price supports, their strides toward agriculture's economic objectives will be retarded and their efficiency crippled, according to Allan B. Kline, president of the American Farm Bureau Federation.

"We believe that farmers are entitled to full parity, in the form of earned income, rather than in the form of a government-guaranteed return," he said in a statement to the farm press.

"Necessary though support prices are, if they are so high as to bring about rigid controls, they will tend to make it more difficult, rather than easier, for the efficient farmer to use his own skills in obtaining real parity with the rest of the economy.

"Nothing could be more harmful to the long-time welfare of agriculture than to make the farmer depend on government as the major arbiter of farm prices. In a relatively free economy, we can produce for the market, as it reflects consumer demand. There is a distinct danger that high supports, being themselves an incentive to production, would eventually lead farmers to produce for the government rather than for consumers.

"If we get into this kind of a situation, agriculture's freedom will be gone, farmers will be at the mercy of government, and consumers will be deprived, at least to some extent, of their means of expressing preference — the free market.

"Consumer demand is the guide, and the only reliable guide, to agriculture's opportunities. To prosper on any permanent basis, farmers must follow it. A price support program must encourage them to do so, if it is to be of any permanent benefit.

"The price support provisions of the Agricultural Act of 1948 meet this requirement fairly well — better, we think, than anything we have had in the past and much better than the suggestions that are now being advanced for larger government guarantees and commitments.

"The flexible support schedules in the act are a safeguard against the disastrous price crashes which have been the farmer's nightmare for generations. On the other hand, they do not destroy the farmer's vital guide to production. They permit prices to reflect demand, and leave the farmer an incentive to adjust his output to the wants of the consumer."

Kline added that the attractions of high price supports are largely an illusion, since they must be accompanied by limitations on production which tend to take away from the farmer's income the amount that seems to be added by artificially sustained prices.

"The higher the support level, the more drastic the controls are likely to be," he pointed out.

There are still a few copies left of the history of Farm Bureau entitled "The Farm Bureau Through Three Decades," by O. M. Kile. The long struggle for recognition and better living conditions for farmers reads like an adventure novel. You're missing a good thing if you pass up this story of your neighbors and yourself. To get a copy send $3.50 to the American Farm Bureau Federation, 109 North Wabash Ave., Chicago, Ill.

Lawyer Drinks Bottle of Hog Virus

IOWA legislators were startled recently when Carl J. Stephens, attorney for the Iowa Farm Bureau Federation, gulped down a bottle of hog cholera virus before them.

Stephens drank the virus to prove it was not harmful to humans. I. W. Meyers, attorney for the Iowa Pharmaceutical Association, had just told the legislators in Des Moines the virus was dangerous for farmers to handle.

"If broken (the virus bottle) on the floor it could spread disease among a great many people," Meyers said.

The Iowa Farm Bureau is backing a bill to permit its subsidiaries to sell virus and other products without supervision by pharmacists. The Iowa supreme court ruled recently that pharmacists should be employed for this purpose. Farmers administer their own hog cholera virus and serum in Illinois.

IAA President Charles B. Shuman (left) discusses farm problems with Adlai Stevenson, governor of Illinois, during the governor's recent visit to the IAA offices in Chicago.

BUY CHICAGO TERMINAL ELEVATOR

IAA's Grain Company Affiliate Will Enter Large Scale Terminal Operation June 1 With Two and One-half Million Bushel Elevator

New Venture Will Give Producer Unlimited Markets

HISTORY is being made in cooperative grain marketing in Illinois as the Illinois Grain Terminals Company, affiliate of the Illinois Agricultural Association, prepares to operate a 2½ million bushel grain terminal elevator in Chicago. This will mark the first time than an Illinois grain cooperative has had such a marketing outlet of its own.

Operation of a terminal elevator gives the Illinois farmer an unlimited market for his grain. It can move east, west north, south or for export abroad: wherever the best price beckons. It can move direct to the processor or other buyer.

A terminal elevator will enable the cooperative to clean, dry, and blend grain. Drying facilities are extremely important in wet years, and apparently since the widespread use of hybrid seed, are a necessary part of the grain marketing function, even in normal years. It is a well-known fact that a considerable portion of the farmer's grain dollar is being drained off in drying operations. Corn can be dried for a relatively small cost compared with the heavy discounts that farmers have been taking on high moisture grain.

In addition to the possibilities in the processing field a terminal facility also makes it possible to sell grain in large lots and even in boat loads, rather than in just the amounts than can be shipped out by car from the individual member elevators.

Dr. L. J. Norton, University of Illinois economist, also points out that terminal elevators perform a valuable service by storing grain marketed by farmers that is not used up currently or does not go directly into processors' stocks.

These are just a few of the many advantages to be gained from terminal grain merchandising operations. Full details are being given at county grain meetings being held throughout the state.

Illinois Grain Terminals Company, under a purchase agreement signed in March, is scheduled to take over the Irondale terminal elevator situated at 107th Street and the Calumet River, South Chicago, on June 1, 1949.

This terminal is excellently located on 7.2 acres of land accessible to both rail and deep water transportation. Main unit of the elevator is an open type steel structure with a capacity of approximately 1 million bushels. A modern concrete annex has a capacity of approximately 1½ million bushels. There is ample room for the construction of additional storage capacity of 3 million bushels. The facilities will be developed to handle receipts of 50 cars and to ship out 60 cars daily, to unload 100,000 bushels from river barges, and to load 400,000 bushels on lake ships in 12 hours.

The purchase agreement for the terminal elevator was signed with the Chicago Grain Corporation, a subsidiary of the Norris Grain Company, which is now using the facilities.

The contract provides that present operating personnel of the Irondale elevator will continue to operate the elevator for the Terminals Company. The contract also includes terms for taking over inventories of grain on hand at the time the Terminals Company takes possession of the elevator. Financial consideration involved in the transaction was $1,300,000.

The Terminals Company will have a considerable volume of grain to draw upon from its affiliates, both inland and river, throughout Illinois. These marketing facilities include 24 county grain companies, 10 local elevators, and sub-terminal elevators on the Illinois River at Havana, Lacon and Hennepin and on the Mississippi River at Dallas City. These sub

High Support Danger

AFBF President Says Leaning Too Heavily on Government Price Crutch Will Retard Farm Progress

IF FARMERS lean too heavily on a crutch of price supports, their strides toward agriculture's economic objectives will be retarded and their efficiency crippled, according to Allan B. Kline, president of the American Farm Bureau Federation.

We believe that farmers are entitled to full parity, in the form of earned income, rather than in the form of a government-guaranteed return," he said in a statement to the farm press.

Necessary though support prices are, when they are so high as to bring about rigid controls, they will tend to make it more difficult, rather than easier, for the efficient farmer to use his own skills in obtaining real parity with the rest of the economy.

Nothing could be more harmful to the long-time welfare of agriculture than to make the farmer depend on government as the major arbiter of farm prices. In a relatively free economy, we can produce for the market, as it reflects consumer demand. There is a distinct danger that high supports, being themselves an incentive to production, would eventually lead farmers to produce for the government rather than for consumers.

If we get into this kind of a situation, agriculture's freedom will be gone, farmers will be at the mercy of government, and consumers will be deprived, at least to some extent, of their means of expressing preference — the free market.

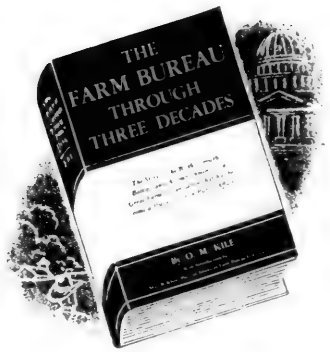
Consumer demand is the guide, and the only reliable guide, to agriculture's opportunities. To prosper on any permanent basis, farmers must follow it. A price support program must encourage them to do so, if it is to be of any permanent benefit.

The price support provisions of the Agricultural Act of 1948 meet this requirement fairly well — better, we think, than anything we have had in the past and much better than the suggestions that are now being advanced for larger government guarantees and commitments.

The flexible support schedules in the act are a safeguard against the disastrous price crashes which have been the farmer's nightmare for generations. On the other hand, they do not destroy the farmer's vital guide to production. They permit prices to reflect demand, and leave the farmer an incentive to adjust his output to the wants of the consumer.

Kline added that the attractions of high price supports are largely an illusion, since they must be accompanied by limitations on production which tend to take away from the farmer's income the amount that seems to be added by artificially sustained prices.

"The higher the support level, the more drastic the controls are likely to be," he pointed out.



There are still a few copies left of the history of Farm Bureau entitled "The Farm Bureau Through Three Decades," by O. M. Kile. MEMBERSHIP PASSES 160,000

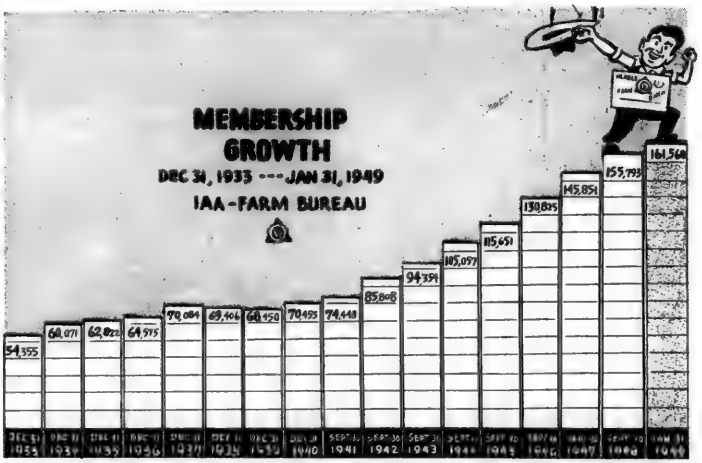
"WHEN you add up the score, it is difficult to understand how any farm family can afford to be without membership in the Farm Bureau." That's the concluding paragraph in an editorial from the Danville Commercial-News (see opposite page).

Looking at Farm Bureau with the impartial eye of an outsider which has worked with farmers and their organizations for many years, the Danville Commercial News has come to a conclusion which can scarcely be ignored by any farmer.

Farm Bureau is Illinois' most powerful farm organization. It is the organization that goes to bat for all the farmers of Illinois. It is the farm organization that keeps a sleepless eye on all legislative acts that affect the farmer.

We have known for many years that no farm family could afford to be without membership in Farm Bureau. But we have felt, too, that some people can't be rushed into these things. It takes time. But we have known all along that once a non-member farmer knew all the facts on what Farm Bureau stands for, it wouldn't be long before he would sign up.

This has been borne out in the membership records when compared through the years (see graph). The last official figure released by Organization Director O. D. Brissenden shows that Illinois Agricultural Association-Farm Bureau membership has for the first time crossed the 160,000 mark. As of Jan. 31 membership was 161,568.



The IAA board of directors last October set a membership goal of 165,000 for Sept. 30, 1949. Speaking on the success of the county membership drives held throughout the state in the past few months, Brissenden said he felt sure the goal would be reached as the halfway mark was passed.

The January membership drives again amazed even the most veteran campaigners. Areas which heretofore had been considered "mined out" were yielding rich returns. Clinton reported 102 new members in its drive; Madison, 153; Macoupin, 108; DeKalb, 120; Crawford, 107; Richland, 117; Edgar and Effingham, 122 each; Vermilion, 180; Pike, 121; Tazewell, 131; and Iroquois, 222.

County organization directors pulled every trick out of the hat to keep the membership drives before the public. Many of them pulled stunts befitting high-priced public relations men. Down in Richland they enlisted the aid of four mayors to assist with the drive. In Crawford county the Farm Bureau drive was kept before the public even after it was officially over when the losing team captain, Cecil "The Lone Ranger" Burt rode his trusty (?) steed, a donkey, around the courthouse square.

From every section of the state the story was the same. Farmers are more

Losing team captain Cecil F. Burt pays off after recent Crawford county membership drive by riding donkey around the courthouse square at Robinson. Police Chief Norman Richards gives Burt a ticket for operating without a license and overloading the donkey. The drive put Crawford membership over the 1,000 mark.

Here are three mayors who took part in Richland county's recent Farm Bureau membership drive. Mayor E. G. Miller of Olney (left) shows how he signed up eight new members. Looking on are Mayor Myrl Michels of Calhoun and Mayor Boniface Ochs of Stringtown.

willing than ever before to join Farm Bureau. A farmer just can't afford not to be a Farm Bureau member.

Out beating the drums for Farm Bureau in every section of the state were the state organization men O. D. Brissenden, C. S. Mayfield, Harry Claar, L. B. Hornbeck, and Jack Howlett.

But the IAA organization men are quick to disclaim the credit for the success of the drives. The volunteer worker —the farmer who goes out and tells his neighbor what a fine thing Farm Bureau is—he's the man who deserves most of the credit, they say. Once they get started neither mud nor cold can stop them.

The success of Farm Bureau is resting more and more upon a firm foundation of integrity in the eyes of Illinois farmers who sell their sons and neighbors by taking it for granted as a necessary tool of farming.

THERE'S beauty, too, in a dazzling white riverside elevator set against a brilliant blue sky. This month's cover is of the Prairie Grain Company's elevator at Lacon on the Illinois River. Prairie Grain is an affiliate of the IAA's Illinois Grain Terminals Company (See page 4). This is the 22nd of our series of picturesque or historical Illinois scenes.

This elevator was built last year by farmers who wish to have control of marketing part of their own grain. It cost just over $200,000 and has a capacity of 190,000 bushels. It can load and unload 9,000 bushels per hour.

Farm Bureau and the Illinois Press

• *To Promote Better Understanding and Relationships with Illinois Dailies and Weeklies, the IAA and 99 County Farm Bureaus are Studying Editorials Concerning Agriculture as They Appear in the Press. Considerable Interest Has Been Shown in the Project. Here's One Clipping That Was Considered Exceptionally Interesting.*

•

CONSIDERABLE interest has been shown by the County Farm Bureaus in a press relations program inaugurated several months ago at the suggestion of the Illinois Agricultural Association board of directors.

Under this program, County Farm Bureaus scan the local daily and weekly newspapers for editorials about Farm Bureau. These editorials are clipped and mailed to F. E. Morris, vice-president of the IAA, at 43 East Ohio Street, Chicago 11, Illinois. He in turn commends or makes a constructive suggestion in a letter to the editor of the paper in which the editorial comment is made.

Readers of the IAA RECORD probably will enjoy the following editorial entitled "Farm Bureau Membership Offers Many Advantages to Rural People" from the Danville Commercial-News of Jan. 19. It is one of best of the many editorials received to date.

The Vermilion County Farm Bureau has launched its annual campaign for new members with a great showing of enthusiasm and willingness to work on the part of those who have volunteered to solicit memberships.

Last year these same workers won for Vermilion County the honor of the best membership drive record in the State, when they obtained 258 names on the dotted line. Having tasted the fruits of victory, they like it and are out to repeat this noteworthy achievement.

They should do well, because the Farm Bureau really has something to offer.

In the first place, it offers its members a voice in the determining of state and national legislation that affects them. An individual farmer in Springfield or Washington would receive scant consideration.

But when the spokesmen for 155,791 farm families of Illinois talk at the State Capitol it carries weight; and when the spokesmen for Farm Bureau members through the nation talk in Washington, that carries weight, too.

It all goes back to the old truth that in union there is strength; that organization is necessary for a group of people to obtain the things they desire.

The Farm Bureau, however, offers much more than a voice in legislative matters. Through its affiliation with the University of Illinois Extension Service it also has become an educational institution and it performs those functions in admirable way. As a result, its members benefit from such projects and programs as soil and crop improvement, soil erosion control, dairy herd improvement, rural electrification, rural youth and 4-H Club activities.

The Farm Bureau also offers a number of business services to its members through its subsidiaries.

In addition to all these benefits, there is the fellowship that comes from association with fellow farmers from different sections of the county, state and nation through Farm Bureau activities.

When you add up the score, it is difficult to understand how any farm family can afford to be without membership in the Farm Bureau.

MEMBERSHIP PASSES 160,000

TRACTOR IS WORST FARM HAZARD

EVERYTHING is ready. You're rarin' to go. The plugs are clean. The timing gear is perfect. The motor purrs like a kitten.

And in just a few more weeks your tractors will be crawling across the face of the land throughout the length and breadth of Illinois — plowing, planting, and cultivating the crops.

You think you're ready. But you're not . . . not unless you have this little item of information in the back of your head — THE TRACTOR IS THE MOST DANGEROUS PIECE OF MACHINERY ON THE FARM.

Stop and think of that for a moment. Of the 1366 men, women, and children reported killed or injured in Illinois farm accidents in 1948, 275 of the accidents were caused by tractors — or should we say the driver of the tractor.

"What," you might ask, "is the greatest hazard when driving a tractor?" Statistics compiled by the IAA department of safety and public health show that the greatest menace to life and limb is the danger from overturning. Great care, therefore, must be taken when driving on uneven ground. Next greatest danger is that of falling off. Many of the falling-off accidents resulted when children were allowed to ride on the tractor.

Safety organizations, including the IAA safety department, have repeatedly warned of the dangers involved in allowing children to ride tractors, whether moving or standing, yet last year 45 Illinois farm children under the age of 15 were killed or injured in tractor accidents.

Tractor accidents last year ranged from a youth being badly injured when a windmill fell on him after he backed into it, to the drowning of another youth whose tractor rolled off the side of a bridge, fell into a creek, and pinned him under the water.

In 1948, 94 Illinois farm people were killed or injured by overturning tractors; 55 when they fell off; 17 by cranking; six in refueling; and 99 by miscellaneous tractor mishaps. Of the 275 accidents, 58 resulted in death or permanent disability.

Looking at the whole Illinois farm accident picture we see that half of the deaths and injuries are caused by machinery. The corn picker is a close runnerup to the tractor. It injured 200 persons last year. Most of the corn picker accidents involved the mangling of fingers or hands.

Among other farm accidents, livestock caused 183 deaths or injuries; falls, 121; haying, 81; falling objects, 43; hand tools, 41; gunfire, 32; explosions, 23; burns, 21; and miscellaneous, 403.

It is interesting to note that cows on Illinois farms cause more accidents than bulls. There are far fewer bulls, of course. Cows last year caused 34 accidents whereas bulls caused 29.

As far as the danger from tractor operation is concerned, in just a few more weeks we will be in the middle of the most hazardous period of farming.

May is usually the most dangerous month. Last year's Illinois farm tractor accident toll by months is fairly typical — May, 40 accidents; June, 35; July, 30; August 31; September, 27; and October, 31.

You can save a life — and it probably will be your own — if you treat your tractor with respect. Tractors have caused thousands of accidents, any one of which could happen to you.

Charlie Grimm (center), manager of the Chicago Cubs, talks over his team's prospects with Bob Seely, manager of the Will county team, last year's Farm Bureau champions, and Otto Steffey (right), IAA director from Henderson county and president of the Illinois Farm Bureau Baseball League.

Map shows how the state is divided for Illinois Farm Sports Festival competition. The Illinois Farm Bureau Baseball League has redistricted to conform to the 16 districts above.

Farm Bureau Baseball

League Changes Competitive Districts To Conform to the 16 Regions Set Up For Farm Sports Festival

THE Illinois Farm Bureau Baseball League has changed its districts for the 1949 season to conform to the 16 districts set up last year for Illinois Farm Sports Festival competition (See map).

The changes were made during the recent 25th annual meeting of the Farm Bureau Baseball League held at the Hotel Sherman in Chicago. This is the only major change in the rules and regulations for the 1949 season.

Under the new plan for the 1949 season, district elimination tournaments will be held before the Sports Festival in Champaign. This will cut down entries in the finals to eight teams.

Principal speaker at Farm Bureau baseball's silver anniversary meeting was Charlie Grimm, jovial manager of the Chicago Cubs. Grimm complimented the League managers for their fine work in training youth in baseball. "It was fellows like you who gave me my start in baseball 32 years ago," he said.

Grimm told the assembled group that 72 per cent of all big league players hail from rural areas. "If you see any promising major league material, don't forget the Cubs," Grimm said. In a free-for-all discussion Grimm said he did a lot better farming last year than managing a baseball team. Asked if he would venture a prediction on the Cubs or the price of fat cattle, Grimm smiled and shook his head.

Counties with memberships in the Farm Bureau Baseball League are Boone, Bureau, Champaign, Christian, Coles, DeKalb, Ford, Henderson, Jo Daviess, Kendall, Lake, La Salle, Livingston, Macon, McDonough, McLean, Marshall-Putnam, Montgomery, Peoria, Rock Island, Stephenson, Tazewell, Warren, and Will.

Robert Builta *Dorothy Giese*

Pauline McMillan *Lyle Schertz*

Four to Represent Illinois at 4-H National Club Camp

FOUR Illinois 4-H Club members have been selected to represent the state at the National 4-H Club Camp to be held in Washington, D. C., in June.

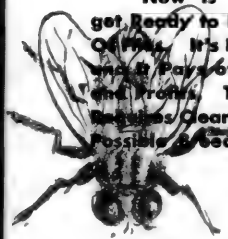
They are Dorothy Giese, 19, La Salle county; Pauline McMillan, 18, Sangamon; Robert W. Builta, 19, McLean; and Lyle P. Schertz, 19, Woodford.

The Illinois delegation was selected on a basis of demonstrated qualities in leadership, 4-H achievement, and participation in project and community activities.

In 1797 a patent was granted to Charles Newbold, New Jersey, for the first cast-iron plow in America. Farmers had an idea that the cast-iron plow poisoned the land and promoted the growth of rocks.

Open '49 War On Flies

• Now is the time to get Ready to Rid the State Of Flies. It's Not a Big Job and It Pays Off in Comfort and Profits. The First Step Requires Cleaning Up of All Possible Breeding Places.



HOW would you like to have a summer without flies around the place? It would be wonderful, wouldn't it? Well, it's not an impossible thing to achieve with modern fly killers like DDT. Illinois farmers who joined in the 1948 fly-free campaign reported real success in ridding their farms, barns and homes of flies.

It's not too big a job or one that takes much time, but there are certain "musts" to perform if you want relief from flies.

First, you've got to rid of all fly-breeding places such as strawpile butts, garbage, and manure piles, where flies are likely to lay their eggs. This cleanup job should be done in April and May, depending in what part of the state you live. The job should be completed before the middle of May in Southern Illinois and before Memorial Day in the Northern area of the state. If you can get the job done a little ahead of these deadlines, so much the better.

This cleanup job is important and must be done before flies start to hatch. The spring cleanup task around the farm can serve a two fold purpose — start the fly-free campaign and also eliminate accident hazards. The Illinois Farm and Rural Home Safety Committee has designated April as cleanup month around the farm and home.

Second step in the fly-free campaign is to spray DDT on all surfaces where flies roost. Spraying will be done in the first week in June and repeated during the month to make sure the pesky fly is wiped out.

IAA Field Secretary George E. Metzger who originated the fly-free program in Illinois in 1948, points out that you can rid your farm of flies for as little as $10 worth of spray materials. Any small portable pressure spray such as one used for spraying noxious weeds can be used.

Because of the success of the 1948 campaign, the four sponsoring agencies are pushing a repeat drive in 1949. These include the Illinois Agricultural Association, Illinois Natural History Survey, University of Illinois Extension Service, and the Illinois Department of Public Health.

The 1948 campaign proved more successful in the rural areas than in the towns and cities, so this year added emphasis is being placed on getting the job done in the cities. Local health officers, service clubs, Chambers of Commerce, newspapers, radio stations, women's clubs, etc., will be enlisted in the drive.

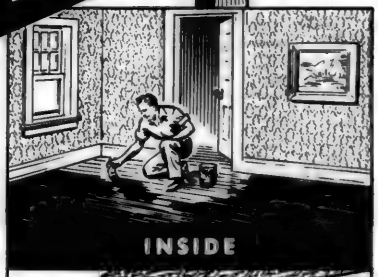
County Farm and Home Bureaus will lead the drive in the rural areas and it is expected they will repeat the successful performance of 1948.

District meetings have been scheduled over the state this month by Dr. H. B. Petty of the State Natural History Survey. Some of these meetings will have been held by the time the RECORD reaches its readers, but the schedule for the meetings, all of which will open at 1 p.m. and close not later than 4. p.m., is as follows:

April 4, Champaign, Farm Bureau hall; April 5, Jacksonville, Farm Bureau hall; April 6, Greenville, Court House; April 7, Marion, Library; April 8, Olney, Farm Bureau hall; April 11, Pontiac, Farm Bureau hall; April 12, St. Charles, Auditorium-Community Center; April 13, Polo, Town Hall; April 14, Galesburg, Farm Bureau hall.

Representatives of the IAA attending these meetings will be I. E. Parett, secretary of general services, Roger Gish, director of soil conservation activities, and Cullen B. Sweet, director of rural roads.

CLEAN UP FIX UP PAINT UP



Brighten the PRESENT— Protect the FUTURE!

Inside, outside, and all around the farm — make this spring a bright spring with SOYOIL PAINTS! Give your farmstead that clean, fresh look which radiates good health and good living. Clean up, fix up, and PAINT UP — with SOYOIL!

For sparkling beauty, lasting protection, and dependable economy you can't beat SOYOIL paints. Developed for Illinois farmers by their own organization — compounded with years of experience — tested since 1933 on Illinois farms — appreciated by all who use them — SOYOIL PAINTS are *your* paints.

EXTERIOR

Give your house *new sparkle* with SOYOIL Outside White — a deep, lustrous, self-cleaning white house paint. Carefully blended pigments of white lead, titanium dioxide, and zinc oxide in a linseed and soybean oil base make SOYOIL cover *better, wear longer, look brighter!*

INTERIOR

Color schemes *to fit your dreams are yours* with SOYOIL INTERIOR PAINTS. Warm, radiant flat wall paints and soft, glowing casein paints for bedroom and living room — glossy, washable enamels for kitchen and bathroom — glistening, durable varnishes for all the floors in the house — weather-proof, wear-proof enamels for porches and steps. There's a SOYOIL paint for every purpose.

Greet the spring with a smile on your face — and a smile on your walls! For your family and for your friends, make your home sparkle with SOYOIL.

BARN

Add money-saving years to the life of your farm buildings! Brighten the present and protect the future the SOYOIL way. For self-sealing protection and exceptional resistance to mildew use SOYOIL Red Barn Paint on your farm buildings.

SOYOIL PAINTS ARE DISTRIBUTED BY

FARM BUREAU-TYPE COOPERATIVES

ILLINOIS FARM SUPPLY CO., CHICAGO

1948 Was Top DOLLAR VOLUME Year For Producers

Top: Chatting together at Chicago Producers meeting are (left to right) John Weller, Bureau county; Byron Kline, McLean; Lester Davison, Woodford; Robert Armstrong, Warren; and LaVerne Johnson, Kendall. Bottom: William Temple, La Salle, (facing camera at right) acts as chairman at district caucus to nominate a director to Chicago Producers board.

THE GREATEST dollar volume of livestock ever handled in its history was reported by Manager Dave Swanson at the 27th annual meeting of the Chicago Producers Commission Association held at the Hotel Sherman in Chicago last month.

Livestock handled by this farmers' co-op in 1948 was valued at $74,520,631.95 campared with $70,797,304.02 in 1947. Volume in animals, however, was lower—13,674 carloads in 1948 compared with 14,821 in 1947.

The balance sheet showed a net loss for the year's operations of $44,265.75 compared with net savings of $40,323.40 in 1947. During the past nine years the Chicago Producers has had five years of savings and four of losses. This, Manager Swanson explained, was caused by the erratic marketing situations since 1939.

Chicago Producers also operates on a very narrow margin to keep handling charges to farmers as low as possible, Swanson said. The average commission per owner shipment was $5.50, a little more than it was the year before. The average commission per owner per year amounted about $10. Swanson also pointed out that the average selling commission amounted to about 4/10 of 1 per cent of the value of the livestock handled.

The Chicago Producers continued to handle one-eighth of all the livestock on sale on the Chicago market in 1948. Swanson reported that receipts came from 26 states and Canada and totaled more than the handlings of the next three high commission firms combined.

Principal speaker on the program was President Charles B. Shuman of the Illinois Agricultural Association who explained the plans which are now underway to launch a new organization called "Illinois Livestock Producers Association."

This new organization will, in effect, be an association of Illinois' six livestock marketing cooperatives designed to (1) strengthen present livestock marketing cooperatives, (2) establish additional

William W. Prince *Charles B. Shuman*

markets or agencies where needed or where desirable, and (3) coordinate selling.

"All groups interested," Shuman said, "have a responsiblity they must recognize. This new organization offers the framework of a better program of increased efficiency, coordination, and service.

"This is not," Shuman said, "the final act in livestock marketing coordination It is only a step—a step that could be the turning point in livestock marketing and of great benefit to livestock producers.

"I don't know if it is going to work, but we will do our best to make it work."

William W. Prince, youthful president of the Union Stock Yards, told of efforts being made to give shippers maximum service at the Stock Yards. He said that the yards recently passed the billion mark in animals handled. To show the extent of the job at the Stock Yards, Prince said the yards have 40,000 gates and moved 25,000 tons of manure and bedding last year.

Swanson called for continued support for the Chicago Producers in the coming year. "Livestock producers," he said, "must be better organized and their organizations must be more effective if they are to meet the challenge of other groups in our economy.

"All livestock producers have ever wanted or asked for is fair prices, but it is becoming increasingly evident that if fair prices for livestock are to be obtained, it will be necesary for livestock producers to organize better, and through their organizations, function more effectively than they have in the past.

"The cooperative livestock marketing organizations in Illinois can work together . . . . . so that livestock producers of Illinois will benefit. For years there has been some criticism in Illinois that cooperative livestock organizations did not work together. In that connection it is well to remember that the individual livestock producer has always had his choice as to where, when, and how he would market his livestock, and will continue to have the same freedom of choice under the new Illinois Livestock Producers Association."

New members elected to the board of directors of Chicago Producers were Clinton Glennie, Winnebago county; LaVerne Johnson, Kendall; and James Little, Lowell, Ind.

The 1949 board of directors of the Illinois Fruit Growers Exchange is shown following reorganization at the organization's recent annual meeting in Carbondale. Front row, (left to right), R. S. McBride, general manager; F. G. Anderson, secretary-treasurer, Union; A. O. Eckert, president, St. Clair; E. D. McGuire, vice president, Jackson; back row: C. R. Boland, Edgar; N. A. Cummins, Jefferson; W. H. Beauman, Johnson; Dwight Powell, Clark; Dr. L. A. Floyd, Bond; Arthur Foreman, Pike; and R. B. Endicott, Pulaski-Alexander. Not present was Roy Wieneke, Calhoun.

More, Better Fruit

Fruit Growers' Annual Meeting Warns That Consumers Will be More Particular About Quality in '49

HIGH QUALITY fruit was again uppermost in the minds of members of the Illinois Fruit Growers Exchange gathering in Carbondale recently for their 28th annual spring meeting.

"Better fruit, and more of it, is our goal for 1949," President A. O. Eckert, St. Clair county, told southern fruit growers. Illinois Fruit Growers Exchange, with offices at Carbondale, is an affiliate of the Illinois Agricultural Association.

"People are now more particular about their buying," Eckert said, "so our fruit must be good to sell. However, emphasis on quality the past few years has shown results because today our pack is as good as any in this area."

C. G. Watkins

Principal speaker was C. G. Watkins of the Fadler Produce Company, Springfield, Mo., who spoke on the importance of preparing a pack that will retain its high quality appearance until the moment the consumer buys it.

Speaking as a middleman, Watkins said the grower shouldn't forget that the wholesaler has his problems too. "His job," Watkins said, "is to sell as much of your fruit as possible."

"I'm not a grower," Watkins said, "but I know what the consumer wants. Pack quality fruit and keep your pack uniform. The fruit business has a great future. There is no food more habit forming than fresh fruits. But never forget that 85 per cent of all fruit is sold on eye appeal."

William Clemens of the Kroger chain stores advised the growers to "live up to the reputation of your labels so that when the buyer sees your label she will know your fruit is good without even sampling it."

Speaking as a fruit grower, L. L. Colvis, IAA secretary of marketing said, "we, as growers, have a responsibility to our organization to grow the quality of fruit the Exchange wants, and pack it as the Exchange wants it packed because the Exchange knows what sells best."

In his annual report to the membership, Manager R. S. McBride predicted an Illinois peach crop of two million bushels in 1949 compared with 1,428,000 bushels in 1948. His report showed that 70,000 less packaged units were handled in 1948 than in 1947 although gross sales returns were up nearly $40,000. Expenses increased $10,000 over the previous year — half of which was attributed to depreciation. The cold storage building, operating on its first full year made a profit of $4200.

McBride reported good reception of the Fruit Exchange peach brand labeled Prairie Chief which was introduced in 1948. "People began asking for Prairie Chief brand," McBride said, "and that is what we are aiming at."

Manager McBride said he thought more attention should be paid to fruit maturity and tree-ripened fruit. It hurts, he said when we market unripened fruit. Demand slackens and it backs up on you.

"Our quality is good now", he said "but there is always room for improvement. Demand for our pack gives us cause to be optimistic about 1949, but let's raise our sights on quality".

Reporting on 1949 pest infestation for Entomologist S. C. Chandler, Dr. Dwight Powell of the U. of I. gave the following information: coddling moth, possibly severe; plum curculio, worse; leaf hoppers, light; European red mite, heavier; scale, moderate to severe; peach catfacing, worse; oriental fruit moth, worse; blotch on apples, light; black rot, building up; brown rot, worse; rosy apple aphis, building up; and apple measles, general increase.

The annual meeting in resolutions endorsed "the program of horticultural societies in enacting a tax law to benefit Illinois horticulture," backed efforts to improve, develop, and expand facilities at Southern Illinois University and called for strengthening the laws of the state division of markets.

Elected to three year terms on the Fruit Growers Exchange board of directors were C. R. Boland, Edgar; Dr. L. A. Floyd, Bond; E. D. McGuire, Jackson; Dr. Dwight Powell, Clark; and Roy Wieneke, Calhoun.

Officers re-elected were A. O. Eckert, St. Clair, president; E. D. McQuire, Jackson, vice president; and F. G. Anderson, Union, secretary-treasurer.

More, Better Fruit

Fruit Growers' Annual Meeting Warns That Consumers Will be More Particular About Quality in '49

HIGH QUALITY fruit was again uppermost in the minds of members of the Illinois Fruit Growers Exchange gathering in Carbondale recently for their 28th annual spring meeting.

"Better fruit, and more of it, is our goal for 1949," President A. O. Eckert, St. Clair county, told southern fruit growers. Illinois Fruit Growers Exchange, with offices at Carbondale, is an affiliate of the Illinois Agricultural Association.

"People are now more particular about their buying," Eckert said, "so our fruit must be good to sell. However, emphasis on quality the past few years has shown results because today our pack is as good as any in this area."

C. G. Watkins

Principal speaker was C. G. Watkins of the Fadler Produce Company, Springfield, Mo., who spoke on the importance of preparing a pack that will retain its high quality appearance until the moment the consumer buys it.

Speaking as a middleman, Watkins said the grower shouldn't forget that the wholesaler has his problems too. "His job," Watkins said, "is to sell as much of your fruit as possible."

"I'm not a grower," Watkins said "but I know what the consumer wants. Pack quality fruit and keep your pack uniform. The fruit business has a great future. There is no food more habit forming than fresh fruits. But never forget that 85 per cent of all fruit is sold on eye appeal."

William Clemens of the Kroger chain stores advised the growers to "live up to the reputation of your labels so that when the buyer sees your label she will know your fruit is good without even sampling it."

Speaking as a fruit grower, L. L. Colvis, IAA secretary of marketing said, "we, as growers, have a responsibility to our organization to grow the quality of fruit the Exchange wants, and pack it as the Exchange wants it packed because the Exchange knows what sells best."

In his annual report to the membership, Manager R. S. McBride predicted an Illinois peach crop of two million bushels in 1949 compared with 1,428,000 bushels in 1948. His report showed that 70,000 less packaged units were handled in 1948 than in 1947 although gross sales returns were up nearly $40,000. Expenses increased $10,000 over the previous year — half of which was attributed to depreciation. The cold storage building, operating on its first full year made a profit of $4200.

McBride reported good reception of the Fruit Exchange peach brand labeled Prairie Chief which was introduced in 1948. "People began asking for Prairie Chief brand," McBride said, "and that is what we are aiming at."

Manager McBride said he thought more attention should be paid to tree maturity and tree-ripened fruit. It hurts he said when we market green fruit. Demand slackens and it lacks quality.

Our quality is good now, he said but there is always room for improvement. Demand for our pack gives us cause to be optimistic about the year but let's raise our sights on quality.

Reporting on 1949 pest infestation for Entomologist S. C. Chandler, Dr. Dwight Powell of the U of I gave the following information: codling moth, possibly severe; plum curculio, worse; leaf hoppers, light; European red mite heavier; scale, moderate to severe; peach catfacing, worse; oriental fruit moth worse; blotch on apples, light; black rot building up; brown rot, worse; rosy apple aphis, building up; and apple measles, general increase.

The annual meeting in resolutions endorsed the program of horticultural societies in enacting a tax law to benefit Illinois horticulture. Backed efforts to improve, develop, and expand facilities at Southern Illinois University and called for strengthening the laws of the state division of markets.

Elected to three year terms on the Fruit Growers Exchange board of directors were C. R. Boland, Edgar; Dr. L. A. Floyd, Bond; E. D. McGuire, Jackson; Dr. Dwight Powell, Clark; and Roy Wieneke, Calhoun.

Officers re-elected were A. O. Eckert, St. Clair, president; E. D. McGuire, Jackson, vice president; and F. G. Anderson, Union, secretary-treasurer.

Start Fight For Road Program

Earl C. Smith Calls on Farmers For Active Support to Push Through Comprehensive Road Building and Maintenance Plan

"THIS may be your last chance for a long time to get better rural roads," Farm Bureau leaders meeting in Springfield were warned by Earl C. Smith, former IAA president, during his discussion of a comprehensive Illinois road improvement program which has been submitted to the state legislature

Two important provisions of the proposed road improvement program are (1) that the tax per gallon of gasoline be raised from three cents to five cents and (2) that 12½ per cent of all gasoline taxes collected be spent on rural roads.

Smith called on farmers for their active support in a campaign to inform their neighbors and their legislators of the importance of getting legislation passed raising the gas tax two cents to insure a steady source of state funds for rural roads and highways.

The road improvement program for Illinois was proposed after a long study of road problems by a 17-man group called the Illinois Highay and Traffic Problems Commission. Smith was a member of this commission.

Recognizing the feeling of irritation and dismay that sweeps over most people at the mere mention of increases in taxes these days, Smith said: "I have always been opposed to any increase in taxes unless such an increase was needed to do the job. . . . . I am convinced an increase in revenue is in the best interests of all the people."

Illinois farm leaders are aware that a major legislative battle is at hand over use of gasoline taxes for local rural roads. Rural roads have never shared in gas tax funds before and there is bitter opposition brewing in some quarters, particularly Chicago.

During the Farm Bureau leaders' meeting in Springfield, Smith charged that the petroleum and trucking interests were "sabotaging the proposed highway improvement and maintenance program through a concerted campaign of spreading misinformation regarding the need for a two-cent increase in the state gas tax and nominal increases in truck licenses."

The recommendation giving 12½ per cent of motor fuel tax funds to local rural roads also proposes that 37½ per cent go to the primary road system (the highways which bear the heaviest traffic), 25 per cent to the secondary highway system (sometimes called the county road system), and 25 per cent to the municipal street system (city streets not traversed by the primary system).

In the last two sessions of the state legislature, the IAA has been successful in securing two special appropriations of $15 million for local roads. These appropriations, however, are merely stopgap aid which cannot be depended upon over the years. As ex-president Smith said: "How can we set up a long-range plan on our rural roads unless we have an adequate and dependable source of income? We will never have an adequate system of township roads," he continued, "if you have to appear before the legislature every two years with your hat in hand."

The Commission commended state officials for their current campaign to enforce the law on truck weight limitations. The report pointed out the increasing destructiveness of overloaded trucks which have caused rapid deterioration of primary road systems. Smith suggested that people interested in preserving the roads write the governor and their representatives to express their appreciation of the present law enforcement program.

The Commission also has recommended the encouragement of road district consolidation. The proposal provides that gas tax funds be cut off to township or township road districts unless they meet one of the following conditions: (1) have levied taxes necessary to construct and maintain grading and culverts (not exceeding three feet in diameter) under roadways; (2) have levied the maximum tax limits authorized by law; (3) have in excess of 40 miles of local rural roads.

The IAA recognizes that the state cannot be expected to allocate funds indefinitely to units which are too small for efficient administration. Consolidation, it is felt, is necessary for more efficient administration.

"Rural people too have a great stake in this program," Smith said, "because they need all weather roads in order to futher the much needed reorganization of our country school districts."

"Total revenues from gas taxes, motor licenses, federal aid, operators' licenses and other sources to the state", Smith said, "were $83,762,462 in 1947 as compared with expenditures of $86,792,668. Some $30 million of this expenditure were returns to cities and counties, $11 million was for maintenance of our primary system and about $25 million was for primary road construction. The average motorist knows you can't get much road construction these days for that amount of money. He can see how our roads are breaking down, and it costs considerable to build such safety requirements as grade sepa-

R. H. Gantz, Piatt county, rises to ask President Shuman a question during Farm Bureau Leaders annual spring meeting in Springfield.

A group of farmers and farm advisers from the 19th IAA district meet at close of Farm Bureau Leaders meeting to plan district discussion of Farm Bureau problems with IAA Director F. L. Simpson (facing camera, right, center). I. E. Parett (center, speaking) of IAA calls meeting to order.

rations, underpasses and wider two and four-lane highways.

"The question the average motorist has to ask himself is whether he is willing to pay an additional 75 to 80 cents per month for the assurance of a restored and servicable system of Illinois highways and city streets; or does he prefer to keep this amount in his pocket and see our highways and streets continue to break up and finally go into a complete state of destruction." Smith based his figure on an average annual travel per auto in the state of 5,000 miles a year with the increase in the gas tax and license fee.

"As a matter of fact," Smith said, "our present battered highways do many dollars of damage to our autos and tires every year."

In conclusion, we summarize briefly the Commission's principal findings and recommendations:

1. The highway safety record in Illinois must be improved. A comprehensive safety program of education and law enforcement, with some changes in existing law, can be expected to have good results.

2. The highway physical plant itself must be protected against abuse. Changes in existing law as to the enforcement of overweight restrictions are required. The executive branch has recently embarked on an active program of preventing overweight violations. This program should be sustained.

3. Highways should be reclassified into four principal systems — the primary highway system, the secondary highway system, the municipal street system, and the local rural road system.

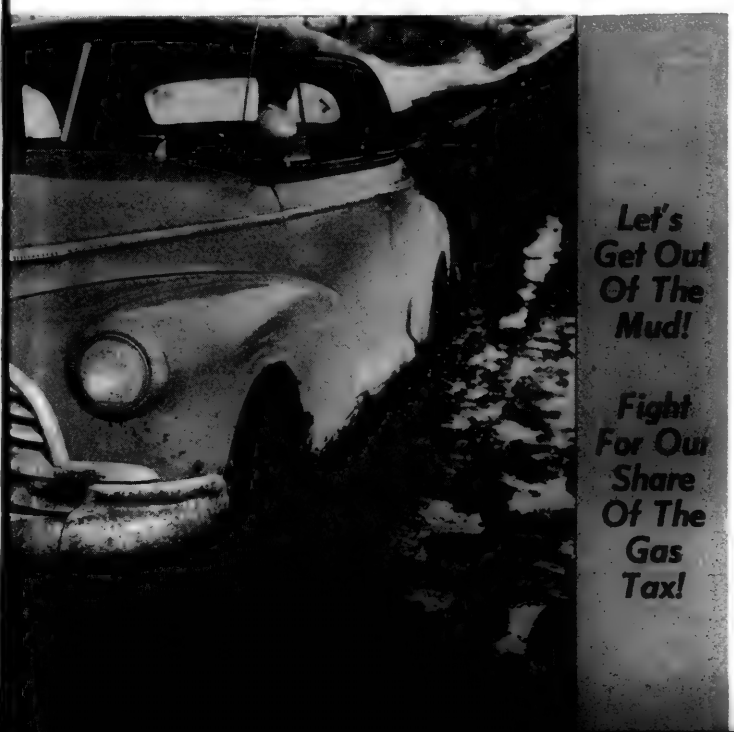
4. The fiscal needs for improving and operating the highway physical plant at a reasonable service level are so great that they cannot possibly be met at the present time, even with the increased revenues which the Commission proposes should be raised.

5. Highway user revenues should be increased substantially to provide the means of going at least part way in meeting the huge fiscal needs. The motor fuel tax rate should be increased to five cents a gallon, the net proceeds to be distributed as follows: to the state, 37.5 per cent; to the counties, 25 per cent; to the municipalities, 25 per cent; and to the townships and road districts, 12.5 per cent. Passenger car licenses should be restored to the pre-1935 level. Truck, bus, and trailer licenses should be increased moderately in the lower weight brackets and steeply in the higher weight brackets, as specifically set forth earlier herein. Motor vehicle operator licenses should be increased to $1 per three-year period.

6. The added revenue from these increases will approximate $44,400,000 a year, but the total highway revenue will still fall short of what is needed. However, it is the judgment of the Commission that, all things considered, further increases in highway user taxes at this time would not be expedient.

7. Laws should be enacted to give townships having less than 40 miles of local rural roads incentive to consolidate into larger administrative districts.

8. The planning, programming, and scheduling of highway improvements should be formalized as a means of making more effective use of highway funds and as a means of resisting pressures to construct improvements that are not needed or to place a project ahead of others having greater relative urgency.



Start Fight For Road Program

THIS may be your last chance for a long time to get better rural roads," Farm Bureau leaders meeting in Springfield were warned by Earl C. Smith, former IAA president, during his discussion of a comprehensive Illinois road improvement program which has been submitted to the state legislature

Two important provisions of the proposed road improvement program are (1) that the tax per gallon of gasoline be raised from three cents to five cents and (2) that 12½ per cent of all gasoline taxes collected be spent on rural roads.

"As a matter of fact," Smith said, "our present battered highways do many dollars of damage to our autos and tires every year."

In conclusion, we summarize briefly the Commission's principal findings and recommendations:

1. The highway safety record in Illinois must be improved. A comprehensive safety program of education and law enforcement, with some changes in existing law, can be expected to have good results.

2. The highway physical plant itself must be protected against abuse. Changes in existing law as to the enforcement of overweight restrictions are required. The executive branch has recently embarked on an active program of preventing overweight violations. This program should be sustained.

3. Highways should be reclassified into four principal systems — the primary highway system, the secondary highway system, the municipal street system, and the local rural road system.

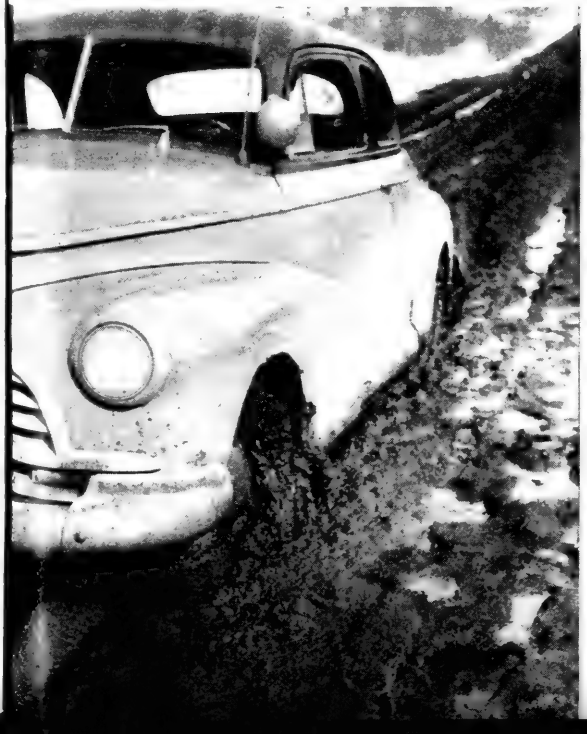
4. The fiscal needs for improving and operating the highway physical plant at a reasonable service level are so great that they cannot possibly be met at the present time, even with the increased revenues which the Commission proposes should be raised.

5. Highway user revenues should be increased substantially to provide the means of going at least part way in meeting the huge fiscal needs. The motor fuel tax rate should be increased to five cents a gallon, the net proceeds to be distributed as follows: to the state, 37.5 per cent; to the counties, 25 per cent; to the municipalities, 25 per cent; and to the townships and road districts, 12.5 per cent. Passenger car licenses should be restored to the pre-1935 level. Truck, bus, and trailer licenses should be increased moderately in the lower weight brackets and steeply in the higher weight brackets, as specifically set forth earlier herein. Motor vehicle operator licenses should be increased to $1 per three-year period.

6. The added revenue from these increases will approximate $44,400,000 a year, but the total highway revenue will still fall short of what is needed. However, it is the judgment of the Commission that, all things considered, further increases in highway user taxes at this time would not be expedient.

7. Laws should be enacted to give townships having less than 40 miles of local rural roads incentive to consolidate into larger administrative districts.

8. The planning, programming, and scheduling of highway improvements should be formalized as a means of making more effective use of highway funds and as a means of resisting pressures to construct improvements that are not needed or to place a project ahead of others having greater relative urgency.



Let's Get Out Of The Mud!

Fight For Our Share Of The Gas Tax!

This is the modern hybrid seed corn processing plant and office building of the Producers Crop Improvement Association at Piper City.

Seed Co-op Is IAA Affiliate

Full Recognition Given To Producers Crop Improvement Association As A Statewide Affiliate of IAA. District Caucuses Scheduled To Name Eight Directors.

UNDER a revised plan of operation, full recognition has been given to the Producers Crop Improvement Association as a statewide affiliate of the Illinois Agricultural Association. The Producers Association is a Farm Bureau type cooperative which has given outstanding service in the hybrid seed corn field in many counties of the state. Home offices of the organization which was founded in 1937 are at Piper City, Ford county.

A meeting of the stockholders of the Producers has been called for April 23 in the high school auditorium at Piper City to act on a change of name for the Producers, redistricting for representation on the board of directors, and authorization for an increase in capital stock.

District caucuses for the purpose of nominating directors for the new districts will be held at 1:30 p.m. on the following dates and places: district 1, April 19, St. Charles, Community Center; district 2, April 18, Polo Opera House; district 3, April 23, Piper City High School; district 4, April 15, Toulon, Farm Bureau Hall; district 5, April 11, Tuscola, Farm Bureau Hall; district 6, April 14, Jacksonville, Farm Bureau Hall; district 7, April 12, Fairfield, Farm Bureau Hall; district 8, April 13, Belleville, Farm Bureau Hall.

The new name being proposed for the organization is Producers Seed Company.

Proposed new districts are illustrated in the map on the adjacent page. It is proposed that the board would consist of nine members, one elected from each of the districts and the other member to be a member-at-large nominated from the board of directors of the Illinois Agricultural Association.

Under the new setup, the Producers organization will have a close working relationship with the IAA and will subscribe to the management services of the Illinois Agricultural Service Company, the corporate management affiliate of the IAA.

Class B stock of the Producers which is already held by the IAA would continue in effect.

The reorganized Producers will be recognized as the Farm Bureau setup in Illinois for the acquisition, processing and cooperative distribution of hybrid corn, and small seeds.

The Producers will submit to the same rigid control of quality regulations under a Quality Control committee of the IAA as is in effect for other affiliates of the organization.

The expansion program in hybrid corn and in the new field of small seeds will be only at the rate that seems practical and efficient.

The growth of the Producers and its service to members is a tribute to the Farm Bureau folks who pioneered the organization. The growth has been a

steady one. In 1937 the organization produced hybrid seed corn to plant 66,680 acres. By 1948 the production had increased to 2,240 acres of seed, enough to plant 872,562 acres of corn.

Production has grown from 8,585 bushels in 1937 to 109,069 bushels in 1948 and dollar sales from $56,501.79 in 1937 to $519,152.18 in 1948. It can readily be seen that the value of sales does not reflect the true picture of progress, since the per bushel price of seed corn in the first years was $15, declining to $7, then during the war years gradually working back to around $11.50.

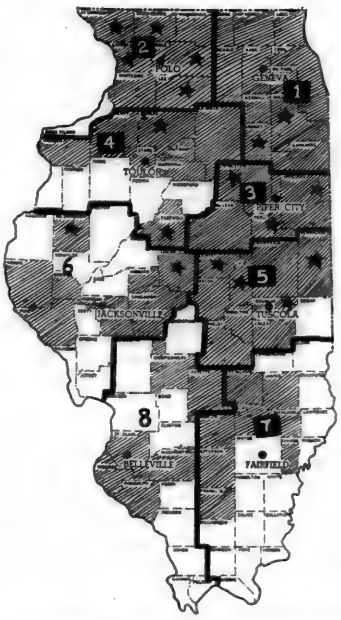
The Producers holds the distinction of being the first cooperative hybrid seed corn processing plant in the United States.

These honors were earned by farsighted Farm Bureau men such as A. B. Schofield, Ford county, first president, who promoted and organized the project. Other early directors, also of Ford county, were L. A. Barrow, Frank Anderson, George J. Arends, F. L. Hevener, Charles Dueringer, and Howard J. Stuckey. Stuckey, a young progressive livestock farmer from near Piper City was elected president at the second annual meeting and has piloted the organization to its present successful status.

The present organization was an outgrowth of the Ford County Corn Growers which prior to the advent of hybrid corn, operated several seed corn testing houses in the county. When hybrid corn came in, the seed houses were abandoned and a modern hybrid seed corn processing plant was built at Piper City. When the plant was completed it was realized that the projects was too big for one county, and since it was a Farm Bureau enterprise, the Livingston and Grundy county Farm Bureaus joined in the setup.

Since that time the service of the cooperative has been extended year by year over the state, but only on the request of the respective county Farm Bureaus. Shaded portions in the adjoining map show the counties which have a complete sales organization servicing "Producers Hybrids" to Farm Bureau members.

Credit for able management of the Producers is due L. R. Downs, general manager, who has been with the organization since February, 1940. He has



Map (above) shows the proposed districts in the reorganization of Producers' Crop Improvement Association marked off by heavy lines. Shaded areas are counties having complete sales service for Producers' Hybrids, and stars indicate where present directors on the board live. Towns listed, with exception of Geneva, are caucus sites. St. Charles is district 1 caucus site instead of Geneva.

been managing agricultural cooperatives for 21 years having started with the Farm Bureau cream pools in Piatt county and later managed a cooperative creamery. Prior to coming with Producers, Downs was manager of Columbia Farmers Cooperative Grain Company in Monroe county.

Playing an important part in the sales growth of Producers is R. A. Hager, sales manager, who came with the organization in November 1941. A former Iowa farm boy, Hager had some eight years sales experience prior to joining Producers.

For the past several years, the Producers has maintained a complete plant breeding and research program under the direction and supervision of its plant breeder, R. R. Copper. Copper is a recognized agronomist having served on the agronomy staff of the University of Illinois for five years and two years at State College of Pennsylvania, prior to joining Producers.

In 1945 the Producers established a hybrid seed corn drying plant at Fairbury in Livingston county. Then on June 30, 1947 the Blackhawk Hybrid Seed corn Association at Polo in Ogle county was merged with the Producers by mutual consent of the shareholders of both organizations on a capital stock exchange basis.

NOTICE OF DISTRICT CAUCUSES

For Nomination of Directors
For Producers' Seed Company

April 1, 1949

Notice is hereby given to the stockholders and Farm Bureau patrons of the Producers' Crop Improvement Association of the district caucuses to be held for the purpose of nominating a director from each of the eight districts to serve on the board of directors of the proposed "Producers' Seed Company."

The Producers' Crop Improvement Association is being reorganized as the "Producers' Seed Company". Producers' Seed Company will be recognized as the Farm Bureau set-up in Illinois for the acquisition, processing and cooperative distribution of hybrid seed corn and small seeds.

District No. I, consisting of the counties of Boone, McHenry, Lake, DeKalb, Kane, Cook, DuPage, Kendall, Will, Grundy and Kankakee, will hold its caucus April 19, 1949, at 1:30 p.m. in St. Charles, Ill., Community Center.

District No. II, consisting of the counties of Jo Daviess, Stephenson, Winnebago, Carroll, Ogle, Whiteside, Lee and Rock Island will hold its caucus April 18, 1949, at 1:30 p.m., in Polo, Ill., at the Polo Opera House.

District No. III, consisting of the counties of Livingston, Iroquois, McLean and Ford, will hold its caucus April 22, 1949, at 1:30 p.m. in Piper City, Ill., in conjunction with the special stockholders meeting.

District No. IV, consisting of the counties of Mercer, Henry, Bureau, La Salle, Henderson, Warren, Knox, Stark, Putnam, Marshall, Peoria, Woodford and Tazewell, will hold its caucus April 15, 1949, at 1:30 p.m., in Toulon, Ill., at the Farm Bureau Hall.

District No. V, consisting of the counties of DeWitt, Piatt, Champaign, Vermilion, Macon, Moultrie, Douglas, Edgar, Shelby and Coles, will hold its caucus April 11, 1949, at 1:30 p.m. in Tuscola, Ill., at the Farm Bureau Hall.

District No. VI, consisting of the counties of Hancock, McDonough, Fulton, Adams, Schuyler, Mason, Brown, Cass, Menard, Logan, Pike, Morgan, Scott, Sangamon, Calhoun, Greene and Jersey, will hold its caucus April 14, 1949, at 1:30 p.m. in Jacksonville, at the Farm Bureau Hall.

District No. VII, consisting of the counties of Cumberland, Clark, Effingham, Jasper, Crawford, Clay, Richland, Lawrence, Marion, Jefferson, Wayne, Edwards, Wabash, Hamilton, White, Franklin, Williamson, Saline, Gallatin, Johnson, Pope, Hardin and Massac, will hold its caucus April 12, 1949, at 1:30 p.m. in Fairfield, Ill., at the Farm Bureau Hall.

District No. VIII, consisting of the counties of Christian, Macoupin, Montgomery, Madison, Bond, Fayette, St. Clair, Clinton, Washington, Monroe, Randolph, Perry, Jackson, Union, Alexander and Pulaski, will hold its caucus April 13, 1949, at 1:30 p.m., in Belleville, Ill., at the Farm Bureau Hall.

Persons who are bona fide producers of agricultural products, and who are members and common shareholders and in good standing with this Association, are eligible for election to the board of directors.

Plan to attend your district caucus.

Producers' Crop Improvement Association
L. R. Downs
General Manager

NOTICE OF DISTRICT CAUCUSES

For Nomination of Directors
For Producers' Seed Company

April 1, 1949

Notice is hereby given to the stockholders and Farm Bureau patrons of the Producers' Crop Improvement Association of the district caucuses to be held for the purpose of nominating a director from each of the eight districts to serve on the board of directors of the proposed "Producers' Seed Company."

The Producers' Crop Improvement Association is being reorganized as the "Producers' Seed Company". Producers' Seed Company will be recognized as the Farm Bureau set-up in Illinois for the acquisition, processing and cooperative distribution of hybrid seed corn and small seeds.

District No. I, consisting of the counties of Boone, McHenry, Lake, DeKalb, Kane, Cook, DuPage, Kendall, Will, Grundy and Kankakee, will hold its caucus April 19, 1949, at 1:30 p.m. in St. Charles, Ill., Community Center.

District No. II, consisting of the counties of Jo Daviess, Stephenson, Winnebago, Carroll, Ogle, Whiteside, Lee and Rock Island will hold its caucus April 18, 1949, at 1:30 p.m., in Polo, Ill., at the Polo Opera House.

District No. III, consisting of the counties of Livingston, Iroquois, McLean and Ford, will hold its caucus April 23, 1949, at 1:30 p.m. in Piper City, Ill., in conjunction with the special stockholders meeting.

District No. IV, consisting of the counties of Mercer, Henry, Bureau, La Salle, Henderson, Warren, Knox, Stark, Putnam, Marshall, Peoria, Woodford and Tazewell, will hold its caucus April 15, 1949, at 1:30 p.m., in Toulon, Ill., at the Farm Bureau Hall.

District No. V, consisting of the counties of DeWitt, Piatt, Champaign, Vermilion, Macon, Moultrie, Douglas, Edgar, Shelby and Coles, will hold its caucus April 11, 1949, at 1:30 p.m. in Tuscola, Ill., at the Farm Bureau Hall.

District No. VI, consisting of the counties of Hancock, McDonough, Fulton, Adams, Schuyler, Mason, Brown, Cass, Menard, Logan, Pike, Morgan, Scott, Sangamon, Calhoun, Greene and Jersey, will hold its caucus April 14, 1949, at 1:30 p.m. in Jacksonville, at the Farm Bureau Hall.

District No. VII, consisting of the counties of Cumberland, Clark, Effingham, Jasper, Crawford, Clay, Richland, Lawrence, Marion, Jefferson, Wayne, Edwards, Wabash, Hamilton, White, Franklin, Williamson, Saline, Gallatin, Johnson, Pope, Hardin and Massac, will hold its caucus April 12, 1949, at 1:30 p.m. in Fairfield, Ill., at the Farm Bureau Hall.

District No. VIII, consisting of the counties of Christian, Macoupin, Montgomery, Madison, Bond, Fayette, St. Clair, Clinton, Washington, Monroe, Randolph, Perry, Jackson, Union, Alexander and Pulaski, will hold its caucus April 13, 1949, at 1:30 p.m., in Belleville, Ill., at the Farm Bureau Hall.

Persons who are bona fide producers of agricultural products, and who are members and common shareholders and in good standing with this Association, are eligible for election to the board of directors.

Plan to attend your district caucus.

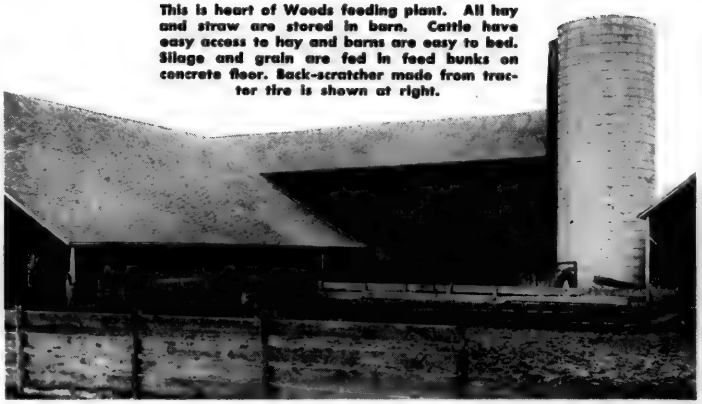
Veteran Feeder EXPLAINS Money-Making SYSTEM of Fat Cattle PRODUCTION



This is heart of Woods feeding plant. All hay and straw are stored in barn. Cattle have easy access to hay and barns are easy to bed. Silage and grain are fed in feed bunks on concrete floor. Back-scratcher made from tractor tire is shown at right.

By PRESTON WOODS,
DeKalb County Farmer

Woods uses this labor-saving device for a number of things, mainly cattle feeding. The platform he stands on is attached to the tractor and is used for hauling the feeds.

IF YOU FEED year after year, you can take the gamble out of cattle feeding. It is a matter of figuring.

Just figure your profits on the difference between your fat cattle sales and your feeder cattle costs in the same year. Keep about the same number of cattle on feed year after year.

You can do this because there is always a definite relationship between the price you pay for feeders and the price you get for fat cattle in July and August.

Our 192-acre farm is built almost entirely around cattle feeding. We also rent 120 acres which has no buildings and is operated only as a grain farm.

The two large old barns on the farm we own were remodeled into feeding sheds. Now we have plenty of room to store hay and straw.

Since the fall of 1937 we have contracted Texas calves through the Chicago Producers in July or August for October delivery. We like this way of getting calves. We also sell through the Chicago Producers.

For three years we have been feeding from 150 to 200 heifers. They use more roughage, fatten faster, and finish quicker on less corn than steer calves.

When the calves arrive in October they are kept in a shed for a few days to rest, and are given all the hay they will eat. In case the weather is nice as it was this year, they are turned out on pasture right away and left there.

They run on pasture and through corn fields until the feed gets too short or until snow covers the ground. They are then started on silage which is increased until they are getting all they will eat.

In addition to the corn silage, the steers get a pound of protein daily (one-half pound with grass silage). They also are fed all the chopped hay they can eat from racks inside the sheds.

All our calves run out through the winter as long as the fields stay frozen. We didn't yard them last year until January.

In the meantime, the lot of light weight heifers are kept on the same silage and linseed meal ration after the March sorting.

They are fed silage until it is nearly all gone, about the last of April. We then supplement the silage with crushed ear corn until the silage is used up. At this time the cattle are getting all the corn they can eat.

About May 5 the light weights are turned out on the pasture and fed corn once a day, just what they will clean up. This year we pastured 78 head on 20 acres of sweet clover, alfalfa, and timothy mixture.

From the time they were turned out, May 5, until June 20 they were fed corn once a day, averaging about five pounds per head. After June 20 the corn was increased to eight or 10 pounds, and linseed to one and a half pounds a day.

A simple wooden ramp allows hogs to drink from cattle tank, saves up to 15 minutes a day. Wooden guard in tank keeps pigs, when smaller, from drowning.

They remained on pasture until Aug. 15 when they were placed in dry lot and given a full feed of corn.

On Sept. 6 we sorted out 39 of the

(*Continued on page* 28)

This COULD HAPPEN TO *You* IN 1949!

COUNTRY *Mutual* **FIRE** *Company*

A whole crop laid low by hail! And with these shattered stalks lie wasted man hours, all the hopes for profit from one of your major crops — unless your loss is protected by hail insurance. Invest now, before it's too late, in a Country Mutual Fire hail insurance policy. Just a few dollars brings you the protection of the special percentage payment plan, giving you greatest benefit when damage is most severe.

For example, if you insure 80 acres of a certain crop at $50.00 per acre (or $4000), you get the total amount of $4000 should total loss occur. If 50 per cent of the same crop is destroyed, you receive payment for $2000. So be certain to insure your crop for enough to pay your loss if hail SHOULD strike.

See your insurance counselor from your Farm Bureau for information about this coverage. Have him bring your complete personal survey of protection in your three companies to your home.

LETTERS TO THE EDITOR

SCHOOL CONSOLIDATION

ON March 8, 2500 people, consisting mostly of farmers, went down to Springfield to attend the hearing of House Bills 164 and 165 of the Education Committee.

The purpose behind this demonstration was to show to our representatives that the present laws are unjust and that the land grabbing and rush for filing petitions to add new districts by larger communities has reached the point where there must be immediate legislation to put a halt to this.

However speaking against these bills was our own IAA. The reason given by Mr. Cox for opposing these bills seems to center around the idea that the IAA is on record as being in favor of a larger unit and elimination of some of the smaller districts.

Even if granted that the larger unit were preferable, which those attending seemed to think otherwise, it is the present law which allows the smaller communities in whole or part by no consent or desire of their own to be absorbed into one of the surrounding larger units that we are greatly disturbed about.

We left Springfield with the feeling that the IAA is not representing the views of the majority of its members in regard to these bills.

I think that Mr. Cox as director of rural school relations would do well to give these bills and other similar bills which are about to be proposed a good deal of study and to make sure that the views he expresses are those of the members.

R. E. Trainor,
Livingston County.

John K. Cox, IAA director of rural school relations, was well within the policy of the Association in the position he took in the education committee in the General Assembly on March 8. The IAA was instrumental in securing passage of the Community Unit School District Act which carries a minimum population figure of 2,000. That population figure was considered necessary to insure a desirable minimum enrollment in the high school. The IAA School Report of 1944, a copy of which is being sent to Mr. Trainor, outlines on pages 35 and 36 the IAA position on House bill 164. Mr. Cox also represented the position of the IAA in opposing House bill 165. This bill requiring a separate favorable vote in every high school district or part thereof would have the effect of freezing small high schools. The IAA believes that the provision for a separate rural and urban vote, now a part of the Community Act, seems to be good protection to rural people.

FINE IDEA

"A FINE IDEA", Mr. Frank Shuman, farm adviser, said when I suggested that the picture study of Clyde Miller at the IAA Co-op Training School be included with Clyde's application to represent Illinois in the International Farm Youth Exchange project.

Being elected to the co-op board, taking an active part in the entire school, and being named a finalist in the speaking contest, is typical in the life of Clyde Miller. Because of his forward stride in 4-H, FFA, and Rural Youth — both local and state — he was selected as our applicant for the farm youth exchange.

Clyde was quite pleased to have had the opportunity to attend the co-op school. I think that everyone who attended, regards it as a valuable asset to their future community interest.

Thanks so much for your picture study of Miller and the fine article. Keep your fingers crossed for him.

Hubert J. Wetzel,
Youth Assistant
Whiteside County

SEARCHING FOR G.I.'s

DOES the Farm Bureau of your state publish a magazine? In the November, 1948 "Nation's Agriculture", on page 21, is an item about a German soldier.

He, Willy Schafer, is trying to get in touch with nine American soldiers he set free in a woods near Bourbon, France, during the October, 1944, fighting. The German army was in retreat towards the last bridge over the Mosel River. Finding their way blocked, Schafer's captain ordered him to take the nine Americans and turn them over to the S. S. Brigade in the next village. Knowing that they would be executed, Schafer turned the nine prisoners loose and gave them their chance to escape. He later entered a hospital at St. Die, and thus evaded the S. S. himself. His notebook, (in which the nine wrote their names and addresses), was taken from him by the Russians, who captured him at Berlin.

He, Willy Schafer, wrote to a religious organization at Topeka, asking aid for himself and family, telling his story. An account of it was published in a Topeka newspaper, and attracted my attention.

Out of curiosity I wrote to him, and also sent him some aid. I have carried on correspondence with him for upwards of a year.

They were all farm boys. If there is a State Farm Bureau magazine in your state, with a "reader's column", I wonder if this letter of mine, or a summary of it, could not be published. Perhaps this unusual matter would attract the attention of one who might know one of the nine.

So much am I interested in finding and meeting a group of them, I would be willing to travel to almost any point in the United States next fall.

My object is to inform them of Willy Schafer, and for them to read the letters that he has written to me. And so that they, themselves can give their former guard, a "helping hand".

I own a good-sized farm here, and the expense of such a trip would be the "least of my worries".

Tecumseh, Kansas

HOW MUCH LONGER

MY opinion is there is nothing wrong with this country that the application of a few common sense rules of good business or good farming will not cure. Mr. Hoover has recommended some very essential and drastic changes to our president, but I don't think any man, or should I say politician, is going to eliminate his so-called loyal supporters.

There is no doubt that your money and mine is being wasted at record speed. I am sure if some sincere effort were made to operate the federal government, as any sensible business man or farmer operates his business, our taxes could be greatly reduced.

At the present high level of taxes and other essential expenses of farming and business, the government is fast removing the incentive for an individual to accumulate any property. I speak from the standpoint of a farmer in debt for a farm, but I can also recognize the similarity of my position to that of any other small businessman. During the last years of high grain and livestock prices, it has been impossible for me to put any amount into needed improvements or equipment and still maintain a reduction of the debt against my land.

Perhaps I expect too much but I know that I and my family have not indulged in any excess of high living or extensive travel, yet it becomes increasingly hard to carry out that great American heritage of owning and paying for your own farm or home. I am not asking for help from the government except in the sense that by using a little common sense, my tax load would be lightened.

As I see it all veterans, labor groups and others who would seek more and more government service for the individual, should stop and take another look. Are these people so different from the rest of us that they cannot see the tax load they are wishing on us and our children? As for our president's recommendation of socialized medicine, I am against it in any way, shape, or form. I have no quarrel with our local doctors or hospitals. In our county we have our own county hospital to take care of the poor and needy to which all of the doctors contribute their time and skill. Let us keep our Blue Cross and similar organizations, but let us keep it local and voluntary.

I think we should follow our own noses and not the pattern of socialistic Britain, who I understand we are helping to support. I recognize the need for government spending and supervision in certain fields, but let us keep our government out of competition with private business. In our administration of the European Recovery Plan let us remember this that we hold the aces, that we are Americans and that just a little horse sense could easily be the best foreign policy in the world.

In this letter I am only trying to give you my opinion of the things I feel we can do to keep our country free and great. The war is over and now is the time for us to use our heads, keep our powder dry, and put our financial house in order.

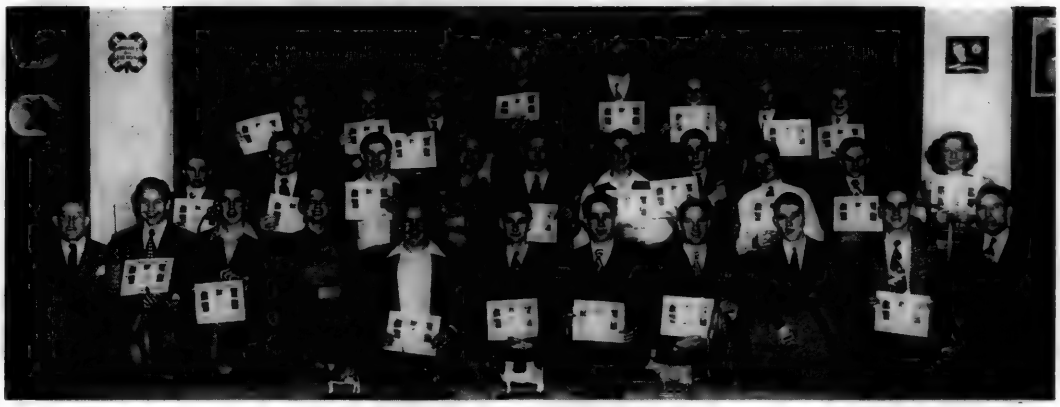
ON THE BEAM

WE'VE been having such an interesting time out here in Whiteside Rural Youth that I can't let this opportunity go by without telling you about it. Our Rural Youth feels rather proud of its record in the recent CROP drive. (Rural Youth carried the responsibility of this program) We finished second in the state with 12,000 bushels of corn and $4,000 in cash. It was a lot of work but if it helps



Holding certificates that prove they know their dairying are competing youngsters sponsored by the Litchfield Dairy Club. Left to right (first row) Douglas, Schmidt, Hartke, Grosenheider, Wolf, Durbin, Selvers, Blankenship, Jones, Hampton, Peterson; (second row) Hartke, Schmidt, Green, Saunders, Bierbaum, Brashear, Jones, Leitschuh, Watson, Ploczizka; (third row) Lay, Frerichs, Bowles, Bishop, Werner, Slighton, Skinner, Hampton.

some one who is less fortunate than we our work was not lost effort.

Our local club, (Prophetstown-Tampico Warriors) had a one-act play and won county honors, permitting us to go to the district festival. There we received a "B" rating but we certainly have been having an "A" time with it at home. We've been giving it at the school districts around Prophetstown, taking over the entire program of the evening, giving the play, piano selections, singing, and an exhibition of square dancing, and then opening the square dancing up to the parents.

We had our annual semi-formal banquet and dance and we believe it was one of the nicest events we've ever had. We had 110 at the dinner and at least 200 or more at the dance. Everything went like clock work.

We did another interesting thing with our banquet. Several Rural Youthers said they wouldn't come because they wouldn't have dates. It was decided to have a "date bureau" set up. So with every newsletter that was sent out the young folks were asked whether or not they were coming to the banquet, and if they were coming dateless. If they were, they answered questions about age, weight, height, etc. and a committee paired them off. We had good response and I believe they all had a nice evening.

We are in the middle of a membership drive. Bowling and basketball games are on every week, and in March we are starting a series of discussions on Family Living. Our gang is quite active and believe me were having ourselves a time.

George Matthews
Whiteside County

Three members of the IAA board of directors have been named to serve on committees of the American Farm Bureau Federation. They are Homer Curtiss, Jo Daviess county, dairy; F. E. Morris, Sangamon, field crops; and Lyman Bunting, Edwards, alternate, poultry committee.

The Midwest Training School for Farm Bureau officers and organization men will be held at the Game Lodge in the Black Hills, South Dakota, June 5-8.

"Master Dairyman" is Top Award

TO CLAIM the title of "Master Dairyman" FFA and 4-H Club members around Litchfield in Montgomery county really mean what they say. Because the boys and girls must pursue a rigorous course of instruction before they can be considered top dairymen.

The Litchfield Dairy Club puts the boys through their dairying degrees in one of the most unusual farming clubs in the state. Points are given and titles awarded with prizes for skills shown in dairy practice. The project was formulated by Farm Adviser Earl Peterson and the ag instructor at Litchfield high school last year.

When a student receives 30 points he gets his first degree and title of "Cub Dairyman" then successively as he accumulates points he becomes a junior dairyman, dairyman, and finally, a master dairyman.

Points are awarded for such things as showing in fairs, placing in fairs, keeping of productions and breeding records, testing herds, taking care of animals, and talking for five minutes on any phase of dairying.

Raise $170,000 For 4-H Club Fund

ALMOST $170,000 had been contributed to the 4-H state camp fund as of March 1.

A 10-year campaign to raise $1,000,000 to develop four camps for 4-H members as started in 1945, with F. H. Mynard, assistant 4-H state leader in charge. 4-H members themselves are raising $500,000, half of the goal. About 12,000 4-H'ers attended district or county camps in 1948.

The undesignated fund from larger donors is growing fast, Mynard says. It now stands at just under $33,500. Contributions can also be assigned to any of the four camps. The Memorial camp fund now stands at $83,300, Camp Shawwaw-nas-see at $46,500, the western camp at $1,800, and southern camp at $2,900.

PRODUCERS' CROP IMPROVEMENT ASSOCIATION

Notice of Special Stockholders Meeting
Saturday, April 23, 1949

Notice is hereby given of a special meeting of the stockholders of the Producers' Crop Improvement Association, to be held in the Auditorium of the Piper City High School, Piper City, Ill., on Saturday, April 23rd, 1949, at 1:30 p.m., for the purpose of considering and acting upon a proposed amendment of the articles of incorporation, changing the name of the Association, broadening the purposes for which it is formed, to include among other things the handling of seeds of all kinds, to provide for nine directors, one to be elected at large to hold for a term of one year and eight to be divided into two classes and to hold for alternating two year terms; to increase the authorized capital to 100,000 shares of first preferred stock of the par value of $10.00 per share; 100,000 shares of second preferred stock, of the par value of $10.00 per share; 250,000 shares of Class "B" preferred stock of no par value and 100,000 shares of common stock of no par value; to consider and act upon a proposed amendment of the by-laws of the Corporation, including an amendment dividing the territory served by the Association into 8 districts and providing that one director shall be elected from each such district; and if the foregoing are approved, to elect nine directors, and for the transaction of such other business as may come before the meeting.

(Signed): GUY K. GEE, Secretary

LETTERS TO THE EDITOR

SCHOOL CONSOLIDATION

ON March 8, 2500 people, consisting mostly of farmers, went down to Springfield to attend the hearing of House Bills 164 and 165 of the Education Committee.

The purpose behind this demonstration was to show to our representatives that the present laws are unjust and that the land grabbing and rush for filing petitions to add new districts by larger communities has reached the point where there must be immediate legislation to put a halt to this.

However speaking against these bills was our own IAA. The reason given by Mr. Cox for opposing these bills seems to center around the idea that the IAA is on record as being in favor of a larger unit and elimination of some of the smaller districts.

Even if granted that the larger unit were preferable, which those attending seemed to think otherwise, it is the present law which allows the smaller communities in whole or part by no consent or desire of their own to be absorbed into one of the surrounding larger units that we are greatly disturbed about.

We left Springfield with the feeling that the IAA is not representing the views of the majority of its members in regard to these bills.

I think that Mr. Cox as director of rural school relations would do well to give these bills and other similar bills which are about to be proposed a good deal of study and to make sure that the views he expresses are those of the members.

R. E. Trainor,
Livingston County.

Jess K. Cox, IAA director of rural school relations, said, "I am well within the policy of the Association in the position we took in the education committee in the General Assembly in March 8. The IAA was instrumental in securing passage of the Community Unit School District Act which carries a minimum population figure of 2000. That population figure was considered necessary to provide a desirable minimum educational program. See the IAA School Report of 1944, a copy of which is being sent to Mr. Trainor, outlined on pages 35 and 36 the IAA position on House bill 164. Mr. Cox also represented the position of the IAA in opposing House bill 165. This bill requiring a county unit vote is to us very high type. I do not see how we could have the effect of the one mule-ridge vote. The IAA believes that it is possible to have a separate rural and urban unit in a part of the Community. At present it is good practice to rural people.

FINE IDEA

"A FINE IDEA," Mr. Frank Shuman, farm adviser, said when I suggested that the picture study of Clyde Miller at the IAA Co-op Training School be included with Clyde's application to represent Illinois in the International Farm Youth Exchange project.

Being elected to the co-op board, taking an active part in the entire school, and being named a finalist in the speaking contest, is typical in the life of Clyde Miller. Because of his forward stride in 4-H, FFA, and Rural Youth — both local and state — he was selected as our applicant for the farm youth exchange.

Clyde was quite pleased to have had the opportunity to attend the co-op school. I think that everyone who attended, regards it as a valuable asset to their future community interest.

Thanks so much for your picture study of Miller and the fine article. Keep your fingers crossed for him.

Metzger, secretary of organization and information, Creston Foster, editor; and Jim Thomson, assistant editor. The IAA Record is edited by the publicity department which is under the supervision of Secretary Metzger.

IAA Record Wins Award For General Excellence

AN award for general excellence in the field of industrial and association magazine editing for 1948 has been won by THE ILLINOIS AGRICULTURAL ASSOCIATION RECORD, official state Farm Bureau publication.

Winners of the contest, sponsored by the Industrial Editors Association of Chicago, were announced last month. The contest drew entries from 22 states.

Magazines were graded on three points —(1) presentation of editorial matter; (2) improvement over 1947; and (3) appearance. The IAA scored 46 out of a possible 50 points in the first category, 9.5 out of 30 in improvement, and 16 out of 20 in appearance. Average improvement grade was 7. The RECORD was given a total grade of 71.5 per cent. Average for all entries was 64 per cent.

An award in the form of a finely etched engraving was presented to IAA RECORD Editor Creston Foster.

PMA Success Story

Past Year Records Gains in Membership, Milk Consumption, And Income to Dairy Producers

NEARLY 12 million more dollars for members' milk, with a three per cent increase in consumers' consumption, and 556 more members is the success story for Pure Milk Association in 1948, said President Wilbur J. Swayer in addressing 2500 members attending the 24th annual PMA meeting at the Sherman Hotel, Chicago, March 12.

Members of Pure Milk Association, largest milk cooperative supplying Chicagoland's milk, having 14,549 dairy farmer members, poured into Chicago from Illinois, Wisconsin, Indiana and Michigan to take part in the annual meeting of their organization.

W. E. Winn, Richmond, Ill., treasurer, reported that the increase in net worth of Pure Milk Association for 1948 was $164,901.93, making the total net worth of the Association $2,229,891.45.

R. P. Alexander, comptroller, reported that Association finances were audited and certified by the Illinois Agricultural Auditing Association.

F. J. Knox, director of sales, gave a detailed report on the pounds of milk sold during 1948 by Pure Milk Association. There was an increase of 4,115,047 pounds over 1947 and an increased value of $11,763,549.02 over 1947. "For 1948 the average price per hundredweight was $4.73 which is the best price in the history of the Chicago milk market," Knox said. "A total of 350,373,795 pounds of milk, representing 20 per cent of Pure Milk Association members' 1948 production, was handled directly by the Association. This milk originated in the Association-owned plants," Knox said.

The location and pounds of milk handled by Pure Milk Association plants are as follows: Chicago, Ill. 15,894,668; Gary, Ind. 12,369,647; Hinckley, Ill. 20,327,140; Kankakee, Ill. 18,982,223; Kansasville, Wis. 42,067,762; Lisle, Ill. 12,055,210; Mazon, Ill. 10,850,259; Orfordville, Wis. 22,346,090; Richmond, Ill. 21,021,076; Salem, Wis. 20,613,005; Sharon, Wis. 14,551,934, or a total volume handled by all PMA plants of 211,079,014 pounds.

In his address A. H. Lauterbach, general manager of Pure Milk Association, was emphatic in stating the Association's opposition to oleomargarine being allowed to use the yellow color of butter in imitation of butter. Lauterbach stated that dairymen had no objection to the removal of taxes on oleomargarine but definitely were opposed to oleomargarine being allowed to masquerade as butter.

Mrs. Haven Smith, vice president of the Nebraska Farm Bureau, spoke on the "Values of Rural Living".

Dr. J. O. Christianson of the University of Minnesota, gave the principal address of the afternoon, speaking on the subject, "Re-Discovering America."

FARM BUREAU INSTITUTE

The American Farm Bureau Institute for the training of Farm Bureau organization men from throughout the nation will be held at the University of Illinois Aug. 15-19.

Market Your Wool by Two Co-op Methods

TWO alternate methods of marketing your 1949 wool clip are being offered through the facilities of the Illinois Wool Marketing Association, according to manager Dale Rouse. Illinois Wool Marketing Association is an affiliate of the Illinois Agricultural Association.

First, the grower who wishes to market his wool on the basis of grade and quality may do so; and second, the wool grower who wishes to sell his wool outright at shearing time may do so.

Under the first or consignment method, the grower delivers his wool to the representative of the Illinois Wool Marketing Association in the county where he lives. This man will weigh the wool, mark it for shipment and will then issue a receipt covering the weight of the wool. It is then shipped to the Association's warehouse at Paris in Edgar county where it will be graded.

Under the second or purchase method there is provided a daily cash market for wool based on average market quotations prevailing at the time. These prices are subject to change at any time and will be based upon clear, native fleece wool with discounts applied to wools carrying burrs, chaff, haystems, and seeds, black and gray wools, and the short staple lamb and fed wools.

Good News Travels FAST!

It's BLUE SEAL!

FOR LARGER, STRONGER LITTERS

Small litters and slow starters never catch up. It's no secret that BLUE SEAL Pig and Sow Supplement makes healthier, huskier pigs—and more of them! Get your pigs off to a flying start with highly-fortified Pig and Sow Supplement for *both* the sow and the litter.

FOR FASTER GAINS

It's no secret that BLUE SEAL Feeds have that pound-producing punch that sends pigs off to market early. Feed Pig and Sow Supplement until the pigs reach 75 pounds—then shift to Hog Supplement or Pasture Supplement to finish the job early.

FOR GREATER PROFITS

Early marketing brings top prices. It's no secret that large healthy litters fed the BLUE SEAL way will get those early-market premiums—and will cost less per pound to produce! Lower production costs coupled with higher market prices mean greater profits for you. Good news travels fast. Feed BLUE SEAL from start to finish!

These feeds are distributed by

McLean Builds Reserve of Leader Material By Training Young Farmers in Co-op Operations

McLEAN is a big county. It has more than 4,100 Farm Bureau members. Its soil is rich and its crops are abundant. Its farmers are progressive and loyal to their organization.

So McLean might be expected to come up with an idea now and then — a pace-setter for other Farm Bureaus. And through the years this often has happened. But several weeks ago they put into effect an idea that probably will have lasting results for years to come.

One day Asa B. Culp, county organization director, sat in his office thinking about two things which, when put together, troubled him. Farm Bureau membership had risen over 4,000 and more than 150 farmers in the county were sitting on boards of directors of farm organizations.

"How," "A. B." reasoned, "can new members of these boards of directors do the right thing for the 4,000 unless they are properly trained or informed?" The answer appeared to be — conduct a course of training for future McLean county farm leaders.

A. B. took his proposal to the Farm Bureau board of directors. They were enthusiastic about it and voted funds to help conduct it. Next he got financial backing from the Service Company, Federal Land Bank, Production Credit Association, Prairie Farms Creamery of Bloomington, the Country Insurance Companies, the County Livestock and Locker Companies, and the REA.

Farm Bureau township representatives were allowed to select three promising young men each from the age bracket 25-35 to attend the school, and for each $25 contributed each co-op was allowed to select one student to attend the school each Thursday for five weeks.

The five session course ended March 17 and was reported a huge success. Attendance was unusually high at all sessions. Farm Bureau leaders in the county carried the course one step further by taking all with high attendance records to Chicago for visits to the IAA offices, the Board of Trade, Stock Yards, etc.

One hundred thirty students were chosen for the courses of instruction which included a history of farm organization and its causes; the development of Farm Bureau; farm prices and farm price supports; the history, development, problems, and philosophy of farm cooperatives; an outline of the organization and functions of such loan organizations as Production Credit and Federal Farm Loan; and a study of the problems of farmers without electricity and what they did to get it through the Rural Electrification Administration.

Among those who took part in conducting the course and instructing the students were officers and management of Farm Bureau, county cooperatives, farm loan organizations, the REA, the Illinois Agricultural Association, and the University of Illinois. Representing the IAA were G. E. Metzger, secretary of organization and information; L. L. Colvis, secretary of marketing; Sam Russell, director of livestock marketing; O. D. Brissenden, director of organization.

Other speakers included Dr. L. F. Stice of the department of agricultural economics, University of Illinois; Dr. Frank Gougler, retired produce marketing director for IAA; Everett Read, Jo Daviess county, longtime state REA leader; and H. W. Trautmann, manager of Illinois Livestock Marketing Association, an IAA affiliate.

L. L. Colvis, IAA secretary of marketing, emphasizes a point during his talk on general farm marketing problems before a session of the McLean County Farm Bureau's school to promote farm organization leadership.

COME TO THE FAIR AUGUST 12 TO 21

The 1949 Illinois State Fair will be held Aug. 12-21, according to Roy E. Yung, state director of agriculture. It will be Illinois' 93rd fair.

Work already has been begun on this year's exposition which calls for the enlargement of many exhibitor facilities, particularly those dealing with livestock.

334 ELEVATORS

There are 334 farmers' elevators in Illinois serving 407 communities and they paid about four million dollars in patronage refunds the past year, according to Lawrence Farlow, Bloomington, secretary of the Farmers Grain Dealers Association of Illinois.

Send entries to Picture Editor, IAA Record, 43 East Ohio Street, Chicago 11, Ill. Entries are judged on originality, clearness, and interest. If you wish print returned enclose a self-addressed stamped envelope. Avoid shots of persons merely looking at camera. Best picture receives $5. Others published receive $1.

FARM BUREAU FOLKS IN PICTURES

McLean Builds Reserve of Leader Material By Training Young Farmers in Co-op Operations

By JIM THOMSON
Ass't Editor, IAA RECORD

McLEAN is a big county. It has more than 4,100 Farm Bureau members. Its soil is rich and its crops are abundant. Its farmers are progressive and loyal to their organization.

So McLean might be expected to come up with an idea now and then — a pace-setter for other Farm Bureaus. And through the years this often has happened. But several weeks ago they put into effect an idea that probably will have lasting results for years to come.

One day Asa B. Culp, county organization director, sat in his office thinking about two things which, when put together, troubled him. Farm Bureau membership had risen over 4,000 and more than 150 farmers in the county were sitting on boards of directors of farm organizations.

"How," "A. B." reasoned, "can new members of these boards of directors do the right thing for the 4,000 unless they are properly trained or informed?" The answer appeared to be — conduct a course of training for future McLean county farm leaders.

A. B. took his proposal to the Farm Bureau board of directors. They were enthusiastic about it and voted funds to help conduct it. Next he got financial backing from the Service Company, Federal Land Bank, Production Credit Association, Prairie Farms Creamery of Bloomington, the Country Insurance Companies, the County Livestock and Locker Companies, and the REA.

Farm Bureau township representatives were allowed to select three promising young men each from the age bracket 25-35 to attend the school, and for each $25 contributed each co-op was allowed to select one student to attend the school each Thursday for five weeks.

The five session course ended March 17 and was reported a huge success. Attendance was unusually high at all sessions. Farm Bureau leaders in the county carried the course one step further by taking all with high attendance records to Chicago for visits to the IAA offices, the Board of Trade, Stock Yards, etc.

One hundred thirty students were chosen for the courses of instruction which included a history of farm organization and its causes; the development of Farm Bureau; farm prices and farm price supports; the history, development, problems, and philosophy of farm cooperatives; an outline of the organization and functions of such loan organizations as Production Credit and Federal Farm Loan; and a study of the problems of farmers without electricity and what they did to get it through the Rural Electrification Administration.

Rural Youth Activities

By ELLSWORTH D. LYON, Director
Young Peoples Activities

TWO members of our State Rural Youth Committee represented Rural Youth at the Springfield Farm Bureau leaders meeting March 4. They were: Doreen Marti, Bond, who is also on the national committee; and Bob Sievers, Rock Island. They were interested greatly in their first meeting since election to the IAA State Committee.

Impressive to them was the democratic way in which Farm Bureau subjects were discussed by Farm Bureau leaders from all over Illinois. Such topics as the long-range farm program, the financing of co-operatives, and road problems were brought close to them by men who have been at the center of activities relating to these outstanding issues.

Becoming acquainted with the problems of agriculture and a firsthand contact with leaders and with methods of discussing the problems helps to build democratic leadership for Rural Youth and for Farm Bureau in general. This privilege of attending leaders meetings is appreciated by the Rural Youth Committee.

From many groups comes news of reports by Rural Youth, FFA, and 4-H members to county Farm Bureau boards and to annual meetings of the Co-op Training Course held during Farm and Home Week in Urbana. Such follow-up by alert young men who attended the CTC and by the cooperating Farm Bureaus is to be complimented. The results will mean much for the future advancement of agriculture and the growth in leadership ability of the young men.

Youth Under AFBF

The most recent big event on the national level for Rural Youth was the AFBF Rural Youth conference held at Kentucky Dam State Park, Gilbertsville, Kentucky, March 7-9. While designed for state leaders of youth on the state level and for state committee members and presidents, Rural Youth leaders in counties will be interested in the event. This conference set up for the purpose of guiding the program of Rural Youth was under three general headings of: Organization, Education, and Recreation.

As a background for the three themes mentioned above was the presentation of Farm Bureau philosophy by Roger Fleming, director AFBF, Washington office, Mrs. Charles W. Sewell, Associated Women, AFBF, and Frank Pierce, California Farm Bureau.

Mrs. Sewell addressed the conference on two different occassions. One of her talks dealt with citizenship as it relates to Rural Youth in which pointers were given for the National Rural Youth Talk Meet which will be held in December. The general topic for this Talk Meet will be, "Rural Youth Citizenship in a Democratic Government."

She pointed out that there are four pillars of government: (1) alert informed citizenship, (2) a simple plan of government, (3) team work in administration, and (4) a plan for future growth. For reading material she suggested *Decline and Fall of Rome* by Gibbons. Mrs. Sewell said this book points to five factors which led to the fall of Rome: Increase of divorce, excessive taxation, craze for pleasure, huge armament programs and decay of religion.

She challenged all present to be proud of their citizenship. She pointed out that delegates should carry back to their state organizations the things which they want to have happen and ideas of ways to prevent what they don't want to have happen, a realization that legislation must protect both producer and consumer alike and that to be effective, Rural Youth must build an action organization.

Some of the ideas emphasized by Frank Pierce in his talk upon public relations should be of interest to Rural Youth members, especially those who are public relations officers in their groups. "The effect of our activities on others and others' activities on us is public relations," said Pierce. He pointed out that the public relations director should be as close as possible to the chief executive. He said further that good public relations leads us to accept the truth rather than shy away from it.

Roger Fleming drew much attention in his speech entitled, "Relationship of Government and Farm Bureau." He pointed out that congressmen are the only hope of control of freedom in our government. He challenged his audience to return to their communities and be participating members in their farm organizations and in the life of our government. A question and answer period following his address brought forth many more questions than there was time for discussion. He said that Rural Youth groups would be safe as they work in their local counties if they will plan their activities in harmony with the AFBF resolutions.

Mimeographed copies of the addresses and discussions will soon be available for distribution. If your county group desires copies you many contact the office of the Department of Young People's Activities.

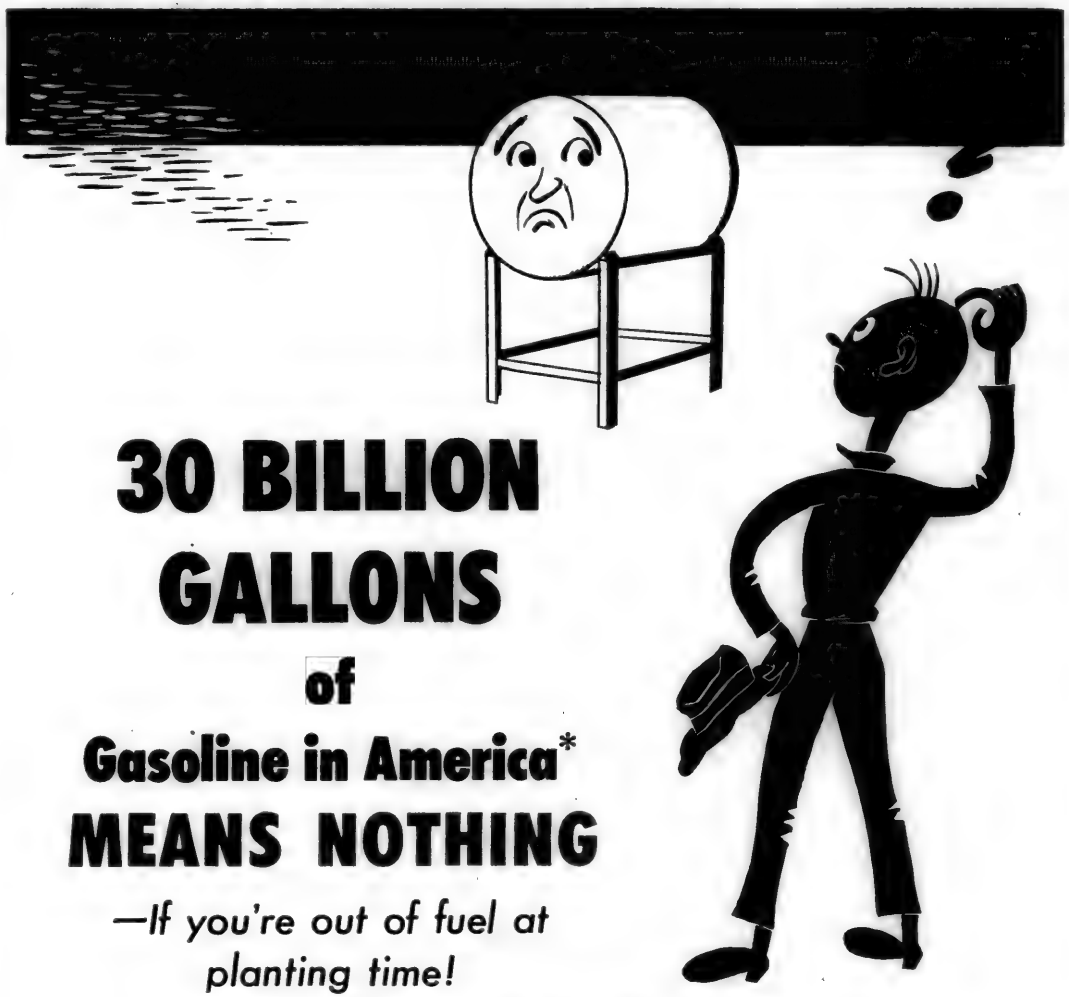
County Activities

Sangamon passed a resolution March 10 promoting Standard time. After discussion it was decided to send the resolution to all mayors of all towns and to publishers of all newspapers in Sangamon County. This action is in harmony with the action of many county Farm Bureau annual meetings.

"Cancer" was the theme for Knox's educational feature, March 1. The speaker was Dr. Alexander M. Burke, M.D., District Health Officer.

A good job of publicity brought out an attendance of 315 Rural Youthers to Henry's annual banquet, March 5. Raymond Johnson and Florence Staley are given credit for an outstanding publicity program.

IAA Vice President Floyd E. Morris (right), Sangamon county, chats with Rural Youthers Bob Stevens, Rock Island, and Dorreen Marti, Bond, following Farm Bureau leaders meeting they attended recently in Springfield.



30 BILLION GALLONS

of

Gasoline in America*

MEANS NOTHING

—If you're out of fuel at planting time!

A word to the wise—now is the time to fill your farm storage with fuel—and keep it filled during the farming season which is just around the corner. With many of our farmers working around the clock to complete their spring planting, the daily need for fuel for farming becomes tremendous.

For many, it narrows down to a race against time.

Safeguard yourself during the peak season of farm work by keeping your farm storage filled with fuel.

See Your Salesman who drives the Blue and White Truck.

Let's keep our farm storage FILLED!

*The Amount of Gasoline Used in U.S. in 1948.

Record Hail Losses are Paid Off

VALUE of crop hail protection in Country Mutual Fire Company, Illinois Farm Bureau members' own company, is well demonstrated in a report just completed on 1948 figures.

Country Fire paid out in 1948 a total of $3,451,000 to Farm Bureau members who suffered losses on their crops which were covered by growing crop hail insurance. This was almost six times as much as the losses in 1947 and set a new all-time record for the company.

The 1948 experience, however, has not impaired the splendid financial standing of Country Fire, D. L. Achenbach, manager, points out. Adequate reserves have been set up from year to year to meet emergencies and reinsurance is carried to offset storms of catastrophic proportions.

Yes, Country Fire was able to stand up under these record-breaking losses, but think what nearly three and one-half million dollars in lost income would have meant to the farmers of Illinois if they had not had insurance protection.

Because of the widespread hail damage, the cost to the Company, including operating and adjusting expense, was 111 per cent of the $4,119,625 premium received in 1948. This means that no dividend can be paid on the 1948 crop hail business, but on the other hand, no rate increase is being considered, even in the areas where the most serious storms occurred.

The policyholder who has carried insurance in Country Fire every year from 1939 through 1948 has received an average dividend of 26.3 per cent on all crop hail premiums paid.

The plan of Country Fire has always been, and will continue to be—to pay back the money through dividends, in years when losses justify such action, and to retain it in years when the Company needs it to pay claims, Manager Achenbach reported.

Field corn accounted for the largest amount of losses paid in 1948 by Country Fire to Farm Bureau members with a total of $2,704,851.84. Next on the list of 1948 losses was soybeans. These losses amounted to $439,754.69. Some of the other losses in order were: oats, $161,206.23 and wheat, $89,516.30.

Other growing crops insured by the Country Fire Company include sweet corn, peaches, apples, onions and onion sets, rye, barley, tomatoes, canning peas, etc.

Veteran Feeder Explains Money-Making System of Fat Cattle Production

(*Continued from page* 18)

best. They sold for $36.75, weighing 800 pounds. The other 39 are still on feed and will be marketed soon.

The calves last year cost $21.50 in the west. I now have 199 at home that cost $29 in the west.

Does this method of feeding pay?

Our Farm Bureau Farm Management records show that pasture feeding has shown a greater return for feed than dry lot feeding.

These records also show that during the past seven years we have received $140 return for each $100 worth of feed. The average for all feeders keeping records was $123 for each $100 of feed.

The sheds are kept bedded, but not the yards. The yards are cleaned out regularly. We have two silos, 14x40 and 14x50, which were filled with grass silage this year. No preservatives were used.

We have a large concrete feeding yard put in about 35 years ago. It is still in good condition. Silage and grain are fed in bunks on this floor, while the cattle in dry lot are fed hay in racks in the sheds.

After they are yarded we feed them all the silage they will clean up, about 19 or 20 pounds a day. In addition, they get a half pound of linseed or soybean meal, three or four pounds of alfalfa hay, and one-tenth pound of a simple mineral mixture.

Then about the last of March we sort the heifers into two lots, lights and heavies, with about equal numbers in each. Then from the lighter lot we sort any that are not choice quality or that would tend to grow out rough, or lose their conformation on pasture. These are put with the heaviest lot.

The heifers in the heavier lot are then fed smaller amounts of silage and greater amounts of ear corn for a week until they are on a full feed of corn and getting no silage. The protein feed is also increased to about two pounds.

This heavy lot will be kept in dry lot all the time. This year we sold seven head from this lot on May 17 for $30.40, weighing 825. On June 3 we sold 20 head for $33.25, weighing 810. On June 16 the rest were sold for $34.75, the 67 heifers weighing 730 pounds.

All the grain and silage feeding is done by one man using a small tractor with a box mounted on the draw bar. The box can be put on or taken off in about a minute.

The tractor has an extension steering wheel, clutch lever, and other controls to enable the driver to stand in the back of the box and drive along the feed bunks. One man can feed 150 to 200 head of cattle in 30 to 35 minutes.

We use crushed ear corn which is ground just enough to partly crack kernels. In feeding, protein supplement and minerals are mixed with corn as the corn is loaded on the tractor.

We made a "back scratcher" from an old tractor tire fastened on a good solid frame and platform. It has been used for four years and is nicely polished.

One man used to spend a full day twice a week hauling straw. Now with the chopped straw inside one man can do the bedding in less than an hour.

My cattle feeding program has been a gradual development. In looking back through my farm records I find we have fed cattle every year since we started farming 28 years ago.

We've fed all kinds, from 1600 pound market toppers to wet cows. We have fed calves, however, for 15 out of the last 19 years.

It's the Farmers Who Are Buying Land

IT'S the farmers, and not city folks, who are buying land, a survey in the Wall Street Journal shows. The article quotes Dr. H. C. Filley, economist at the University of Nebraska, who says:

"Farmers are convinced there's at least another year of good demand for agricultural products especially with the European Recovery Program in operation. Even at today's high land costs, farmers can write off the price of land in three or four years of good crops.

Mastitis is an inflammation of the udder which may reduce the milk flow and ultimately destroy the functional tissue of the udder.

SCHOOL ACTIVITIES

By JOHN K. COX, Director
IAA Rural School Relations

A LARGE per cent of high school pupils who enter the 9th grade drop out before graduation. Of the graduates, about 80 per cent do not plan to go to college. They need vocational courses in general shop, manual training or industrial arts, vocational agriculture and home economics to better fit them for living and working in the community of their choice.

Farming is becoming more and more scientific and the farm boy who plans to remain on the farm needs to study soil chemistry, seeds, proper livestock care and feeding, machinery repair and many other subjects in a good high school agriculture course.

Many high school students, including 50 per cent of our farm boys, are attracted to city areas because of a lack of opportunity at home. They will compete there with former high school pupils who have had training in vocational subjects. Many of the pupils will have had vocational aptitude tests and vocational counseling in high school to better fit them for their life's work.

If high schools do not properly prepare boys and girls for actual living, they have little excuse for existing. The neighborhood that puts basketball, local jealousies of other towns and trade above consideration of their children's future success may well expect to have their graduates at the head of the bread line if and when the depression forces employers to lay off the unskilled and less productive help.

A high school whose only job is to train for college can be a very good high school even though small. But experience, and particularly the last war, shows that the high school's responsibility goes far beyond what was considered to be the main function of the high school when most of them were established. An attempt to provide the needed courses in a small high school results in very small classes, often times inadequate equipment, second rate teachers, and exceptionally high per capita cost.

The per capita cost in many small central and northern Illinois high schools is running from $350 to $750 per pupil. Some are costing five to seven times per high school pupil what the grade schools in the same area are costing. This is proof enough of a seriously unbalanced school system wherein the grade school is considered the step-child. This situation not only exists but is prevalent in many small high school areas where the dual system of school administration enables the high school to squander tax monies needed by the grade school.

Fly Control Program Increased Dairy Production 10 Per Cent

THE Illinois fly-control program of 1948 increased dairy production 10 per cent, according to estimates by Dr. Harlow B. Mills, chief of the Illinois Natura History Survey. The Illinois Agricultural Association was one of the sponsors of the fly-control program.

Experiments by entomologists indicate that fly control on beef cattle resulted in at least a 10 pound per steer gain. Illinois dairy cows in 1948 gave 90,000,000 more pounds of milk and beef cattle put on 12,700,000 more pounds of meat as a result of fly-control.

Dr. Mills estimates that a gross gain from milk of $2,700,000 was made at a cost of $270,000; and a gross gain from beef of $3,187,000 at a cost of $956,250.

For maximum production and as a precaution against prussic acid poisoning, Sudan grass should not be grazed until it is 18 to 24 inches high.

Get tuned up for SPRING WORK

ELIMINATE CHANCES OF BREAKDOWNS

Break-downs are tragic in the spring work season. Don't lose precious working days with a balky engine. Heavy spring work brings to light all the troubles which have developed during the winter. Save your time, temper, and crops by getting "tuned up" *before* spring work starts.

SURE-FIRE PERFORMANCE

A strong, hot spark means greater power and increased fuel efficiency. New EDISON Spark Plugs are cheap insurance for "power when you need it." Don't take a chance on worn out plugs. Replace with the new EDISONS with the aluminum oxide insulators and the spun-on gaskets. KEEP AN EXTRA SET ON HAND!

KEEP YOUR OIL CLEAN

Dirty oil means trouble. Keep your oil clean with dependable, economical, non-channeling BLUE SEAL Oil Filter Cartridges. Replace cartridges regularly to maintain filtering efficiency. A dirty filter has finished its job—replace it with a new one! BETTER BUY A CASE!

CLEAN as a WHISTLE!

Engine tests prove the quality of

BLUE CIRCLE

The New, Improved, Regular-Type
MOTOR OIL

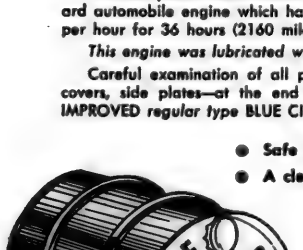
The new BLUE CIRCLE Motor Oil is a real *farmer's* motor oil, brought to you with pride by Illinois farmers' own organization. Engine tests—not guesswork—prove the superiority of this new, IMPROVED *regular-type* motor oil.

See that piston shown above? Clean as a whistle! It was taken from a standard automobile engine which had been run continuously at the rate of 60 miles per hour for 36 hours (2160 miles) without stopping.

This engine was lubricated with BLUE CIRCLE Motor Oil!

Careful examination of all parts of the engine—pistons, bearings, push rod covers, side plates—at the end of the test proved conclusively that the new, IMPROVED *regular type* BLUE CIRCLE Motor Oil will give you:

- **Safe lubrication**
- **A cleaner engine**
- **Less sludge and varnish**
- **Longer bearing life**



See your salesman in the blue and white truck.

BLUE CIRCLE OIL is sold exclusively by

Extend Hog Price Supports Into '50 At 90% of Parity

HOG PRICES will be supported at 90 per cent of parity through March, 1950, when the marketing season for 1949 spring pigs ends, according to an announcement made late in February by the U. S. Department of Agriculture.

This action was taken to assure farmers the same level of price support during the last half of the October 1949-March 1950 marketing period as is required during the first half by the Agricultural Act of 1948. Hog price support level at Chicago April 2 was $17.50 per hundredweight.

Specific price supports, with the usual seasonal variations, will be announced next fall for this entire period and will be based on the Sept. 15, 1949 parity price.

Only other recent government announcement on new developments in price supports was on Feb. 8 when the U. S. Department of Agriculture reported its program to support the price of butterfat at a national average of 90 per cent of parity during 1949 as required by the Agricultural Act of 1948.

In carrying out any necessary support operations, the Department will offer to buy in any area during 1949 butter of U. S. Grade A or higher at 59 cents per pound for delivery before Sept. 1 and at 62 cents for delivery on and after Sept. 1. The Department's purchase price for U. S. Grade B butter will be two cents lower in each period.

On Feb. 23, a parity equivalent for manufacturing milk was established by order of the Secretary of Agriculture. On a national average basis, this figure is set at 88.5 per cent of current parity price for all farm milk at wholesale, as reported regularly.

The 88.5 per cent relationship is the relation between (1) the average price f.o.b. the plant for evaporating, cheesemaking and the butter-powder price for 30 months—July 1946 through December, 1948; and (2) average price at the farm for all milk sold at wholesale. For that stated period the manufacturing milk price at $4.10 per hundredweight was 88.5 per cent of the $4.36 per hundredweight representing the general national wholesale milk price.

Continuous cropping, especially if no manures and chemical fertilizers are added to the soil, progressively robs it of both organic and inorganic materials.

GOLDEN RULES for Co-op Directors

By FRED E. HERNDON, President
Illinois Farm Supply Company

TOO many generals can lose a war. The North was losing the Civil War until they consolidated their armies under one command. In World War I and in World War II history again repeated itself. In the field of sports there is one manager and trained coaches.

Fred E. Herndon

The trainer tells the jockey the strategy to use to win the race. The war, the game, or the race is won by those who have the best coordination of strong individuals after the program is outlined. Team play and respect for authority are necessary. Respect does not came with position — it is gained by results.

These fundamentals are as true and applicable in business as they are in the field of war and sports.

The future of America is limited to the degree we can coordinate and consolidate our human relations and convert our raw materials into finished products for the benefit of mankind. The love of liberty is as old as life itself, and education tends to intensify it. As self-restraint is necessary for the good of the individual, discipline is necessary in group action.

With this foreword, I am ready to discuss qualifications of and relationships between directors and management of farm cooperatives.

It is hard to get a good finished product from poor material. So let us first give some thought to the selection of directors. The value of a director is limited to the effort he will put forth. So let's see if he will give the time necessary to promote the best interests of the cooperative.

Is he a patron, or is he a bargain seeker with personal influence? Is he or his near relatives in competition with the cooperative? Does he support farm organizations by membership and participation, or is he a so-called "rugged individualist?" Is he worthy of the position? If he seeks the position, is there an ulterior motive? Is he a radical who loves to debate on any and all subjects? Does he pay his accounts promptly, or will he oppose a good credit policy? Is a member of his family an employee? Does he use good judgment in managing his own business? Will he support the majority board action without carrying differences of opinion out of board meetings? Is he a "yes" man? Will he place himself under obligation to employees? Will he read and understand the articles of incorporation, and all company agreements?

Can he understand, or will he learn the value of all items in the balance sheet, and income and expense statement?

Will he demand that the financial status be presented with the manager's report each month? Can he stand criticism?

And last, but not least — when he is defeated for office, can he take the decision of the membership gracefully?

Assuming that the directors are well qualified under these standards, it is their responsibility to select a manager. These are some desirable qualifications: the applicant should possess excellent character; he should be courageous, energetic and loyal to his God, his country, his family and to the people he serves. Careful consideration also should be given to his educational background pertaining to the position he seeks. His knowledge and value of the general farm organization should be such that he maintains membership paid by him and not by the cooperative.

Responsibilities and lines of authority should be discussed and understood between boards and managers. The board is the policy-making body. The manager is the administrative head of the business and has control of all other employees, material and moneys.

Policies should be adopted by majority board action and be a matter of record in the minutes of board meetings. Managers should make detailed reports on the company at least monthly to the board of directors.

The manager should cultivate a friendly relationship with employees holding responsible positions in other cooperatives or farm organizations in the county, but he should remember that they are not his "boss".

He should lend his moral support to help others serve farm people better, but should not give or receive financial remuneration for any personal services, make no commitments for others — neither should they make adjustments for him.

The manager should remember that his time belongs primarily to the cooperative that employs him.

When complaints are made by a patron, the manager should assume that the member is honest, at least until he has told his story twice, and if there are some discrepancies, he should still treat him kindly.

A manager should never criticize his employees to the patron if he expects either of them to respect him. Managers should always give their employees an opportunity to tell their side of the story. Loyalty with honesty of purpose builds and maintains company morale.

Problems can easily develop if the manager goes hunting, fishing, or participates in too many outside activities with board members or employees.

Directors and managers should keep out of political or religious discussions that may lead to unpleasant situations.

A manager should not take up the board's time with minor problems. They are not paying him for the privilege of doing his thinking for him. The manager should always be ready to explain employee problems to the board, but many times the least discussion possible serves best the morale of the cooperative. Directors should beware of managers who are always reporting sharp bargaining. Fair-trade practices and merchandising methods with fair treatment to suppliers and members are the foundation stones of permanent success.

When great baseball teams fail to win, the problem usually is within the organization. They lack team spirit. They may have some temperamental "Prima Donnas." Their batting averages may look well, their fielding may head the list, but they lack the will to win because of dissension within the group.

The same situation can exist in cooperatives. If and when it does, it may be necessary for the good of the ownership to select a new manager if he is at fault, or to make a change of other employees — or in some instances elect some new directors to the board.

In private business the so-called "big shots" are the owners of the business. That being true, then in cooperatives

NEWS and VIEWS

CHAIR PROTECTORS

A new chair keeps its good looks longer with the help of a fresh chair set. White or ecru sets made of crocheted motifs joined together are especially attractive. They are easy to crochet, too. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois.

DeKalb Home Bureau Women Visit Chicago

TOURS of Chicago in early March were made by more than 200 Home Bureau women with the assistance of the special services department of the Illinois Agricultural Association.

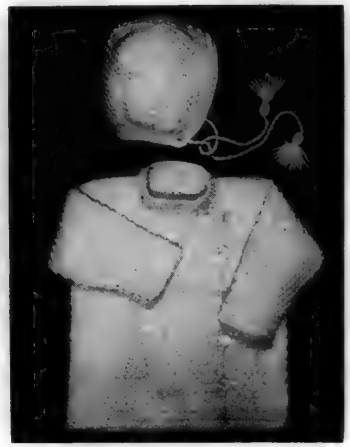
From DeKalb county 135 Home Bureau women toured the Board of Trade with the help of Illinois Grain Corporation officials. Illinois Grain is an IAA affiliate with offices in the Board of Trade building.

The DeKalb group was then escorted to the Continental Illinois National Banking and Trust Company for a tour of the bank. The women were then guests of the bank at luncheon.

In the afternoon the group made a tour of the Merchandise Mart and split up in the evening to attend the stage plays "Finian's Rainbow," and "Mr. Roberts."

The day of the DeKalb group's tour 75 Home Bureau women from Iroquois county were in Chicago to see the sights. The tour included a visit to the Swift and Company plant including a special demonstration in the Martha Logan kitchen.

In the afternoon they saw a brilliant sea of color at the Garfield Park flower show.



SWEATER AND HAT

A new Spring outfit for baby, this crocheted sweater and hat are crocheted with sport yarn. The border trim although unusual is not difficult to make. For free instructions send a self-addressed stamped envelope to Women's Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 10, Illinois.

In the evening they attended a concert of the Chicago Symphony Orchestra. Home Bureau women planning to make Chicago trips are invited to get in touch with the special services department of the Illinois Agricultural Association if they wish help in planning their tour of the city. Through contacts with many organizations in Chicago the special services director is able to arrange programs most suitable for visiting Home Bureau women.

A home economics group from Henderson county planned to tour Chicago places of interest March 17-18-19.

Three Counties Attend Frozen Food School

Five hundred men and women attended a three-county frozen food school held recently at the Community House in Sugar Grove. Counties taking part were Kane, Kendall, and DeKalb. It was the first school of its type in that area.

The program included a demonstration of meat cutting, identification, and wrapping by William Gamble of the University of Illinois. Dr. L. A. Somers of the University stressed the importance of high quality fruits and vegetables when quick-freezing.

George A. Schlageter, Streator Food Lockers, gave a demonstration on the preparation of poultry for freezing.

Mrs. Ruth Pearsall, demonstrator for a farm machinery company, showed how simple and easy it is to prepare, package, and freeze fruits and vegetables which already have been cooked.

J. L. Pidcock, manager of Illinois Co-op Locker Service, an IAA affiliate, appeared on a panel discussion considering the purchase and use of a home storage freezer.

Associated Women's President to Europe

MRS. RAYMOND SAYRE of Ackworth, Ia., president of the Associated Women of the American Farm Bureau Federation left March 21 for Frankfort, Germany where she will spend about two months on an army mission.

The Associated Women is the national organization of farm women of which the Illinois Home Bureau Federation is a member.

Mrs. Sayre's job will be to work with the women leaders in the U. S. Zone of Germany who have already made an attempt to reorganize the rural women, and to help them develop their organizations with due regard for democratic principles. In addition, Mrs. Sayre will make recommendations to the military government for Germany with respect to future programs for these organizations.

Mrs. Sayre has had long experience in organization work at local, state, national, and international levels. After graduation from Simpson College, Indianola, Iowa, in 1917, Mrs. Sayre and her husband, Raymond, started farming near Ackworth, Iowa. From the beginning, she took a deep interest in church work, school affairs, all community activities. Later, with four children in school, she served on the local school board, and her work in Farm Bureau was so outstanding that she ultimately became a member of the board of directors of the Iowa Farm Bureau Federation.

Mrs. Sayre never allowed her outside activities to interfere with her home responsibilities. Many years ago, she was recognized as a Master Farm Homemaker.

for HOMEMAKERS

Mrs. Elsie Mies Former Home Bureau President Dies

ONE of the great leaders in women's farm organizations and Home Bureau groups, Mrs. Elsie Wheaton Mies, died Feb. 22 in Carle hospital, Urbana, after a lingering illness. Funeral services were held from the University Christian Church, Champaign, and burial was in Pontiac. President Charles B. Shuman of the Illinois Agricultural Association represented the IAA at the services.

Mrs. Elsie Mies

Mrs. Mies, who had lived in Urbana since 1934, was national president of the Associated Women of the American Farm Bureau Federation from 1940 to 1944, seryed as vice-president for three years prior to that, and as president of the Illinois Home Bureau Federation from 1930 to 1933. She had also served as president of the Livingston County Home Bureau.

Illinois farm women will long remember Mrs. Mies' many talks before county and state meetings. She had a straight forward and direct method of speaking that was spiced with a fine sense of humor. She had a great capacity for understanding and used her early training as a teacher in effective leadership to promote the welfare of farm men and women.

Mrs. Mies was born Nov. 14, 1880 in Hinckley, DeKalb county, the daughter of Amelia Holdenhouse and George L. Wheaton. On Aug. 28, 1909, she was married to Henry Joseph Mies in Chicago. Mr. Mies, one of the early founders of the Illinois Agricultural Association, was killed in an auto accident on Oct. 19, 1932, and Mrs. Mies was seriously injured.

Mrs. Mies a descendant of the founders of Wheaton college, was a school teacher prior to her marriage.

The Illinois women's leader made a great contribution to the development of farm organizations — both in the state and nation. It was Mrs. Mies who helped develop the constitution and by-laws of the Associated Women. She traveled extensively in this country and in Canada in connection with her work as an officer of the Associated Women and Illinois Home Bureau Federation.

She will long be remembered by those who had the privilege of working with her as a kind and thoughtful individual. She was without pretense or affectation and while her approach to problems was always of a practical nature, she retained the gift of inspiration. In her death, farm men and women have lost a great leader.

Mrs. Mies leaves three daughters: Mrs. Helen Schilf, Fulton county, who has served as publicity chairman of the Illinois Home Bureau Federation; Mrs. Henrietta Babb, Macon county; Mrs. Jeannette Bixler, Richland, Wash.; one son, Wheaton Mies, Boston, Mass., and five grandchildren.

Handicraft projects are causing a great deal of interest among women of Stephenson County Home Bureau. Some of the projects include glove making, metal etching, chair caning and rug making.

4-H Girls Mark Record Year in '48 On Membership

WITH an all-time-high membership of 25,503 in 1948, Illinois 4-H girls had a record-breaking year.

It was a mighty busy year for the 4-H girls too. More than 50 per cent of them were enrolled in clothing projects. And they made hundreds of good-looking dresses and other garments.

Food project work attracted many of the 4-H'ers. More than a third were enrolled in this phase of the program. They learned cooking methods and nutrition through studying such subjects as "Use of Fruits and Vegetables," "Cookies," "Dairy Foods," and "Outdoor Meals."

More than a thousand girls tried their hands at interior decorating by carrying the room improvement project.

The age range for 4-H girls is from 10 to 21 years. Here in Illinois most of them are from 10 to 16 years old. The largest group is the 12-year-olds with 4,678 members.

COPY CAT HOUSECOATS

Terminal Elevator

(*Continued from page 4*)

terminals are operated by Havanna River Grain, Prairie Grain and Western Illinois Grain companies, all having close working relationships with Illinois Grain Terminals Company.

The Terminals Company in turn will work with the other IAA grain broker and commission affiliate, the Illinois Grain Corporation which operates on the boards of trade of Chicago, Peoria and St. Louis.

Illinois Grain Terminals also has a branch office at Buffalo, N. Y.

The purchase of the Irondale elevator in Chicago rounds out a complete marketing program for Illinois farmers and securing such an elevator is considered fortunate as it enables the Terminals Company to get into the grain merchandising field quickly with a going business.

Signing the purchase agreement for the Illinois Grain Terminals Company were Homer Curtiss, Jo Daviess county, Company president, and James F. Holderman, Grundy county, secretary.

Illinois farmers are being offered an opportunity to invest in their grain marketing cooperative through a $2,750,000 offering of six per cent cumulative preferred stock. Twelve fieldmen will be working to distribute this stock under the direction of L. L. Colvis, secretary of marketing, and George E. Metzger, IAA field secretary.

New Farm Tool

(*Continued from page 3*)

bushels of grain annually by rail and water movement. This should be a considerable factor in correcting these and other price inequities and have its influence on the market price of every bushel of grain marketed in Illinois.

Yes, this new farm tool costs money — it requires a considerable capital outlay. I am sure that thousands of grain producers will welcome this opportunity to make a substantial investment in a grain merchandising operation. Grain handling profits on Illinois grain have paid for many terminal elevators — this is one time that farmers expect to hold the title when payment is made.

A good water supply is a basic first step in farm house modernization.

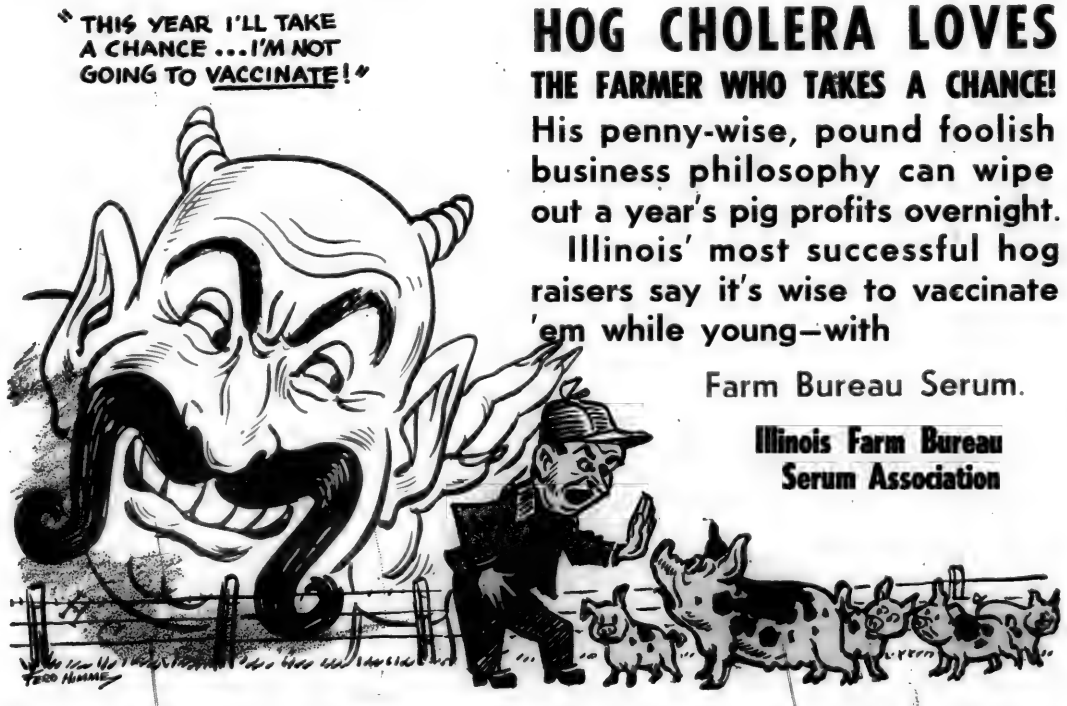
Golden Rules

(*Continued from page 31*)

the so-called "big shots" are the member owners of the business. Directors and managers are those who serve the organization. Cooperatives are not organized to give men jobs or directors special privileges. Directors or managers should earn the right of serving them.

A commerical cooperative should not be used to convert quickly the raw material of untrained men into top leadership. The experiment may be too expensive. While it is true that men grow in the cooperative field, they should have first developed leadership ability as qualification to serve in important positions.

How well men serve, not how long, should be the yardstick of tenure of office. As the autumn of a well-lived life should be the most beautiful, so should the older leadership of the cooperative be characterized by a generous attitude toward new and growing leadership and with warmth and admiration for those who have served them. The size of a man is measured by how gracefully he can turn over authority to those who replace him, rather than how gratefully he accepts new responsibilities.



HOG CHOLERA LOVES THE FARMER WHO TAKES A CHANCE!

His penny-wise, pound foolish business philosophy can wipe out a year's pig profits overnight.

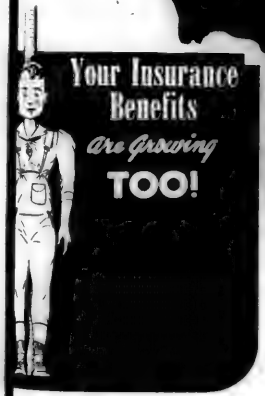
Safest FARMS IN ILLINOIS...



32,000 Farm Bureau Members in Illinois put their faith in the Farmers General and Employers Liability protection last year. That represents the confidence the Farm Bureau Members have in their own insurance company in the state of Illinois. Just one more instance where careful farmers don't want to gamble that their farming equipment or livestock might cause injury to an employee or stranger. They didn't want to take the chance that their life savings might be swept away by one damage suit.

Ask your Farm Bureau insurance counselor to bring your personal survey sheet to your home so you might determine if you are fully protected against all the hazards that might develop from your farming operation. It's so inexpensive to "get in the pool" of cooperative protection offered by your OWN company, at a genuine saving to you.

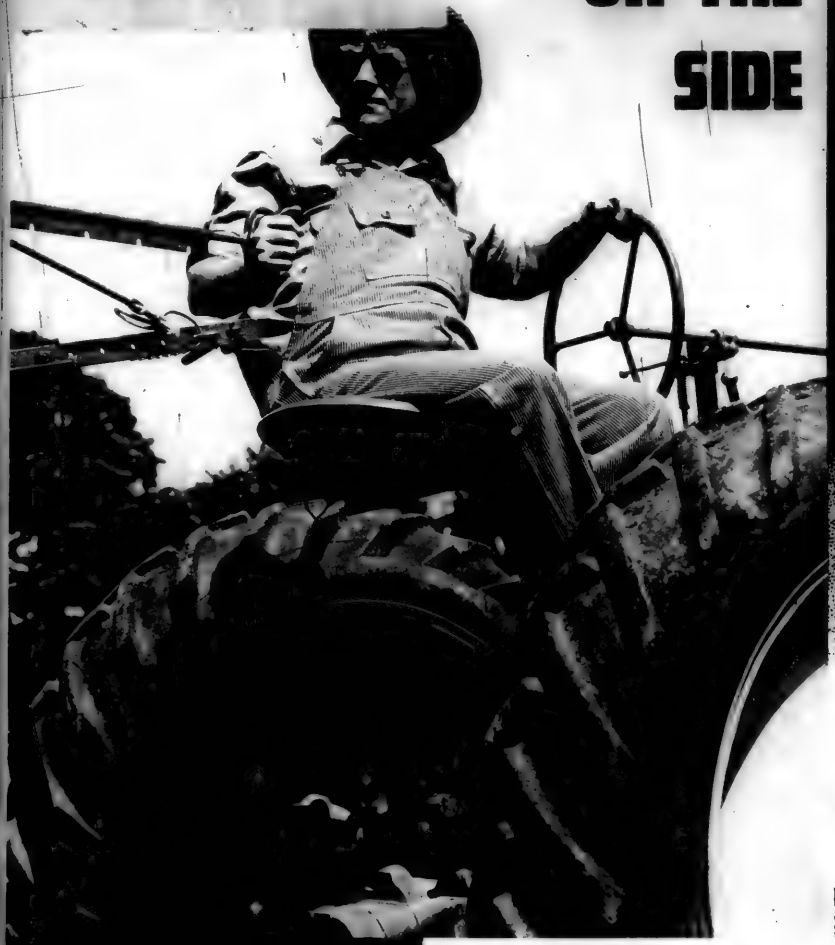
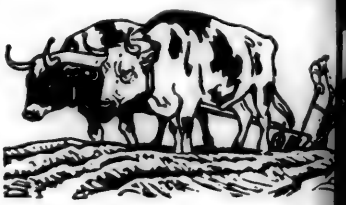
ON THE SIDE

300 YEARS





Fifty-seven hours of work to produce 20 bushels of wheat? Not for you, brother! Not during this year of plenty, 1949. But that's the type of farming you'd have been sweating for back in Colonial days — when 40 to 60 bushels per acre after FOUR man hours' work was as unheard of as driving a team right over the moon. Perhaps the Colonial farmer wouldn't quite believe his eyes at some of the other benefits Mr. Farmer, 1949, is getting. Take Farm Bureau, for instance, which for more than 20 years has paved the way for better profits, better homes, better methods, even better insurance plans. In fact many of the best things of farm living have come by way of your Farm Bureau office.

Farm Bureau is your special privilege. Use it for the good things of life that it can, and does, bring. If any of your neighbors don't belong, tell them about the Farm Bureau way.

THE STATE FARM BUREAU PUBLICATION

Legislation Against Efficiency

By Charles B. Shuman

President, Illinois Agricultural Association

A NEW farm program proposal is born! The product of the fertile imagination and thinking of the U. S. Department of Agriculture's Washington "office farmers" is indeed revolutionary. It proposes to stabilize farm income at the highest level in history and at the same time lower the cost of food to consumers. Certainly an interesting idea if we could avoid the responsibility of thinking about its workability or the probable total cost. This new proposal, as endorsed by the secretary of agriculture, would junk parity price as a standard of equality for agriculture and substitute, therefor, a subsidy check drawn on the U. S. Treasury. These payments would total billions of dollars annually.

C. B. Shuman

ALMOST certainly the cost of this program would tend to increase each year as larger subsidies would be paid to keep farm income up and reduce food costs to the consumer. The taxpayers would pay the cost. With 82 per cent of our total population in occupations other than agriculture, it is reasonable to assume that greater emphasis would be given to providing cheap food rather than satisfactory farm income.

THERE is another more sinister suggestion in the new plan that every farmer in Illinois should know about and understand. Income and price supports would be limited to so-called family size operations of 1800 units. At first thought this suggestion does not sound unreasonable as the definition of a unit is fairly liberal. However, production above 1800 units in surplus years would go into the market without benefit of support price or subsidy at such a huge discount that farmers would probably be forced to reduce their operations to the prescribed size. If surplus food production continued to pile up, the tendency would be to reduce the maximum number of units per farm. In effect, we would turn over to politicians and social planners an effective device to control the size and efficiency of our farming operations.

IT IS not my intention to defend large-scale corporation farming. However, every farmer recognizes the importance of an efficient farming unit. He knows that government action to control production by reducing the size of his family farm operation will result in decreased efficiency and higher production costs. This proposed law grants powers that could be used to gradually roll back all agriculture to a subsistence level.

IF WE are to resort to legislation against efficiency as a means of controlling agricultural production, it would be simpler to prohibit the use of fertilizer or hybrid corn or three plow tractors!

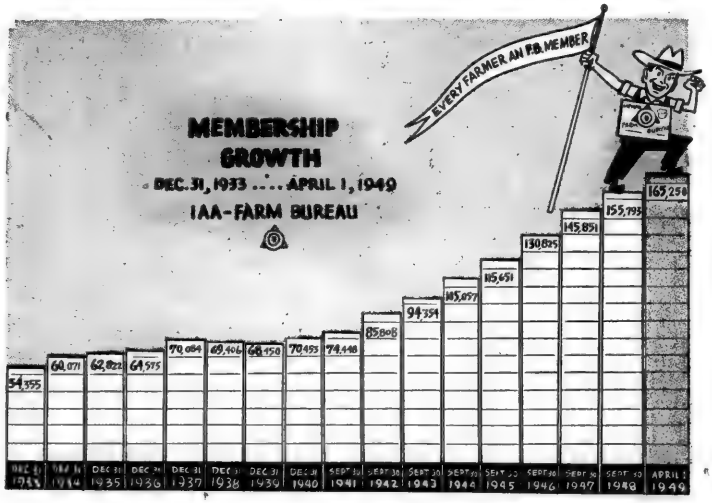
PASS '49 MEMBERSHIP GOAL



FARM BUREAU membership in Illinois already has rolled past its goal of 165,000 members by Sept. 30, 1949. Illinois Agricultural Association-Farm Bureau membership on April 1 was 165,250 — up 1,900 since March 1, according to figures compiled by O. D. Brissenden, IAA director of organization.

Since Sept. 30, 1948, when membership was 155,793 IAA-Farm Bureau has made a net gain of 9,457 members.

As results of annual spring membership drives poured in from throughout the state, county after county reported phenomenal gains. For the first time in Farm Bureau history a substantial number of the counties (19) now have as many or more Farm Bureau members than farms with $400 or more gross income, according to the 1940 U. S. census.

The following have as many or more farmers in Farm Bureau than there are farms in the counties: Cook, 131 per cent; Kendall, 121; Macon, 118.9; Piatt, 118.4; Sangamon, 114.6; DuPage, 113; Will, 112; DeKalb, 111; Kane, 109; Whiteside, 108.7; Winnebago, 108.6; Wabash, 108; Menard, 107; DeWitt, 105; Champaign, 103; Jersey, 102.5; Logan, 101; Peoria, 100.4; and LaSalle, 100. In addition all of these counties have a substantial number of non-farmers with associate memberships in Farm Bureau.

The five counties with the highest total Farm Bureau membership in the state are (1) Cook, 4,188; (2) McLean, 4,055; (3) La Salle, 4,040; (4) Champaign, 3,760; and (5) Will, 3,233.

Counties within 100 members of the goal of a farmer member for every farm in the county are: Cass, 12 members short of goal; Ford, 17; Grundy, 35; Marshall-Putnam, 37; Woodford, 49; McLean, 53; Lee, 77; and Tazewell, 90.

Among the most notable successes in the current membership drives was the accomplishment of Wabash county, the only county in the southern Illinois area with more than one Farm Bureau member for each farm in the county. Wabash has 108 per cent of the total number of its farms organized. Totals go over 100 per cent because some farms have more than one membership.

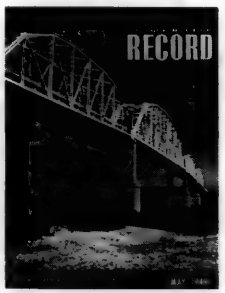
The steady rise in Farm Bureau membership over the past several years is a great tribute to an organization which more and more is enabled to speak for all the farmers of Illinois with one strong voice. The fact that Farm Bureau membership has doubled in the past seven years is proof enough that Illinois farmers have come to accept their organization as a necessary tool in their farming operations.

Assistant Organization Director Charles Mayfield pointed out what might be a notable trend and a favorable sign for Farm Bureau's future when he said he noticed that young farmers starting out waste very little time taking out Farm Bureau membership. If Dad is a Farm Bureau member, Mayfield said, there is no argument about it, the young farmer just naturally believes that to be a successful farmer you must belong to Farm Bureau.

The men who so believe in Farm Bureau make the best organization drive workers, according to Brissenden. When they are solidly sold on the or-

(*Continued on page* 17)

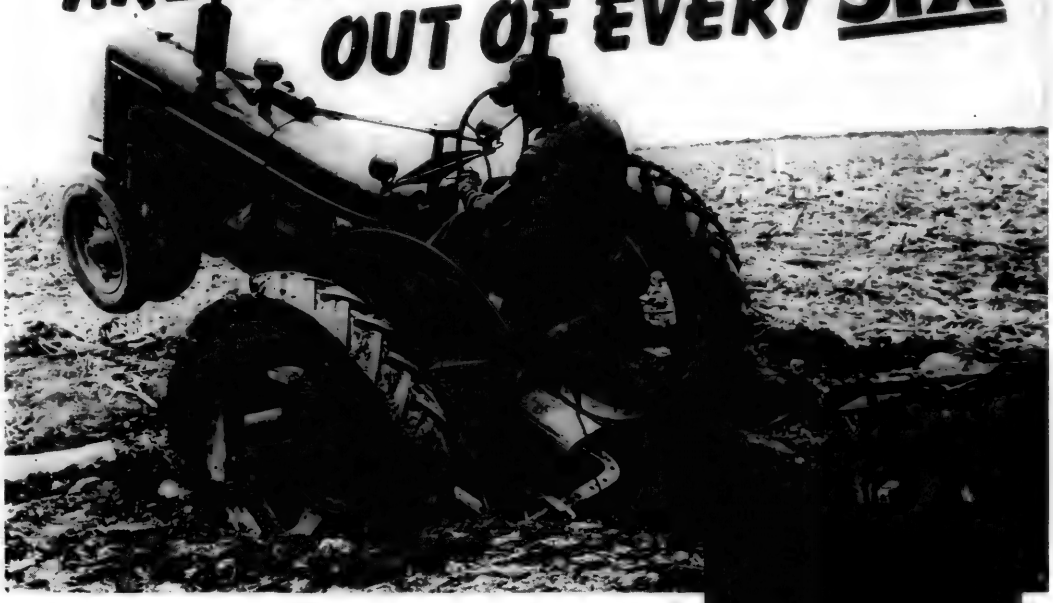
FRONT COVER



IF you have traveled near the Illinois River in the past 14 years you have seen these silvery cantilever bridges dazzling in the bright sunlight. Like this one at Spring Valley in Bureau county most of them were built as federal public works "make work" projects during the depression years of the early thirties and because the old bridges did not provide sufficient clearance for the lakes-to-the-gulf waterway which was being developed at that time.

When it was opened in 1935 the engineers predicted that if all went well with business the Illinois waterway would carry 10,000,000 tons of freight in 1953. The tonnage carried in 1948 was 11,250,000. The waterway helped ease the transportation bottleneck during the war. This is the 23rd in our series of covers illustrating historic and picturesque Illinois.

ARE YOU THE ONE OUT OF EVERY SIX



WHO WILL HAVE A FARM ACCIDENT THIS YEAR?

Unless you and every other farmer show unusual caution this year, 19,500 farm residents will be killed in accidents, and more than 1,800,000 will be injured. Yes, ONE in SIX farms will have accidents in 1949! But accidents don't just happen; they're caused. By dangerous, high-powered machinery, unruly livestock, and most of all by HUMAN NATURE — taking risks because it's "too much trouble" to take precautions all the time.

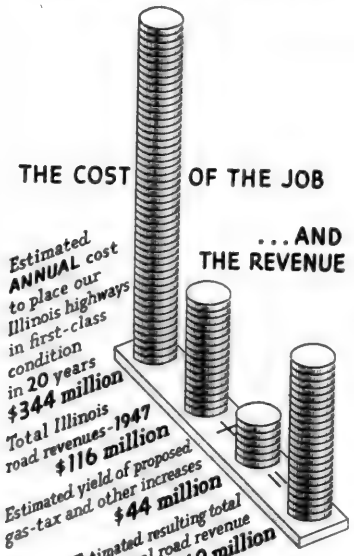
This work season BE CAREFUL. And back up your caution with the protection of Country Mutual Casualty's low-cost Farmers General and Employers Liability insurance. Don't risk the loss of a crop, or more, should your hired hand, or a stranger, be injured on your property. Don't say, "It can't happen here."

Face the facts! Springtime is accident time. See your Country Mutual Casualty representative today.

COUNTRY MUTUAL CA

Don't take a chance

NEED MORE INCOME for ROADS



Estimate Cost af Rebuilding Our Illinois Roads At 344 Million Dollars Per Year For 20 Years. Even With Proposed Increase In State Motor Fuel Tax, Income Will Be Far Below Minimum Needs According To Engineering Survey.

ILLINOIS motorists, including farmers, are being bombarded with propaganda from special interest groups who are against the proposed two-cent increase in the state motor fuel tax. The main reason given by the opposition is that the state has enough money to take care of the roads. This is not true.

Surveys made by impartial engineers and studies by the Illinois Highway and Traffic Problems Commission show that present revenues are far below the needs. Earl C. Smith, former president of the Illinois Agricultural Association, is a member of the Commission.

The Commission reports that an engineering survey shows it would take nearly seven billion dollars over a period of 20 years to put Illinois highways, bridges and streets in first class condition.

This would mean spending 344 million dollars a year for 20 years.

Road income from all sources at present amounts to an estimated 116 million dollars a year.

By increasing the state motor fuel tax from three to five cents and increasing license fees, an additional 44 million dollars per year income could be secured. This would still be short of the needs estimated by the engineering survey, but the Commission believes that it would at least put Illinois roads in serviceable condition.

The Illinois Agricultural Association is backing these increases recommended by the Commission provided township roads get 12.5 per cent of the net receipts from proposed five-cent gasoline tax, or an estimated 10½ million dollars a year.

The IAA believes that the state should contribute to the cost of building and maintaining local township and road district roads. The entire cost of these roads should not be borne by property taxes.

The Illinois Agricultural Association also believes that the highway users should pay in large part the cost of construction, repairing and maintaining our highway system.

The revenues must come either from highway user taxes, such as license and gasoline taxes, or from other taxes. It seems only fair that the highway users carry a very substantial portion of this cost.

Rural property with only about one-fourth of the total assessed valuation of the state is now levying for road purposes an amount which is almost equal to the total amounts levied by the counties and cities for roads and city streets.

The motor fuel tax rate in Illinois has been three cents a gallon since 1929. Only one state, Missouri, has a lower rate. Forty-three states have a higher rate.

Road building dollars are now buying only about half as much as in 1941 because of the increases in costs. Income from the present three-cent gasoline tax has increased only 10 per cent as the result of postwar increases in fuel consumption.

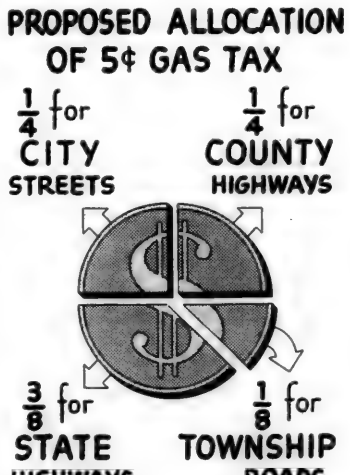
The proposed increases are fair for the average motorist. Assuming that the motorist drives 7,500 miles a year and gets 15 miles to the gallon, he will have used 500 gallons of gasoline. The additional two-cent tax per gallon will cost $10. The additional license fee will cost $1.50, or a total of some $11.50 per year. This would be less than a $1 per month and certainly not too much to pay for the rebuilding of Illinois' highway system.

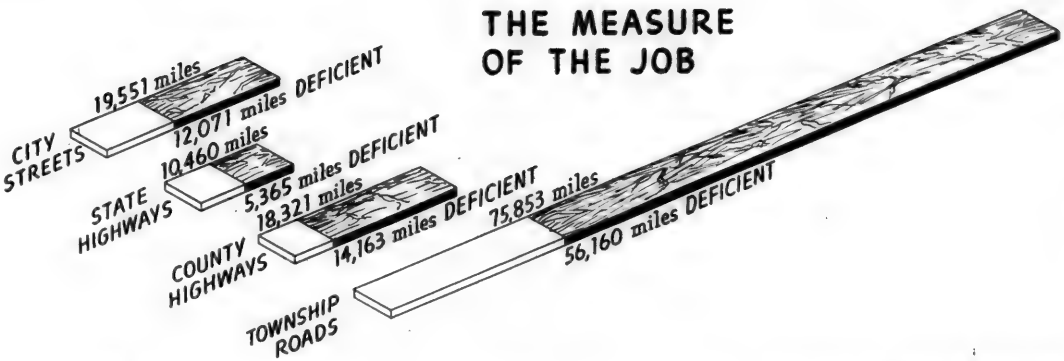
With respect to many of the township roads and some of the county roads, a substantial mileage never has been adequately improved.

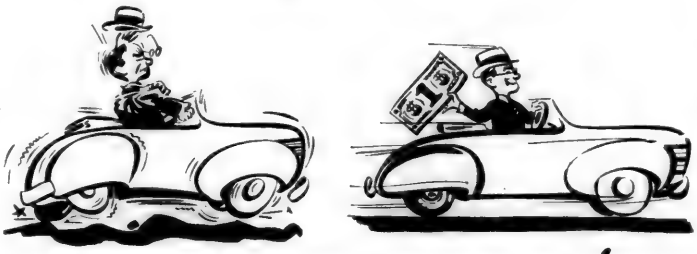
The engineering survey indicated that it would take more than 70 million dollars a year over a period of 20 years, or one and one-half billion dollars, to put the local rural road system in first class condition. Some 64 per cent, or 56,160 miles of the rural roads of the state are deficient.

Local township roads serve all the interests of the state and not merely farm people. The consumer of dairy products, livestock or grain is as interested in fast and economical transportation of these products as the farmer.

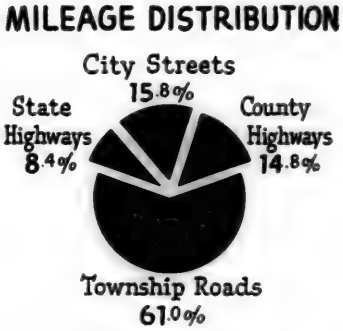
The public generally, and not merely farmers, are interested in roads which







WORTH THE PRICE!



will provide for school bus and mail routes.

There is little doubt that the Illinois highway system is in bad shape generally. This is because more than one-third of our highways are more than 25 years old and half of them were not built to carry today's heavy traffic loads.

Many miles our Illinois highways were built at a time when the gross vehicle load was 40,000 pounds. Weight limits have been increased to 18,000 pounds per axle and to 72,000 pounds overall. What's more checks made by the division of highways show that almost one-fourth of the truck and trailer type vehicles have been overloaded. It's a wonder that there is anything left of the highways from this terrific pounding.

It comes down to this. More money is needed to save the highways from complete destruction. The most logical source is from increased highway user taxes. The longer the job of rebuilding is delayed, the more it will cost. It's up to you who want good roads to tell your neighbors, your city friends and your state legislators why you are in favor of the two-cent increase in the gasoline tax, provided township roads share in the funds.

Farmers Asked to Join Savings Bond Drive May 16-June 30

FARMERS are being asked to join with their city neighbors in the U. S. Savings Bonds "Opportunity Drive" May 16 through June 30. Slogan behind the drive is to "Put More Opportunity in Your Future" by buying bonds.

Dean W. I. Myers of Cornell university, chairman of the national agricultural savings bonds committee, says:

"A financial reserve in U. S. Savings Bonds is just as important a part of a well-managed farm business as is land, livestock and machinery.

"Agriculture is a highly speculative business at best, and farm people need to have their financial reserves in the safest possible form where they will always be readily available. . ."

The Savings Bonds program gives more people an opportunity to make a sound, safe investment and to share in the interest paid on the national debt. That's good business for everybody.

RURAL YOUTH TO NORWAY

Meta Marie Keller, Streator, LaSalle county, has been named as one of 27 rural young men and women from 20 states who will sail in June for a summer on farms in 10 countries. Miss Keller, a Rural Youther, will go to Norway under the International Farm Youth Project supervised by the Extension Service of the Department of Agriculture. Purpose of the project is to develop an informed junior farm leadership.

Representing the five organizations which are in the fight to rid the state of flies are (left to right) H. B. Petty, extension entomologist, Natural History Survey; James Williams, Illinois Public Health Service; Francis Longmire, extension service, University of Illinois; S. E. Myers, farm adviser, Adams County Farm Bureau; and Roger E. Gish, soil conservation activities department, IAA.

Start TODAY ON FLY CONTROL

SEVENTY-FIVE per cent of fly control depends on sanitation, H. B. Petty, insect specialist for the Illinois College of Agriculture and State Natural History Survey, told leaders in the 1949 Illinois fly control campaign in April.

Petty spoke at a series of nine kick-off meetings held throughout the state to make final plans and start the ball rolling in the 1949 war on flies.

Flies start to emerge in greater numbers this month during the warm days of late spring. So both farmers and urban dwellers were advised by fly campaign leaders to strike now when so much can be done to reduce the number of flies and their descendants.

Farm and civic leaders met to chart their fly-fighting courses over the summer months. The question most bothersome seemed to be "Should I spray my dairy cattle with DDT?"

Petty's answer is "No, do not use DDT in the dairy barn. Use DDT everywhere else but use methoxychlor in the dairy barn and on dairy cows."

Last year farmers were advised to use DDT in dairy barns but when traces of DDT were found in milk, the Pure Food and Drug Administration said it would confiscate interstate shipments of milk contaminated by DDT.

Jim Williams of the Illinois Public Health Service echoed the remarks of Petty on sanitation. Williams pointed out that without sanitation your fly-control program may turn out to be a failure.

A good fly control program requires strict cleanliness. If there were no breeding places there would be no flies. And flies must breed in filth. So clean out your garbage containers at least once a week then spray with DDT. Keep lids on garbage cans. Get rid of all decaying organic matter. That includes such things as manure piles. Regular disposal will eliminate breeding places.

Now that you have finished the first step in good fly control — sanitation — the next step in use of DDT and methoxyclor. Paint screen doors, screen windows, and porch ceilings on your house once a month with DDT — 25 per cent emulsifiable diluted to five per cent strength.

The number of flies you find is a guide to the number of times you need to spray. Outdoor places where flies roost should be sprayed at least once a month with DDT. You will get best control of stable flies that way. They like to roost in trees where cattle go for shade.

For non-dairy animals mix a quarter pound of 50 per cent wettable DDT powder in three gallons of water. Apply two quarts of this solution to each animal once a month.

Besides adding to the comfort of both man and animals, the fly control program means extra profits to farmers.

Last summer more than 100,000 Illinois farmers spent about $1,250,000 for fly control, Petty said, but they earned $4,661,000 in extra profits because of faster gains on beef cattle and greater production from dairy cattle.

That in itself should be reason enough for every farmer to join in the fly control program this summer but here is an even more significant reason. Williams points out that flies carry more than 20 human diseases including typhoid fever, tuberculosis, dysentery, smallpox, diphtheria, and quite probably the dread poliomyelitis (infantile paralysis). If you have any children about your farm it is only good common sense to protect them against fly-borne diseases by a good sanitation and spray program. May is the month to start. Don't let the flies get ahead of you.

Some strains of flies have developed resistance to DDT usually in a community where DDT has been used at least three years. Petty suggested, however, that where there is resistance use chlordane instead of DDT but don't use it on dairy cows or in the dairy barn.

DDT, methoxychlor, and chlordane are all poisonous but with a little care can be used without danger. Here are a few precautions: don't contaminate livestock feed, water troughs or feeding bunks; keep it out of reach of children; in closed areas wear a respirator or get out as soon as possible; avoid contact with skin and wash thoroughly with soap and water after using; follow directions of manufacturer on the container.

If your fly-control work seems a failure, Petty suggests that you recheck your sanitation program. You cannot overemphasize sanitation for the control of flies, Petty says.

IAA Field Secretary George E. Metzger points out that you can rid your farm of flies for as little as $10 worth of spray materials plus a little time and effort.

The four sponsoring agencies of the 1948 campaign are back in the forefront in the 1949 fly-control campaign — Illinois Agricultural Association, Illinois College of Agriculture Extension Service, Illinois Natural History Survey, and Illinois Department of Public Health.

County Farm and Home Bureaus will lead the drive in rural areas where the drive was most successful last year. Efforts will be made to stimulate greater interest in the cities with the help of newspapers, women's clubs, service clubs, radio stations and chambers of commerce.

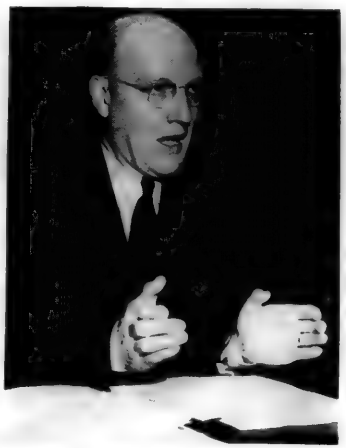
• A NEW FARM PLAN

THE new farm program proposal announced by Secretary of Agriculture Charles F. Brannan is the most sensational thing to hit agricultural circles in a long time. As someone said — "It's not a farm program; it's a form of government."

It appears from Secretary Brannan's 7,500-word statement and statistical exhibits covering 35 typewritten pages that the program is aimed at (1) keeping farm income at wartime levels and at the same time (2) reducing food prices at the grocery counter. Government subsidies would make up the difference between the high farm income and the low retail prices. The taxpayer, of course, would pay the bill. Under direct questioning of Congressional committee members, Secretary Brannan failed to estimate the cost of the new program.

The new farm program has been called revolutionary, and that is no exaggeration. The designers of this plan threw out practically every basic farm program principle for which Farm Bureau fought years to secure. The Washington planners junked the parity principle as well as the "fair price in the market place."



Secretary of Agriculture Charles Brannan (above) as he appeared before the House Agricultural Committee to answer Congressional criticism that the administration's new farm program would hurt the farmer more than it would help him. Some Republicans have assailed the program as a scheme to regiment farmers and share the wealth. Brannan denied both assertions.

The proposed farm plan in effect calls for the repeal of the Agricultural Act of 1948. At the 1948 annual meeting of the Illinois Agricultural Association, the voting delegates went on record in support of the 1948 Act with its principle of flexible price supports keyed to supply and demand. Therefore, the Illinois Farm Bureau, while it will give the new farm program a thorough and careful consideration, is bound by delegate action to support the Agricultural Act of 1948 and its fundamental principles.

At the April 15 meeting of the IAA board, the directors went on record to reaffirm their support of the American Farm Bureau Federation in backing the Agricultural Act of 1948.

The American Farm Bureau Federation's official statement on the new program pointed out:

"The recommendations of the Secretary involve far-reaching and fundamental changes in the approach and role of government in dealing with farm problems. The changes recommended in this startling reversal of policy are revolutionary in their effect.

"Before the Farm Bureau could consider seriously supporting them, it would be necessary to submit these proposals to our entire membership, and through the democratic process by which our policies are developed on the county, state and national levels, get their decision with regard to our position.

"Our present position is in support of the Agricultural Act of 1948, which we feel is sound and worthy of a fair trial."

Here are some of the general proposals of the new farm program:

1. The old parity system of establishing fair prices is junked. Instead a total farm income goal is established. For 1950, for example, farm income would be pegged to give farmers the same average buying power as they had in the 10-year period, 1939-48. For 1951, the 10-year period used would be 1940-49, and so on. The period would always be the first 10 years of the most recent previous 12-year span.

2. From this total farm income goal, price supports are figured for each commodity.

3. Supports would be made effective through loans and purchase agreements as at present for basic non-perishable crops such as cotton, wheat, corn, and other grains, tobacco, the oilseed crops, dry beans and peas, wool and peanuts. And, Secretary Brannan said, "It would be desirable to have available, as a supplementary method, the authority to make production payments under certain circumstances."

For the perishable products, fruits, vegetables, meat animals, milk, butterfat, poultry and eggs, Secretary Brannan says, "I recommend that we rely mainly upon production payments."

"Under this system," Secretary Brannan said, "the farmer would be paid in cash the difference between the support standard for commodities which he produced and the average selling price for those commodities in the market place. Because the payment would go directly to the farmer, it would be an efficient support operation."

4. Certain commodities are given first call on the available support funds. These include corn, cotton, wheat, tobacco, whole milk, eggs, farm chickens, hogs, beef cattle and lambs.

5. To get supports, farmers would have to comply with soil conservation practices, and any acreage allotments, marketing quotas and marketing agreements which may be adopted.

6. Price supports would be limited to a certain volume of production on each farm. A volume "high enough . . . but which would not encourage the development of extremely large, industrialized farming."

It is suggested that not more than 1800 units per farm be eligible for support. A unit, it is suggested, would be equal to 10 bushels of corn. For example, a farmer could elect to get support on 18,000 bushels of corn at a rate of $1.46 per bushel, under the schedule as it is set up for 1950. Other suggested production units are shown in the accompanying table.

7. Marketing quotas and acreage allotments would continue to be available or be provided for commodities such as tobacco, cotton, wheat, rice, corn and peanuts, "with improvements based on experience." Whenever allotments or marketing quotas are in effect on corn, similar restrictions would be available for use on other feed grains and "possibly rye."

"The time may come," Secretary Brannan said, "when marketing quotas or similar feasible devices may be desirable for meat animals, dairy prod-

By Creston J. Foster, Editor
IAA Record

ucts, poultry and eggs." For fluid milk, marketing agreements and orders would be continued.

Secretary Brannan makes a significant statement in discussing production payments. It reveals some of the use to which the farm program would be put.

". . . I want to make clear that I believe production payments should be used to encourage increased consumption as well as to support farm returns. Let me illustrate. In some of our larger cities, milk consumption per capita was much higher in 1947 than in 1940. Since 1947, in some of these same cities, the average person has been using less and less milk. . . Through production payments we can keep the market price within reach of more people and maintain returns to dairy farmers at a level which will bring forth the necessary production. . . The same principle should apply to other commodities to which marketing agreements and orders are adapted. . . I believe authority to support hog and milk prices through direct payments should be available before Jan. 1, 1950."

Here is Secretary Brannan's suggested standard for measuring production units. Ten bushels of corn, for example, would equal one unit, 7.77 bushels of wheat would equal one unit, etc.

COMMODITY	Quantity Equal To One Unit
Wheat	7.77 bu.
Corn	10.00 bu.
Butterfat	21.82 lb.
Milk, whole	346.00 lb.
Hogs	76.00 lb.
Eggs	31.88 doz.
Chickens	50.34 lb.
Soybeans	5.75 bu.
Beef cattle	86.00 lb.
Lambs	79.00 lb.
Oats	17.70 bu.
Barley	11.97 bu.
Apples	5.59 bu.
Wool	29.32 lb.

Comparison of Brannan's Proposed Support, 1940-49 Average, 90 Per Cent of Parity and Agricultural Act of 1948.

Commodity	1940-49 Avg. Farm Price	Brannan's Proposed 1950 Support	90% of Parity	Agricultural Act of 1948 (60 to 90%)
Corn, bu.	1.17	1.46	1.42	$ .90 -$1.35
Wheat, bu.	1.50	1.88	1.95	1.24 - 1.85
Wool, lb.	.398	.498	.405	.289- .434
Hogs, cwt.	15.20	19.00	16.10	Not more than 16.60
Beef cattle cwt.	13.50	16.90	12.00	" " 14.80
Lambs, cwt.	14.70	18.40	13.00	" " 16.00
Milk, whole, cwt.	3.38	4.22	3.55	" " 3.70
Butterfat, lb.	.535	.669	.582	" " .584
Eggs, doz.	.366	.458	.476	" " .453
Chickens, lb.	.232	.290	.252	" " .252
Soybeans, bu.	2.03	2.54	2.12	" " 2.21
Oats, bu.	.66	.825	.884	" " .840
Barley, bu.	.975	1.22	1.37	" " 1.30
Apples, bu.	2.09	2.61	2.12	" " 2.28

Sell Your Wool Through Your Own IAA Co-op

HAVE you marketed your wool? If not, better check with your county wool manager at the local Farm Bureau office so that you will be assured of the best price for your product.

Your local wool pool is part of the operation of the Illinois Wool Marketing Association, located at Paris, Edgar county. It is an Illinois Agricultural Association affiliate. Illinois Wool was set up some years ago for the purpose of protecting small wool growers in an uncertain market.

First of the 1949 wool clips moved into the county wool pools in late April, according to reports received by Dale Rouse, Illinois Wool manager.

Farmers who sold their wool in outright sale to the Association in late April received 44 cents per pound for clear fleece wool. This price was net to the grower at the county receiving point.

This is one of the methods by which you can market your wool. Another way by which you can sell your wool cooperatively is by the consignment method. In this case you deliver your wool to the county wool pool, where it is weighed and placed in bags furnished free, and shipped to the Association's warehouse at Paris where it is graded by your own cooperative. You will receive a receipt for your wool and an advance payment will be received from the Association as soon as it is graded. Final payment will be made as soon as the wool is sold by the National Wool Marketing Association in Boston.

• A NEW FARM PLAN

THE new farm program proposal announced by Secretary of Agriculture Charles F. Brannan is the most sensational thing to hit agricultural circles in a long time. As someone said — "It's not a farm program; it's a form of government."

It appears from Secretary Brannan's 7,500-word statement and statistical exhibits covering 35 typewritten pages that the program is aimed at (1) keeping farm income at wartime levels and at the same time (2) reducing food prices at the grocery counter. Government subsidies would make up the difference between the high farm income and the low retail prices. The taxpayer, of course, would pay the bill. Under direct questioning of Congressional committee members, Secretary Brannan failed to estimate the cost of the new program.

The new farm program has been called revolutionary, and that is no exaggeration. The designers of this plan threw out practically every basic farm program principle for which Farm Bureau fought years to secure. The Washington planners junked the parity principle as well as the "fair price in the market place."

The proposed farm plan in effect calls for the repeal of the Agricultural Act of 1948. At the 1948 annual meeting of the Illinois Agricultural Association, the voting delegates went on record in support of the 1948 Act with its principle of flexible price supports keyed to supply and demand. Therefore, the Illinois Farm Bureau, while it will give the new farm program a thorough and careful consideration, is bound by delegate action to support the Agricultural Act of 1948 and its fundamental principles.

At the April 15 meeting of the IAA board, the directors went on record to reaffirm their support of the American Farm Bureau Federation in backing the Agricultural Act of 1948.

The American Farm Bureau Federation's official statement on the new program pointed out:

"The recommendations of the Secretary involve far-reaching and fundamental changes in the approach and role of government in dealing with farm problems. The changes recommended in this startling reversal of policy are revolutionary in their effect.

"Before the Farm Bureau could consider seriously supporting them, it would be necessary to submit these proposals to our entire membership, and through the democratic process by which our policies are developed on the county, state and national levels, get their decision with regard to our position.

"Our present position is in support of the Agricultural Act of 1948, which we feel is sound and worthy of a fair trial."

Secretary of Agriculture Charles Brannan (above) as he appeared before the House Agricultural Committee to answer Congressional criticism that the administration's new farm program would hurt the farmer more than it would help him. Some Republicans have assailed the program as a scheme to regiment farmers and share the wealth. Brannan denied both assertions.

Here are some of the general proposals of the new farm program:

1. The old parity system of establishing fair prices is junked. Instead a total farm income goal is established. For 1950, for example, farm income would be pegged to give farmers the same average buying power as they had in the 10-year period, 1939-48. Christian County

Wins Two Firsts In Team Events And Places in Six Other Classes

IF the old saying is true that "practice makes perfect," they must bowl out in the corn rows in Ogle county from the looks of the results of the recent State Farm Bureau Bowling Tournament held in Springfield.

The pin-topplers from Ogle not only took first in two team events but also placed in six of the remaining seven classes of competition.

They took first in the Rural Youth Boys' Team event with a total score of 2376 and first in the Rural Youth Girls' Team competition with a total of 1898.

Ogle also placed third in the Men's Team event, third in the Women's Team, third in Rural Youth Mixed Doubles, fifth in Women's Singles, fourth in Rural Youth Boys' Singles, and third in Rural Youth Girls' Singles.

Leo Deets of Ogle rolled a 608 series, one of the only two over 600 rolled in the tournament. Two other Ogle men had single games of more than 200.

The bowling tournament was held at The Bowl in Springfield in connection with the annual Illinois Farm Sports Festival. It was the first time the state finals of the bowling tournament were held in Springfield. Competitive points and participation points scored at Springfield will be added to the totals of the scores accumulated at the University of Illinois when the Illinois Farm Sports Festival will be held Aug. 25-26.

It was decided to hold the bowling tournament in Springfield this spring because bowling is generally a cool weather sport and players would be in far better form in spring when they are usually at the peak of performance than they would be after a summer layoff and under hot weather conditions.

The 350 bowlers taking part in the state tournament were the cream of 1500 entrants in county and district competition.

Following are the results of the bowling tournament:

Open Class Men's Team—(1) Macoupin, 2735; (2) DeKalb, 2589; (3) Ogle, 2507; (4) Schuyler, 2484; (5) St. Clair, 2456.

Open Class Women's Team—(1) Mason, 2147; (2) Moultrie, 2137; (3) Ogle, 2072; (4) Will, 2046; (5) Henry, 2014.

Open Class Men's Singles—(1) Linn Eaton, Schuyler, 567; (2) Stark, 555; (3) Macoupin, 552; (4) Bureau, 536; (5) Grundy, 535.

Open Class Women's Singles—(1) Shirley Faxon, DeKalb, 511; (2) St. Clair, 464; (3) Will, 461; (4) Knox, 441; (5) Ogle, 437.

Rural Youth Boys' Team—(1) Ogle, 2376; (2) Rock Island, 2295; (3) Kendall, 2213; (4) De Witt, 2175; (5) Mason, 2120.

Rural Youth Girls' Team—(1) Ogle, 1898; (2) Warren, 1771; (3) Madison, 1769; (4) Fayette, 1761; (5) Henry, 1609.

Rural Youth Boys' Singles—(1) Homer Blunier, Woodford, 503; (2) Madison, 494; (3) Warren, 487; (4) Ogle, 472; (5) Fayette, 470.

Rural Youth Girls' Singles—(1) Mary Lou Reeter, Christian, 454; (2) Randolph, 414; (3) Ogle, 405; (4) Fayette, 370; (5) Champaign, 353.

Will County Wins State Farm Bureau Volleyball Title

FOR the third successive year Will county stands unchallenged as the state's best Farm Bureau volleyball team. The Will county ball punchers defeated Mason county in the state finals of the Farm Bureau volleyball tournament at Lanphier high school in Springfield. The scores were 11-0 and 15-4.

The volleyball tournament was held at the same time as the bowling tournament as a cool weather sport. Competitive and participation points will be added to each county's accumulated points at the Illinois Farm Sports Festival to be held at the University of Illinois Aug. 25-26.

Here are the results of the volleyball tournament:

Preliminary play: Whiteside, 15-15, vs. Clay, 5-7; Mason, 15-15, vs. Kane, 7-9; Champaign won on forfeit from McLean; Will, 15-15, vs. Fayette, 2-3.

Semi-finals: Mason, 15-15, vs. Whiteside, 12-12; Will, 15-15, vs. Champaign, 4-1.

Finals: Will, 11-15, vs. Mason, 0-4.

Consolation: Champaign, 15-15, vs. Whiteside, 11-12.

This group from Mason county won the women's team championship. Left to right: Fern McCoy, Paula Heberling (seated) Ethel McClelland, Leonore Pugh, and Alma Smith

Volley ball champions for the third successive year Will county team poses after winning final match. Left to right (front) Lawrence Werner, Wilbur Francis, Ralph Smith, Richard McHugh, Richard Richards; (back) Charles Sweedler, William Schoop, Harold Holz, and Hubert Woodcock.

Best of the men's teams was Macoupin county with a total score of 2735. Members of the team are left to right: (back) Kenneth Harris standing in for Irvin Bettis, who was not available; Earl Dufner; Harold Williams; (front) Stanley Smith and Charles Jackson.

Farm Bureau Trap Shoot Set for Aug. 5 Near Springfield

THE annual State Farm Bureau Trap and Skeet Shoot will be held Friday, Aug. 5 at the Mather Gun Club southwest of Springfield, according to Roy P. Johnson, IAA secretary of special services.

The Mather Gun Club is near the old

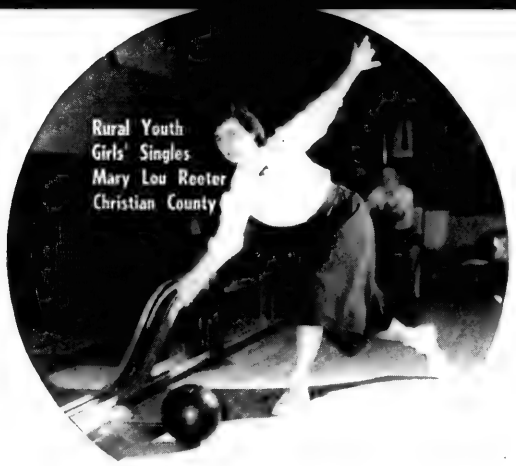
OGLE COUNTY Tops Bowlers!



Rural Youth
Girls' Singles
Mary Lou Reeter
Christian County

Wins Two Firsts In Team Events And Places in Six Other Classes

If the old saying is true that "practice makes perfect," they must bowl out in the corn rows in Ogle county from the looks of the results of the recent State Farm Bureau Bowling Tournament held in Springfield.

The pin-topplers from Ogle not only took first in two team events but also placed in six of the remaining seven classes of competition.

They took first in the Rural Youth Boys' Team event with a total score of 2376 and first in the Rural Youth Girls' Team competition with a total of 1898.

Ogle also placed third in the Men's Team event, third in the Women's Team, third in Rural Youth Mixed Doubles, fifth in Women's Singles, fourth in Rural Youth Boys' Singles, and third in Rural Youth Girls' Singles.

Leo Deets of Ogle rolled a 608 series, one of the only two over 600 rolled in the tournament. Two other Ogle men had single games of more than 200.

The bowling tournament was held at The Bowl in Springfield in connection with the annual Illinois Farm Sports Festival. It was the first time the state finals of the bowling tournament were held in Springfield. Competitive points and participation points scored at Springfield will be added to the totals of the scores accumulated at the University of Illinois when the Illinois Farm Sports Festival will be held Aug. 25-26.

It was decided to hold the bowling tournament in Springfield this spring because bowling is generally a cool weather sport and players would be in far better form in spring when they are usually at the peak of performance than they would be after a summer layoff and under hot weather conditions.

The 350 bowlers taking part in the state tournament were the cream of 1500 entrants in county and district competition.

Following are the results of the bowling tournament:

Open Class Men's Team—(1) Macoupin, 2735; (2) DeKalb, 2589; (3) Ogle, 2507; (4) Schuyler, 2484; (5) St. Clair, 2456.

Open Class Women's Team—(1) Mason, 2147; (2) Moultrie, 2137; (3) Ogle, 2072; (4) Will, 2046; (5) Henry, 2014.

Open Class Men's Singles—(1) Linn Eaton, Schuyler, 567; (2) Stark, 555; (3) Macoupin, 552; (4) Bureau, 536; (5) Grundy, 535.

Open Class Women's Singles—(1) Shirley Faxon, DeKalb, 511; (2) St. Clair, 464; (3) Will, 461; (4) Knox, 441; (5) Ogle, 437.

Rural Youth Boys' Team—(1) Ogle, 2376; (2) Rock Island, 2295; (3) Kendall, 2213; (4) De Witt, 2175; (5) Mason, 2120.

Rural Youth Girls' Team—(1) Ogle, 1898; (2) Warren, 1771; (3) Madison, 1769; (4) Fayette, 1761; (5) Henry, 1609.

Rural Youth Boys' Singles—(1) Homer Blunier, Woodford, 503; (2) Madison, 494; (3) Warren, 487; (4) Ogle, 472; (5) Fayette, 470.

Rural Youth Girls' Singles—(1) Mary Lou Reeter, Christian, 454; (2) Randolph, 414; (3) Ogle, 405; (4) Fayette, 370; (5) Champaign, 353.

Rural Youth Mixed Doubles—(1) Kenneth Cramm and Virginia Neff, Adams, 922; (2) Woodford, 909; (3) Ogle, 828; (4) Bond, 822; (5) Fayette, 788.

The following bowlers rolled 200 or above: Men's Team—Milburn, Stark, 221; Deets, Ogle, 200-216; Linker, Ogle, 204; Clark, DeKalb, 202-202; Smith, Macoupin, 224-203; Bettis, Macoupin, 233; Bullis, DeKalb, 208; Dutner,

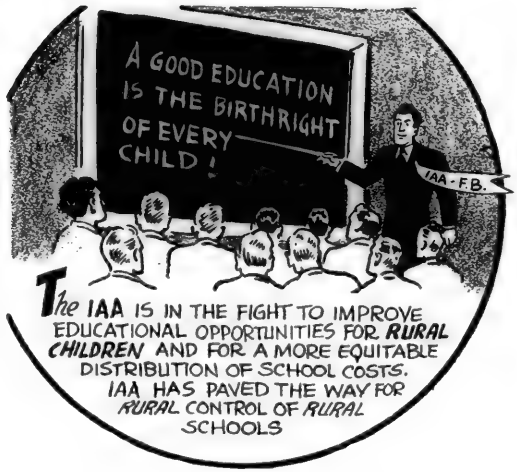
Here's IAA Position On Rural Schools



Believe Farm Children are Entitled to Same Educational Opportunities As Children in Cities

By PAUL E. MATHIAS
Secretary
Illinois Agricultural Association

THE Illinois Agricultural Association desires the best public school system which is possible within the reasonable limits of our ability to provide and support. We believe rural people will support and favor that school system which offers the best educational opportunities for their children. We believe that children in rural areas are entitled to the same educational opportunities as children in cities.

The Illinois Agricultural Association believes that local people are most able to determine the type of school which will best serve their particular community. We recognize that not all large schools are good and not all small schools are poor. In some areas due to local conditions one room schools must be retained. However, it is important that children learn to live, to work and to get along with others.

Very small schools do not afford the opportunity for association with, and adjustments to, others. Rural schools should include an enlarged curriculum, including vocational training in high schools, which is generally recognized as desirable. The very small schools ordinarily cannot provide this enlarged curriculum as at reasonable cost.

We do not believe all rural children should be transported to urban centers. There are many advantages in schools, particularly elementary schools, located in rural areas. While not always true, in general more flexibility and economy in administration will be had and equal emphasis and importance will be placed upon all grades alike when all twelve grades are under one administrative unit.

One administrative unit can administer both elementary and high schools and can have attendance centers at several locations. Many communities do not have the financial ability to provide a modern school program. State assistance is necessary and the amount of this assistance should be substantially increased. However, we cannot expect the State to support schools which are too small to be efficient or schools which do not provide an adequate program.

It is recognized that in the reorganization of schools, mistakes have been made. The objective of providing the best educational opportunities possible for our children has not always been kept in mind. There has been "land-grabbing" and efforts to obtain additional assessed valuation for some reorganized districts.

Some small schools, and particularly some small high schools, have been advocated not primarily because of the educational facilities which they provide or because of economical operation but in order to further the trade or economic advantages of some particular locality or urban center.

Some of the larger administrative units apparently have thought that they must immediately close all rural one-room schools and transport all the children to urban centers. Some of these children are on school buses too long. Possibly some of the administrative personnel employed has not been too familiar with the problems of elementary schools and particularly schools in rural areas.

However, in view of the progress that has been made and the reorganization that has been had, the mistakes made probably have been a minimum number. From 11,906 school districts in the 1945-1946 school year, the number has been reduced to 5,859. 40 per cent of the entire area of the State is now organized into community unit districts. This reorganization has come about within just a few years.

We need, and the Illinois Agricultural Association is supporting, legislation to prevent land-grabbing, to continue safeguards for rural areas and to better protect the rights of all people within a proposed district without giving any small area the right to veto entirely the organization of a new district, and legislation to facilitate the correction of mistakes that have been made through detachment and annexation.

We also need substantially increased State support. The period of reorganization and adjustment does raise many problems and result in some inequities. However, if we keep in mind the objective of providing better educational opportunities for our children and test proposals which are advanced by whether they further that objective, we should be able to meet the problems and to build the type of school system and provide the educational opportunities which we seek.

Re-elected President

Wilbur Swayer, Lake county, has been reelected president of Pure Milk Association, the largest dairy cooperative supplying the Chicago market.

Bott Named Sales Manager for Prairie Farms Creameries

FRANK Bott, 56, manager of the Producers' Dairy at Danville since it was organized in 1934, has been named assistant manager of Illinois Milk Producers' Supply Company and sales manager for Prairie Farms Creameries. Both are affiliates of the Illinois Agricultural Association.

Frank Bott

Bott will be succeeded at Danville by I. C. Hochstrasser, manager of the Prairie Farms Creamery of Champaign, who will also continue to manage the Champaign creamery.

Bott was born at Danville, and was formerly employed by the C. and E. I. Railroad. He served in World War I, was treasurer of the military home at Danville with the rank of major for 12 years. He resigned to go into the meat business in Danville and in 1934 became manager of the Producers' Dairy which started with a gross business of $30,000 to a little less than a million dollars last year.

He is married and has two boys in high school.

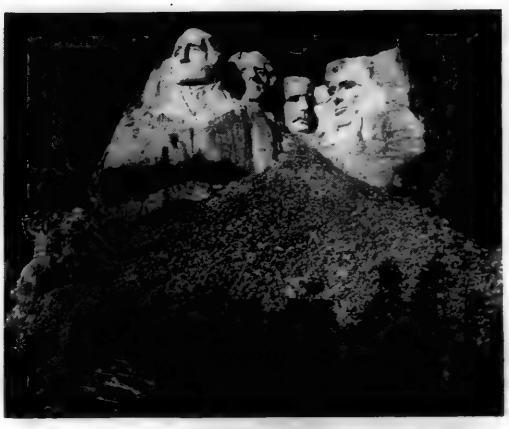
Illinois Youth Wins National Honors

PAUL STONE, an FFA member from Greenview, in Menard county, won top honors in the junior division of a nationwide swine picture judging contest sponsored by The Duroc News. Stone scored 571 out of a possible 600 points in the contest to win the junior division and a tie for third among more than 10,000 contestants in all divisions. Paul is secretary of the Greenview chapter. Thirty-seven seven-member FFA teams averaged more than 500 points in the contest. High team honors were won by the Belleville, Kansas, FFA with an average score of 558.6 per boy.

Dream of the Future — 200 Bu. Corn Per Acre

ILLINOIS farmers will be growing 200 bushels of corn to the acre within 20 years or less, and they'll think it is an ordinary yield, according to A. L. Lang, University of Illinois agronomist.

Lang said we can double and triple our present yields because plant breeders are sure to produce higher yielding strains of hybrid corn. Last year's average yield was 61 bushels per acre, an all-time high.



The majesty of Gutzon Borglum's great sculpture of four of America's presidents will be seen at Mt. Rushmore by Farm Bureau people attending the Midwest Farm Bureau Training School to be held at Custer state park in the Black Hills of South Dakota, June 5-6-7. Farm Bureau leaders will explain there the techniques of building Farm Bureau membership.

Romeo Short, left, Arkansas, vice-president of the American Farm Bureau, and Charles B. Shuman, IAA president, right, chat in Washington with Dr. Edwin Nourse, chairman of President Truman's Economic Council.

MEMBERSHIP . . .

(*Continued from page 6*)

ganization it makes it so much easier for them to sell their neighbors.

It is to these men and the organization directors who provided the leadership that Brissenden gives all the credit for the success of Farm Bureau membership drives. "Practically all of the counties have done a splendid job," Brissenden said. "It is a pleasure to work with such men who have so much faith and loyalty to their organization."

Illinois is still the nation's greatest state Farm Bureau organization. With 165,000 members it is now far ahead of its nearest rival, Iowa, with approximately 125,000 members.

Employ C. W. Mitchell as Field Representative For The Illinois Livestock Marketing Association

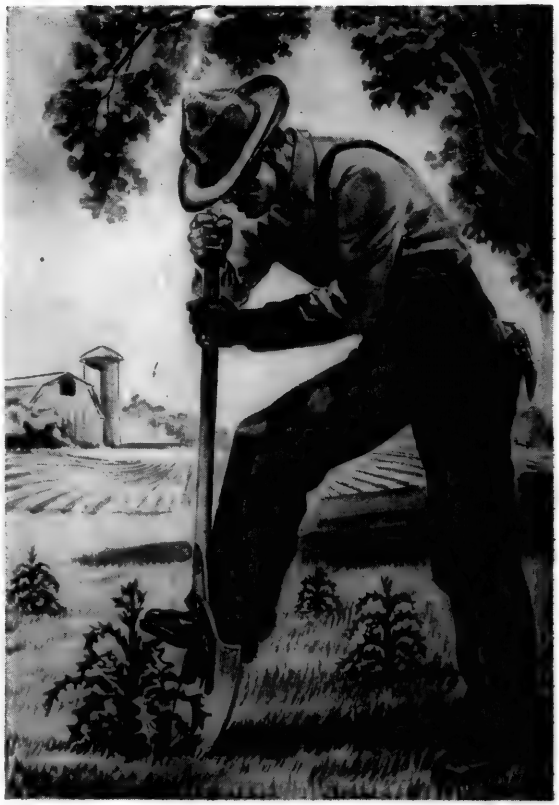
C. W. MITCHELL, 40, has been employed as a field man and public relations representative for the Illinois Livestock Marketing Association, an IAA affiliated company with headquarters at Decatur. He will work with member livestock marketing points and do contact work with packers and other associated organizations in the livestock industry.

Mitchell was born in Cass City, Mich., where he attended local schools. He attended Michigan State College. He left college to work for the American Berkshire Association with headquarters at Springfield, Ill.

During his 17 years with American Berkshire he served as secretary and started the organization's official publication in 1935 which goes to 9,000 Berkshire breeders in 48 states and 14 foreign countries. Last year he was president of the National Association of Swine Records.

Mitchell is married and has four children, two boys and two girls. The family will move to Decatur as soon as they can obtain housing accommodations.

WEEDS WASTE WORK



No more wasted hours, wasted effort. Now 2,4-D Weed Killers open a new era in *Selective, Economical,* weed control.

Gone is the necessity for costly hours of digging, mowing, and extra cultivation.

2,4-D AMINE WEED KILLER, a highly effective destroyer of many types of annual and perennial weeds. Selective killing properties permits its use on pastures, fence rows, roadways, drainage ditches, lawns, and field crops.

2,4-D ESTER WEED KILLER, covers a wider range of weeds, with effective killing power, than other types of 2,4-D. An increased rate of penetration into leaf tissues gives a surer, faster, kill. Greater caution in application is required, especially near flowers, bushes, trees, and vegetables. Both types of 2,4-D are adaptable to low or high pressure spraying.

Follow *implicitly* the directions on the container. Consult your salesman for recommendations.

ATLACIDE

A chlorate type weed killer, especially effective on perennial weeds. Destroys all contacted vegetation. For use where surrounding growth is not a factor.

2,45-T

For control and killing of woody fibrous growth. Particularly effective on brambles and woody plants such as osage orange, gum, and hawthorn.

LETTERS...

FOR GAS TAX

The following is a copy of a letter sent to the senator of the 30th district and representatives of the 18th congressional district of Illinois relative to the proposed two cent increase in the gasoline tax for Illinois.

I would appreciate your publishing the letter in its entirety sometime in the near future, in your publication.

THE Tazewell county board of supervisors, has gone on record endorsing the two cent raise in the gasoline tax, with instructions that the county clerk so advise you. I am taking this opportunity to express some of my views relative to the raise.

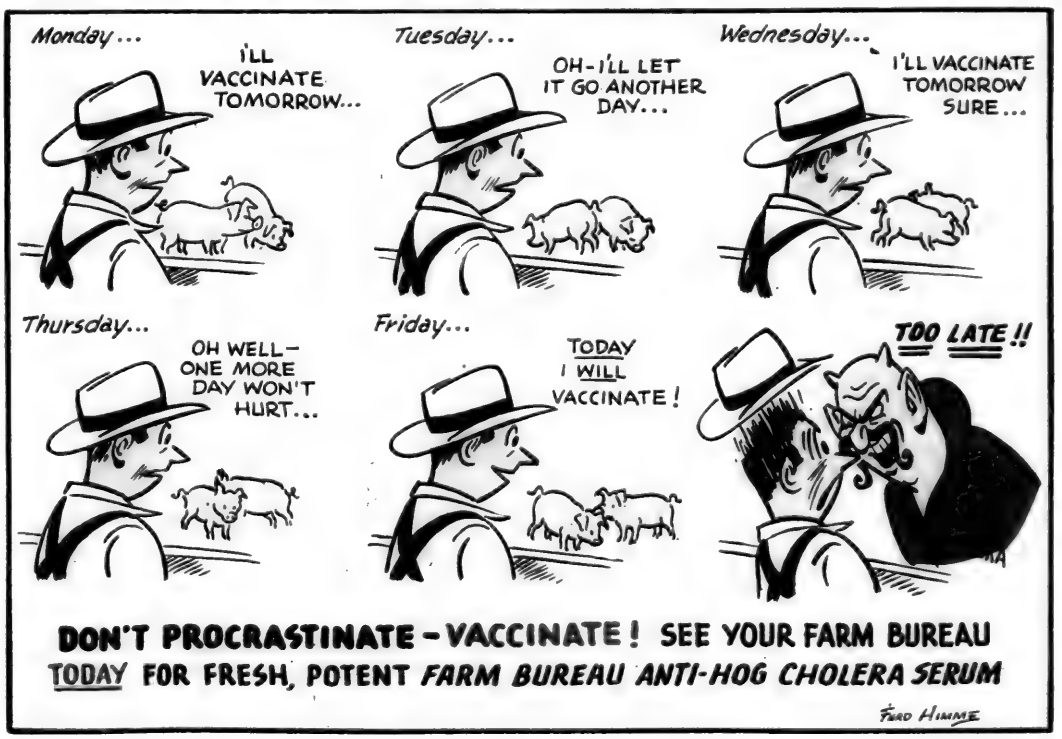
No doubt, you have received quite a few letters from people opposing this raise, and I feel it is safe to assume that many of them are not familiar with the situation and the great necessity of this extra money for road purposes. The highway commissioners of this county, who represent the people relative to road construction, are all 100 per cent for the proposed increase in the gasoline tax. Nearly all the farmers I have contacted have no opposition to the raise. It seems as though the opposition comes from the oil interests—and of course, we know that this opposition is from a personal standpoint. The trucking industry, in all but a few instances, is also opposed to the increase and I can hardly understand why they should, because truck traffic is only 10 per cent of the total, while they do about 100 per cent of the damage to our roads.

IAA Director Frank L. Simpson discusses farm issues with farmers in his district at the DeWitt County Farm Bureau. These meetings are held annually throughout the state to give farmers a chance to express to their IAA director their feeling on farm issues.

What gets me riled up, is the fact that while I traveled through the southern states, the tax ranged from seven cents in Tennessee to nine and one half cents in Louisiana, and I paid from 28 cents to 30 cents per gallon for gasoline (Ethyl) tax included. Then, I come back to our own state and pay only three cents tax on gasoline but still pay 28 cents for a gallon, tax included. This is happening in a state (Illinois) which is third in production of oil and has five or six refineries scattered over the state. At the same rate that we are charged for gasoline in the southern states and taking into consideration, the gas tax, we should not be paying any more than 21 cents per gallon. If you travel through those states south of the Dixie line, you will see that there is mile after mile of new construction, this work, I claim, is being paid for by we who live in the north. Another thing, the oil companies could, tomorrow morning, raise the price of gasoline one half cent and in two or three weeks add on another one half cent and in a few months raise the price three cents and no one would open his mouth about it, but go ahead and pay the increased price — yet these same people raise loud objections at the thought of an increase of two cents in tax that will result in greatly improved roads throughout the State.

Therefore, I think, for the good of every one concerned, that it would be well if you would support a raise in the gas tax. I would further state, that before we can match the Federal Appropriations, we will have to have some way of getting extra money, as we do not have sufficient funds now.

Elmer Mitchell
Superintendent of Highways
Tazewell County



Rural Youth Activities

By Ellsworth D. Lyon, Director
Young Peoples Activities

ILLINOIS Rural Youth members will soon be visiting Illinois state parks. There scenery is at its best and history has been made. County Rural Youth groups will find the parks of unusual interest to them. They are laid out mainly in areas of abiding historical interest.

Among these parks is New Salem where Lincoln lived and loved Ann Rutledge, and where he served as store clerk, mill hand, postmaster, and soldier. A large sign at the village entrance tells the town's history and of Lincoln's residence there. From that point on down the ridge to the last house the visitor is frequently reminded of the pioneer life of the 1820's and the 1830's.

It is well to take time to read the various signs from the entrance of the old village to the old Clary Grocery farthest down the street. The street takes the visitor past the various homes where the names of the residents are inscribed: Onstott's Cooper Shop, Miller's Blacksmith Shop, Hill's Carding Mill, Dr. Francis Regnier's Office, the Rutledge Tavern, the Berry-Lincoln Store and the Hill-McNeil Store where Lincoln served as postmaster, and the first Berry-Lincoln Store which now houses the post office. On the bank of the Sangamon River under the hill upon which the town was located, is the Rutledge-Cameron Mill where Lincoln worked for some time.

E. D. Lyon reads about the old village of New Salem before entering the state park northwest of Springfield.

John W. Gellerman, New Salem postmaster, talks with state park visitors. Note woodcarvings on mantel.

The cast of "The Angell Brats" of Edwards County Rural Youth pose for a picture. Left to right (standing): Nona Tribe, Gerald Longbons, Joan Raber, Marilyn Wolfe, Allen Goodson, and George Knight. Seated are: Maxine Roosevelt, Lester Piercy, Irene Smith, Wanda Roosevelt, Marjorie Tribe, James Scott, Marilyn Horton, and Dwain Massie.

The present postmaster, John W. Gellerman, was installed by James W. Farley, Feb. 12, 1941. Gellerman, a whittler of horses and busts of Lincoln, enjoys visiting with people who come into the post office. He likes to talk about Lincoln and pioneer life.

Rural Youthers visiting New Salem will find that time spent there will be greatly enjoyed.

The Illinois Farm Sports Festival is under way. Activities in the past have grown to such an extent that it is necessary to sponsor play-offs in the various divisions prior to the dates which climax the activities of the Annual Farm Sports Festival. The statewide volleyball and bowling tournaments were run off at Springfield on March 30. Rural Youth supported these activities wholeheartedly. Pictures and listings of winners will be found on other pages of this issue of the "RECORD."

This year there will be a section for Rural Youth folk and square dancing. In 1950 the culmination of this activity will be shifted to Farm and Home Week at the University of Illinois but will remain as a part of the Sports Festival activity. County groups this year may enter a square dance or folk dance team.

Edwards Rural Youth presented "The Angell Brats", a three-act play, Saturday, April 2 at the Edwards county senior high school, before an audience of 450. The sale of tickets netted $235.40 and will be used to meet expenses of the group throughout the year. Mrs. John McCue, wife of the farm adviser, directed the play with Miss Norma Jacobs assisting. The play is an annual event.

Glenn Niehaus, Montgomery county, who was on the IAA state committee in 1948, was married March 25. Glenn's father, Ed Niehaus, is a prominent leader in Montgomery county.

Tazewell Rural Youthers are going strong on educational experiences. On March 17 the group toured the Keystone Steel and Wire plant, Peoria, saw a colored movie on animal diseases at the March meeting, and learned English folk dances under the leadership of Miss Moira Barry, exchange teacher, Pekin high school, from London, England.

Peoria county heard I. E. Parett, Illinois Agricultural Association division of general services, at the annual banquet March 30. He spoke of Rural Youth and its place on the stage of life, using the words RURAL YOUTH to provide initial letters of key words which challenge young people: Responsibility, Understanding, Respect, Action, Leadership, Yearning, Ownership, Utilization of character traits, Truth, 4-H's (Head, Heart, Hands and Health).

Women's Singles—Handrich, St. Clair, 201.

Two rolled series of over 600 in men's team classification: Smith, Macoupin, 622; and Deets, Ogle, 608.

TRAPSHOOT . . .

(*Continued from page* 15)

airport on route 4. The Farm Bureau Trap and Skeet Shoot is part of the Illinois Farm Sports Festival and is being held in advance of the Sports Festival as it was last year because the dates of the Sports Festival conflict with the All American Trap Shoot.

Jim Holderman of Grundy county, a Farm Bureau singles champion and former winner of the All-American, will serve as chairman of the state trap shoot. Glen Chenoweth of Livingston county will be in charge of the skeet shoot. Farm people planning to enter the shoot should register with their county Farm Bureaus.

FOLK FESTIVAL . . .

CHANGES have been made in the folk festival plans for the Illjnois Farm Sports Festival Aug. 25-26 according to announcement by Roy P. Johnson, IAA secretary of special services and festival secretary.

A few months ago it was announced that the folk and dance festival features would be postponed until Farm and Home Week in 1950. This was the recommendation of the Sports Festival Executive Committee.

Some counties already had made plans for August, 1949 so the following modifications have been provided for this year: (1) 4-H folk or square dance team — one entry per county; (2) Rural Youth square or folk dance team — one entry per county; (3) Open class folk or square dance team — one entry per county; (4) Time limit on dance features — five minutes; (5) Square dance bands will be judged as they accompany dance groups; (6) Folk dance and square dance teams will be judged separately; (7) Folk song and ballad singers and county bands — dropped this year; (8) No change from 1948 for other music, dance, and drama features; and (9) district competition will not be required.

Homer Blunier, Woodford County, jokes with Evelyn Boyer, Woodford, after he won Rural Youth boys' singles title.

SOFTBALL . . .

TO promote greater participation in the softball divisions of the Illinois Farm Sports Festival, the executive softball committee has set the following goals for 1949: (1) A boys' 4-H team from every county in district competition; (2) At least two Rural Youth teams in every district; (3) A girls' 4-H team from every district; and (4) encouragement of as many entries as possible in the other divisions: county league, all county, 35'ers, and girls' open class.

The softball committee meeting in Chicago April 14 set the rule that a player may participate in only one division of the final softball tournaments at the Sports Festival, August 25-26.

The committee set the deadline for softball entries at July 1, 1949 with which must be included a $5 entry fee. Counties have been requested to give early consideration to the possibility of entering teams in various softball divisions because early entries will ease the handling of the district play-offs and the making of arrangements for the finals.

District softball chairmen will be named not later than June 1, 1949. Chairmen will make arrangements with other counties for play-offs. Schedules for the final play-offs will be drawn in the IAA offices August 19, 1949.

F. D. Laible Named Outstanding Senior Of Farm House

FDALE LAIBLE, 21-year-old son of Frank H. Laible, a director of the Marshall-Putnam County Farm Bureau, has received an award made annually by Farm House fraternity on the University of Illinois campus to the outstanding senior of the fraternity.

A 4-H member for 10 years and a FFA member for four years, Laible will be graduated this spring. While attending the university he worked two years at the beef barn and showed the university cattle at the International for two years. He is president of the Hoof and Horn club, a member of the livestock and meat judging teams and served as chairman for the 1948 Little International. He also is a member of Alpha Zeta, national agriculture honorary fraternity.

Laible received the Doane award at the Farm House fraternity's founders' day banquet in April. It was the fraternity's 44th anniversary. Principal speakers were Dean H. P. Rusk, U. of I. College of Agriculture, and Fred H. Turner, dean of students.

Courier Photo

F. Dale Laible, right, Marshall county, receives Farm House fraternity award to top senior from Cecil D. Smith, administrative assistant, U. of I. College of Agriculture. Center is Glyndon Stuff, fraternity president.

ILLINOIS Rural Youth members will soon be visiting Illinois state parks. There scenery is at its best and history has been made. County Rural Youth groups will find the parks of unusual interest to them. They are laid out mainly in areas of abiding historical interest.

Among these parks is New Salem where Lincoln lived and loved Ann Rutledge, and where he served as store clerk, mill hand, postmaster, and soldier. A large sign at the village entrance tells the town's history and of Lincoln's residence there. From that point on down the ridge to the last house the visitor is frequently reminded of the pioneer life of the 1820's and the 1830's.

It is well to take time to read the various signs from the entrance of the old village to the old Clary Grocery farthest down the street. The street takes the visitor past the various homes where the names of the residents are inscribed: Onstott's Cooper Shop, Miller's Blacksmith Shop, Hill's Carding Mill, Dr. Francis Regnier's Office, the Rutledge Tavern, the Berry-Lincoln Store and the Hill-McNeil Store where Lincoln served as postmaster, and the first Berry-Lincoln Store which now houses the post office. On the bank of the Sangamon River under the hill upon which the town was located, is the Rutledge-Cameron Mill where Lincoln worked for some time.

The present postmaster, John W. Gellerman, was installed by James W. Farley, Feb. 12, 1941. Gellerman, a whittler of horses and busts of Lincoln, enjoys visiting with people who come into the post office. He likes to talk about Lincoln and pioneer life.

Rural Youthers visiting New Salem will find that time spent there will be greatly enjoyed.

The Illinois Farm Sports Festival is under way. Activities in the past have grown to such an extent that it is necessary to sponsor play-offs in the various divisions prior to the dates which climax the activities of the Annual Farm Sports Festival. The statewide volleyball and bowling tournaments were run off at Springfield on March 30. Rural Youth supported these activities wholeheartedly. Pictures and listings of winners will be found on other pages of this issue of the "RECORD."

This year there will be a section for Rural Youth folk and square dancing. In 1950 the culmination of this activity will be shifted to Farm and Home Week at the University of Illinois but will remain as a part of the Sports Festival activity. County groups this year may enter a square dance or folk dance team.

Edwards Rural Youth presented "The Angell Brats", a three-act play, Saturday, April 2 at the Edwards county senior high school, before an audience of 450. The sale of tickets netted $235.40 and will be used to meet expenses of the group throughout the year. Mrs. John McCue, wife of the farm adviser, directed the play with Miss Norma Jacobs assisting. The play is an annual event.

Glenn Niehaus, Montgomery county, who was on the IAA state committee in 1948, was married March 25. Glenn's father, Ed Niehaus, is a prominent leader in Montgomery county.

Tazewell Rural Youthers are going strong on educational experiences. On March 17 the group toured the Keystone Steel and Wire plant, Peoria, saw a colored movie on animal diseases at the March meeting, and learned English folk dances under the leadership of Miss Moira Barry, exchange teacher, Pekin high school, from London, England.

Peoria county heard I. E. Parett, Illinois Agricultural Association division of general services, at the annual banquet March 30. He spoke of Rural Youth and its place on the stage of life, using the words RURAL YOUTH to provide initial letters of key words which challenge young people: Responsibility, Understanding, Respect, Action, Leadership, Yearning, Ownership, Utilization of character traits, Truth, 4-H's (Head, Heart, Hands and Health).

BOWLING . . .

(Continued from page 14)

Macoupin, 215; Eaton, Schuyler, 203-235; Jones, Christian, 223; Frobish, Christian, 201; Eales, Schuyler, 202; Olson, DeKalb, 211; Speichinger, St. Clair, 206-211.

Men's Singles—Eaton, Schuyler, 213-225; Blunier, Woodford, 208; Hanson, Grundy, 201; Hopkins, Lee, 202; Fischer, Monroe, 202; Kaney, Ogle, 212; Repcher, Christian, 202.

Women's Singles—Handrich, St. Clair, 201.

Two rolled series of over 600 in men's team classification: Smith, Macoupin, 622; and Deets, Ogle, 608.

Homer Blunier, Woodford County, jokes with Evelyn Boyer, Woodford, after he won Rural Youth boys' singles title.

TRAPSHOOT . . .

(Continued from page 15)

airport on route 4. The Farm Bureau Trap and Skeet Shoot is part of the Illinois Farm Sports Festival and is being held in advance of the Sports Festival as it was last year because the dates of the Sports Festival conflict with the All American Trap Shoot.

Jim Holderman of Grundy county, a Farm Bureau singles champion and former winner of the All-American, will serve as chairman of the state trap shoot. Glen Chenoweth of Livingston county will be in charge of the skeet shoot. Farm people planning to enter the shoot should register with their county Farm Bureaus.

FOLK FESTIVAL . . .

CHANGES have been made in the folk festival plans for the Illinois Farm Sports Festival Aug. 25-26 according to announcement by Roy P. Johnson, IAA secretary of special services and festival secretary.

A few months ago it was announced that the folk and dance festival features would be postponed until Farm and Home Week in 1950. This was the recommendation of the Sports Festival Executive Committee.

Some counties already had made plans for August, 1949 so the following modifications have been provided for this year: (1) 4-H folk or square dance team — one entry per county; (2) Rural Youth square or folk dance team — one entry per county; (3) Open class folk or square dance team — one entry per county; (4) Time limit on dance features — five minutes; (5) Square dance bands will be judged as they accompany dance groups; (6) Folk dance and square dance teams will be judged separately; (7) Folk song and ballad singers and county bands dropped this year; (8) No change from 1948 for other music, dance, and drama features, and (9) district competition will not be required.

SOFTBALL . . .

TO promote greater participation in the softball divisions of the Illinois Farm Sports Festival, the executive softball committee has set the following goals for 1949: (1) A boys' 4-H team from every county in district competition; (2) At least two Rural Youth teams in every district; (3) A girls' 4-H team from every district; and (4) encouragement of as many entries as possible in the other divisions: county league, all county, 35'ers, and girls' open class.

The softball committee meeting in Chicago April 14 set the rule that a player may participate in only one division of the final softball tournaments at the Sports Festival, August 25-26.

The committee set the deadline for softball entries at July 1, 1949 with which must be included a $5 entry fee. Counties have been requested to give early consideration to the possibility of entering teams in various softball divisions because early entries will ease the handling of the district play-offs and the making of arrangements for the finals.

District softball chairmen will be named not later than June 1, 1949. Chairmen will make arrangements with other counties for play-offs. Schedules for the final play-offs will be drawn in the IAA offices August 19, 1949.

F. D. Laible Named Outstanding Senior Of Farm House

F. DALE LAIBLE, 21-year-old son of Frank H. Laible, a director of the Marshall-Putnam County Farm Bureau, has received an award made annually by Farm House fraternity on the University of Illinois campus to the outstanding senior of the fraternity.

A 4-H member for 10 years and a FFA member for four years, Laible will be graduated this spring. While attending the university he worked two years at the beef barn and showed the university cattle at the International for two years. He is president of the Hoot and Horn club, a member of the livestock and meat judging teams and served as chairman for the 1948 Little International. He also is a member of Alpha Zeta, national agriculture honorary fraternity.

Laible received the Doane award at the Farm House fraternity's founders' day banquet in April. It was the fraternity's 44th anniversary. Principal speakers were Dean H. P. Rusk, U. of I. College of Agriculture, and Fred H. Turner, dean of students.

F. Dale Laible, right, Marshall county, receives Farm House fraternity award to top senior from Cecil D. Smith, administrative assistant, U. of I. College of Agriculture. Center is Glyndon Stuff, fraternity president.

AS MANY farmers already had suspected, a brome grass-alfalfa mixture is fully as good as alfalfa alone during the first year of swine pasturing. This was borne out in tests conducted by University of Illinois animal scientists and explained at Swine Growers' Day held at the University of Illinois College of Agriculture last month.

Interest was focused mainly on animal nutrition as four swine feeding experts bombarded 1500 farmers with facts and figures to prove their conclusions.

Their experiments show that dried corn distillers' solubles give better results when fed with soybean oil meal than when fed with meat scraps as a hog's pasture supplement.

Distillers' solubles as 50 per cent of the pasture supplement can be used without affecting the rate or efficiency of gains. It also made little difference whether the supplement was fed as a meal or pelleted.

It also was pointed out that pigs need 1.4 milligrams of riboflavin (one of the B vitamins) per pound of feed. Lack of riboflavin stunted pig growth and developed abnormal feet, legs, and hocks.

Sufficient riboflavin is contained in a 10 per cent diet of good quality alfalfa hay or meal. Pigs get enough in good pasture. Cereal grains are low in riboflavin.

Another highlight on the nutrition program was the announcement that baby pigs will grow faster on an artificial milk than on sow's milk. The artificial milk is made of casein, sugar, mineral salts, and lard.

It is expensive and too complicated for the average farmer to make. It is being used experimentally to learn what nutrients speed up or slow down their growth. On the artificial milk, the University has grown pigs to a weight of 45 pounds at eight weeks. On sow's milk pigs do well to weigh 30 pounds at eight weeks.

For about two hours in the morning farmers, and an unusually large number of vocational agriculture students toured the swine pens on the south farms of the College of Agriculture listening to lectures on experimental feeding on many types of pastures and a varied diet of supplements.

Others poked around among the feed lots and farrowing pens looking for some suggestion that might help them improve their own hog production. A discussion of the latest developments in swine nutrition followed at the University auditorium. The crowd was unusually large and many complained about the lack of parking facilities at the University.

Reporting on a study of reduced fertility in female swine, A. V. Nalbandov said that preliminary conclusions showed that out of 921 breeding females tested 57 were sterile. Nalbandov suggested that low fertility may be an inherited trait and recommended that low fertility animals be culled as soon as they are recognized. He warned farmers not to use hormones on animals with reproductive troubles.

A double-barreled new pricing plan, explained by E. F. Ferrin, University of Minnesota, has eliminated 83 per cent of the pricing errors in buying hogs, he said. The new plan, now being tried experimentally, is based on more accurate pricing of live hogs, and grading the carcasses on the rail in the packing plant.

"True, there are difficulties in selling hogs by carcass weight and grade," Ferrin admitted, "but the possibilities are so good they deserve more study."

In discussing parity price support, E. L. Butz, Purdue agricultural economist, declared, "There is some prospect that American agriculture may move toward nationalization in the next 10 years."

A system of artificially high fixed price supports would produce huge food and fiber surpluses, he said, and strict government control would result.

"If this situation occurs," Butz said, "there will be no 'voluntary' controls. Everything must be compulsory."

Butz urged farmers to favor a moderate range of support prices, within the 60 to 90 per cent of parity bracket.

"The future of American agriculture lies in more efficient production and reasonable selling prices in an ever-expanding market," Butz stated. Prices maintained at artificially high levels can be only a temporary stimulant. The hangover will make one wonder why he took the drink in the first place."

IAA Trippers to Hold Picnic on Aug. 21 at Bloomington Park

THE IAA Trippers picnic will be held Sunday, Aug. 21 at Miller Park at Bloomington, Ill.

IAA Trippers are farm folks who made either the IAA-sponsored western tour to the AFBF convention in San Francisco in 1946 or the IAA-sponsored eastern and southern tours to the AFBF convention in 1948.

Many of the men and women struck up enduring friendships during the tours and discussed means of meeting again and renewing old acquaintances. The IAA Trippers picnic is the result. Last year a large crowd turned out for the picnic at Decatur.

The picnic will be potluck with everyone requested to bring his own picnic basket. Chairman of the event is Adrian L. Phillips of Tuscola in Douglas county.

Rapid Gains

Supplements do the trick!

HOGS ON DRY LOT

Blue Seal Hog Supplement, with 40% highest quality protein plus all the minerals and vitamins necessary to balance commonly fed farm grains. Gives "quick to market" gains for growing, fattening pigs from 75 pounds to market weight.

No sleight of hand. No magic required. With Blue Seal Pasture Supplement (42% protein), hogs on good, green succulent pasture are provided the high quality proteins and minerals necessary to get *Rapid Gains* with *Low Production Costs.*

Enables you to utilize to the fullest your good legume pastures for the thrifty production of pork.

Blue Seal Feeds are Surety
Of Savings with High Quality
So make your pork High Profits pay
By feeding hogs the Blue Seal Way

Hog Supplement and Pasture Supplement are also available in Service Brand. Precision formulated pre-mixes blended with area grown grains give you highest quality with real economy.

These Feeds are sold exclusively by

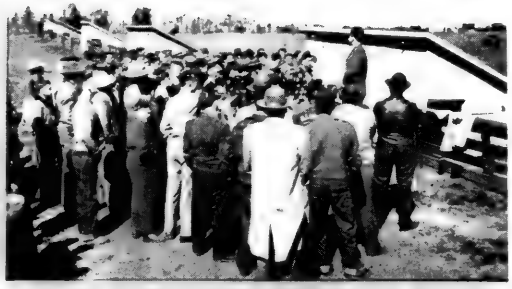
Swine Diet Is All-Important

Hog Growers Hear University Animal Scientists Explain Latest Experiments in Controlled Feeding and What It Means in Higher Profits



D. M. Baird, graduate assistant in animal science, discusses the results of rations used on sows kept in feedlots behind him during morning field tour of experimental swine pens by farm people attending annual Swine Growers' Day at the University of Illinois College of Agriculture.

AS MANY farmers already had suspected, a brome grass-alfalfa mixture is fully as good as alfalfa alone during the first year of swine pasturing. This was borne out in tests conducted by University of Illinois animal scientists and explained at Swine Growers' Day held at the University of Illinois College of Agriculture last month.

Interest was focused mainly on animal nutrition as four swine feeding experts bombarded 1500 farmers with facts and figures to prove their conclusions.

Their experiments show that dried corn distillers' solubles give better results when fed with soybean oil meal than when fed with meat scraps as a hog's pasture supplement.

Distillers' solubles as 50 per cent of the pasture supplement can be used without affecting the rate or efficiency of gains. It also made little difference whether the supplement was fed as a meal or pelleted.

It also was pointed out that pigs need 1.4 milligrams of riboflavin (one of the B vitamins) per pound of feed. Lack of riboflavin stunted pig growth and developed abnormal feet, legs, and hocks.

Sufficient riboflavin is contained in a 10 per cent diet of good quality alfalfa hay or meal. Pigs get enough in good pasture. Cereal grains are low in riboflavin.

Another highlight on the nutrition program was the announcement that baby pigs will grow faster on an artificial milk than on sow's milk. The artificial milk is made of casein, sugar, mineral salts, and lard.

It is expensive and too complicated for the average farmer to make. It is being used experimentally to learn what nutrients speed up or slow down their growth. On the artificial milk, the University has grown pigs to a weight of 45 pounds at eight weeks. On sow's milk pigs do well to weigh 30 pounds at eight weeks.

NEWS and VIEWS

Mrs. Earl C. Smith Dies Suddenly at Home

Pictures show high esteem in which Mrs. Earl C. Smith was held by Farm Bureau people and staff of the IAA. Picture at left shows her receiving silver service from staff of IAA on retirement of her husband (right) in 1945 after he had served as president of IAA for 20 years. At right she is shown with a large bouquet of flowers presented to her by the membership at the 25th annual meeting of the Illinois Agricultural Association in 1940.

A FAMILIAR figure will be missing when Farm Bureau folks meet to chat during the annual meeting of the Illinois Agricultural Association this fall. The sudden death of Mrs. Mary Smith, wife of Earl C. Smith, has removed one of the most gracious and well-liked personages from Farm Bureau circles. The warmth of her kindly personality, of course, will long remain with those who enjoyed the privilege of meeting her during the 20 years that Mr. Smith served as president of the IAA and vice-president of the American Farm Bureau Federation.

Farm Bureau and Association officials were shocked and saddened when they received word of Mrs. Smith's death following a heart attack March 21 in her home at Detroit, Ill. Mr. and Mrs. Smith had finished breakfast and Mr. Smith was preparing to drive to Springfield for a meeting when she was stricken. Mrs. Smith was in good health and had planned to join her husband in Springfield the following day.

Mrs. Smith's death also was a shock and loss to her many friends in Detroit who had known her all her life. As Rev. Joe T. Maynard, pastor of the Detroit Christian Church, said at the services, "I speak the sentiments of this entire community when I say we all have lost one of our best friends." Mrs. Smith was a devoted member of the Detroit Christian Church which she and her husband joined during the second year of their marriage.

Mary Jeannette Smith was a daughter of Frank and Elizabeth Sitton Sanderson, pioneer settlers in Detroit township and was born on the Sanderson homestead in that township on Oct. 13, 1887. She attended Toll Gate and Detroit schools and on Aug. 29, 1909 was married to Earl C. Smith. They went in to housekeeping and have always lived in the home where she died. This house was originally built by Mr. Smith's grandfather, William Clemmons and is the home where his mother was born.

The Smiths had no children of their own, but in 1915 when Mrs. Smith's sister, Mrs. Lottie Fulmer, died, leaving four small children, they took into their home and lives the youngest daughter Eloise who was then two years old. They were devoted and helpful to the other children and their home was opened to them at all times. Mr. and Mrs. Smith had 41 nieces and nephews who were always welcome in their home and all of whom were very fond of their Aunt Mary.

Officials of the American Farm Bureau Federation, Illinois Agricultural Association and many past and present directors of the IAA board attended the services for Mrs. Smith. Mrs. Smith loved people and she had a wide acquaintance with Farm Bureau folks through her attandance at IAA and AFBF meetings. During the last 21 years she had only missed attending two of these conventions.

Former IAA Director Wills Land to 4-H

THE late Milton W. Warren of Mansfield in Piatt county, a member of the IAA board of directors from 1945 until he retired last November, has willed the income of 80 acres of his 240-acre farm to the University of Illinois for 4-H Club work.

The income will not be available immediately but is subject to the prior life estate of his widow, Mrs. Claradine Warren.

Mr. Warren was Piatt County Farm Bureau president for 12 years.

Iowa Farm Women Make Tour of Illinois

THIRTY-seven Iowa farm women made a tour of Illinois recently. They arrived in southern Illinois to tour the daffodil and fruit orchard area. From there they went to the University of Illinois experiment station at Dixon Springs.

The women also visited historical spots in Illinois including the Lincoln shrines at Springfield. From Springfield they planned to visit points of interest in Indiana, Kentucky, Missouri, and Tennessee.

Many Dressings Can Be Used With Fish

AN endless variety of dressings may be served with fish. The secret is to add just the right amount of seasoning to enhance the delicate fish flavor rather than to mask it.

Sour cream can be used as the basis for preparing a number of different fish sauces. Miss Frances Cook, foods specialist, University of Illinois College of Agriculture, recommends this easy-to-prepare one: To a half cup of whipped sour cream, add 2 tablespoons of vinegar and a dash of tabasco sauce and salt to taste. Then just before serving, blend in ½ cup of finely chopped or grated cucumber. Be sure the cucumber is thoroughly chilled, and blend it in carefully.

GAS REFRIGERATOR SHOULD BE APPROVED

IF you are considering a gas refrigerator, look for the AGA star of approval. Miss Gladys Ward, home management specialist, University of Illinois College of Agriculture, reminds us that this seal is important. It shows that the equipment meets the requirements set up by the American Gas Association and adopted by the American Standards Association.

Check the equipment, also, for the seal of the Underwriters' Laboratories. The letters UL stand for safety. They mean that the refrigerating system and connections have been thoroughly checked and approved as safe.

An average maple sugar tree yields about 15 gallons of sap; 45 to 50 gallons are needed to make one gallon of syrup.

Here's Chance to Go On European Trip

WANT to take a low-cost, six-week tour to England, Denmark, and Sweden, beginning about Aug. 20? D. E. Lindstrom, University of Illinois College of Agriculture, will take care of your request for such a tour that is being offered by World Studytours of Columbia University. Cost of the tour which includes travel, rooms, meals, guides, baggage, and side trips, is estimated at from $800 to $900 for each person from New York and return.

If you are interested, write to D. E. Lindstrom, 300a Mumford Hall, Urbana, Ill. He will give you further information, such as how to secure passports, visas, etc. The trip is being offered primarily for Illinois rural chorus, music, drama and folk arts participants and their friends. Reservations will be limited to 150 persons.

Plan of the tour is to stay at least one week in England, one week in Denmark, one week in Sweden, return across Norway to Bergen, by ferry to Newcastle, and sail from England. In each country, visits will be made to typical and model farms, attend concerts and festivals, meet people in farm organizations, talk with agricultural officials, and have one sightseeing tour in each major city.

DO NOT OVERLOAD YOUR WASHING MACHINE

YOUR washer is designed to wash a certain number of clothes. Miss Gladys Ward, home management specialist, University of Illinois College of Agriculture, advises that you put in only the load recommended by the manufacturer. Too many clothes may overload the motor, and most machines do a more efficient job of washing if the load is right in size.

Cream separators should be rinsed after each use and washed and sterilized at least once a day.

CARDIGAN SWEATER

If you don't have a flattering cardigan sweater in your wardrobe, here's just the thing for you for chilly evenings. Make it in pink or aquamarine. You'll be pleased with the results. For free instructions send a self-addressed stamped envelope to Women's Editor, IAA Record, 43 East Ohio Street, Chicago 11, Ill.

BUFFET LACE

Crochet offers you a wide choice of lace patterns suitable for household decoration. Square motifs framing clusters of four pineapples are joined to make this charming buffet set. For free instructions send a self-addressed stamped envelope to Women's Editor, IAA Record, 43 East Ohio Street, Chicago 11, Ill.

WHY IT COST "GRAMPS" MORE TO BE A GOOD PROVIDER

Back when Grampa was a young man operating the old home place he had the foresight to put some money into life insurance for later years. Sometimes it was pretty hard to meet the premiums as they came due because in many of the years farm prices were quite low. One time he even had to borrow money on his policy to take care of interest on the mortgage. What would he say today if he knew that I was paying premium on only the same amount of insurance that he carried? Perhaps he would think that I should have more insurance.

I want to be as good a provider as he was, so I had better see my Country Life Insurance counselor at the Farm Bureau office and get full information on how to do the job right.

...L IS TO GROW

AND 165,000 ILLINOIS FARMERS ARE *GROWING* INTO BETTER FARMERS EVERY YEAR BY *KNOWING*...

. . . the advantages of marketing cooperatively at higher prices.

. . . better insurance coverage at lower rates.

. . . his own ideas are being represented by a strong, united voice before Springfield and Washington legislative bodies.

. . . the increased net income made possible through cooperative purchasing of fuel, feeds, seed.

. . . the satisfaction of working shoulder to shoulder with 165,000 other progressive farmers to improve the standards of agriculture.

Illinois
AGRICULTURAL
ASSOCIATION
AND 99 COUNTY FARM BUREAUS

All these are familiar to the good farmer — the successful business man of agriculture — who is improving his and his family's way of life through the opportunities of Farm Bureau membership.

The BLUE SEAL EXTRA LOW PRESSURE TIRE Rides Easier

NEW TIRE "SOAKS UP" BUMPS - GIVES SMOOTHER RIDE

EXTRA RIDING EASE—Lower pressure and softer construction envelope bumps—cushions road shocks.

EXTRA DRIVING EASE—Lessens vibrations and "wandering". Less fatigue and steering strain.

EXTRA SAFETY—Shock absorbing ability reduces blowout danger. Fewer cuts, breaks and bruises.

EXTRA MILEAGE—New design and construction generates less heat. Cooler running tires last longer.

BLUE SEAL EXTRA LOW PRESSURE TIRES are designed to fit any car using 15" or 16" rims. Changeover is swift, simple and inexpensive. They are designed to meet the challenge of all road conditions—the smoothness of the highway—the ripping, abrasive action of gravel roads—slippery, rain-swept country roads, and the extra needs of all around farm use.

EVERY WHEEL Should Wear BLUE SEAL

The family car will look better, ride better and drive better with BLUE SEAL MASTER PASSENGER TIRES **(A).** Non-skid protection, silent running, shock resistant and long wearing.

Hauling to market or just around the farm, truck tires costs go down with BLUE SEAL MASTER TRUCK RIB TIRES **(B).** Biting, gripping, tread design for traction, strong, tough carcass of rayon fabric to withstand load strain, road abuse and heat.

Tough jobs made easy on BLUE SEAL TRACTOR and IMPLEMENT TIRES **(C).** Positive steering ease, free rolling and self-cleaning. Maximum service in the field or on the road.

The fee includes payment of fifty cents for subscription to the Illinois Agricultural Association RECORD. Postmaster: Send notices on Form 3578. Undeliverable copies returned under Form 3579 to editorial offices, 43 E. Ohio St., Chicago 11, Ill.

THE STATE FARM BUREAU PUBLICATION

BLUE HAZE

THE beautiful greens of early spring were a pleasant sight to view through the Pullman window as our train hugged the banks of the Potomac and pushed up through the wooded mountains to the historic Cumberland Gap. Sunset came and with it the blue haze for which these mountains are famous. Within a few minutes the details of distant slopes that were so clearly visible in the bright sunlight faded away under this mysterious blanket.

MY thoughts turned to the day just ended — a Congressional committee hearing on the farm program. There had been plenty of "blue haze" spread in that committee room during the hearing with the intention of clouding the real issues at stake. The spectators and newspaper reporters had witnessed a rare spectacle that day. Representatives of the farmers' own organization had appeared to resist the insistent efforts of some Congressmen and government officials to force farmers to accept federal subsidy payments and excessive price guarantees. It required clear thinking to pierce the "blue haze" and point out that the real issue was whether or not we were ready to turn completely to a government administered agriculture.

C. B. Shuman

FARMERS are in better position than any other group in America to think clearly about national problems. It is true that agriculture has from time to time turned to government for some degree of assistance in educational and self help programs. However, even the farm price support programs we have had so far have been largely devices to partly match the government protection and subsidy aids so commonly granted to industry and labor. Self improvement, not government gifts, has been the foundation of our progress.

THE Land Grant College Act, which was signed into law by Abraham Lincoln, has been of untold value in helping to open up vast new areas of new agricultural knowledge through scientific research. Yet all of this wonderful knowledge was very difficult to put into practice on the farm until the coming of the Extension Service in agriculture. We have a wonderful team in Illinois — the County Farm Bureaus cooperating with the College of Agriculture Extension Service. This cooperative arrangement is an example of a proper, healthy relationship between private citizens and their government in which the farmers themselves pay a large share of the total cost of the program.

THE Extension Service program and particularly its close relationship with the local farm organizations is now under attack. Some of the same people who are trying to lead agriculture toward socialism are most vicious in their efforts to cripple the effectiveness of the Extension Service. These people are trying to set up a farm program which will encourage farmers to lean more and more on government subsidy payments rather than on their own efficiency and ability to produce.

Charles B. Shuman

President, Illinois Agricultural Association

You Can Control Local Taxes!

If You Want To Keep Your Taxes In Line You Will Have To Watch Your Local Budgets And Levies. It's Too Late When You Get Your Tax Bill.

By CRESTON FOSTER
Editor, IAA Record

ON AN ordinary grain and livestock farm of 205 acres in central Illinois a farmer this month paid a 1948 land property tax of $559.08. On this same farm he paid a 1945 property tax bill of $303.44. The 1947 tax bill was $459.34.

That's the tax picture for Illinois farmers today. Taxes are steadily going up. Where will they stop? It takes more bushels of corn to pay the tax bill today than it did even a year or so ago. When the farmer paid his 1947 tax bill in June, 1948, he was getting $2.18 for his corn. Today his tax bill is higher and corn is bringing him $1.22 a bushel.

It's something to think about, isn't it? With taxes and other production costs moving up and farm prices coming down, the farmer is caught in an ever tightening squeeze.

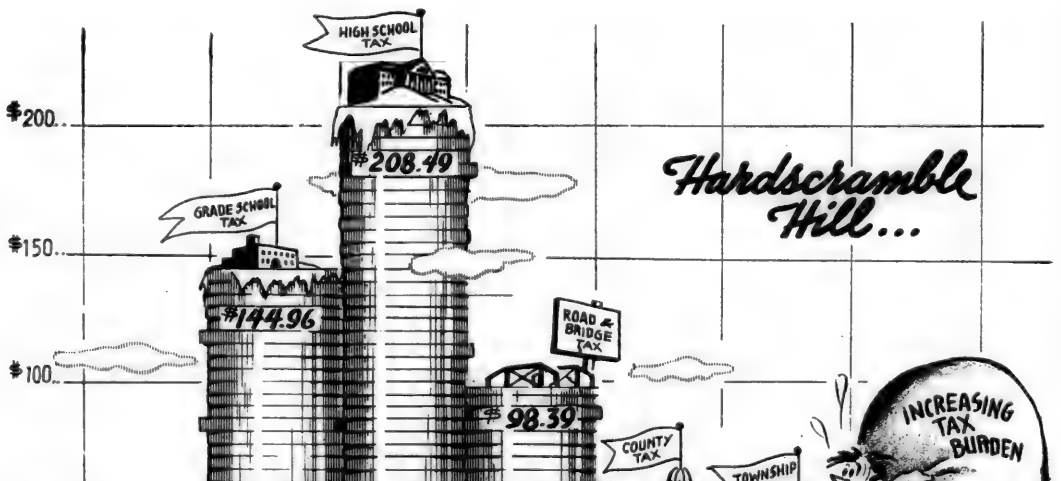
What can be done about it? Well, this $559.08 tax bill we're talking about is a local one—the tax is levied and spent in his community. The local taxpayer can say more about these taxes than his federal income tax for example.

Let's take a look on how this $559.08 is spent. The assessed valuation of the farm is $28,560.

		Rate on $100 Valuation
County tax	$39.98	.14
Township tax	35.13	.123
Road & Bridge tax	98.39	.3445
Road Bond tax	7.43	.026
Cemetery tax	24.70	.0865
High School tax	208.49	.73
Grade School tax	144.96	.5075
Total	$559.08	$1.9575

It's plain to see that roads and schools are the big items in this tax bill. These two items account for 83 per cent of all the land property taxes paid, and these expenditures are made within a few miles of his home. Let's look at the school situation for this particular farmer. Schools cost him $353.45 in his 1948 tax bill.

In his high school district there are 75 students with eight teachers. In a neighboring high school district the enrollment is 160 with nine teachers. His district has a valuation of $6,000,000 and the neighboring district has a valuation of



The BIG SQUEEZE...

$15,000,000. If the two schools were combined, there would be a valuation of $21,000,000 with an enrollment of 235 students and 17 teachers.

If a unit district were set up, the extra high school building could be used as a grade school. In this farmer's particular grade school district the enrollment is 135 pupils with 8 teachers, and the adjoining grade school district has 50 pupils with only two teachers. By bringing the two high schools, two grade schools and other nearby one-room schools into one unit district and using one of the high schools as a grade school building, economical and efficient use could be made of valuation, buildings, equipment and teachers.

The Illinois Agricultural Association supported passage of legislation in the 1947 session of the state legislature to aid in the formation of the 12 grade unit system, so that farmers could reorganize districts where needed and get more educational service for their tax dollar.

The next big expense item for this farmer with the $559.08 tax bill is roads. In his township he has 82.5 miles of roads to keep up. Some $106.82 of his taxes were spent on road and bridges and road bonds in his township. The mileage of roads in his township is well above average so that better use of machinery is made. Most of the farm homes are located on good gravel roads.

There's no question but good roads cost money, but the Illinois Agricultural Association has been trying to get the state to recognize that it must help to maintain rural roads either by appropriations or sharing the state gas tax.

The IAA secured for the farmers $30,000,000 in appropriations from the 1945 and 1947 sessions of the state legislature for a four-year period.

In that period, July 1, 1945, to June 30, 1949, this farmer's township received, or was entitled to receive, $31,345.56 from state appropriations. The amount of money each township received from the $30,000,000 in state funds was on the basis of the percentage of total miles of road in each township to the miles of township highways in the state.

The $31,000 this township received can help to relieve the local tax burden, provide more and better roads, or it can be wasted.

The farmer in his township can control his tax bill by controlling the levy. Of course he will have to attend his annual town meeting and also participate in the business affairs of his school board, county board, etc. to do this. In the last couple of years when prices were good, he might not have worried too much about the size of his local tax bill. But it's going to take more corn to pay the bill now.

A lot of folks blame the "Butler bills" for all their tax troubles. The IAA fought the Butler bills with all the force they could muster, but they passed, and now the job is to see what we can do about them. The Butler bills didn't raise taxes, but this legislation did increase the taxing power of almost all governing bodies. Also, they raised the bonding limits so that higher levies could be voted, if the local folks permitted it. Valuations were brought to a full cash value by use of a multiplier.

In the farm under discussion, the valuation in 1945 was $7,410. The rate applied to that valuation was $4.24 per $100. The 1948 valuation was $28.560. The rate applied was $1.94 per $100.

The matter of spending tax money is just like any other kind of spending. Either you get your money's worth, or you don't. The time to go to work on your tax bill is not when you receive it, but when your local boards are making up their budgets and setting the levies.

County Wool Pools Boost Country Price On 1949 Clip

PROOF that the Illinois Wool Marketing Association is helping the current wool price is found in a report received from one central Illinois county. In this particular county, the market price being offered by independent buyers was 38 cents. Then a farmer delivered 440 pounds of wool to his County Farm Bureau wool pool and got 44 cents a pound. As the result of this sale, the independent buyers over the county raised their offer six cents per pound.

Farm Bureau members should need no further evidence of the worth of their cooperative wool marketing program. You can deliver your wool to your county wool pool and receive immediate payment. Another way by which you can sell your wool cooperatively is by the consignment method. In this case you deliver your wool to the county wool pool, where it is weighed and placed in bags furnished free, and shipped to the Association's warehouse at Paris where it is graded by your own cooperative. You will receive a receipt for your wool and an advance payment will be received from the Association as soon as it is graded. Final payment will be made as soon as the wool is sold by the National Wool Marketing Association in Boston.

Harold Allen, Champaign county's veteran sheep shearer, clips the wool from one of Arthur Rittenhouse's Shropshire ewes. Allen has sheared sheep for four generations of Rittenhouses. Only years he missed were the three seasons he spent in the army in World War II. Maybe this picture will remind some folks to get their wool clipped to ship to their county wool pools. It pays to market your wool cooperatively, you know.

This is what's left of the Montgomery Service Company warehouse and feed mill at Butler after a fire thought to have been caused by spontaneous combustion. An adjoining elevator (right, background) was saved. Sensible insurance coverage prevented a disastrous financial loss.

Insurance Survey Saves Service Company $18,500

EARLY one morning about two months ago flames burst from the Montgomery County Service Company feed mill and warehouse at Butler. By dawn the building, equipment, and stock valued at $59,000 were a total loss.

Fortunately for the Montgomery Service Company a chain of events had been forged several months before the fire broke out...a chain of events that assured the company recovery of $52,000 of the loss in insurance.

Credit for softening the financial blow which would have resulted from the fire losses goes to the Illinois Agricultural Association's insurance service for cooperatives department under the direction of Albert R. Grauer.

The IAA set up the department Jan. 1, 1948 to advise Illinois farm cooperatives on their insurance needs.

Last September Grauer made a survey of the insurance carried on the feed mill and warehouse at Butler. Based on present-day values, he found that coverage was inadequate. As a result, the insurance on building, stock, and equipment was raised from $33,500 to $52,000.

Credit also goes to Manager Charles Votsmier for seeing the need for more insurance based on Grauer's survey and to the service company board for having the foresight to follow the manager's recommendation that the insurance be increased.

In a recent letter to the IAA's insurance service for cooperatives department Votsmier says: "The type of service you are rendering member companies has certainly been of great value to our company, and I want to express the appreciation of our board of directors and myself for the time and effort you spent in our behalf. I am sure we all have a greater appreciation of the insurance service being rendered by your department."

Typical of the young farmers easily sold on the advantages of belonging to Farm Bureau is Warren Gumbrell, 20, (second from right) of West Salem, Wabash county, shown with his 17-year-old wife chatting with O. D. Brissenden, IAA director of organization. At right is Wabash Organization Director J. E. Moyer. Married a year Gumbrell told Brissenden: "I've known all along that the smart farmers belong to Farm Bureau."

Wabash is Only Southern County With Farm Bureau Member for Every Farm

THE FIRST county in the southern Illinois region to have one farmer member for every farm in the county —that's the proud boast of the Wabash County Farm Bureau.

A year ago County Organization Director J. E. Moyer and his organization workers set their goal for 1949. It was to be at least 100 per cent of all the farms in the county.

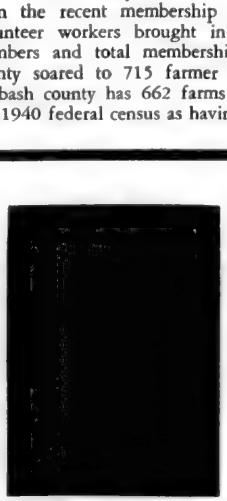
In the recent membership drive 32 volunteer workers brought in 52 new members and total membership in the county soared to 715 farmer members. Wabash county has 662 farms listed by the 1940 federal census as having income of at least $400 a year. Farmer membership in Farm Bureau therefore is 108 per cent higher than the number of farms in the county. In addition Wabash has 78 non-voting associate members.

Speaking at Wabash's new member meeting, O. D. Brissenden, IAA director of organization, praised the excellent record of the county saying that only through fine organization work like theirs could Farm Bureau speak in Springfield and Washington for all the farmers.

Brissenden told the new members to go to the Farm Bureau office at the first opportunity and tell the farm adviser and officers who you are."

As a member of Farm Bureau, he continued, ask yourself these three questions: (1) Is my community a better place because of Farm Bureau? (2) Has it helped develop leadership in the county? (3) Has it increased the farmer's bargaining power? The answers must be "yes".

"My last plea to you," Brissenden said, "is to use Farm Bureau in every way you can. Get everything out of it you can. It is your privilege."



CENTER of Indian life in pre-historic times when it was called "The Habitation of the Great Spirit," the site of a great gaping hole in the bluff on the Ohio River in Hardin county is the 24th in our series of historic and picturesque Illinois picture covers.

The cave gives Cave-in-Rock State Park its name and principal feature. During the days when pioneers began filtering into southern Illinois, the cave became a rendezvous for river pirates and later for robbers and counterfeiters. The mouth of the cave is 55 feet wide but averages 40 feet inside. It extends 108 feet into the river bluff.

GOOD NEWS
Travels FAR and FAST

MONROE COUNTY *is*
50 % Producers' Planted

Monroe County is a long way from Piper City, home of Producers' Hybrids. But, good news *does* travel far and fast. Last year fifty per cent of the corn planted in Monroe County was Producers' Hybrids. Exceptional? Not at all! In many Illinois Counties, Producers' Hybrids are preferred hybrids. That's because it is YIELD that counts, whether you live in Monroe County, or Logan County or LaSalle County. And where YIELD counts, farmers count on Producers' Hybrids . . . . the YIELD-PROVED hybrids.

PRODUCERS' CROP IMPROVEMENT ASSOCIATION
PIPER CITY, ILLINOIS

SEED CO-OP ELECTS

Producers Seed Company Reorganizes With Nine-Man Board To Represent And Serve Entire State In An Expanded Program

REORGANIZATION of the Producers' Crop Improvement Association as a full-fledged statewide affiliated company of the Illinois Agricultural Association has been completed with election of directors, amendment of articles and change of name. The new name of the corn and seed cooperative will be Producers' Seed Company.

E. B. Vander Meulen

These matters were approved at a special stockholders meeting April 23 at Piper City. Main office and plant of the Producers' Seed Company is located in this community in Ford county.

Directors elected for the eight districts of the state to the Producers' Seed Company board were: district 1, Frank R. Loucks, Lockport, Will county; dist. 2, Elmer L. Yeoman, Dakota, Stephenson; dist. 3, Howard Stuckey, Piper City, Ford; dist. 4, Orville Lutes, Princeton, Bureau; dist. 5, John T. Evans, Hoopeston, Vermilion; dist. 6, Ryal Keithley, Macomb, McDonough; dist. 7, Clarence McCauley, Mt. Vernon, Jefferson; and dist. 8, Justin Ebert, Valmeyer, Monroe. Director-at-large from the IAA board is Frank L. Simpson, Farmer City, DeWitt.

Officers of Producers' Seed are Stuckey, president; Loucks, vice-president; and Simpson, secretary-treasurer.

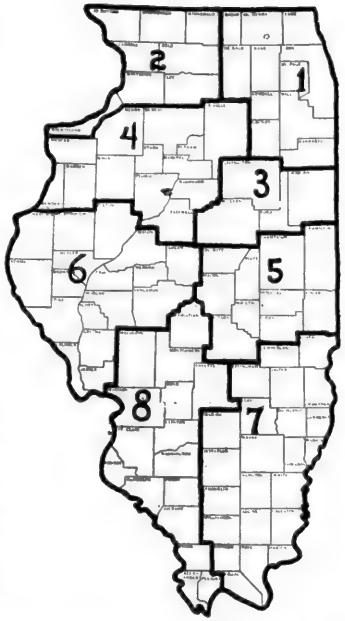
S. F. Russell, representing the IAA at the reorganization meeting, paid special tribute to the incumbent directors of the old organization who stepped aside and made is possible to reorganize the representation on a statewide basis into eight districts. Under the old setup, a number of the directors were from the area of Ford and adjoining counties. This was the area for which the cooperative was first set up to serve back in 1937.

In addition to hybrid seed corn, Producers' Seed will be the IAA affiliate for the acquisition, processing and cooperative distribution of field seeds. First step in the field seed program will be a survey of county Farm Bureaus and subsidiaries now handling field seeds to work out an efficient program. Main objective is to provide Illinois Farm Bureau members with high quality seeds. It has not been determined where headquarters for the field seed program will be located.

Producers' Seed Company will be governed by the same rigid control of quality regulations under a quality control committee of the IAA as is in effect for other affiliates of the organization.

On May 1, Evart Vander Meulen of Waterloo, Ill., Monroe county, joined the Producers' staff to head up the handling of the field seed program. Prior to this date he was employed as a buyer for a large seed company and is thoroughly familiar with the small field seed business.

Vander Meulen, a native of Michigan has a fine record of research work on the staff of Michigan State College from which he was graduated in 1939 and where he received his master's degree in 1943. He was in charge of agronomy research at the College's Upper Peninsula Experiment Station at Chatham for three years and introduced a new oat variety and a spring wheat variety. He grew the first five acres of ladino clover in Michigan and did considerable work with pasture improvement and hay management. In 1944, Vander Meulen was employed by the Corneli Seed Company, St. Louis. He had charge of establishing corn and vegetable growing stations in Illinois, Missouri and Oklahoma and later was transferred to the field seed department in charge of buying crop seeds at the source of production. He also had charge of the field seed research department.



Board of directors of the Producers' Seed Company, new IAA affiliate, is made up of one from each of the eight districts shown on this map, and one at large from the board of the IAA.

Vander Meulen developed an appreciation for cooperatives and Farm Bureau from his father who is a charter member of the Michigan Farm Bureau and has served for 35 years as president of a county grain seed cooperative elevator. While attending Michigan State Vander Meulen helped organize the College Farm Bureau. He worked his way through college through employment in the agronomy department where he had charge of laboratory work, and at the college farm during summer months.

New directors and officers of the Producers' Seed Company (front row), left to right: Vice-President Frank R. Loucks, Will county; Orville K. Lutes, Bureau; President Howard Stuckey, Ford; Secretary - Treasurer Frank L. Simpson, DeWitt, and Justin M. Ebert, Monroe. Back row: Ryal E. Keithley, McDonough; Elmer L. Yeoman, Stephenson; John T. Evans, Vermilion, and Clarence McCauley, Jefferson.

FARM BUREAU Sticks To 1948 FARM ACT

AFBF President Kline Testifies Before Farm Program Committee in Washington In Support of 1948 Agricultural Act

President Allan B. Kline reads the American Farm Bureau Federation statement in support of the Agricultural Act of 1948 in the House Agriculture Committee's hearing room. Just behind Kline are four AFBF executive committee members: (left to right) George Wilson, California; Walter Randolph, Alabama; Hassil Schenck, Indiana; and Wilson Heaps, Maryland. Man at right at table is shorthand clerk.

THE Farm Bureau favors the agricultural Act of 1948 with its flexible price supports and modernized parity formula over the new farm proposal of Secretary of Agriculture Charles F. Brannan. Allan B. Kline, president of the American Farm Bureau Federation, made this point clear in his appearance before the national farm program subcommittee of the House Agricultural Committee in Washington recently.

Kline said that Secretary Brannan's proposal throws away the parity price approach to a fair exchange value for farm commodities.

Instead the secretary's proposal means government-administered farm prices and farm income, with government control of all land and livestock production and a ceiling on opportunity in agriculture, the AFBF president told the subcommittee.

The Brannan program, he added, introduces a cheap food philosophy and seeks to establish the principle that taxpayers should pay a considerable portion of the grocery bill of consumers.

Kline also said the Farm Bureau believed that the Agricultural Act of 1948 could be improved by certain amendments. Included in the amendments recommended by the Farm Bureau were:

Provide that as a general policy, subject to certain exceptions already in the law, Commodity Credit Corporation shall not sell any farm commodity at less than a price midway between the parity price and the support in effect at the time of the sale.

Require the secretary of agriculture to establish acreage allotments on all basic crops except tobacco before or at the time he announces marketing quotas. That if farmers vote down marketing quotas, cooperators in the acreage allotment program would still be permitted to get loans at the scheduled rate. No loans, however, would be made available to non-cooperators.

Provide that as far as is practical price supports be made available to the producers of any nonbasic agricultural commodity whenever acreage allotments, marketing quotas, or marketing agreements are in effect for such commodity.

Amend the parity formula provisions of the 1948 Agricultural Act to require that subsidy payments made to farmers to hold down prices to consumers during the war be included as part of the prices received by farmers in computing parity prices under the 10-year moving average formula.

Life Manager Visits Costa Rica

A. E. RICHARDSON, manager of Country Life Insurance Company, had a look at the agriculture of Central America on a recent trip with his wife to Costa Rica. Through arrangements made by Ed Tanner, agricultural attache of the American embassy at San Jose, and Howard Gabbert, of the Food Production division of the Institute of Inter-American Affairs, he attended a soil conservation meeting at Orena in Costa Rica.

A. E. Richardson (right), manager of Country Life Insurance Company, on a recent trip to Central America enjoyed the privilege of riding on the special car of Provisional President Figueres of Costa Rica. Figueres is pictured at the left, and his special car operated on rails by automotive power is in background.

The provisional president of Costa Rica spoke at this meeting and invited the Country Life manager to ride back to San Jose with him.

Richardson reports that there is considerable interest in soil conservation and scientific agricultural development in this territory. The United States is cooperating with the Extension Department under the Institute of Inter-American Affairs. There are a number of county agents located throughout the territory. Mr. Tanner told Mr. Richardson that he knew many of the Farm Bureau leaders of this country. Principal crops of the area are coffee, bananas, sugar, some grains and many vegetables.

Mr. and Mrs. Richardson's daughter, Martha, is a secretary in the American embassy at San Jose.

S. F. Russell, representing the IAA at the reorganization meeting, paid special tribute to the incumbent directors of the old organization who stepped aside and made is possible to reorganize the representation on a statewide basis into eight districts. Under the old setup, a number of the directors were from the area of Ford and adjoining counties. This was the area for which the cooperative was first set up to serve back in 1937.

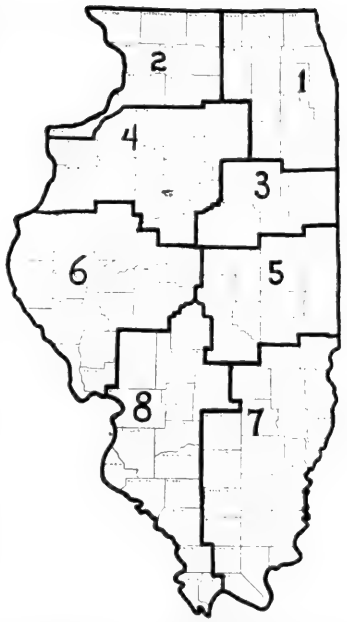
In addition to hybrid seed corn, Producers' Seed will be the IAA affiliate for the acquisition, processing and cooperative distribution of field seeds. First step in the field seed program will be a survey of county Farm Bureaus and subsidiaries now handling field seeds to work out an efficient program. Main objective is to provide Illinois Farm Bureau members with high quality seeds. It has not been determined where headquarters for the field seed program will be located.

Producers' Seed Company will be governed by the same rigid control of quality regulations under a quality control committee of the IAA as is in effect for other affiliates of the organization.

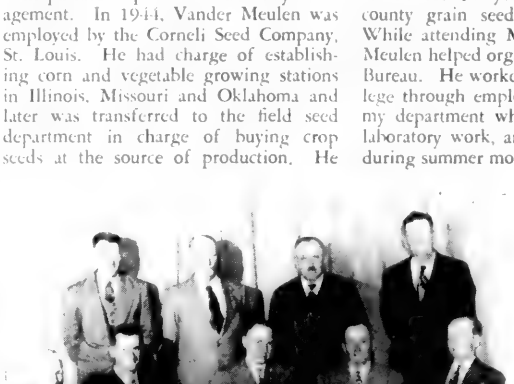
On May 1, Evart Vander Meulen of Waterloo, Ill., Monroe county, joined the Producers' staff to head up the handling of the field seed program. Prior to this date he was employed as a buyer for a large seed company and is thoroughly familiar with the small field seed business.

Vander Meulen, a native of Michigan has a fine record of research work on the staff of Michigan State College from which he was graduated in 1939 and where he received his master's degree in 1943. He was in charge of agronomy research at the College's Upper Peninsula Experiment Station at Chatham for three years and introduced a new oat variety and a spring wheat variety. He grew the first five acres of ladino clover in Michigan and did considerable work with pasture improvement and hay management. In 1944, Vander Meulen was employed by the Corneli Seed Company, St. Louis. He had charge of establishing corn and vegetable growing stations in Illinois, Missouri and Oklahoma and later was transferred to the field seed department in charge of buying crop seeds at the source of production. He also had charge of the field seed research department.

Vander Meulen developed an appreciation for cooperatives and Farm Bureau from his father who is a charter member of the Michigan Farm Bureau and has served for 35 years as president of a county grain seed cooperative elevator. While attending Michigan State Vander Meulen helped organize the College Farm Bureau. He worked his way through college through employment in the agronomy department where he had charge of laboratory work, and at the college farm during summer months.



Board of directors of the Producers' Seed Company, new IAA affiliate, is made up of one from each of the eight districts shown on this map, and one at large from the board of the IAA.



New directors and officers of the Producers' Seed Company (front row), left to right: Vice-President Frank R. Loucks, Will county; Orville K. Lutes, Bureau; President Howard Stuckey, Ford; Secretary - Treasurer Frank L. Simpson, DeWitt, and Justin M. Ebert, Monroe. Back row: Ryal E. Keithley, McDonough; Elmer L. Yeoman, Stephenson; John T. Evans, Vermilion, and Clarence McCauley, Jefferson.

FARM BUREAU Sticks To 1948 FARM ACT

AFBF President Kline Testifies Before Farm Program Committee in Washington In Support of 1948 Agricultural Act

President Allan B. Kline reads the American Farm Bureau Federation statement in support of the Agricultural Act of 1948 in the House Agriculture Committee's hearing room. Just behind Kline are four AFBF executive committee members: (left to right) George Wilson, California; Walter Randolph, Alabama; Hassil Schenck, Indiana; and Wilson Heaps, Maryland. Man at right at table is shorthand clerk.

THE Farm Bureau favors the agricultural Act of 1948 with its flexible price supports and modernized parity formula over the new farm proposal of Secretary of Agriculture Charles F. Brannan. Allan B. Kline, president of the American Farm Bureau Federation, made this point clear in his appearance before the national farm program subcommittee of the House Agricultural Committee in Washington recently.

Kline said that Secretary Brannan's proposal throws away the parity price approach to a fair exchange value for farm commodities.

Instead the secretary's proposal means government-administered farm prices and farm income, with government control of all land and livestock production and a ceiling on opportunity in agriculture, the AFBF president told the subcommittee.

The Brannan program, he added, introduces a cheap food philosophy and seeks to establish the principle that taxpayers should pay a considerable portion of the grocery bill of consumers.

Kline also said the Farm Bureau believed that the Agricultural Act of 1948 could be improved by certain amendments. Included in the amendments recommended by the Farm Bureau were:

Provide that as a general policy, subject to certain exceptions already in the law, Commodity Credit Corporation shall not sell any farm commodity at less than a price midway between the parity price and the support in effect at the time of the sale.

Require the secretary of agriculture to establish acreage allotments on all basic crops except tobacco before or at the time he announces marketing quotas. That if farmers vote down marketing quotas, cooperators in the acreage allotment program would still be permitted to get loans at the scheduled rate. No loans, however, would be made available to non-cooperators.

Provide that as far as is practical price supports be made available to the producers of any nonbasic agricultural commodity whenever acreage allotments, marketing quotas, or marketing agreements are in effect for such commodity.

Amend the parity formula provisions of the 1948 Agricultural Act to require that subsidy payments made to farmers to hold down prices to consumers during the war be included as part of the prices received by farmers in computing parity prices under the 10-year moving average formula.

Life Manager Visits Costa Rica

A. E. RICHARDSON, manager of Country Life Insurance Company, had a look at the agriculture of Central America on a recent trip with his wife to Costa Rica. Through arrangements made by Ed Tanner, agricultural attache of the American embassy at San Jose, and Howard Gabbert, of the Food Production division of the Institute of Inter-American Affairs, he attended a soil conservation meeting at Orena in Costa Rica.

The provisional president of Costa Rica spoke at this meeting and invited the Country Life manager to ride back to San Jose with him.

Richardson reports that there is considerable interest in soil conservation and scientific agricultural development in this territory. The United States is cooperating with the Extension Department under the Institute of Inter-American Affairs. There are a number of county agents located throughout the territory. Mr. Tanner told Mr. Richardson that he knew many of the Farm Bureau leaders of this country. Principal crops of the area are coffee, bananas, sugar, some grains and many vegetables.

Mr. and Mrs. Richardson's daughter, Martha, is a secretary in the American embassy at San Jose.

A. E. Richardson (right), manager of Country Life Insurance Company, on a recent trip to Central America enjoyed the privilege of riding on the special car of Provisional President Figueres of Costa Rica. Figueres is pictured at the left, and his special car operated on rails by automotive power is in background.

Grain Terminals Stock Campaign is SUCCESS

Shown in Tuscola discussing stock-selling campaign to raise $2,750,000 for a grain terminals program affiliated with the IAA are, left to right: Floyd Rahn, Douglas County Farm Bureau president; George E. Metzger, IAA, director of the campaign; E. S. Wetzel, Douglas F.B. treasurer; D. H. Cuppy, Douglas County Service Company board president; and Charles S. Mayfield, IAA, who assisted with the stock campaign.

AS THE IAA Record went to press $2,060,200 of stock had been sold in the Illinois Grain Terminals Company and it was apparent that the goal of $2,750,000 would be achieved early this month. In the years to come, Illinois Farm Bureau members will look back on this campaign as a milestone in the establishment of a complete grain marketing program.

Success of the stock campaign, assured farmers that they were finally launched in the grain merchandising business with the ownership and operation of a 2½ million bushel grain terminal elevator in Chicago. This marks the first time that an Illinois grain cooperative has had such a marketing outlet of its own.

Operation of a terminal elevator gives the Illinois farmer a new market for his grain. It enables Illinois Grain Terminals to clean, dry and blend grain. Drying facilities are becoming more and more important to the grain producer.

The May 13 report showed that 31 County Farm Bureaus had passed their quota and had oversubscribed a total of $216,500. This more than took care of the $162,000 quota assigned to Champaign and Christian County Farm Bureaus who elected not to endorse the stock selling project in their respective counties.

Ninety-seven of the 99 county Farm Bureaus in the state endorsed the project and on May 13, a total of 69 County Farm Bureaus had bought class C stock, and 84 had sent in subscriptions for class A stock.

George E. Metzger, field secretary for the Illinois Agricultural Association, reported that "the response and enthusiasm for the program throughout the state has been wonderful." Good weather for field work has been the only factor that has slowed the solicitation.

A review of the project throughout the counties shows that the job was done by the local, hard-working Farm Bureau members who went out and told the story of grain marketing to their neighbors. It brought a thrill to the field men and state leaders to see the old-fashioned Farm Bureau spirit at the kickoff meetings. It was the same spirit that built the Illinois Farm Bureau into its present position of leadership in America today. It's the kind of spirit that will tackle any job and lick it. That's why Farm Bureau gets things done.

The 31 County Farm Bureaus which had topped their quotas on May 13 are as follows: Bureau, Clark, Clay, Clinton, Cook, Crawford, Cumberland, DeKalb, Edwards, Fayette, Franklin, Grundy, Jackson, Jersey, Jo Daviess, Kendall, Knox, Lake, Madison, McDonough, Mercer, Montgomery, Morgan, Perry, St. Clair, Stephenson, Tazewell, Wabash, Will, and Williamson.

By the time this issue of the RECORD reaches you, there probably will be many more over their quota.

"WE WILL not oppose removal of the taxes on oleomargarine, provided some other means of preserving the identification between butter and oleomargarine is developed."

This was the position of the Illinois Agricultural Association a year ago during hearings in Washington on a bill to repeal federal taxes on yellow margarine.

The IAA took a similar position at Springfield last month during hearings on a bill to repeal the Illinois law which prohibits the sale of yellow margarine.

Speaking for the IAA, Judson P. Mason, director of dairy marketing, said: "Positive identification between the products affords the best solution for all interested parties, that each product sell on its own merit. The color line is the most practical means of providing positive identification of butter and oleomargarine. For that reason, we of course, oppose legislation which would remove the present color distinction."

During the hearings some soybean growers and processors asked for repeal of the law against yellow margarine. Mason pointed out to them that one of the largest groups of consumers of soybean meal are dairy farmers. With lower demand for butterfat, he said, there will be a lower demand for soybean meal. He said, too, that when cocoanut oils become more plentiful soybean oil will be pushed aside in favor of these cheaper oils.

Another speaker was Forrest C. Fairchild, manager of Prairie Farms Creameries. Fairchild pointed out that the butter industry claims the yellow color as its own. There is no reason, he said, why the oleomargarine industry cannot develop a color of its own. Peanut butter and cottage cheese have both developed their own peculiar coloring and have been accepted on their own merits by the public.

O. H. Ryan, president of the Illinois Milk Producers' Association, emphasized the importance of promoting the dairy industry because of its value in soil conservation. Depletion of dairy herds, he said, would mean less pasturing, more cropping, and more soil erosion.

President W. J. Swayer of the Pure Milk Association contested the argument that low income groups would stand to gain most from unrestricted sales of margarine. He said that if butter sales dropped, farmers would have to curtail their dairy herds. The resulting com-

New Livestock Unit Elects

Illinois Livestock Producers Association Elects Officers, Adopts By-Laws At Organization Meeting

LATEST step in the plan to develop an improved statewide cooperative livestock marketing program for Illinois farmers has been the election of officers and adoption of by-laws for the new Illinois Livestock Producers' Association.

Scott Irwin

This is the new organization that has been set up to (1) strengthen present livestock marketing cooperatives; (2) establish additional markets or agencies where needed or where desirable and (3) organize selling on an efficient basis.

Just so you won't get confused, this new Producers' Association is a different organization than the Illinois Livestock Marketing Association which has its headquarters at Decatur. The latter organization is one of the agencies cooperating with the Producers' Association in improving a statewide marketing program.

Other agencies cooperating and their representatives on the Producers' Association board are the Chicago Producers' Commission Association, Carl M. Johnson, DeKalb; Peoria Producers' Commission Association, M. F. Holmes, Peoria; Springfield Producers' Livestock Commission Company, Scott Irwin, Sangamon; Illinois Livestock Marketing Association, Ray Ihrig, Adams; Bushnell Producers' Commission Company, Henry L. Combs, McDonough. Otto Steffey, Henderson county, is the IAA representative on the Producers' Association board. Irwin was named since the first meeting and was not in the picture in the March IAA RECORD.

Eight other board members are elected from the eight districts in which the state is divided for representation purposes. District 7 is without a representative as the result of the recent death of J. P. Redman, Alexander county. Other district representatives are: dis. 1, William Temple, LaSalle; dis. 2, Frank P. Norrish, Whiteside; dis. 3, Robert Armstrong, Warren; dis. 4, L. E. Mathers, Mason; dis. 5, Lester E. Martin, Morgan; dis. 6, Clark E. Wise, Champaign, and dis. 8, Marion A. Fry, Shelby.

Elected officers at the organization meeting were: Johnson, president; Armstrong, vice-president; Ray Ihrig, secretary, and Otto Steffey, treasurer. W. J. Neverman was named assistant treasurer and C. C. Chapelle, comptroller. Mathers was named a member of the executive committee.

The executive committee was scheduled to meet May 18 to work on three jobs: to work out contract forms between the Producers' Association and the five cooperating marketing agencies; to figure out car fees and to seek a manager. The entire board was scheduled to meet May 27.

One of the first projects expected to be started by the Producers' Association is a study of hog marketing in Illinois. This study will be used as a basis for developing efficient and economical hog marketing on a statewide setup that will be of the greatest benefit to the livestock producer.

For the first three months of 1949, there were 9,693 carloads of livestock marketed cooperatively from Illinois counties, compared with 9,531 for the same period in 1948.

Officers and members of the executive committee of the Illinois Livestock Producers Association following a recent organization meeting are: front row, left to right: Treasurer Otto Steffey, Henderson county; Secretary Ray Ihrig, Adams; President Carl M. Johnson, DeKalb; Vice-President Robert Armstrong, Warren, and L. E. Mathers, Mason.

This is Illinois Farm Supply's new fertilizer plant at East St. Louis, Ill., which recently started the production of plant food for distribution through your local service company. Illinois Farm Supply is an affiliate of the Illinois Agricultural Association.

Illinois Farm Supply Company's Fertilizer Plant Is Operating

ILLINOIS Farm Supply Company's new fertilizer plant at East St. Louis, Ill., is now in operation and shipping plant food to member company distributors, according to J. J. Lanter, director of procurement.

The plant commenced full-scale operations several days ago in the production of superphosphate and the recommended grades of higher analysis mixed fertilizers. The new plant is under the management of Kenneth Wohlford. The first truckload of 18 tons of 3-12-12 Grow Crop fertilizer was shipped to the Montgomery Service Company at Hillsboro.

Production for several weeks, said Lanter, was to be confined to this one grade. By this a larger volume was made available to Illinois farmers in the short period before corn planting time. It is expected that the plant will be able to bag, load and ship about 150 tons daily, or approximately 2,500 tons of 3-12-12 fertilizer this spring.

When fully completed and in operation the plant will have an annual production of 40,000 tons of mixed fertilizers and 20,000 tons of superphosphate.

This new plant is but a part of the complete plant food program of Illinois Farm Supply Company. Through the member company distributors Illinois farmers are now receiving over 175,000 tons of rock phosphate, potash, triple superphosphate and ammonium nitrate per year. These straight carriers of plant foods are in additin to the 40,000 tons of mixed fertilizers and superphosphate distributed.

By having their own fertilizer plant, Illinois Farm Bureau member patrons

Insect Specialist H. B. Petty points out the four important steps to a successful fly-free program to Roger E. Gish of the IAA during series of fly control meetings.

Fly Control Now In Full Swing

Sanitation is Most Important Factor in Fly-Free Program, Specialist Says

IT ALL depends on you now, Mr. John Q. Public. The Illinois fly-free program for 1949 is now in full swing. It will be a success only so long as everybody cooperates.

For the past few months the Illinois Agricultural Association, the Illinois Natural History Survey, the University of Illinois College of Agriculture, and the State Department of Public Health, have hammered away at the advantages in continuing last year's fly-eradication campaign.

These organizations have backed the campaign with reams of stories telling the public the benefits of a fly-free community. For the farmer it means an average of $75 more profit. Cows will give more milk and beef cattle will gain faster. The farmer will be rid of a pest and more important he will be wiping out a carrier of more than 20 human diseases, including typhoid, dysentery, tuberculosis, and possibly the dreaded infantile paralysis. It is, therefore, particularly important to be rid of disease carrying flies if there are any children in your home.

Join the campaign now! Here's what must be done. First of all follow a sanitation program. Clean up all fly breeding places or spray them heavily with DDT. Haul manure and old straw out to the fields twice a week. Spray inside and outside wherever flies roost. Spray windows, doors, ceilings, screens, and walls. Spray trees under which cattle gather.

DDT should be used everywhere, except in the dairy barn and on dairy cattle where metoxychlor should be used because of the danger of DDT tainting milk. Dairy cattle should be sprayed once a week, beef cattle once a month.

Insect Specialist H. B. Petty says 75 per cent of a successful fly-free campaign depends on good sanitation. And George E. Metzger of the IAA points out that the rest of the job can be done with about $10 worth of spray materials and a little of your time.

Sounds like a good proposition, doesn't it? You can't lose. Let's start now! Clean out those fly breeding places and start using that spray gun.

Work Progresses Rapidly on Two District 4-H Club Camps

WORK is progressing rapidly on two of Illinois' district 4-H Club camps at West Frankfort and Jacksonville in an effort to have them ready for use by July 4.

The southern 4-H camp at West Frankfort expects to have a dining hall, a water system, sanitary facilities, and roads constructed by the first week in July. The southern camp comprises 65 acres on a 60-year lease from the city of West Frankfort and 25 acres donated by the city Kiwanis Club. It has a mile and a half shoreline fronting a lake.

W. C. Anderson, Jackson county farm adviser, said $20,000 had been raised for the camp. He estimated that about 800 youngsters would use it this summer. The southern camp will serve 26 counties.

The western 4-H camp south of Jacksonville on Lake Jacksonville is in about the same stage of development as the southern camp. Two weeks ago work was progressing rapidly on a kitchen and dining hall and work was about to be started on roads, water and sewage disposal systems.

Farm Adviser Ray Watson of Mason county estimated that more than 1,000 youngsters from 28 counties would attend the camp this year. The 78-acre wooded site with a mile-long lake shore line was leased from the city of Jacksonville for 60 years. Watson said $8,000 had been raised for the camp and that a campaign for more money would be conducted this summer.

Working on the foundation of the kitchen for the Western Illinois 4-H club camp in Morgan county are left to right: E. E. Lamont, farm adviser, Cass county; H. E. West, youth assistant, Madison; Wayne Stapf, assistant farm adviser, Macoupin; Lyle D. Kerley, assistant farm adviser, Sangamon; L. L. Fuchs, farm adviser, Pike; and Ray Watson, farm adviser, Mason.

New Livestock Unit Elects

Illinois Livestock Producers Association Elects Officers, Adopts By-Laws At Organization Meeting

The southern 4-H camp at West Frankfort expects to have a dining hall, a water system, sanitary facilities, and roads constructed by the first week in July. The southern camp comprises 65 acres on a 60-year lease from the city of West Frankfort and 25 acres donated by the city Kiwanis Club. It has a mile and a half shoreline fronting a lake.

W. C. Anderson, Jackson county farm adviser, said $20,000 had been raised for the camp. He estimated that about 800 youngsters would use it this summer. The southern camp will serve 26 counties.

The western 4-H camp south of Jacksonville on Lake Jacksonville is in about the same stage of development as the southern camp. Two weeks ago work was progressing rapidly on a kitchen and dining hall and work was about to be started on roads, water and sewage disposal systems.

Farm Adviser Ray Watson of Mason county estimated that more than 1,000 youngsters from 28 counties would attend the camp this year. The 78-acre wooded site with a mile-long lake shore line was leased from the city of Jacksonville for 60 years. Watson said $8,000 had been raised for the camp and that a campaign for more money would be conducted this summer.

Working on the foundation of the kitchen for the Western Illinois 4-H club camp in Morgan county are left to right: E. E. Lamont, farm adviser, Cass county; H. E. West, youth assistant, Madison; Wayne Stapf, assistant farm adviser, Macoupin; Lyle D. Kerley, assistant farm adviser, Sangamon; L. L. Fuchs, farm adviser, Pike; and Ray Watson, farm adviser, Mason.

The story behind

YOUR INSURANC PROTECTIO

THE STORY of your insurance protection was proudly told in the April issue of the Knox County Farm Bureau Bulletin. It appears at the right exactly as it was presented to the membership of Knox county.

This action program is the same which is being proclaimed throughout every county in Illinois. It might well be called one chapter of the complete story of the insurance protection for Farm Bureau members in this state. To realize the full story behind this "full time" program would require the presentation of 101 such "chapters," for behind this service is not just one county — not just one agency force — it is backed by 101 counties with some 600 agents, secretaries, and adjusters; in addition to more than 400 employees in the Home Office of the three Insurance Companies. In all, over 1,000 men and women who are serving you in Farm Bureau, through the I.A.A. Insurance Services.

These two pages are a tribute to the Farm Bureau members in Illinois who, through their confidence and cooperation in their own companies, have built the largest farm insurance companies of this type in the world today. Read this chapter of the story behind your insurance Service Program. It is imperative to you as Farm Bureau members that you realize the advantages offered here for your own and your family's financial security on the farm.

THE INCREASING FARM BUREAU MEMBERSHIP together with the greater farm inventor has prompted the Illinois Agricultural Associati and the County Farm Bureaus to adopt a new meth of serving the members of the State. This progra is called the *"Full Time Agents Program."* Knox now operating under this new plan as well as ma other Counties.

This program was felt necessary due to the i creasing demands of Farm People for insurance cove age. Since the farmers had their own Companies a a complete line of coverages, it seemed only natur that they should be afforded the advantages of th service every day of the year.

All the agents of Knox County are now full tim insurance representatives. They have each be alloted four townships in which they are to have t responsibility of servicing Fire, Casualty, and Hi Insurance. Each of the five districts have approx mately 500 members. From this it is very plain to s that to properly service this number is a full tim man-sized job. It was not too long ago that ma Counties in Illinois did not have a much larger to membership than four townships in Knox Coun have today.

As your insurance demands increase it is t responsibility of this Department to see that the demands are fulfilled. It is our desire to have you a member, enjoy the many insurance coverages your own insurance Companies. Farm Bureau Me bers built these Companies and have every right expect the best service and most highly trained repr sentatives to serve them.

Knox County is proud of its past records a hope that this new program will bring better servi to you and your neighbors.

SYNOPSIS OF STAFF

VIRGINIA FILSON, *General Insurance Secretary.*

Virginia has been assisting Farm Bureau Members with their insurance problems and claims the past three and one-half years. The tremendous growth of new policyholders together with those already on the books has added considerably to the responsibility of her department. Farm Bureau people of Knox County are 100% in accord that Virginia's courteous and efficient service is a definite asset to their insurance department and the Farm Bureau organization in general.

FRANCES COX, *Policy Holders Service Department.*

Frances has just recently started with the insurance department. She will assist in the service and records of present policyholders. Her duties will include the issuing of all Crop Hail policies and tabulation of record cards. Frances is well known among Farm People in this County due to her close association with the Rural Youth Organization. We believe her knowledge of farming and farm problems will be utilized by this department and make a better service to policyholders.

WAYNE LEINBACH, *General Agent, Knox County.*

After starting in the insurance business in Henderson County in 1938 he was transferred to Rock Island County as General Agent in 1939, and transferred from that County in 1947 to Knox County as Insurance Director. It is his responsibility to administer the insurance program and see that proper promotion procedure is applied to guarantee proper acquisition of all insurance services. Recruiting and training of agents, office administration, claims and County problems are the major responsibility of his program.

JOHN LUSK, *Adjuster, Country Mutual Casualty Company.*

Last year John handled 742 claims for Knox County. This number included both claims for car and truck as well as the general and Employers Liability. John adjusts for Warren, Mercer and Henderson Counties also. He has approximately 8,000 policies in his district that really make a man-sized job. He began his duties as adjuster in October, 1946. Everyone appreciates the fact that John's duties are sometimes very difficult and that his work has been satisfactory to both Policyholder and Company.

REUBEN E. JOHNSON, *Agent — Cedar, Orange, Indian Point and Chestnut.*

Starting in 1934 he serviced farm people on a part-time basis and on December 15, 1948, Reuben started on a full-time program as insurance Representative. Farm Bureau Members appreciate his true Farm Bureau spirit and willingness to help in all coöperative projects. Reuben has always been well at the top for production of Life and Casualty insurance among agents of the State. Quotas to him are but a challenge to do a good job still better.

JOHN K. CALLOW, *Agent — Rio, Henderson, Ontario and Persifer.*

John began his insurance career in Rock Island County in 1946. Then transferred to Knox County in 1947. John has used the "every member canvass" method to service his membership. This has resulted in top production for all three Companies of the Farm Bureau. His willingness to assist in all Farm Bureau projects and his "easy-to-get-acquainted" manner has classified him as a good insurance underwriter.

A. N. SKINNER, *Agent — Salem, Elba, Truro and Maquon Townships.*

Albert is the senior member of the entire insurance staff, having started with the Farm Bureau in 1929. These many years of insurance work have qualified him as an excellent underwriter. He stands high in esteem of his Farm Bureau Members as a counsellor for their insurance problems. His ability to govern himself to "do it now," ranks him high among our members as well as insurance men of the State.

RAY JOHNSTON, *Agent — Copley, Victoria, Lynn and Walnut Grove Townships.*

Ray started with the Insurance Service in 1934 on a part-time basis. He continued on this basis until March 1, 1949, when he adopted the "Full Time Program." For many years his production has been in the top brackets for part-time agents. He has equalled or surpassed his quota for Life Insurance on 14 occasions. His peppy spirit and jovial disposition will rank him as one of the good "Full Time" Agents. Farmers in his district know that his success as a farmer and hog-breeder qualify him to determine their Farm Insurance needs from actual experience.

Trap & Skeet Shoot Moved Up to Aug. 12

THE Illinois Farm Bureau Trap and Skeet Shoot has been moved up one week to Friday, Aug. 12, according to Roy P. Johnson, director of special services for the Illinois Agricultural Association.

The previous date, Friday, Aug. 5, was in conflict with the National Skeet Shoot to be held at Dallas, Tex. Johnson said a number of the men entered in the Farm Bureau shoot protested that they already had planned to attend the Dallas meet.

No change has been made in the location of the shoot which will be held at the Mather Gun Club near the old airport on route 4 southwest of Springfield. The Farm Bureau Trap and Skeet Shoot is held as part of the Illinois Farm Sports Festival. Aug. 12 is also the first day of the Illinois State Fair at Springfield.

Prominent Southern Illinois Farm Bureau Leader Dies Suddenly

J. P. REDMAN of Cairo in Alexander county, a member of the Illinois Farm Supply Company board of directors since 1946, died suddenly early May 10.

J. P. Redman

He was also member of the recently organized Illinois Livestock Producers' Association, an IAA affiliate. A few years ago he served on the IAA's livestock study committee set up to make a statewide survey of livestock marketing in Illinois.

Since 1933 Mr. Redman had been on the board of the Fruit Belt Service Company. He previously served one year on the Illinois Farm Supply board in 1935-36. He also was a member of the board of directors of the Pulaski-Alexander Farm Bureau. Funeral services were held May 12.

Illinois Future Farmer of America top members winning trip awards to Chicago from Prairie Farmer-WLS are (left to right): Bob Herriott, and Don Jacobs, both of Champaign county; State Leader J. B. Adams, Sangamon; Thomas Sussenbach, Bond; Robert Cumpston, McLean; George Lewis, Brown, and Arthur C. Page, associate editor, Prairie Farmer.

Join a Team Now!

Get the Most Out of the Illinois Farm Sports Festival By Playing With A Team Ask at Your Farm Bureau Office Today!

YOU'LL lose out on a lot of fun and good, healthy, outdoor sport if you don't get in on Illinois' 10th annual Farm Sports Festival, Aug. 25-26.

The University of Illinois again will be host to nearly 25,000 farmer spectators and contestants on the campus at Champaign-Urbana. It is the biggest farm gathering of its type in the nation.

It isn't too early to call your county Farm Bureau office and let them know that you want to take part as a contestant. And you don't have to be an expert to pile up points for your county. What would you like to do? There are events for practically every member of the family.

Take your pick: baseball, softball, swimming, hog calling, horseshoe pitching, tennis, track events, clock golf, knot tying, shuffleboard, barber shop quartet singing, novelty bands, folk and square dancing, woodchopping, tug o' war, dramatic skits, and choral singing.

Because bowling is a cool weather sport, district elimination was held during late winter and finals were played off in Springfield in early spring.

Because the Sports Festival is held during the All-American trap shoot, the Farm Bureau trap and skeet shoot will be held Aug. 12 at Springfield, the first day of the state fair.

Besides the sports events an evening of entertainment and dancing is planned in three separate locations—entertainment for the spectators, old time folk dancing for those who prefer that type, and modern dancing for those who prefer the fox trot and the waltz.

SOFTBALL teams planning to enter district competition preliminary to the Illinois Farm Sports Festival are advised by Roy P. Johnson, IAA director of special services, to get their official entries to him at 43 East Ohio Street, Chicago 11, Ill., before July 1. Entries must be accompanied by a $5 deposit. Entries must be in, Johnson said, so district chairmen can arrange for playoff games.

The softball committee has set the following goals for 1949: (1) A boys' 4-H team from every county in district competition; (2) At least two Rural Youth teams in every district; (3) A girls' 4-H team from every district; and (4) encouragement of as many entries as possible in the other divisions—county league, all county; 35'ers, and girls' open class.

County softball chairmen, all of whom can be reached at their county Farm Bureaus, by districts are: (1) Rolf M. Vogen, Ogle county; (2) Virgil R. Smith, Kane; (3) G. F. Miller, Henry; (4) E. M. Holford, Hancock; (5) H. J. Stevenson, McLean; (6) L. E. Wright, Grundy; (7) Ansel H. Hare, Brown-Schuyler; (8) James Hoyt, Tazewell; (9) Earl Bantz, Champaign; (10) Harold E. West, Madison; (11) G. I. Coffey, Effingham; (12) Leslie W. Rogers, Edgar; (13) Jack A. Wasson, St. Clair; (14) A. A. Wicklein, Wabash; (15) B. H. Wanstreet, Hamilton; (16) H. H. Fulkerson, Williamson.

Shallow wells must be carefully protected, with good drainage, to prevent contamination by surface water.

Do You Need a Hospital?

DOES your community need a new hospital? Is the health of the people in your area endangered because of poor hospital facilities? If your answer is "yes", you might then ask "What can I do about it?" As an individual, you can do much but cooperation of the rest of the community is essential.

Time, effort, and money are the important contributions that must be made by people in the community to insure the success of a drive for a new hospital.

How is it done? Let's take a look at the job being done at Jacksonville, Illinois. During the war the people of that community felt that hospital facilities were woefully inadequate—hardly able to take care of Jacksonville's own sick and injured without counting in the thousands of rural people dependent upon the city's hospital facilities.

In 1945 a drive was started to raise $300,000 and $330,000 was pledged. But priorities on materials stopped cold plans for improved hospital facilities.

About two years later federal funds became available for hospital construction under the Hill-Burton Act. State authorities came in, surveyed the community, mapped out the area (see map) which the hospital would normally serve, set a minimum of 200 beds for the hospital, and specified that the hospital must be built from scratch, that no repairs or additions to the old hospital in use would be considered.

Like many things nowadays, the most staggering thing about a new hospital is its cost. For small communities the cost per bed at today's prices runs about $15,000 to $17,000. The hospital must be fully fireproof which adds an estimated $2,000 to the cost per bed. If the area to be served has more than 25,000 people, to meet requirements for federal assistance you must plan for four beds per 1000 population and you must abide by the state plan for hospital construction which has been approved by the surgeon general of the United States Public Health Service.

The Jacksonville area as outlined in the Illinois State Plan (see map) includes all of Morgan and Scott counties, and parts of Greene, Cass, and Macoupin counties. Since this area comprises a population of 51,000 (1947 estimate) the formula showed a need for a 200-bed hospital. At $15,000 per bed that amounts to $3,000,000. Rural and city

By JIM THOMSON

Ass't Editor, IAA RECORD

hospital committeemen felt the cost was out of the question. They conferred again with state authorities and it was agreed to build about 70 per cent of the total beds needed because there was another 80-bed hospital in Jacksonville. Permission was then granted to build a 140-bed hospital at an estimated cost of $2,100,000 with expense to be borne thus: federal $700,000; state, $700,000; and voluntary community contributions, $700,000.

Heading the drive in the rural areas was Warren Brockhouse of Concord and Lawrence T. Oxley, Morgan County Illinois Agricultural Association general agent of insurance. Both men did an outstanding job and met with a splendid response among farmers and their families. Two farmers gave $35,000 each. Close to half of the money raised has come from rural areas.

Both Brockhouse and Oxley commended the county Farm Bureaus involved for their excellent cooperation. Oxley was particularly impressed by the remarkable work done by many of the farmer solicitors. Oxley said he believed that many of the men had developed their leadership qualities through close association with the Farm Bureau. "I was never so appreciative of my Farm Bureau connections," Oxley said, "as I was during the hospital campaign. The response was marvelous."

As of May 1, total pledges and cash, including money pledged in 1945, amounted to $850,000. With a reasonable amount of shrinkage, sufficient funds should be assured to complete the job.

Plans for the T-shaped, three story structure are expected to be approved by late summer with construction to begin early this fall. The site is a tenth of a mile beyond the city limits of Jacksonville. When completed, the hospital will be the largest built in Illinois thus far under the Hill-Burton Act and will be the largest and most modern hospital between Springfield and St. Louis.

Some of the things that must be remembered if you plan to follow the lead of the Jacksonville-area hospital are: (1) The people of the community must feel that there is a definite need for a hospital; (2) A responsible local organization must be set up; (3) This latter organization must contact the State Health Department at Springfield if grant-in-aid money is to be requested; (4) In response, the State Health Department will discuss the program with you and tell you whether or not you are eligible; (5) If eligible, they will outline a program of

SOYOIL WHITE HOUSE PAINTS

NEW and IMPROVED

NEW LEAD-FREE WHITE PAINT

No. 6 WHITE HOUSE PAINT NEW — with incorporated time tested principles of lead-free paint.

LEAD-FREE—highest quality pigments. Contains no lead.

FUME RESISTANT — minimizes chemical reaction to smoke and fumes. Far superior to ordinary paints for this reason.

TOUGH FILM — pliability gives long film life. Resists checking and cracking.

WHITENESS—startling whiteness that stays white. Self-cleaning by even, controlled chalking.

ECONOMICAL — top quality plus low initial and maintenance costs. Surrounds your buildings with beauty and protection.

IMPROVED LEAD-TYPE PAINT

No. 5 WHITE HOUSE PAINT. An old favorite, with its fine record for durable, long lasting protection, now comes to you IMPROVED.

IMPROVED self-cleaning for whiteness and gleaming beauty.

IMPROVED film toughness and flexibility against checking and cracking.

IMPROVED appearance through elimination of brush marks.

MARVEL at its years of durable protection.

ENJOY the smooth ease of application.

BE AMAZED at economy measured in price and quality.

Painting with Soyoil Is An Experience, Not An Experiment.

SOYOIL PAINTS ARE NOT *JUST MIXED* — THEY'RE *BLENDED*

RED BARN PAINT

No. 90 RED BARN PAINT — Dollar for Dollar The Best Buy In Paint.

CONTROLLED PENETRATION even on worn, weather-beaten surfaces.

MILDEW RESISTANT qualities not found in ordinary paints.

LONG LIFE beauty and protection that withstands age and weathering.

NON-FADING uniform gloss and color maintained throughout the life of the paint. The red that STAYS red.

THE IDEAL FARM PAINT

ROOF PAINTS

No. 997 ASPHALT ALUMINUM ROOF COATING excellent cover for composition roofs.

No. 998 ALUMINUM PAINT Insulates against heat and is rust resistant. For composition or metal roofs.

No. 977 SOY-ZINC the perfect metal paint as a primer or finish coat. Long lasting, rust resistant.

No. 2000 NON-FIBRE ROOF COATING for building up weather worn, lifeless roll type roofing

No. 2100 ASBESTOS BLACK ROOF COATING weather proofs and water proofs composition, felt and metal roofs. Seals nail holes and seams. Excellent for underground tanks.

U. of I. Veterinarian Says Vaccination Pays

IT COSTS only a few cents to vaccinate your pigs against hog cholera, America's number 1 swine killer. But hog cholera losses can cost you plenty.

Dr. M. E. Mansfield, University of Illinois veterinarian, says losing one hog to cholera costs as much as vaccinating 40 to 50 young pigs. If you lose 10 hogs from cholera, it will cost you as much as vaccinating at least 400 pigs.

The best time to have your swine vaccinated against cholera is about two weeks before weaning time. Pigs take less vaccine at this age, so they're cheaper to vaccinate. And it allows them to recover while they're still nursing.

Find Corn Can Be Used In Making Clothing

CLOTHING from corn. That's the newest use science has put Illinois' most important grain crop to. Some day you may be wearing corn suits and corn dresses.

The fiber made from the protein in corn is known as vicara and is soft and warm, moth-repellant, mildew-resistant, and non-itching. It also has considerable absorbency and tensile strength. Production has been started by a company at Taftville, Conn.

IAA President Shuman Named To Fair Board

PRESIDENT Charles B. Shuman of the Illinois Agricultural Association has been named to the Illinois state fair advisory board by Governor Adlai Stevenson. Four other new members named to the board were John F. Cuneo, Libertyville; state Representative Henry Knauf, Ladd, chairman of the house agricultural committee and a harness racing official; former state representative Joseph Russell, Roberts; and state Representative Clyde Lee, Mt. Vernon, a member of the Illinois Association of Agricultural Fairs.

Among those reappointed to the fair board were Dean H. P. Rusk of the U. of I. College of Agriculture; E. A. Eckert, past master of the Illinois Grange; State Senator Simon E. Lantz, Congerville, chairman of the senate agricultural committee, and Joseph Fulkerson, prominent Jersey County Farm Bureau member.

Food Specialist Gives Milk Drink Recipes

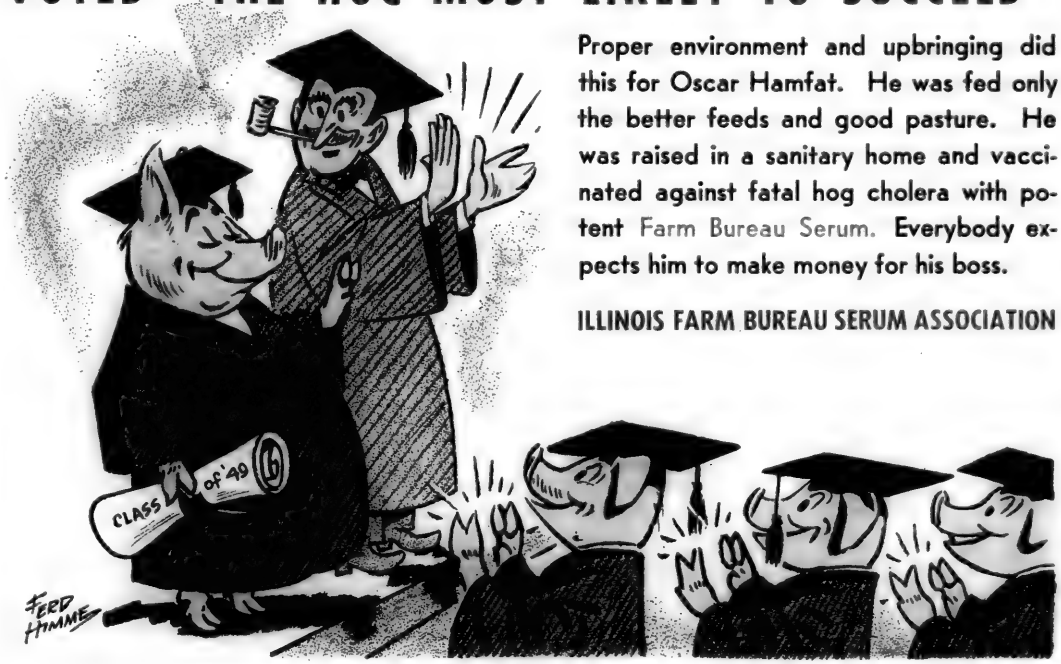
IF you have difficulty in maintaining the milk quota in family menus, why not serve milk drinks occasionally? They are popular with grown-ups as well as children and are fine for the between-meal pick-up.

Miss Grace Armstrong, nutritionist, University of Illinois College of Agriculture, recommends eggnog. It has long been a favorite milk drink and is one that is packed with nutrients.

Prepare the eggnog by mixing an egg, one teaspoon of sugar, a few drops of vanilla, a dash of cinnamon or nutmeg, and a tall glass of milk. Modify the flavor by adding malted milk or canned or fresh fruit juices.

Milk Fizz is another favorite that is easy to prepare. To half a glass of cold carbonated beverage, add flavoring — honey, sweetened fruit juice, chocolate syrup. Fill the glass with cold whole milk, stir slowly, and serve immediately.

VOTED "THE HOG MOST LIKELY TO SUCCEED"



Proper environment and upbringing did this for Oscar Hamfat. He was fed only the better feeds and good pasture. He was raised in a sanitary home and vaccinated against fatal hog cholera with potent Farm Bureau Serum. Everybody expects him to make money for his boss.

ILLINOIS FARM BUREAU SERUM ASSOCIATION

Answer Critics Of IAA Rural School Policy

IAA Has Always Held View That Reorganization Should Be The Duty Of Local People

HOW does the Illinois Agricultural Association feel about school reorganization? Why does it feel that way?

These queries have been answered before but questions arising in areas not yet reorganized call for a review of IAA school policy over the past several years.

IAA school reorganization policy dates mainly from publication of the IAA School Report in 1944. The report was approved unanimously at the IAA annual meeting in 1944. It recommended reorganization of small schools into larger units. It favored the 12-grade type of district. It recognized that the main purpose of school reorganization was to establish school districts with opportunities for a good education at reasonable cost where the broader tax rate would help to equalize the burden of school support, and where school administration could be improved.

The IAA agreed that reorganization should be done by local people. It had opposed legislation in 1937 that seemed to be the opening wedge for compulsory school reorganization.

Support of the School Survey act was the next step taken by the IAA. It became law in 1945. This act set up the machinery for local people to make their study. It also provided for a vote after public hearings. The IAA was a cosponsor with the Illinois Association of School Boards in securing passage of the School Survey Act. Other associations supported this legislation including the Illinois Education Associaton and the Illinois Congress of Parents and Teachers. After many survey committees had studied their problems and agreed they would like to recommend the 12-grade type of district, the IAA in 1946 agreed to support legislation to provide a more simple method of setting up a 12-grade district than the method provided under existing law. The result was the Community Unit Act of 1947. No votes in either Senate or House were registered against the Community Unit Act. To date over 200 community unit districts have been set up under that act. This is proof of its popularity.

As progress is made, new problems arise. The Illinois Agricultural Association has stood ready to cooperate with efforts to correct existing legislation or pass needed legislation in the interest of sound reorganization. This Association has opposed efforts to torpedo the school reorganization program under which so much progress already has been made.

The IAA has been commended for its practical approach to reorganization. It has been criticized too, though less than expected. A few statements answering these criticisms are in order:

1. *IAA representatives have departed from established IAA school policy.* The IAA still has copies of the school report available for anyone who would like to check established policy.

2. *Our approval of a more desirable type of district suitable enough to do the job does not mean necessarily that the IAA can go on record approving everything that has been done along that line.* The IAA has defended the right of local people to do their own reorganizing.

3. *Rural people do not have protection under the laws.* Reorganization has largely been left in the hands of rural people: (a) A majority of board members that voted to make a survey were rural, (b) A majority of members of the survey committees were rural, (c) Both the Survey Act and the Community Unit Act require a separate vote in rural as well as urban territoy, (d) The Community Unit Act, under which most progress has been made, prevents grouping the representation on the school board from the town, another concession to rural people.

4. *The IAA favors districts that are too large.* Of the first 197 community unit districts set up 76 are too small according to IAA recommendations. The variations in size of high schools inincluded in these new districts runs from 60 to 1535 or from a total enrollment of 285 to 4,012. There is sufficient proof of local control. Most of the leadership in the IAA favored the community type district.

5. *The IAA goes along with school people and does not consider farm people's interests carefully enough.* In the first place, the IAA encountered many school people who opposed reorganization, especially at the start. Some still do. Secondly the IAA's responsibility in the reorganization effort is to offer far-sighted leadership for the establishment of schools that will offer children as many advantages as possible in the years ahead. As to who indoctrinates whom, there are numerous instances to show that the IAA has done a lot of indoctrinating of other organizations.

6. *The IAA has encouraged school reorganization in areas where rural property will have to bear a larger tax burden.* It is granted that there is entirely too much dependence placed on the property tax to support schools, and there are many inequities. But this same situation existed before school reorganization began. It would be difficult to establish a district in which someone did not pay more, others pay less. That is one of the objectives of reorganization, to broaden the tax base and equalize the tax load. However, to many the educational advantages possible in the larger district, are worth the additional cost.

By John K. Cox, Director
Rural School Activities

Increases in state aid will further assist in distributing the costs more widely.

7. *There have been too many mistakes made under the reorganization legislation provided.* No one will argue that mistakes have not been made. However, no advance planning can keep people from making mistakes. Nor can we legislate mistakes out of the picture.

8. *The state should have done the job in the first place and thereby avoided the mistakes made by local people and the difficulties encountered in some areas.* No widespread progress is made without some difficulties, doubts and high blood pressures. No approach to school reorganization would be popular with all the people. The local approach has a very definite value in that it is more democratic and allows local people to do their own planning, hold their own discussion meetings, and vote for or against the district that is eventually proposed. Also it has been good for the school program to arouse so many people to a revaluation of the purpose of the schools in the community and the school's needs.

9. *Illinois should have done the job more gradually and by stages.* There is some virtue in that argument. However, in general, it seems foolish to take the long road if the other road is better. Indiana several years ago reorganized on a township basis. It worked out all right for her grade schools but most of her high schools are too small. Now she has the job of again uprooting established systems, beliefs, and traditions to improve her high schools. They say they cannot now afford the luxury of a decentralized school system. It is admittedly a painful process to make the necessary steps; but if Illinois can set up districts for both grade and high schools that are large enough to provide a good program at reasonable cost, it may save us the pains of transition later.

10. *The IAA should support efforts to lower state requirements to favor a few scattered small districts, mainly high school districts.* State standards are already too low in the opinion of many people who are interested in districts of adequate size. To cut those standards down further would establish a false minimum that no studies or surveys by people qualified to make such could endorse. Also it would penalize those people who had already acted in good faith and in accordance with the laws in establishing the larger districts.

It is fortunate for Illinois' school systems of the future that the school policy of the IAA was sufficiently broad and farsighted to point in the direction of the type of school districts that the future, it is confidently hoped, will prove to be the best.

Two German farm specialists studying farm organizations in the United States visited the Illinois Agricultural Association and county Farm Bureaus in May. Left to right are Otto von Feury, Munich; Hans Burbach, Frankfurt, and IAA President Charles B. Shuman.

IAA Host To German Farmers

Farm Leaders Visit America To Study Free Farmer Organizations, Agricultural Methods

AGRICULTURE is making a recovery in the Western zone of Germany, but it always will be necessary to import food for that section.

This point was made by two German agricultural specialists who visited the Illinois Agricultural Association and four county Farm Bureaus during May. The German agriculturists made the visit at the invitation of the American Military Government with the cooperation of the American Farm Bureau Federation and state Farm Bureaus. After leaving Illinois, the specialists were to visit Iowa, Kansas, and other state Farm Bureaus.

The two men were Otto von Feury, 42, of near Munich, head of the state committee for research and extension in Bavaria and Hans Burbach, 48, of Frankfurt, adviser on fertilizers in the state of Hesse.

Burbach pointed out that the eastern zone of Germany which is under Russian control contains the country's chief farming area, and that the Western zone used to get considerable of its food from that area. Since the Russians have shut off this exchange of food, there has been an effort to increase agricultural production to the utmost in the Western zone. In addition to increasing agricultural production, they hope to develop industries and exports in order to get dollars to buy essential foods they cannot produce.

In visiting the McLean County Farm Bureau, the German visitors told of village and county contests they sponsor in their area for the best manure pile. Prizes range from 100 marks for first place down to a diploma for the farmer who can build the best manure pile.

Fertility is a big problem for the German farmer and he has always used considerable commercial fertilizer in addition to manure. Last year, von Feury said, was the first time since the war that sufficient fertilizers were available. Too many small farm units of one to two acres each make it impossible in some of the areas to utilize modern machine farming methods.

The purpose of the visit of the German farm leaders to the United States was primarily to study "free farm organizations" such as Farm Bureau and to examine educational and production methods of our agricultural system.

County Farm Bureaus visited were Champaign, McLean, La Salle, and DeKalb.

Expect Bumper Illinois Peach Crop

ILLINOIS peaches will be plentiful this year according to a prediction based on present conditions made by R. S. McBride, manager of the Illinois Fruit Growers' Exchange.

The Exchange is the largest marketer of fruits produced in southern Illinois and is affiliated with the Illinois Agricultural Association.

McBride estimated that Illinois would harvest a 2,150,000 bushel peach crop compared with a 1,500,000 bushel crop last year or 43 per cent higher than in 1948.

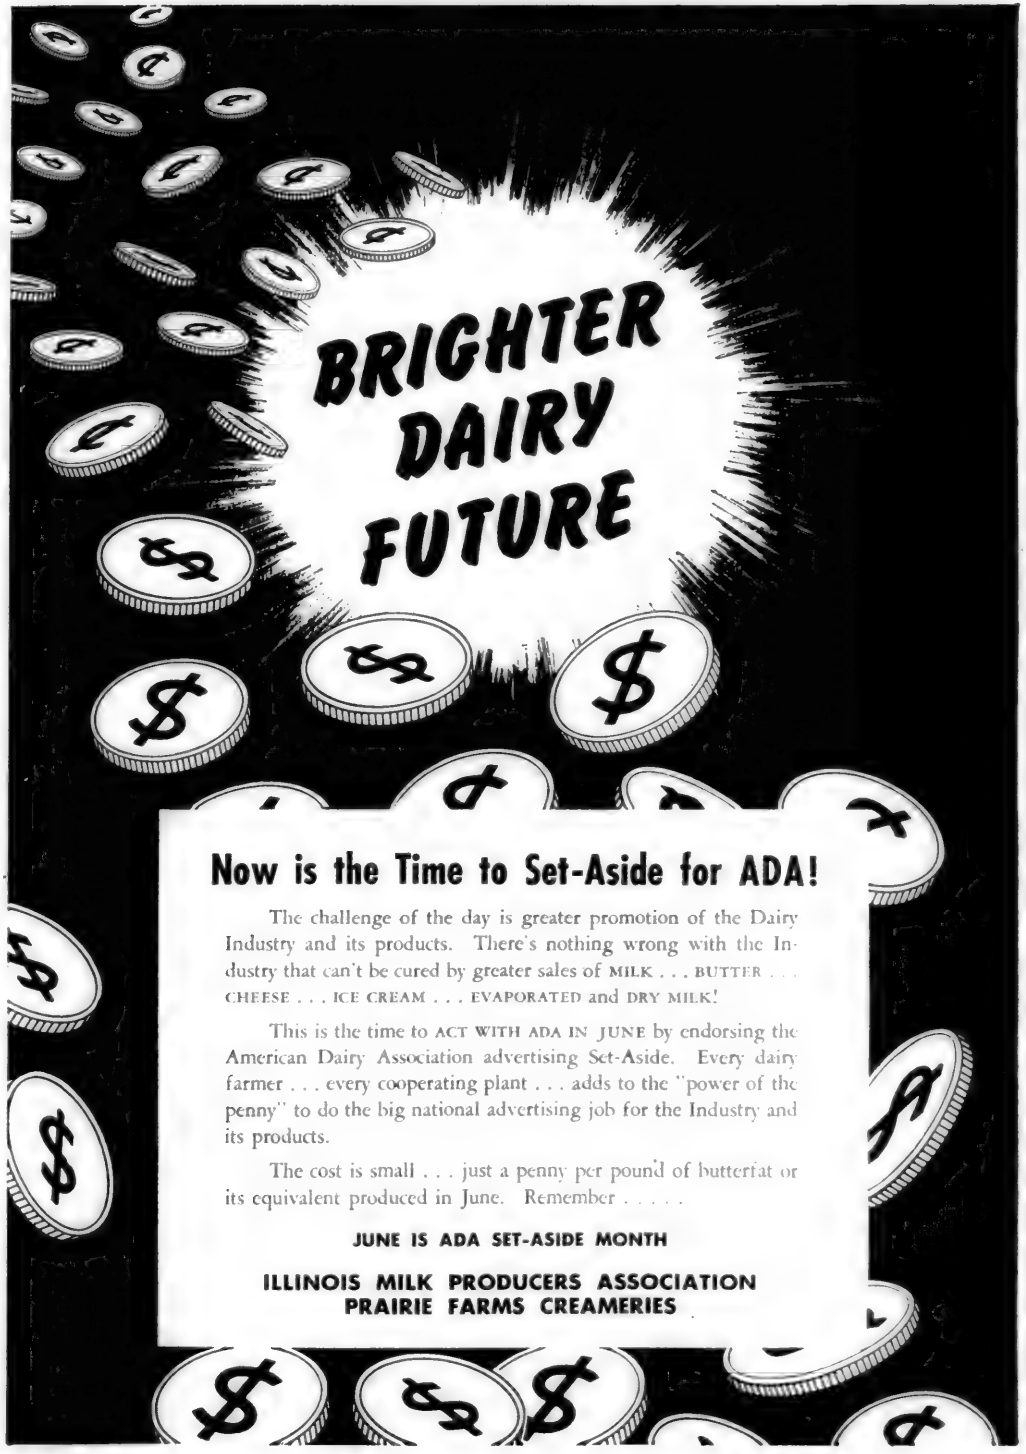
"Constant emphasis on quality will make the Illinois peach crop one of the best ever marketed," McBride said.

Illinois peach growers expect good prices because the normal 6,000,000 bushel South Carolina crop which comes in just ahead of the Illinois crop was cut 80 per cent by heavy frost damage.

Illinois ranks third in amount of cash farm income, being exceeded only by Iowa and California.

Before you start making hay this year take a mighty close look at your barn equipment — your hay ropes, pulleys, track. They're all a year older now, a year weaker. By taking these precautions you can prevent numerous chances of injury that might happen to yourself or your hired help.

And when haying starts be doubly cautious. Haying accidents are serious accidents — a falling hay fork becomes a guillotine, carelessly placed pitch forks become bayonets, a sudden fall from the loft or load can cripple or kill, the trip rope becomes a hangman's noose in a careless moment. Yes, death makes hay, too, when we drop our guard. So be CAREFUL. But be prepared, too, with a Farmers' General and Employers' Liability insurance policy. Be protected against heavy loss if an employee or a stranger is injured on your premises by your stock or equipment. See your friendly insurance representative today in your Farm Bureau office.



Now is the Time to Set-Aside for ADA!

The challenge of the day is greater promotion of the Dairy Industry and its products. There's nothing wrong with the Industry that can't be cured by greater sales of MILK . . . BUTTER . . . CHEESE . . . ICE CREAM . . . EVAPORATED and DRY MILK!

This is the time to ACT WITH ADA IN JUNE by endorsing the American Dairy Association advertising Set-Aside. Every dairy farmer . . . every cooperating plant . . . adds to the "power of the penny" to do the big national advertising job for the Industry and its products.

The cost is small . . . just a penny per pound of butterfat or its equivalent produced in June. Remember . . . . .

JUNE IS ADA SET-ASIDE MONTH

ILLINOIS MILK PRODUCERS ASSOCIATION
PRAIRIE FARMS CREAMERIES

Auditing Employee Retires Under IAA Pension Program

ANOTHER beneficiary under the IAA employee pension plan will be Fred Foulds of Illinois Agricultural Auditing Association. He retired May 31.

Employed by Auditing since 1935, Foulds' interesting history and personality have won him scores of friends throughout Illinois.

For some time after coming to Auditing, Foulds worked as a field auditor from the Chicago office. Later he served for one year as the district auditor in Bloomington, and in recent years as Peoria district auditor.

During his IAA career, Foulds has audited various accounts in 67 counties and in half of the Farm Bureau offices.

It is interesting to note that the first job held by Foulds was one at a cooperative in England and that he has completed his business career by serving Illinois cooperatives for a period of approximately 15 years.

Foulds will spend the summer with friends in Winnipeg. Beyond that he has no specific plans for his retirement.

Armand LeMay of the Springfield district office has been transferred to Peoria as district auditor for that district.

Good Hog Pasture Is Worth $50 Acre

GOOD hog pasture is worth about $50 an acre because it saves that much money in feed costs.

J. L. Krider, animal scientist in the Illinois College of Agriculture, says that, compared with dry-lot feeding, one acre of good hog pasture will save almost 900 pounds of protein supplement. At present prices that 900 pounds of supplement is worth around $50.

Krider points out that with good pastures you can save half the protein supplement needed to fatten hogs, and you have no vitamin problem — they're all provided by the pasture and sunlight. Pasture also provides some of the minerals, and you can save about 4 percent on your total feed bill. You can also save one-third of your labor by using good hog pastures.

Krider reports that any good green pasture will give you these advantages. Rye, Ladino clover, alfalfa, alfalfa-bromegrass, clover . . . . any of these which is suited to your land will cut down your total feed costs. These good pastures, carrying 20 pigs per acre, can save you around 900 pounds of protein supplement and put about $50 more profit in your pocket.

Margarine . . .

(*Continued from page* 10)

petition for the small supply of milk would send prices soaring. And the people who needed milk most would suffer.

Charles Cameron, president of the Peoria Milk Producers' Association told members of the committee that the dairy farmer has an investment to protect. An investment bigger than the whole steel industry. Altogether more than 10,000,000 people depend on the dairy industry for a livelihood, Cameron said. Dairy farmers will not sit idly by and see their investment jeopardized by unfair competition from colored margarine. By allowing this unfair competition we also run the risk of having racketeers sell oleomargarine under a butter label.

Those who spoke in favor of repealing the law prohibiting the sale of yellow margarine stressed that it was made from an Illinois product, soybean oil, and that this oil is in distress. The price has decreased from a high of 21 cents to 10½ cents per pound today. One-third of the nation's soybeans are grown in Illinois.

Four women representing civic organizations said the consumer wanted yellow margarine, that its nutritional value was as high as butter, and that low income groups must buy it because of the higher price of butter.

C. B. Simcox of Assumption, who said he represented 1000 soybean growers said butter itself is colored 10 months out of the year.

Hospital . . .

(*Continued from page* 17)

procedure and assist you with applications, etc; (6) The community selects the architect who develops the blueprints in line with the community needs; (7) The State Department of Public Health works with the architect and the organization to make certain that the plans meet the requirements of the federal government as to construction standards. Plans also must be approved by the U. S. Public Health Service; (8) The community must by voluntary subscription, raise funds to meet the local share of the cost of the hospital; (9) Construction of the hospital will be under the supervision of the owner's inspector; and (10) When completed, the hospital will be owned by the community and will be operated by the community without discrimination. It will be just as if you paid for it entirely with your own money. It is required, however, that minimum standards of maintenance and operation be developed by the State Department of Public Health and that hospitals constructed with federal funds meet those standards. This provides protection for the people admitted as patients.

The 65th Illinois General Assembly in 1947 appropriated some state money to aid in hospital construction similar to the money from the Hill-Burton program. Under this state program it was then possible for communities such as Jacksonville to receive both state and federal funds provided total government money did not exceed two-thirds of the total cost of the hospital. While the federal program is established to continue for three more years, the continuation of state money is entirely dependent upon an appropriation made by the 66th General Assembly now in session in Springfield.

"This program is not operated on a first come, first served basis." Says George K. Hendrix, chief division of hospital construction and services Illinois Department of Public Health. "Neither is it a political program where the loudest is heard first. It is a program designed to aid in the construction of hospitals in areas having the greatest need and following a sound state plan which has been approved by the surgeon general of the U. S. Public Health Service.

"This program then encourages the building of hospitals of appropriate size, so located that they are within reasonable reach of all farm people. The relatively small amount of government money prevents the construction of a hospital at every cross-road or every small town, but, it is the aim to provide adequate and safe facilities primarily for the rural people."

Fertilizer . . .

(*Continued from page* 12)

which have been paid out in transportation costs. Due to the industry-wide shortage of plant foods, Illinois Farm Supply Company, in order to secure supplies, has been forced to purchase and ship tonnage from points as far distant as the east coast.

In addition, a close watch can be maintained on quality. Also, grades which are of the higher-analysis type can be made available to farmers. This means greater value received for every dollar spent.

Select farm equipment on the basis of the job to be done and not on the basis of what may be bought the easiest or cheapest.

The peel of the apple is five times as rich in vitamin C as the flesh.

This is a scene from the finals of the Illinois Farm Bureau Safe Driving contest held on a rainy day in November, 1947 during the IAA annual meeting in St. Louis. The state policeman (left) is checking the driver's ability to drive in a zig-zag course past a row of posts set up for that purpose.

Rural Youth

By ELLSWORTH D. LYON, Director
Young People's Activities

CAMPING is big business, says Miss Thelma Patterson, a leading authority on camping activities who is assisting the University of Illinois in setting up the University camping program. Camping, she says, should be a part of a total program to meet the needs of the individual. Included in the list of needs are: leadership development, love of outdoor living, responsible community sharing and adjustment, respect for the rights of others, and the ability to take part in specific programs and see them through.

The 1949 Rural Youth state camp is being planned with this in mind. To help prepare leaders and the responsible committee of Rural Youth members who will assist the campers, a pre-camp training program was sponsored by the University over the week-end of May 21 on the grounds of Memorial Camp.

Memorial Camp near Monticello will ring out from July 31 to Aug. 6 with the happy voices of Rural Youthers from all over Illinois. They are entering into a program planned for and by youth in which each camper finds much to meet his needs. We hope that any member of a county Rural Youth group who can plan his summer to include the week of camping at Memorial Camp will realize that he can be a better Rural Youth member and a better citizen by attending.

Rural Youth groups often consider it a good investment in better county organizations if they send one or more leading members to the state camp. Many campers come paying their own way so that they might enjoy the experience of group living outdoors. By whatever method they are privileged to come this year Rural Youthers will have an enjoyable outing.

The IAA has shown considerable interest in the camping program of the University. In addition to financial contributions, the IAA has always shared in actual camping responsibilities by supplying personnel as speakers and counselors.

Skilled Drivers' Program

The IAA skilled drivers' program for Rural Youth is under way again. The driver short course, which is mainly a summer and fall program, is ready. The vacancy in the IAA department of safety has been filled by John Lake. Lake is a graduate of Iowa State with a major in safety. He is ready to serve Rural Youth groups and the skilled drivers' program, as well as to instruct in youth programs of safety.

Counties are now preparing for the activities which will enable the members of our Rural Youth groups to become safe operators of automobiles. The four-unit short course has been revised. It combines various helpful needs which have been included in former issues of "Your Safety." Counties may obtain the desired quantities of the short course by writing either the department of safety or the department of young people's activities. The written examination will be sent only in quantity to county youth leaders.

The facts indicate strongly that the counties which sponsored actual skilled driving contests received the greatest value from the Rural Youth skilled driving activities. Because of this fact we are stipulating that each county wishing to send contestants to district skilled drivers' contests must first of all sponsor actual driving tests in their counties. The report of the county driving test will be certified by the person in the county who is responsible for the Rural Youth program, using an official card supplied by the department of safety.

County News

Cooperatives continue to be of interest to Rural Youth. From the recent Lee county report we quote: "Mr. Hill of the Lee County Service Company was present and he along with Wilbur Ransom and Eddie Bernadin led a discussion on cooperatives. Rural Youthers learned what cooperatives are, how they are managed, and their advantages and disadvantages."

St. Clair county is cooperating in the Rural Youth community service achievement program. They served the Progressive Grange at New Athens by presenting entertainment for this particular Grange's chapter. The program consisted of selections by the quartet, dance demonstrations by the square dance team, and by special piano solos.

Will reports a discussion by the entire Rural Youth group upon the possible activities in which they might engage to further community building through the Rural Youth community service achievement program. Possible projects listed were: Securing a building in which community meetings can be held, providing recreation and entertainment at orphanages and old people's homes, conducting recreational classes, building up picnic area facilities, instruction on keeping farm accounts, promoting a 100 per cent X-ray drive, and helping raise the 4-H camp fund quota. A committee was appointed to investigate these projects and report back their recommendations.

One of the big banquets of the spring season was the Rock Island skyway banquet. Dr. George B. Arbaugh, dean of Augustana College, spoke on "Skyways are Happy Ways".

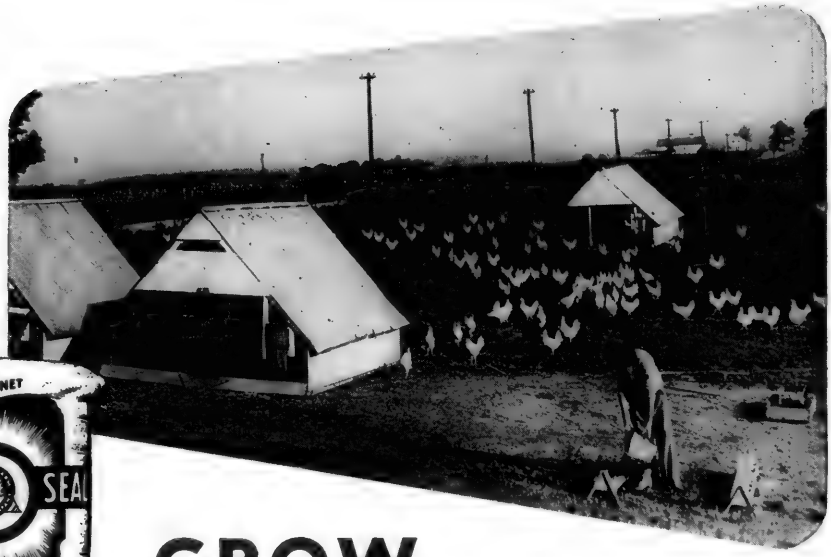
Lake Named IAA Safety Director

JOHN A. Lake, 26, of Athens in Menard county has been employed as director of safety and public health for the Illinois Agricultural Association. He succeeds W. W. Whitlock who resigned to do similar work for the Illinois Farm Supply Company.

John A. Lake

Lake grew up on a farm, attended rural school at Fancy Prairie, and high school at Elkhart. He worked on the home farm until September, 1943 when he joined the army air forces. He spent the next two years before his discharge training in the south.

He was graduated from Iowa State College in March with a degree in general engineering. His major study was safety engineering. Lake is married to the former Lois Sanborn of Madrid, Ia.



GROW STURDY PULLETS *with* BLUE SEAL GROW MASH

Pullets grown out on BLUE SEAL GROW MASH will enter the laying house next fall ready for production. They will be better able to show a good profit during the fall and winter months. And extra eggs will mean extra profits.

From BLUE SEAL GROW MASH your pullets get plenty of the essential amino acids to make a well-balanced, high-quality protein. They also get those essential vitamins, minerals and growth-producing nutrients.

GROW MASH provides the growing pullet with the nutritional factors necessary for rapid growth, early and complete feathering, and high egg production in the laying house. GROW MASH is wholesome, palatable and easily digested.

GROW MASH contains 18 per cent of the highest quality protein. It is available in either meal or pellet form.

BLUE SEAL GROW MASH is fed with scratch grains. Grain should be fed in the amount the growing chicks will clean up.

Provide grit and plenty of water. Feed GROW MASH until the pullets are housed in their laying quarters.

Ask your Blue Seal or Service Brand Feed Salesman

These feeds are distributed by

OTHER SIDE OF THE FENCE

Greener pastures? There aren't any, these days of good farm living. At last our sons are staying on the farm, enjoying their rightful heritage. For in these past few years they've seen agriculture forge ahead with fair prices, a comfortable living, and some of the luxuries that before were always a little beyond reach.

But all this has taken sweat, and planning. Both on the farm, and in places where the state's and nation's policies are formed. It's taken leadership to build a better agriculture. The kind of leadership that has given you, along with 165,000 other Farm Bureau members, a voice for agriculture.

Use your Farm Bureau membership. Use it to work for your own best interests. Let's keep the "pastures greener" on the farming side of the fence.

THE STATE FARM BUREAU PUBLICATION

To Make THE BEST BETTER

Charles B. Shuman

ILLINOIS farmers are rightfully proud of their farms, their homes, and their own accomplishments, but most of all they are proud of their boys and girls. This pride is most evident at any county 4-H fair as the new generation displays the results of its labor and learning. No other industrial or occupational group in America has developed a youth program to equal agriculture's 4-H, Future Farmer, Future Homemaker, and Rural Youth activities.

THOSE of us who have sometimes been discouraged by the seemingly slow progress toward the general adoption of improved farming methods and better soil conservation practices can certainly take new hope from the results of this great movement. All over Illinois I hear the same story — the young people are leading the way. They are assuming their responsibilities in the farm community as successful farmers, as members of Farm Bureau and cooperative association boards of directors, as leaders in every important activity.

IT is well to remember, however, that the rapid gains of today would have been impossible were it not for the experiences and slower progress of a group of far-sighted leaders who envisioned a new day for farm people — scientists at the College of Agriculture who developed new and better ways of farming, hundreds of men and women who gave their best years of service to the agricultural extension work bringing these new methods to practical farmers. Vocational agriculture intructors, volunteer adult 4-H leaders and public spirited citizens in other occupations promoted the idea of a better agriculture.

HOWEVER, all of this activity might have gone for naught had not farmers themselves taken enough interest to build a powerful organization with which to improve the economic "climate" surrounding agriculture. Without these more favorable economic conditions and the improved attitude of the general public towards agriculture which resulted from the activity of our own organization, the best farm youth would probably have continued to seek their opportunities in the city.

EVERY farmer should be thankful that we can now, with some degree of confidence, encourage our farm young people to look for their opportunities on the farm or in agricultural service — to Make the Best Better!

Charles B. Shuman

President, Illinois Agricultural Association

Open IAA Co-op Terminal Elevator

First barge load of grain moves into Illinois Grain Terminals Company elevator.

This first barge load of corn was shipped from the Prairie Grain Company at Lacon.

Examining the corn in the first shipment are left to right: Homer Curtiss, Terminals president; IAA Field Secretary G. E. Metzger, IAA Grain Marketing Director C. H. Iftner and Howard Stone, Terminals director.

PRAIRIE Grain Company at Lacon enjoyed the distinction of having the first barge load of grain moved into the Illinois Grain Terminals Company's 2½ million bushel elevator on the Calumet River in South Chicago.

The Terminals company took over operation of the former Irondale elevator on June 1. It was a memorable day for cooperative grain marketing and on hand to greet the first shipment were the following persons who are pictured below on the deck of the first barge. Left to right are: Fred Watts, manager, Havana River Grain Company; Howard Stone, president, Havana River Grain; L. L. Colvis, IAA marketing director; Robert Sayre, manager, Irondale elevator; Homer Curtiss, president, Illinois Grain Terminals; G. E. Metzger, IAA field secretary; Sam L. Hassell, manager, Illinois Grain Terminals; Chris Studley, Bureau county, Terminals director; G. H. Iftner, IAA grain marketing director and assistant to manager of Grain Terminals; Carl Pratt, manager of Prairie Grain Company; J. F. Holderman, secretary, Grain Terminals; Chris Diehl, Monroe, Grain Terminals director; Donald Kirkpatrick, IAA legal counsel; George Merker, assistant in IAA legal department; Charles Schmitt, president of Illinois Grain Corporation and member of Terminals board, and Harry Meloy, assistant in IAA legal department.

Not to be outdone by Prairie Grain, Havana River Grain shipped a carload of corn to Terminals. Left to right are IAA Field Secretary G. E. Metzger; Fred Watts, manager, Havana Grain, and Howard Stone, Terminals director.

PLAN NOW *for the* Sports Festival

☆ ☆ ☆

NEXT MONTH is Sports Festival time again so let's make it easier for the folks at your county Farm or Home Bureau office this year by signing up now for the events you are going to take part in.

The tenth annual Illinois Farm Sports Festival will be held Thursday and Friday, Aug. 25-26 at the University of Illinois in Urbana-Champaign. It is a big job for the men and women who are in charge of all details for this great event. You can make it quite a bit simpler for them by signing up at your Farm or Home Bureau office for individual or team play as soon as possible.

The Sports Festival was set up as a two-day period of fun, sportsmanship, and good clean play for Illinois farmers and their families. Unless you and your family take part it has very little value for you. Join the fun and you enjoy yourself and help your county Farm Bureau's final standing.

You don't have to be an expert. Let's take tug o' war for example. All you have to do is organize a tug o' war team. Pull on the rope a little bit and there you have added 80 points to your county total. Yes, you get 80 points just for taking part in the tug o' war contest.

You know how to play checkers, don't you? You know how to pitch horseshoes? You don't have to be an expert there either. You're probably better than a lot of the fellows you'll be playing against. But right off the bat Sports Festival Secretary Roy Johnson will chalk up participation points for your county when you take part. If you win or take second or third place your county will receive additional points.

It is suggested that a number of counties can lend color and excitement to their county fairs by holding their own or district elimination contests for the state Sports Festival. Several counties, like Champaign, Livingston, Iroquois, DeKalb, Kane, and others, hold their own Sports Festival and send the cream of their players to the state Festival.

This year's Sports Festival will be held along the same lines as in previous years. On hand to greet you for the two-day schedule of events which draws 25,000 spectators and 4,500 participants will be an impressive array of radio talent, orchestras, folk and square dancers, and the Illinois Rural Chorus of 300 voices.

The big Thursday night program of music, dancing, and entertainment promises to be better than ever. It is under the chairmanship of I. E. Parett of the IAA and Mary McKee of the University of Illinois. The program includes three separate events — entertainment for those who like to watch, square dancing for those who like it that way, and modern dancing for those who like the waltz and fox trot.

The bowling and volleyball tournaments were played off in late spring to avoid the possibility of hot weather in August.

The Festival gets underway at 9 a.m. Thursday when 150 or more softball teams square off for action. Softball is still the most popular sport, judging by the number of teams entered. Softball will be played by groups of all ages from 4-H'ers to men over 35. The hotly contested games usually draw big crowds.

One of the biggest attractions of the Festival is the finals for the state championship of the Illinois Farm Bureau Baseball League. Excitement is usually at fever pitch, the game is usually very close, and a big league brand of baseball is usually exhibited. Last year Will county defeated DeKalb for the title.

The folk festival, under Chairman E. H. Regnier of the University Extension Service, includes barber shop quartets, song leaders, county choruses, family singers, 4-H choruses, adult singers, junior singers, instrumental groups, novelty and rhythm bands, square dance bands, acrobatic and tap dancers, dialogues, skits, and stunts, and folk and square dancers.

Some of the event chairmen selected include tug o' war, Dick O'Dell, Piatt county; horseshoes, Dr. H. J. Snyder of the College of Agriculture and checkers, Frank Anderson, Ford county, and George Merker, IAA. Anderson is secretary of the Paxton Checker Club. Another member of the club, R. M. Mason, secretary of the Illinois Checker Association, has offered his services.

Trap Shoot — Aug. 12

THE Illinois Farm Bureau Trap and Skeet Shoot will be held Friday, Aug. 12 at the Mather Gun Club near the old airport on route 4 southwest of Springfield.

Like last year it is being held in advance of the Illinois Farm Sports Festival of which it is a part because of a conflict in dates with the All-American national shoot.

Both the trap and skeet shoot will include numerous classes of competition from a two brother team to a father and son or mother and daughter combination. Shooting will start at 8:30 a.m.

Warn of Dangers to

'Shackled Agriculture'

Farm Leaders Attack Brannan Plan Before Largest Crowd ever to attend a Midwest Farm Bureau Conference

"LET'S do a better job in Farm Bureau," was the theme of the 23rd annual Midwest Farm Bureau Training School held last month at Custer State Park in the Black Hills of South Dakota.

Also keynoting the meeting was the feeling expressed by Farm Bureau leaders that there is danger in depending too much on government to keep agriculture prosperous.

More than 2,300 farmers and farm women, and Farm Bureau organization and information men from 12 Midwestern states were present for the three-day sessions. It was the largest meeting in the history of the training school and more than double last year's attendance at St. Paul.

Sessions were held in the shadow of Mt. Rushmore where the likenesses of Washington, Jefferson, Theodore Roosevelt, and Lincoln are carved in the granite mountain-side.

"Farmers," said Ransom Aldrich, president of the Mississippi Farm Bureau and one of the principal speakers, "are too complacent." He suggested that Midwestern farmers in particular take a keener interest in federal legislation. He was of the opinion, however, that this was easier said than done, and that it required strong leadership and an extensive educational program to keep the membership well-informed.

Most of the Farm Bureau speakers were outspoken in their opposition to the Brannan farm plan which proposes to keep market prices high to farmers and food costs low to consumers. Mrs. Charles W. Sewell, administrative director of the Associated Women of the American Farm Bureau, dismissed the Brannan plan by saying "The only thing they forgot was to pass out tickets for this circus." She compared it with the cheap food, heavy taxation, and circuses which were contributing factors to the downfall of the Roman Empire.

Discussing the Brannan plan, Ray B. Wiser, president of the California Farm Bureau, said: "In no other country are farmers so free. Let us stay clear of the shackles of government. Let us be wary of the dangers that lie in sacrificing opportunity and freedom for imagined security."

Howard Hill, president of the Iowa Farm Bureau, spoke on the importance of good leadership in Farm Bureau. Quality, he said is more important than quantity. Leadership must be capable, optimistic in the belief that the job can be done, and well-informed. But regardless of the quality of leadership, Hill said, it will bog down without the support of the membership. He listed the faults of leadership which cause the greatest havoc to an organization as (1) lack of information (2) complacency, and (3) lethargy. He suggested that the leadership qualities of Farm Bureau women be used to a greater extent.

Hammering away at the importance of keeping the membership informed, Roger Fleming, director of the AFBF Washington office, said that unless farmers know the essential differences between a voluntary farm organization and government farm organizations like PMA, we are headed for trouble.

"Never apologize for Farm Bureau," was the advice of O. D. Brissenden, Illinois Agricultural Association organization director. "It has served the farmer and the nation well. Farm Bureau is of vital importance to farmers," he said "for four reasons: (1) it makes more efficient farmers, (2) develops farm leadership, (3) increases farm bargaining power, and (4) gives the farmer a voice in state and national policies affecting agriculture.

"Membership in Farm Bureau," Brissenden said, "has been easy to get in recent years but the time is at hand when it won't be so easy. So now is the time to get your membership to become a participating membership. Get them to take part in Farm Bureau affairs."

In his address of welcome, the governor of South Dakota, George Mickelson, praised the record of Farm Bureau and advised the farmers of the nation to "keep economic freedom for yourselves and others in our society." He said America needed Farm Bureau and that history has proven that "Farm Bureau is sound."

William P. Sandford, public speaking instructor from St. Louis and former employee of the IAA, demonstrated the technique of selling Farm Bureau membership by several methods.

The training school also included a conference of Midwest Farm Bureau presidents and secretaries which was attended by IAA President Charles B. Shuman and Vice President Floyd Morris.

Illinois county organization directors watch IAA assistant organization director Charles S. Mayfield (left) put up the Illinois exhibit at the Midwest Farm Bureau Training School at Custer, S. D. In front of stair is F. L. Rathbun, Mercer. Left to right, along rail are: Clifford Briggs, Logan; J. C. Hoyt, Tazewell; Jerry Blanchard, Christian; Meredith Johnson, Peoria; and Edward Sutter, Woodford. At back is O. H. Johnson, Montgomery.

MULTI-PURPOSE GREASE

BLUE SEAL

MASTER-LUBE

FOR SPEED-UP LUBRICATION

MASTER-LUBE GREASE, with its multi-purpose qualities, gives your farm equipment ONE-GUN greasing service. ONE lubricant replaces FOUR.

ONE-GUN LUBRICATION

FOR WHEEL BEARINGS: Great physical stability under pressure.

FOR WATER PUMPS: High water resistance. Will not emulsify on prolonged boiling with water.

FOR UNIVERSAL JOINTS: High melting point gives high heat resistance.

FOR CHASSIS: (car or farm equipment) Has high metal adhesion. Will not wipe away.

GIVES YOU THESE ADVANTAGES:

1. **GREATER CONVENIENCE**—one pail to open, one gun to fill.
2. **GREATER SAFETY**—less chance of using the wrong grease.
3. **THOROUGHLY TESTED**—used in our own fleet of 28 Heavy Duty Petroleum Transports that haul up to 8000 gallons of fuel per load and operate up to 24 hours per working day.
4. **LESS INVENTORY**—one pail of grease instead of four. Less storage space required. Less money tied up.

Here is the grease you should buy!

Credit Corporation Loans Available on Storage Bins

COMMODITY Credit Corporation will make loans to farmers up to 85 per cent of the cost of new storage bins, according to an announcement made by the U. S. Department of Agriculture on June 7.

Interest rate on the loans for building storage will be four per cent, a year and the loan may be paid back in five annual installments, or in a shorter time if the farmer wants to.

On June 1, the Production and Marketing Administration of the Department of Agriculture announced a corn resealing program. Under this program, farmers were offered 10 cents per bushel if they extended their loans on 1948-crop corn to mature July 31, 1950. Deadline on extending loans is Oct. 31, 1949. The same offer applies to corn covered by purchase agreements.

Under the original setup, loans on 1948-crop corn became due on Sept. 1, 1949. The new offer gives farmers the option of paying off loans at that time, delivering the corn to CCC, or, not later than Oct. 31, 1949, extending the loans to mature July 31, 1950.

As of May 1, Illinois farmers had on their farms 44,937,008 bushels of corn under loan and 22,608,354 bushels covered by purchase agreements.

On June 7 the Department of Agriculture also announced that in areas where wheat already has been harvested and where conditions permit outdoor storage, distress loans would be offered to farmers on wheat stored on the ground. Loans would be at 75 per cent of parity and the farmer is supposed to provide permanent storage within 90 days. The borrower will receive the full price support loan when permanent storage is provided.

A group of University of Illinois College of Agriculture students pose in front of the IAA building during a tour of the Chicago offices of the Illinois Agricultural Association.

Illinois Farm Supply Company's new towboat, the Illini, with its tow of six barges is shown on its maiden voyage to Kingston Mines from Louisiana. This tow carries about 2½ million gallons of fuel or twice the capacity of the two other IFS towboats combined. The elevator at right is the Havana River Grain Company elevator which is affiliated with the IAA's Illinois Grain Terminals Company.

Erik Smith

French Peterson

IAA Employs Staff Engineer, Ass't Comptroller

TWO recent additions to the staff of of the Illinois Agricultural Association have been announced by Charles B. Shuman, president. They are Erik Smith as staff engineer and French Peterson as assistant comptroller. Both men have excellent records in the business field and bring years of valuable experience to the IAA.

Smith has been working with the Illinois Grain Terminals Company and Illinois Farm Supply Company performing engineering service in connection with the physical properties of these two affiliates since he joined the IAA staff. He received his technical training in civil engineering at Lewis & Armour Institute, now known as Illinois Technological Institute.

Smith has worked for a number of construction companies including E. P. Strandberg Co., Lundoff-Bicknell Co., both of Chicago, and Walter Butler Co., of St. Paul and Washington. Among the building projects he has worked on are the Palmolive Building in Chicago and North Dakota Capitol building. Smith was vice-president of the E. P. Strandberg Co., when it built the present home of the Illinois Agricultural Association at 43 East Ohio Street, Chicago. Smith also was project engineer for the Huntsville Arsenal at Huntsville, Ala., and assistant project engineer for Camp Farragut in Idaho. He is married and has two children.

Peterson is a graduate of the University of Chicago with a degree from the School of Business. He has had more than 20 years of business experience including 11 years with a service company for a large number of operating utility companies. He served two years as comptroller of a steel fabricating and forging works. Peterson also worked in the management consulting field for some years. He is married and has three children. Both Peterson and Smith are living in Chicago.

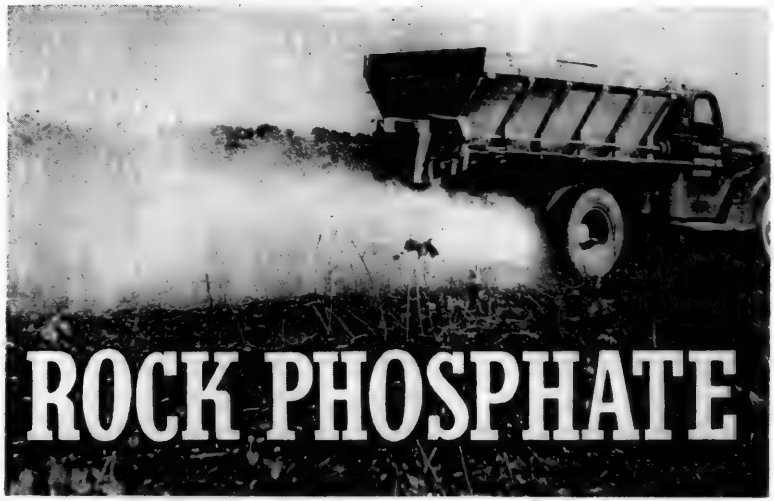
IMPROVE THE **FIELD**



WITH **ROCK PHOSPHATE**

NOW Spreader service makes it possible to have the phosphate applied wherever and whenever you wish.

NOW This service makes it possible to apply phosphate any time it is possible to get into the field without inconvenience to you.

NOW The cost is comparable to what you used to pay for bagged material at the trackside and to which you had to add your haulage and spreading costs.

3 Easy Steps
TO GREATER PRODUCTIVITY

1. Have Your Soil Tested to Determine Phosphate Deficiency.
2. Consult Your Farm Advisor for Recommended Application.
3. See Your Local Farm Bureau Service Company Manager or Salesman for Prices, Spread on Your Fields.

Rock Phosphate Also Available In Bagged Form

Field crops that have sufficient Phosphate, will —

- **MATURE FASTER**
- **HAVE GREATER RESISTANCE TO DISEASE**
- **GIVE GREATER YIELDS PER ACRE**

ILLINOIS FARM SUPPLY COMPANY

YOU CAN STILL Join The FLY-FREE Campaign

ILLINOIS' fly-free campaign is now rolling into high gear as reports from every section of the state indicate that farmers are using large quantities of fly-killing insecticides.

Because the United States Department of Agriculture cautioned against the use of DDT in dairy barns and on dairy cattle last spring, sales of DDT have dropped some over last year.

Sales of fly-killing insecticides are higher than ever, however, according to Illinois Farm Supply Company because of the use of substitutes for DDT on dairy cattle and in dairy barns. DDT should not be used on dairy cattle or in dairy barns. Special insecticides for this purpose are available.

DDT, however, is still the mainstay of the battle against flies. It can be used practically everywhere except where there is a possibility that it might be picked up by dairy cattle and given to humans in milk.

The important thing about this fly-free program is (1) that it wipes out a menace to the health of yourself, your neighbors, and your children, and (2) it is worth an average of about $75 in extra profits to the average farmer through extra production of milk and meat. Cows will give more milk and beef cattle will make faster gains. The common house fly is a known carrier of 20 human diseases.

There is still time to join the fly-free campaign which is under the sponsorship of the Illinois Agricultural Association, the University of Illinois College of Agriculture, the State Department of Public Health, and the Illinois Natural History Survey.

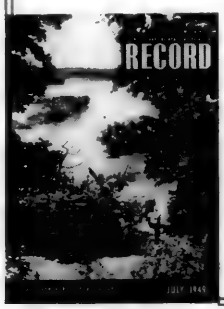
First of all, and most important in the opinion of Insect Specialist H. B. Petty of the Extension Service, is to follow a program of sanitation. Clean up all fly breeding places or spray them heavily with DDT. Haul manure and old straw out to the fields twice a week. Spray inside and outside wherever flies roost. Spray windows, screens, doors, ceilings, and walls. Spray trees under which cattle gather.

Dairy cattle should be sprayed once a week. Beef cattle should be sprayed once a month.

Petty says 75 per cent of a good fly-free program depends on good sanitation. George E. Metzger who has led the campaign for the Illinois Agricultural Association, points out that the rest of the job can be done with about $10 worth of spray materials and a little of your time.

You owe it to the health of your children to join the campaign. You have much to gain, nothing to lose. Let's start now! Clean up those fly breeding places and start squirting that spray gun!

FRONT COVER

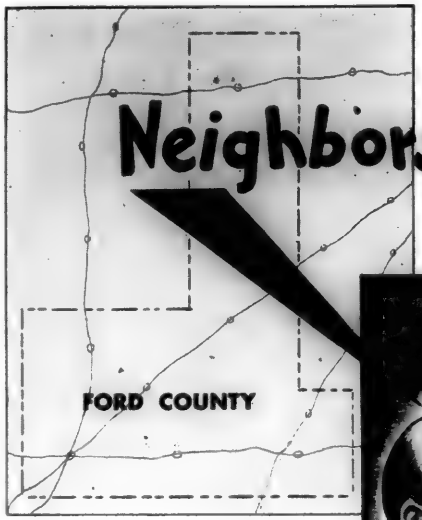


TWENTY-FIFTH in our series of picturesque and historic Illinois scenes is the Mississippi Palisades State Park in Carroll county. Like the Palisades on the Hudson river, this park in northwestern Illinois gets its name from the sheer cliffs which rise precipitously more than 150 feet above the Mississippi River. The rugged land in this area, none too common in Illinois, is considered by many to be the most beautiful countryside in the state. Farmlands can be seen for miles in all directions.

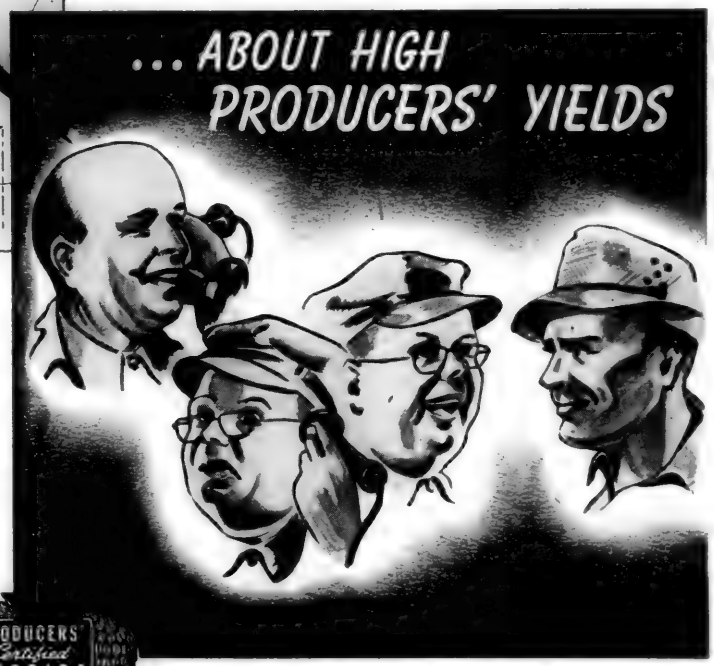
Plan Schools For C.O.D.'s

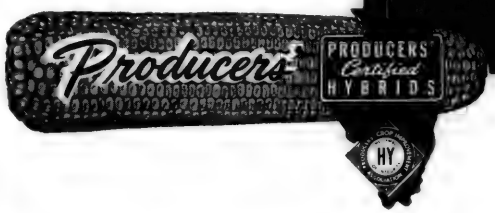
THE techniques involved in selling Farm Bureau to non-members will be studied by county organization directors at three two-day schools next month.

The courses in sales training will be given under the direction of the IAA organization department on Monday and Tuesday, Aug. 1-2 at Mt. Vernon, on Wednesday and Thursday, Aug. 3-4 at Champaign, and on Friday and Saturday, Aug. 5-6 at Galesburg.



Neighbors Here TALKED...





NOW 46%

OF FORD COUNTY IS PRODUCERS' PLANTED

Ford County is another Illinois county where Producers' Hybrids lead all others in acreage planted. That's because neighbors talked . . . about their high Producers' yields. One told another, and year after year more and more Producers' Hybrids seed has gone into Ford county soil. It's yield and yield alone that counts . . . . and each year more and more farmers are learning by experience to count on Producers' to produce. They're YIELD-PROVED. See your Producers' Hybrids dealer now.

Dairy Farmer For 60 Years

E. G. Britton Started Career As Grass Farmer Half a Century Ahead of a Modern Trend In Southern Illinois

E. G. Britton (right) shows Pulaski-Alexander Farm Adviser Les Broom the Master Farmer award he received from Prairie Farmer magazine in 1930.

SIXTY years ago a young man of 27 decided to become a dairy farmer. It wasn't something you could decide in a hurry. None of his neighbors were dairy farmers. The roads were bad and the market was uncertain.

But the day E. G. Britton started dairy farming in 1890, he was more than half a century ahead of a modern trend. Today a Pulaski-Alexander farmer switching from crop farming to pasture-dairy farming would get strong encouragement from Farm Adviser Les Broom.

"Some of my neighbors said I couldn't even raise pasture on these hills," Britton chuckled as he looked across his fields. "But about the turn of the century I read in a magazine about alfalfa so I decided to try it. Dr. Cyril G. Hopkins, University of Illinois agronomist, heard that I was growing alfalfa and came to the farm in 1903. He said it was as good as any he ever saw. In those days," Britton said, "I averaged about three tons of hay to the acre and cut it three times a year."

Britton had to deliver his milk himself to nearby Mounds. Making the rounds with a milk cart he rang a bell for customers, measured out the milk and poured it in the customer's containers. It sold for a nickel a quart or six quarts for a quarter.

By 1927 when the herd was at its peak of 60 cows milking, Britton was producing 180 gallons a day. Today the milk from 32 producing cows goes to the Prairie Farms Creamery at Carbondale, an IAA affiliate.

Britton has always been a strong believer in farm organization. He belonged to the Illinois Grange and is a charter member of the Pulaski-Alexander Farm Bureau. He also holds one of the original policies issued by Country Life Insurance Company, another IAA affiliate.

About 40 years ago Britton started liming his fields for better alfalfa production. Then he built a pair of silos. A silo in 1909 was an oddity in this neighborhood, he said. He grinned as he recalled how the neighbors came to see what he was doing. "Some of them told me not to waste my corn by putting it in silage. 'If you have to be foolish about it,' " he quoted them as saying, " 'go ahead and put your corn in one of those things, but don't put it in two of them.' "

He already had built a dairy barn on the place which is still in good condition. It is 36 feet wide and 154 feet long with a "T" extension 36 feet wide and 42 feet long. And he got all that for $5,000!

Britton received the Master Farmer award in 1930 from Prairie Farmer. The award was given to Britton as a good farmer, a good neighbor, and a good citizen. When Burridge Butler, late publisher of Prairie Farmer, made the award he jokingly told Britton: "I didn't think these hills could produce a really good farmer. But the book says you're the best so I'll have to admit it."

Like most farm women, 83-year-old Mrs. Britton has had a great deal to do with her husband's success as a farmer. Whenever he couldn't quite recall when he did something around half a century ago, Mrs. Britton supplied the answer. She seemed to know as much about the actual farming operations as Britton did himself.

Mr. Britton has gradually retired from operation of the farm which has grown from the 80 acres he started with to 373 acres now. During the war he worked hard because of the lack of help but in October 1943 a cow knocked him down and broke his leg. Since then he hasn't been able to do very much. A grandson, Miles Hartman, 32, manages the farm.

Mr. and Mrs. E. G. Britton are shown at their farm home near Mounds in Pulaski county after more than three score years of marriage.

During his long career as a farmer Britton has watched the changes in agriculture with a great deal of interest. He feels that agriculture has come a long way and that with machinery and science it has a great future full of opportunity for young men who are ready to try to improve what already has been done. He cautions, however, that the farmer cannot expect to accomplish much alone but must join with others to make his voice heard where it counts most. We older fellows helped build that organization," he said. "all you young men have to do now is support it. Keep it strong for the young farmers yet to come."

Struck by the beauty of a pair of collies the Cheathams saw in Ohio during their honeymoon they brought them home with them. Here Kenneth plays with them in his yard.

America's Star Farmer of 1948

Illinois Youth's Career Shows That Chief Ingredient Of Success on Show Grounds Is Hard Work and Plenty of It

"I DON'T think they believed it." America's outstanding young farmer laughed heartily as he recalled a visit to his farm by a group of young Future Farmers.

Their instructor had told the FFA boys they were about to visit the farm of Kenneth L. Cheatham, America's Star Farmer of 1948.

"I guess they expected to find everything in tip-top shape," the 19-year-old Bond county youth said, "but they came just after I moved here. Everything was run down. The buildings were badly in need of fixing and the driveway was covered with weeds.

"They looked at me a bit suspiciously when they left," he chuckled. "I guess they wondered if the judges in Kansas City really knew all the facts."

The boys would no doubt be startled at the changes in the farm near Smithsboro if they should visit it a year later because Cheatham appears to thrive best when there is plenty of work to be done. He joined the Bond County Farm Bureau early in his farming career and is a member of his township membership committee.

The youth who brought national renown to Illinois last November at the FFA convention in Kansas City grew up in Greenville and Alton and spent the summers on the farm of his grandparents, Mr. and Mrs. J. L. Cheatham of near Smithsboro. His parents separated and he went to live with his grandparents about the time he was attending high school. His father now runs a trucking concern at Greenville and his mother lives in Los Angeles.

Kenneth loved farm life and studied vocational agriculture with a great deal of enthusiasm. His first project was a purebred Ohio Improved Chester gilt which he bought with $20 he saved. The gilt farrowed 10 pigs. Five were gilts which he held back to start a purebred herd.

He started a system of records on the dairy herd of 14 Holsteins. Up before five every morning he milked the cows, went to school in Greenville and returned to start the milking again at 5 p.m. He had to give up high school athletics but played at night with an FFA basketball team which lost only three of 18 games played.

Grandad furnished the boy with the incentive he needed, supplying him with feed and occasionally one or two livestock for his work. He went through the four-year high school course in three years. In his sophomore year he bought a Brown Swiss cow and Grandfather Cheatham gave him four grade Holsteins for summer work.

By the end of his high school career when he was 16 years old Ken owned five cows, four heifer calves, and 16 bred gilts, all OIC purebreds. And that's not all. In his sophomore year he rented 40 acres to grow soybeans. Grasshoppers, however, took over and he had a crop failure. Only temporarily discouraged he bought 36 acres, planted 16 to soybeans and 20 to corn. The beans yielded 27 bushels to the acre and sold for $3.21 a bushel. The corn averaged 65 bushels. The land cost $75 an acre. He thinks it's worth $135 now.

In 1946 he decided to go to the Col-

COUNTRY *Mutual* FIRE *Company*

Testing plant foods at the East St. Louis fertilizer plant laboratory are James Seymour (left), chemist, and J. L. Barnes, process supervisor.

QUALITY FIRST!

Rigid Quality Controls Are Maintained on All Illinois Farm Supply Company Products By A Chain of Modern Laboratories

QUALITY is the keystone of success. Ask any customer. He'll tell you he buys the same product over and over again because he knows it will be the same fine product it was last week and the week before.

Illinois Farm Supply Company, the Illinois Agricultural Association's largest affiliate, has long known that Illinois farmers demand quality products. By setting up quality control laboratories Illinois Farm Supply has maintained and protected its high quality standards. The rapid expansion and success of Farm Supply in the past several years is proof of the importance of quality control.

Joining the chain of quality control laboratories at Farm Supply processing plants is the laboratory recently installed at the new fertilizer plant in East St. Louis.

This new laboratory is fully equipped with the finest apparatus needed in making accurate analysis tests on material for their nitrogen, phosphorous, and potash content. The men entrusted with this work are trained chemists.

The new lab at East St. Louis is one of five needed for a complete quality control program. The other four are the petroleum testing laboratories of the Pana Refinery, and the Premier Petroleum Company at Fort Worth, Tex., the feed testing laboratory at the Benton mill, and the new feed laboratory being set up at the new Mendota feed mill.

The new quality control program has been reorganized over the past year and has resulted from the need for expanded facilities to keep pace with Farm Supply's research and testing program.

For many years the quality control work on all products distributed by Farm Supply had been done at the Naperville laboratory. The functions of the Naperville laboratory were transferred to the other quality control centers in May.

Illinois Farm Supply Company is engaged in a wide scope of activities. In addition to distribution, purchasing and transportation, the organization is engaged in the manufacturing of feed and plant food, and the refining of petroleum products.

All activities are under capable supervision to provide Illinois Farm Bureau members with the best in service and the highest quality products to assure full value for money spent.

Experienced men are in charge of purchasing all raw materials used in the feed mills, fertilizer plants, and refineries. Experienced buyers also purchase paints, insecticides, weed killers, steel products, tires, and other automotive accessories.

Many Illinois farmers are feeding Blue Seal or Service Brand feeds. Others are using Grow Crop fertilizers on their crops. There is an interesting story of research and quality control behind the development of these products.

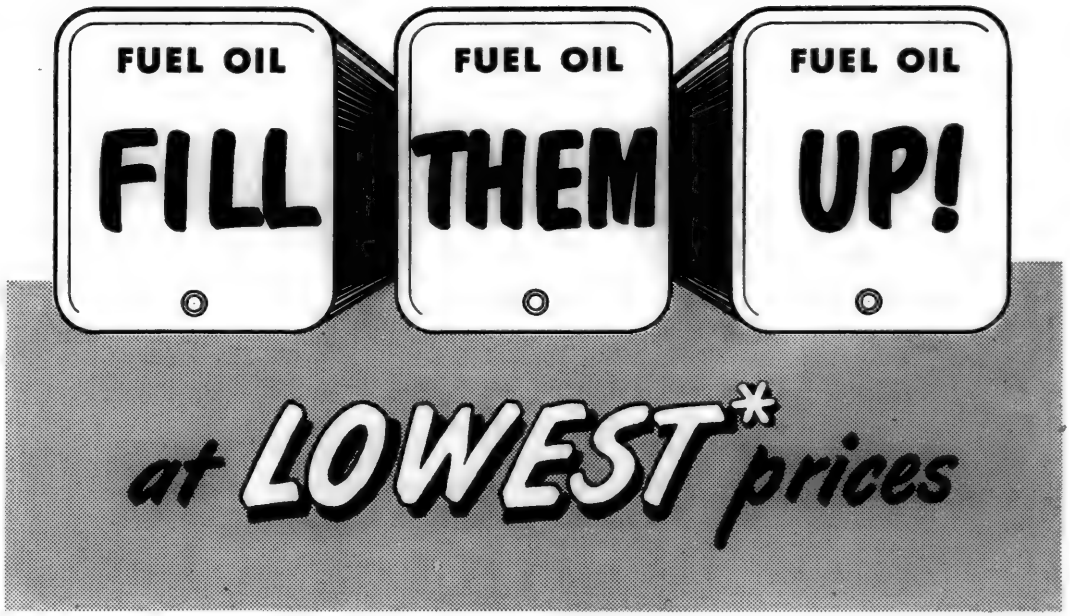
Committees from Illinois Farm Supply operating personnel, with staff members of the College of Agriculture, University of Illinois, acting in a consulting and advisory capacity, spent several years studying and experimenting with many kinds of ingredients and formulas before it was felt they had the best finished products of their kind. Hundreds of laboratory tests were made on raw materials and on experimental formulas.

From this work, Blue Seal and Service Brand feeds and Grow Crop fertilizers were developed. It was comprehensive, but it's this kind of work which makes it possible for Illinois Farm Supply Company and its member companies to offer the best in feeds and plant foods to Illinois Farmers.

The same program functions in the development of fuels, motor oils, greases, paints, tires, insecticides, and other products.

Thus Illinois Farm Supply Company emphasizes quality products for Illinois Farm Bureau members. This farmers' organization is constantly working towards making better feeds, plant foods, and petroleum products — products which farmers can use with the maximum of pocket-wise economy.

Left: Dale Greenwood runs a protein analysis test on Blue Seal feed at the Benton mill. Center: S. F. Graham (left) and C. Monti (right), petroleum chemists, talk over flash tests on fuels which they are conducting. Man in background is an unidentified laboratory worker. Right: An unidentified technician at the Fort Worth, Tex., laboratory runs through an oil test.



In the very near future, your Farm Bureau Service Company trucksalesman will be calling on you to discuss your heating oil needs for the coming fall and winter. He will suggest filling YOUR FUEL OIL STORAGE NOW and SIGNING A FUEL OIL CONTRACT.

HERE — are some of the things this service will mean to you:

1. Assure you the *lowest price**.
2. Avoid the rush season delay.
3. Ready your heating plant for instant use.
4. Protect you against moisture and corrosion formation in an empty tank.
5. Make delivery service to you more efficient.
6. Assure you of a dependable supply throughout the heating season.
7. Assure you of the highest quality fuel, backed by the reputation and integrity of your organization.

Make Every Week a Safe Week!

"GOING to try to get that little patch of weeds over yonder mowed before it gets dark. Got to get this mower off, so's I can hook up to the combine and get it going. That back forty of wheat will be ready tomorrow."

How many times have you said this, or heard it said? You rush all day every day during the summer to get what's got to be done, and then try to keep the place from looking like the weeds and termites have taken over. The Mrs. complains because you're always so tired when you get in. You work long hours, but you're making out, in fact, saving a little money, and the corn looks good. You think you're doing pretty good — you are, but . . .

What about that old ladder, with the broken rung you've been aimin' to fix? What about that penny you put in the fuse box and promised yourself to get a new fuse, then forgot about it? What about those 127 different things you are going to fix when it rains? You have lowered your guard, haven't you? You're trusting luck will keep your name off the hospital list.

Can you afford this? Accidents can be prevented. A little prevention is worth all the doctor and hospital bills you can afford, to say nothing of the lost time while you're "out".

The President of the United States has asked you to observe National Farm Safety Week, July 24-30. We ask you and warn you to be especially careful during the coming weeks. MAKE EVERY WEEK A SAFE WEEK.

Illinois Broom Corn is Best

IF YOU talk to certain farmers in Coles county about corn, you'll have to specify what kind of corn you mean. They speak of broom corn and Indian corn.

Many of the older farmers speak of broom corn with a great deal of respect. "It has paid for a good many Coles county farms," they will tell you. Coles at one time was the leading broom corn county in the nation.

J. I. Weddle, Mattoon farmer, who grows broom corn says, "It's still a good cash crop, although last year the Indian corn growers had a little edge on me".

Weddle estimates his crop yielded 300 pounds an acre, selling for at least 20 cents a pound. He grows the White Italian variety.

Growing it differs little from growing Indian corn, Weddle says. Corn is drilled about 90 seeds to a rod on well-prepared seed beds. It is cultivated two or three times like seed corn.

It is cut when the seeds are in the dough by hired crews of men who break the corn over, crossing the stalks from two rows, to form a table. A table is two rows, 80 rods long. The seeds are not saved.

The tassels or brooms are then removed and loaded on a wagon. A cutter can cut an average of four tables a day and is paid $5 a table. It is hard work.

Why have broom corn acreages dropped? "It's a good money crop," Harry Edwards, a Mattoon buyer said recently. "But it's a big labor crop, too. Farmers here have made enough money with Indian corn so they don't bother with broom."

(*Continued on page* 25)

Noble Jackson shows how broom corn is harvested. Stalks are bent, crossed to form "table." Then tassels are cut off.

Brooms are then dried in open shed after seeds are removed. This shed is in Coles county, once broom corn center of nation.

Farm Operater Weddle, right, and Jackson hold "about a dollar's worth" of brooms almost dry enough to bale for market.

FULLY DEVELOPED
PROFITS

HIGH EGG PRODUCTION

High egg production in the laying flock depends upon the condition and development of the pullets as they enter the laying period.

Give your pullets every advantage!

1. GOOD GROWING CONDITIONS

Plenty of floor space in well-lighted, well-ventilated, sanitary quarters with easy access to good clean range is a must in good flock management. Provide 3 to 4 square feet of floor space per bird.

2. GOOD FEEDING CONDITIONS

Plenty of feeding space (24 ft. per 100 birds), and sufficient watering space (5 feet per 100 birds), is required to develop healthy, vigorous pullets.

3. GOOD FEED

Farm grains alone do not supply a complete ration for growing pullets. BLUE SEAL and SERVICE BRAND FEEDS contain all necessary ingredients for supplementing farm grains. They have: BALANCED PROTEINS — ALL NECESSARY VITAMINS — ALL NECESSARY MINERALS.

Feed them BLUE SEAL

Make Every Week a Safe Week!

"GOING to try to get that little patch of weeds over yonder mowed before it gets dark. Got to get this mower off, so's I can hook up to the combine and get it going. That back forty of wheat will be ready tomorrow."

How many times have you said this, or heard it said? You rush all day every day during the summer to get what's got to be done, and then try to keep the place from looking like the weeds and termites have taken over. The Mrs. complains because you're always so tired when you get in. You work long hours, but you're making out, in fact, saving a little money, and the corn looks good. You think you're doing pretty good — you are, but . . .

What about that old ladder, with the broken rung you've been aimin' to fix? What about that penny you put in the fuse box and promised yourself to get a new fuse, then forgot about it? What about those 127 different things you are going to fix when it rains? You have lowered your guard, haven't you? You're trusting luck will keep your name off the hospital list.

Can you afford this? Accidents can be prevented. A little prevention is worth all the doctor and hospital bills you can afford, to say nothing of the lost time while you're "out".

The President of the United States has asked you to observe National Farm Safety Week, July 24-30. We ask you and warn you to be especially careful during the coming weeks. MAKE EVERY WEEK A SAFE WEEK.

IF YOU talk to certain farmers in Coles county about corn, you'll have to specify what kind of corn you mean. They speak of broom corn and Indian corn.

Many of the older farmers speak of broom corn with a great deal of respect. It has paid for a good many Coles county farms," they will tell you. Coles at one time was the leading broom corn county in the nation.

J. I. Weddle, Mattoon farmer, who grows broom corn says, "It's still a good cash crop, although last year the Indian corn growers had a little edge on me".

Weddle estimates his crop yielded 300 pounds an acre, selling for at least 20 cents a pound. He grows the White Italian variety.

Growing it differs little from growing Indian corn, Weddle says. Corn is drilled about 90 seeds to a rod on well-prepared seed beds. It is cultivated two or three times like seed corn.

It is cut when the seeds are in the dough by hired crews of men who break the corn over, crossing the stalks from two rows, to form a table. A table is two rows, 80 rods long. The seeds are not saved.

The tassels or brooms are then removed and loaded on a wagon. A cutter can cut an average of four tables a day and is paid $5 a table. It is hard work.

Why have broom corn acreages dropped? "It's a good money crop," Harry Edwards, a Mattoon buyer said recently. "But it's a big labor crop, too. Farmers here have made enough money with Indian corn so they don't bother with broom."

It Pays to Advertise!

AS YOU drive east on Highway 20 along the approaches to Terrapin Ridge near Elizabeth in Jo Daviess county you see a large outdoor advertising sign.

The sign is painted on the well-kept barn of Adolph Krug, and it doesn't advertise tobacco, tonic, or beer. In big, clear letters it acquaints the motorists with a farmer's organization. It tells the public they are nearing Elizabeth, home office of the Jo Daviess County Farm Bureau.

Folks in that part of the country know the sign well—and speak of the Krug farm as "that one with the Farm Bureau sign on the barn". It has done a good job of acquainting the public with the name of Farm Bureau.

Krug offered the space to the Farm Bureau in Jo Daviess county soon after he moved to the farm in 1936. Adolph believes in the Farm Bureau movement and this was his way of demonstrating his convictions. He accepts no pay for the space.

This is the 25th year Krug has been a Farm Bureau member. He joined in 1924, the year he started farming.

Krug believes in the value of organization and said the turning point for farmers came with the enactment of the AAA in the early '30's. Always a hard working and conscientious farmer, he nevertheless had to give up the farm he had purchased when the depression hit.

"The low point for me came in about 1932 when a dandy 160 pound pig I had shipped was thrown out as worthless because it didn't weigh up to 200 pounds."

The Farm Bureau, he said, through its legislative efforts helped him back on the road to financial recovery.

He purchased the farm he now operates in 1936. It consists of 94 acres. He and his son rent about 80 acres and do custom work for neighbors.

By central Illinois standards, the Krug farm is extremely hilly. Yet by careful management and long rotations Krug is able to maintain a high-producing herd of 20 Brown Swiss dairy cows and feeds out 100-150 hogs each year.

The neat, trim farmstead tells without words the story of a successful and careful farmer, and the sign on Krug's barn shows that he knows it takes more than one man's effort to maintain the farmer's prosperity. He believes in the power of organization.

Prairie Farms Wins Butter Making Prize

J. W. FELSCH, manager of the Prairie Farms Creamery of Bloomington, has been named champion out-of-state buttermaker in the Minnesota Creamery Operators' annual contest at St. Paul.

According to a report received from St. Paul, the Bloomington plant's butter scored 98.76, indicating careful workmanship, accurate attention to details, and skill.

Felsch gave credit to Harry Lash, plant buttermaker, for winning the award. The 20-pound sample entered in the contest was taken from a regular 2000 pound churning of butter turned out by Lash.

The Bloomington plant during mid-June was producing 10,000 pounds of butter daily, according to Felsch.

Hundreds of livestock men and their families inspected the new marketing facilities of the Henry County Marketing Association on route 81 just east of Cambridge on the opening day May 28.

Ansel Nesbitt, left, manager of the Whiteside Marketing Association, congratulates Manager Emory Gregory of the Henry Association. Both county groups are units of the Illinois Livestock Marketing Association which is now operating in 20 counties. The association shows a gain of 33 per cent so far this year over last.

PICTURE OF THE MONTH WINNER

This picture entitled "Sleepy Time" by Mrs. Herschel Gallagher of Georgetown in Vermilion county wins the Farm Bureau Page in Pictures $5 award for the best picture of the month. The picture was taken on the Gallagher farm and is a lucky shot to get two dogs yawning at the same time.

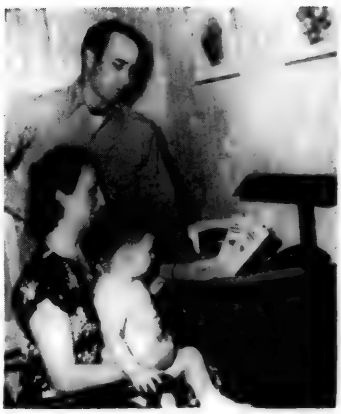
Country Life Insurance Policy Pleases War Bride

MRS. GEORGETTE VAUGHAN took an important step recently in the process of becoming an American when she signed an application for Country Life insurance.

Mrs. Vaughan's policy gives the family of three complete Country Life coverage according to General Agent Clare Grube of Logan county. The Belgian war bride of Everett Vaughan, Logan county farmer, said she wanted to become a complete American when she came to the U. S. Since she had no life insurance in Belgium she adopted an old American custom by taking out the Country Life policy.

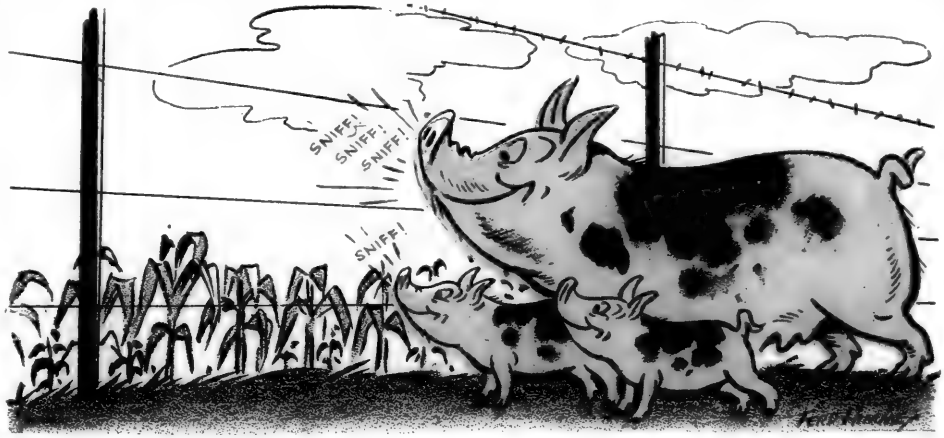
Vaughan met his wife in Ghent during the war. He farms 320 acres and is also covered by IAA fire, hail, and auto insurance. The Vaughans are the parents of a son, Ronald, 2.

The average size of farms in Illinois is 145.4 acres.



The Everett Vaughan family of Logan county becomes a 100 per cent Country Life family with Mrs. Vaughan, a Belgian war bride, signing for a policy. Mrs. Vaughan said women and children are not allowed to carry life insurance in Belgium.

For horses barley should be coarsely ground or crushed, as the grains are too hard and small to be properly masticated.



"THERE it is kiddies—Snoot High, Fourth of July! The tastiest corn you'll ever sink a tusk into.

Yep! It's a pretty safe bet that you'll be big fat hogs just like your mother in a few months.

How can you miss with such a good Boss! He gives you good feed, good quarters, sanitation and vaccination with that wonderful FARM BUREAU SERUM. How can you lose? How can the Boss lose?"

Rural Youth VISIT S. Dakota

By ELLSWORTH D. LYON, Director
Young Peoples Activities

BEAUTIFUL landscapes and growing crops were not the only vivid impressions reported by Illinois Rural Youth state committee members from their trip to the Midwest Farm Bureau Training School at Custer, S. D.

Rural Youthers attending from Illinois were three members of the state committee: Janet Jacobsen, Bureau; Doreen Marti, Bond, also on national committee; Bob Sievers, Rock Island, and Ruth Huser, Tazewell, on state and national committees in 1948.

Evidence of soil erosion drew many comments from the Rural Youthers. Good soil practices and land use were seen along the way, but the problem of soil erosion viewed was so great that members said it ought to be stressed in the IAA Record Rural Youth page.

Ditches, sheet erosion on sloping land, and layers of fine, black, rich silt loam soil piled in low areas were unforgettable evidence of neglect noted.

"Why," the young people asked, "do farmers let this process of erosion go on? Why do they keep these square fields? Why do they plow up and down the hills?"

In some areas there was no conscious effort at soil conservation. In some fields farther on there were grass waterways only, with the same square fields and equal disregard of contouring and strip cropping. One feature causing much comment from the young people was a plowed field (not on the contour) having a long hill with a ravine running down through it. In the ravine was a series of dams. Each dam contained water and much silt.

"Well, that's a beginning," Bob said, "but it doesn't go far enough. If that farmer had only plowed on the contour, the dams would help."

A frequent occurrence was to come upon deposits of rich soil on the highway pavement. In some spots the shoulders are higher than the pavement because of the deposits from fields and because of the transfer of the silt from the pavement to the roadside by highway workers. Easy to see was the elevation of piled up shifted soil above fences, while below the fence there is a drop of from one to three feet.

"Look at that river," came from the rear seat. Janet's close observation caught this sight. We looked. The edge of the muddy river bed was a deep deposit of topsoil from areas which could not afford to lose it.

A soybean field with rows pointing directly up the hill had lost a big load of its never-to-be-regained topsoil to let it go down to the foot of the hill near the highway. Here some of it was held by a rapidly flowing side ditch where it had settled to form a steep, sloping edge.

One of the conclusions reached by the young people as to the cause of so much erosion was that there had been a recent heavy rain and the farmers were not prepared for it.

"But," they asked, "why were they not prepared for it? Were they thinking only of getting money and not of putting something back into the soil?"

Ruth asked, "Can't a farmer see what is happening to his land when he looks at gullies, soil shifted down to pile up against fences, and the soil deposits in the lowland?"

Doreen wondered what will happen to future generations if erosion continues as we saw it. We talked of lower farm incomes which will result and must now actually be a fact. We discussed the problems of poor teeth, impaired health, lowering of standards of living and of civilization itself being endangered. We all felt sorry for the farm family so careless or uninformed of good farming practices as to permit the processes of erosion to rob this and future generations.

We discussed what Rural Youth can do about the problem. Our group feels that Rural Youth will really change this whole problem before it is too late. "Let's study soil conservation more in the future."

At The Farm Bureau Conference, Illinois Rural Youthers were soon absorbed into the group of around 300 farm youths from the Midwest. O. D. Brissenden, IAA organization director, gave the keynote address before the Youth Conference, speaking upon the theme, "Community Service as a Rural Youth Goal." He led the discussion on such important

IAA Organization Director O. D. Brissenden (left) answers questions on Farm Bureau put to him by six Rural Youthers during Midwest Farm Bureau Training School held at Custer, S. D., last month. RURAL YOUTH ...

(*Continued from preceding page*)

goals as soil conservation, road improvement, rural school reorganization to meet community needs, service to Farm and Home Bureau, and rural and health programs. Following the address in which the young people were challenged to feel responsibility, to look for responsibility, and to find ways of carrying responsibility, a number of small discussion groups were formed to discuss definitely the ways in which Rural Youth can become effective in community building.

STAR FARMER ...

(*Continued from page* 13)

lege of Agriculture at the University of Illinois. He turned his five cows over to his grandfather, sold his crops and nearly 100 purebred OIC's. He kept one boar for a herd he hoped to build. One of the gilts he sold brought $200.

At the University Cheatham washed dishes at a fraternity and worked at a filling station. He joined the Naval Reserve Officers Training Corps. At the same time he was secretary of Illinois FFA, a member of the Agricultural Club, Hoof and Horn Club, Agricultural Education Club and the naval rifle team. "And he still found time to write me every night," his youthful wife reminded.

An old back injury made Grandad unable to work and unable to carry on. He told Ken that he would either have to come home or he would have to make other arrangements on the farm. Young Cheatham dropped his college career after a year and a half and entered into partnership with his grandfather on the 260-acre farm.

Last July when both were 18 Kenneth and June Hunter, daughter of a neighboring farmer, were married at the Greenville Baptist Church. The crowd that came for the wedding was so great that many of them couldn't get inside for the ceremony.

Among the wedding presents was a flock of 82 pullets given to June by her mother. June had poultry as a 4-H project while in school.

Kenneth and June moved into an old house on part of his grandfather's land which Kenneth has taken an option to buy. The young couple went to work on the seven room house immediately and installed a modern kitchen, furnace and bathroom. "Just wait till we finish using paint on this old place, cut away these bushes, trim these old trees, and put in a new driveway. We'll show you," Kenneth said.

Last year Kenneth and his grandfather had 30 acres in corn (yield 64 bu.); 35 in wheat (30 bu.); 35 in oats (40 bu.); and 35 in beans (25 bu.). They had 55 acres in hay, red clover, timothy and alfalfa mixed. Under a soil conservation plan being put into practice, fields are being rearranged, a new cropping system developed, and a field of 30 acres is being terraced and seeded to alfalfa.

Kenneth is milking 16 cows and selling grade A milk in St. Louis. He and his grandfather are feeding 60 crossbred pigs. Young Cheatham bought several purebred Hampshire gilts and crossed them with a purebred Duroc boar. He appears to have a knack for raising good quality hogs since the days when as a mere youngster he took the sow championship seven times at eight county fairs and once had the junior champion sow at the state fair.

Both Kenneth and June belonged to Rural Youth until their marriage. In 1945 at the IAA annual meeting in Chicago, Kenneth was adjudged a Topnotch speaker in the annual Rural Youth public speaking contest.

He was secretary of his local FFA chapter and lost the presidency at the flip of a coin on a tie vote. He served as state secretary-treasurer and in 1947 was elected state president. At high school he was president of the student council.

At present he is a director of the Bond County Fair Association and secretary-treasurer of the Bond County Swine Breeders' Association.

From his short career as a farmer it is evident Kenneth will be a success in farming. More than that, he has the ability to do something for the general welfare of agriculture as a farm leader. Only the future can unfold his final record of accomplishment. It is hoped he always will be a good farmer. Illinois needs more youth on its farms like Kenneth Cheatham for the good of agriculture in general.

Whether studying new farm methods or chopping wood, Cheatham puts lots of energy into his work.

IAA Trippers Plan Potluck Picnic Aug. 21

A GROUP of Farm Bureau people are looking forward to Aug. 21 when they will come from all over the state to Miller Park at Bloomington, Ill., for a picnic.

The group call themselves the IAA Trippers and are Farm Bureau folks and families who attended either the IAA-sponsored western tour to the AFBF convention in San Francisco in 1946 or the IAA-sponsored eastern and southern tours in 1948.

The picnic will be potluck with everyone requested to bring his own basket. Chairman of the event is Adrian L. Phillips of Tuscola.

Broom Corn . . .

(*Continued from page* 18)

The broom center has moved west to Baca county, Colorado, Edwards says. Baca county lies in the southeastern part of the state, in the center of the dust bowl.

He says broom corn does well in that drier county since the plants need less moisture than Indian corn. Labor costs are lower, also. He says, however, that Illinois grows the best broom — tough, well bristled, and light green in color.

It looks now like Baca will keep its crown, taken from broom centers like Mattoon. At least as long as they have rain in the dust bowl.

LaRue Sauers, right, assistant manager of Illinois Livestock Marketing Association, presents a fine carving set to James Robinson, Tazewell county, winner in hog judging held at the U. of I. College of Agriculture. Presentation was made at the All-Ag banquet at the University May 17.

By ELLSWORTH D. LYON, Director
Young Peoples Activities

BEAUTIFUL landscapes and growing crops were not the only vivid impressions reported by Illinois Rural Youth state committee members from their trip to the Midwest Farm Bureau Training School at Custer, S. D.

Rural Youthers attending from Illinois were three members of the state committee: Janet Jacobsen, Bureau; Doreen Marti, Bond, also on national committee; Bob Sievers, Rock Island, and Ruth Huser, Tazewell, on state and national committees in 1948.

Evidence of soil erosion drew many comments from the Rural Youthers. Good soil practices and land use were seen along the way, but the problem of soil erosion viewed was so great that members said it ought to be stressed in the IAA Record Rural Youth page.

Ditches, sheet erosion on sloping land, and layers of fine, black, rich silt loam soil piled in low areas were unforgettable evidence of neglect noted.

"Why," the young people asked, "do farmers let this process of erosion go on? Why do they keep these square fields? Why do they plow up and down the hills?"

In some areas there was no conscious effort at soil conservation. In some fields farther on there were grass waterways only, with the same square fields and equal disregard of contouring and strip cropping. One feature causing much comment from the young people was a plowed field (not on the contour) having a long hill with a ravine running down through it. In the ravine was a series of dams. Each dam contained water and much silt.

"Well, that's a beginning," Bob said, "but it doesn't go far enough. If that farmer had only plowed on the contour, the dams would help."

A frequent occurrence was to come upon deposits of rich soil on the highway pavement. In some spots the shoulders are higher than the pavement because of the deposits from fields and because of the transfer of the silt from the pavement to the roadside by highway workers. Easy to see was the elevation of piled up shifted soil above fences, while below the fence there is a drop of from one to three feet.

"Look at that river," came from the rear seat. Janet's close observation caught this sight. We looked. The edge of the muddy river bed was a deep deposit of topsoil from areas which could not afford to lose it.

A soybean field with rows pointing directly up the hill had lost a big load of its never-to-be-regained topsoil to let it go down to the foot of the hill near the highway. Here some of it was held by a rapidly flowing side ditch where it had settled to form a steep, sloping edge.

One of the conclusions reached by the young people as to the cause of so much erosion was that there had been a recent heavy rain and the farmers were not prepared for it.

"But," they asked, "why were they not prepared for it? Were they thinking only of getting money and not of putting something back into the soil?"

Ruth asked, "Can't a farmer see what is happening to his land when he looks at gullies, soil shifted down to pile up against fences, and the soil deposits in the lowland?"

Doreen wondered what will happen to future generations if erosion continues as we saw it. We talked of lower farm incomes which will result and must now actually be a fact. We discussed the problems of poor teeth, impaired health, lowering of standards of living and of civilization itself being endangered. We all felt sorry for the farm family so careless or uninformed of good farming practices as to permit the processes of erosion to rob this and future generations.

We discussed what Rural Youth can do about the problem. Our group feels that Rural Youth will really change this whole problem before it is too late. "Let's study soil conservation more in the future."

At The Farm Bureau Conference, Illinois Rural Youthers were soon absorbed into the group of around 300 farm youths from the Midwest. O. D. Brissenden, IAA organization director, gave the keynote address before the Youth Conference, speaking upon the theme, "Community Service as a Rural Youth Goal." He led the discussion on such important

IAA Organization Director O. D. Brissenden (left) answers questions on Farm Bureau put to him by six Rural Youthers during Midwest Farm Bureau Training School held at Custer, S. D., last month. Left to right, facing camera: Bob Sievers, Rock Island county, Illinois; Darwin Jessen, South Dakota; and Neva Crane, Indiana. Facing Brissenden, are Eugene H. Bohne, Wisconsin; Alice Feusse, Michigan; and Lucy Johnson, Iowa.

Bob Sievers, Rock Island county, points to a flagrant example of soil erosion where black topsoil has been washed down from a soybean field in Iowa. Sievers was en route to the Midwest Farm Bureau Training School at Custer, S. D.

RURAL YOUTH ...

goals as soil conservation, road improvement, rural school reorganization to meet community needs, service to Farm and Home Bureau, and rural and health programs. Following the address in which the young people were challenged to feel responsibility, to look for responsibility, and to find ways of carrying responsibility, a number of small discussion groups were formed to discuss definitely the ways in which Rural Youth can become effective in community building.

Whether studying new farm methods or chopping wood, Cheatham puts lots of energy into his work.

STAR FARMER ...

(*Continued from page 18*)

lege of Agriculture at the University of Illinois. He turned his five cows over to his grandfather, sold his crops and nearly 100 purebred OIC's. He kept one boar for a herd he hoped to build. One of the gilts he sold brought $200.

At the University Cheatham washed dishes at a fraternity and worked at a filling station. He joined the Naval Reserve Officers Training Corps. At the same time he was secretary of Illinois FFA, a member of the Agricultural Club, Hoof and Horn Club, Agricultural Education Club and the naval rifle team. "And he still found time to write me every night," his youthful wife reminded.

An old back injury made Grandad unable to work and unable to carry on. He told Ken that he would either have to come home or he would have to make other arrangements on the farm. Young Cheatham dropped his college career after a year and a half and entered into partnership with his grandfather on the 260-acre farm.

Last July when both were 18 Kenneth and June Hunter, daughter of a neighboring farmer, were married at the Greenville Baptist Church. The crowd that came for the wedding was so great that many of them couldn't get inside for the ceremony.

Among the wedding presents was a flock of 82 pullets given to June by her mother. June had poultry as a 4-H project while in school.

Kenneth and June moved into an old house on part of his grandfather's land which Kenneth has taken an option to buy. The young couple went to work on the seven room house immediately and installed a modern kitchen, furnace and bathroom. "Just wait till we finish using paint on this old place, cut away these bushes, trim these old trees, and put in a new driveway. We'll show you," Kenneth said.

Last year Kenneth and his grandfather had 30 acres in corn (yield 64 bu.), 35 in wheat (30 bu.); 35 in oats (40 bu.), and 35 in beans (25 bu.). They had 55 acres in hay, red clover, timothy and alfalfa mixed. Under a soil conservation plan being put into practice, fields are being rearranged, a new cropping system developed, and a field of 30 acres is being terraced and seeded to alfalfa.

Kenneth is milking 16 cows and selling grade A milk in St. Louis. He and his grandfather are feeding 60 crossbred pigs. Young Cheatham bought several purebred Hampshire gilts and crossed them with a purebred Duroc boar. He appears to have a knack for raising good quality hogs since the days when as a mere youngster he took the sow championship seven times at eight county fairs and once had the junior champion sow at the state fair.

Both Kenneth and June belonged to Rural Youth until their marriage. In 1945 at the IAA annual meeting in Chicago, Kenneth was adjudged a Topnotch speaker in the annual Rural Youth public speaking contest.

He was secretary of his local FFA chapter and lost the presidency at the flip of a coin on a tie vote. He served as state secretary-treasurer and in 1947 was elected state president. At high school he was president of the student council.

At present he is a director of the Bond County Fair Association and secretary-treasurer of the Bond County Swine Breeders' Association.

From his short career as a farmer it is evident Kenneth will be a success in farming. More than that, he has the ability to do something for the general welfare of agriculture as a farm leader. Only the future can unfold his final record of accomplishment. It is hoped he always will be a good farmer. Illinois needs more youth on its farms like Kenneth Cheatham for the good of agriculture in general.

IAA Trippers Plan Potluck Picnic Aug. 21

A GROUP of Farm Bureau people are looking forward to Aug. 21 when they will come from all over the state to Miller Park at Bloomington, Ill., for a picnic.

The group call themselves the IAA Trippers and are Farm Bureau folks and families who attended either the IAA-sponsored western tour to the AFBF convention in San Francisco in 1946 or the IAA-sponsored eastern and southern tours in 1948.

The picnic will be potluck with everyone requested to bring his own basket. Chairman of the event is Adrian L. Phillips of Tuscola.

Broom Corn . . .

(Continued from page 24)

The broom center has moved west to Baca county, Colorado, Edwards says. Baca county lies in the southeastern part of the state, in the center of the dust bowl.

He says broom corn does well in the drier county since the fibers need less moisture than Indian corn. Labor costs are lower, also. He says, however, that Illinois grows the best brooms, tough, well bristled, and light straw in color.

It looks now like Baca will keep its crown, taken from broom centers like Mattoon. At least as long as it doesn't have rain in the skies. Fowl.

LaRue Sauers, right, assistant manager of Illinois Livestock Marketing Association, presents a fine carving set to James Robinson, Tazewell county, winner in hog judging held at the U. of I. College of Agriculture. Presentation was made at the All-Ag banquet at the University May 17.

IT'S HERE!

The NEW-Lead-free WHITE HOUSE PAINT

FOR HOMES AND FARM BUILDINGS

A completely new product in the Soyoil Line!

This new lead-free white house paint is the result of more than 10 years of experience and research with fume-resistant, lead-free paints. For more than 10 years our fume-resistant paints have been used with full satisfaction on houses and on farm buildings in coal mining and factory areas, and on our own petroleum bulk storage tanks.

We now take pride in announcing a NEW, LEAD-FREE WHITE HOUSE PAINT which incorporates all the improvements of the last 10 years.

No. 6 White House Paint will give you:

- EXCEPTIONAL WHITENESS. **Full measure of high quality white pigments produce a white surface that stays white.**
- SELF CLEANING. **Controlled chalking keeps the surface clean and white.**
- FUME-RESISTANCE. **Contains no lead to be discolored by fumes and smoke.**
- RESISTANCE TO CHECKING and CRACKING. **Its tough but elastic film resists checking and cracking.**
- SURPRISING ECONOMY. **Elimination of the expensive lead pigment reduces the cost.**

Your Auto Policy is

WORTH MORE NOW

NOW your Country Mutual Casualty automobile policy is a bigger value than ever. Read these new benefits which can apply to your policy now in force. See your insurance representative in your Farm Bureau office for complete details.

Standard limits of public liability protection are increased from $5,000.00/$10,000.00 to $10,000.00/$20,000.00. This applies to all policies in force with public liability and property damage coverage on July 1, 1949.

Comprehensive coverage is now available upon application. This will apply to pleasure cars less than five years old. Fire, wind and theft will still be available for all vehicles of all ages.

Medical expense benefits will be increased from $300 to $500, and time limit for receiving such benefits extended from 6 months to 12 months from date of accident. Coverage will apply to the named insured, his spouse, and dependents under 21, living at home, while riding in any PLEASURE CAR.

The expanded coverages under Public Liability and Medical Reimbursements are offered at no additional cost. All other new benefits offered will be available at the usual low rates.

Transfer period on a newly purchased motor vehicle is extended from 10 days to 30 days from date of delivery.

CHICKEN Every SUNDAY

He's the envy of a million kids in town (though he probably doesn't know it). He's the guy with a pony to ride, and trees to climb, and a dog, and a calf named "Blackie" — and chicken every Sunday if he wants it. Even his blue jeans are the newest thing in styles for city small fry.

It may be a few years before this little fellow realizes how lucky he is. But he will know, for farming with each passing year is becoming a finer, fuller life. That's because you, through your Farm Bureau, are insisting that it must be.

THE STATE FARM BUREAU PUBLICATION

An Adequate Diet

By Charles B. Shuman
President, Illinois Agricultural Association

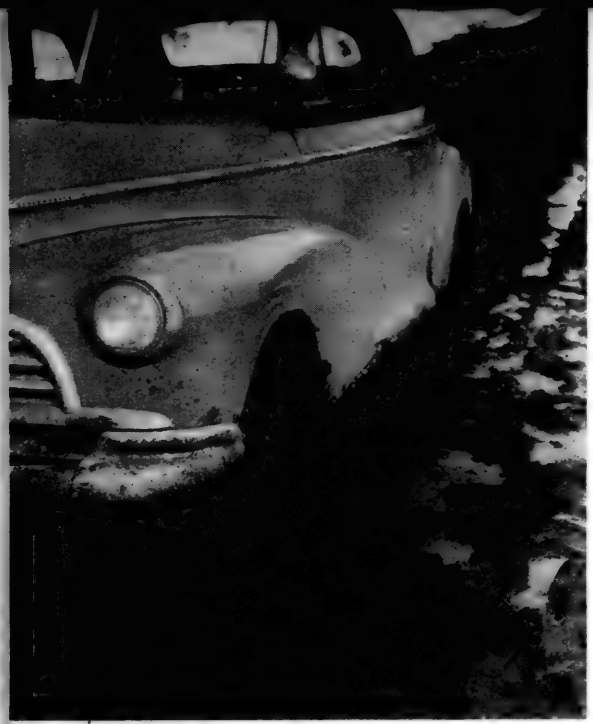
AS DISTRESSING surpluses of food products pile up on our American farms and in government warehouses, it is natural that farmers should once again inquire into the cause of our troubles. Nutritionists tell us that there are countless millions of the world's population who suffer slow starvation from birth to death. Even in our own country there are hundreds of thousands of undernourished. Yet, if total world food production were equally divided among all the people, all of us would be undernourished! What is the answer?

Charles B. Shuman

SECRETARY of Agriculture Brannan has offered one possible solution which is based upon the theory that cheap food will assure an adequate diet. His plan accepts the idea that federal revenue derived from taxes should be used to subsidize the food bills of all citizens. Undoubtedly, cheap food would encourage some parents to provide an adequate diet for their children. However, many of us remember quite vividly the experiences during the depression with WPA and direct relief. Money saved by cheap food was quite often used to purchase liquor, luxury goods, and non-essentials. Actually the American people have purchased a better-balanced diet during the recent inflated price period than during the days of cheap food. Secretary Brannan and the social planners should face the fact that a considerable number of our people will buy non-essentials rather than an adequate diet for themselves and their children.

OUR good friend Ed Babcock of Ithaca, N. Y., has a more practical suggestion. Mr. Babcock points out the fact that if everyone consumed an adequate diet including at least the minimum requirements of animal product foods, it would not be possible to produce a surplus in this country. An annual per capita increase of five pounds in the consumption of animal product foods would eliminate all surplus grain problems. However, Mr. Babcock recognizes that even the power of the federal government is not sufficient to force people to eat better food. He suggests that we follow the slow but more certain plan of an expanded educational program in human nutrition.

A PROGRAM of this kind can be instituted immediately in every Illinois community with the active assistance of all fathers and mothers. It involves placing increased emphasis upon nutrition education in elementary, high school and college courses of study. It would be materially implemented by adequate facilities for the new Department of Nutrition and for the Home Economics Department at the College of Agriculture. Many Illinois farmers can help this program for a better understanding of an adequate diet by encouraging their wives and daughters to participate actively in the program of the local Home Bureau.



We're Back In The Mud

Defeat of Gas Tax Increase Leaves Rural Roads Without State Aid

By PAUL E. MATHIAS, Secretary
Illinois Agricultural Association

THE Illinois Agricultural Association was one of the principal proponents of the bill in the recent session of the legislature to increase the gasoline tax from 3c to 5c per gallon. The Association is convinced that the increased revenues are necessary to rebuild and maintain our Illinois highway system. The Illinois highway system has deteriorated and thousands of miles must be rebuilt or repaired.

The Illinois Highway and Traffic Problems Commission after a detailed study found that of the total of 10,460 miles of state highways, 2,380 miles were in need of immediate improvement and had no effective service life whatever remaining. More than one-half of our present state highway system is deficient.

Of the more than 18,000 miles of county roads, the Commission reported that 11,462 miles, or 62.5 per cent, were in need of immediate improvement and more than three-fourths of the county system is deficient. Of the more than 75,000 miles of local township and road district roads, 44,400 miles were found to be currently deficient and an additional 11,760 miles of these local roads have a remaining service life of from one to ten years.

There are a number of reasons for the deterioration of our highways. More than one-third of our state highways are more than 25 years old. With ordinary use, many of them would be obsolete and in need of reconstruction. However, these roads have been subjected to gross weights far in excess of the maximum weights for which they were designed.

Almost half of our state highway mileage was built at a time when the maximum gross vehicle load was 40,000 pounds. Gross weight limits have been increased to 18,000 pounds per axle and to 72,000 pounds overall. Even with these limits, checks made by the highway authorities indicate that almost one-fourth of the truck and trailer type vehicles have been overloaded. Until recent months no serious, sustained effort has been made to enforce the weight limits. Commercial interests have been permitted to carry gross overloads and to destroy our system of state highways constructed at public expense.

Construction costs are greater too. Due to the general increase in the price level, it would cost from two-thirds to three-fourths more to construct the same type of road today than during the early 1920s. Due to the higher construction standards necessary to carry the much heavier weights, costs are even further increased. Also to provide greater safety, many of the roads are now 22 feet for a double lane pavement rather than the 18 feet or less, in width, of the earlier roads.

Illinois taxpayers must provide the funds necessary to rebuild and maintain our highways. While there is federal aid for highways, the federal aid is not a large percentage of our total need. The Illinois Agricultural Association believes that highway users should in large part provide these state funds. All highway users must contribute. The increased gasoline tax seems to provide a fair apportionment of this cost among highway users.

The Illinois Agricultural Association favored the allocation of gasoline tax funds thus: 37 1/2 percent to the state, 25 percent to counties, 25 percent to cities, and 12 1/2 percent to local roads. The present tax of 3c, of course, is distributed one-third to the state, one-third to the counties, and one-third to the cities.

The state needs substantially increased revenues to provide for the heavy costs of rebuilding, repairing and maintaining the roads and bridges of our primary system. Counties and cities too need additional revenue to meet increased construction costs. Townships and road districts, with 75,853 miles of the 104,634 miles of roads outside cities in the state, certainly are entitled to 12 1/2 per cent of gasoline tax revenues. Local property taxes should provide a portion of the funds for building and maintaining these roads but local property taxes for this purpose are already very heavy. In 1945 the townships and road districts, with approximately only one-fourth the total assessed valuation of the state, levied $11,085,649 for road purposes (they also issued about $6,000,000 in highway bonds). In that year counties with four times greater assessed valuation levied $5,944,296 for road and bridge purposes and cities levied $6,869,101 for streets. Local road and bridge taxes cannot be increased to provide the funds necessary for these roads.

The state should contribute to the cost of building and maintaining local roads. These local roads serve all interests of the state and not merely farm people. The consumer of dairy products, livestock or grain is interested along with the farmer in the rapid and economical transportation of farm products. The public generally and not merely the farmer is interested in roads for school bus and mail routes. The allocation of a portion of the gasoline tax for these roads would provide a permanent source of revenue and make possible a long-range program of improvement of these local roads.

(*Continued on page 25*)

Why We Oppose The Brannan Plan

American Farm Bureau Board Lists Six Reasons and Turns Thumbs Down on 'Trial Run'

THE American Farm Bureau Federation is "vigorously and unanimously opposed to any trial run of the Brannan Farm Plan." This was the announcement made after a recent meeting of the AFBF board of directors.

Stated simply the Brannan plan would maintain high farm prices and at the same time guarantee consumers cheap food. The taxpayers would foot the bill for the difference.

In opposing the Brannan plan, the AFBF board of directors recommended that Congress perfect agricultural legislation already on the books and suggested amendments to the Agricultural Act of 1948. The AFBF board feels that the Agricultural Act of 1948 providing for flexible support prices should be given a chance first.

The AFBF board opposes the Brannan plan for the following reasons:

1. The farmer's only hope for a fair income would depend on government handouts from annual appropriations by Congress.

2. The cost of the program would be staggering. There is no possibility of getting appropriations large enough to pay the cost. There is no good reason why the government should pay part of the grocery bill of every citizen.

3. Price goals of the plan are so high as to assure continous and rigid controls over production and marketing.

4. The plan, which promises high per-unit returns, cheap food, and moderate tax cost, would actually result in low farm prices and high food costs when the inevitable and excessive tax costs are included.

5. The plan discards the fair-exchange concept of parity which has been the basis of farm programs since 1933, and substitutes therefor a new and untried concept which might conceivably result in unsatisfactory farm income as the dislocations of war recede into the past.

6. The unusual procedure employed in creating this plan and presenting it to the public has had the effect of throwing the farm problem into the partisan political arena, a situation which we deplore and condemn.

It is our intention to continue to work aggressively for a farm program which will best serve agriculture regardless of partisan politics. In the future, as in the past, sound farm legislation will depend on the best efforts of both political parties.

At the same time the AFBF board recommended that the Agricultural Act of 1948 be amended to provide:

That the loan rate on cotton, wheat, corn, peanuts, and rice be changed to 75 to 90 per cent of parity whenever marketing quotas and acreage allotments are in effect, instead of 72 to 90 per cent as the law now stands.

And that whenever acreage allotments or marketing quotas are in effect the support schedule for corn, wheat, and rice provide a 90 per cent of parity support for a supply of 102 per cent of normal or less and that this schedule be graduated downward for supplies greater than 102 per cent of normal to a loan rate of 75 per cent of parity when the supply is greater than 130 per cent of normal.

As the Record goes to press debate has started in the House on the farm program. Informed Washington sources predict that the Brannan plan trial run on three commodities will pass the House but will be blocked by the Senate.

Failure of an Experiment

WITH the rise of socialism and communism, and the encroaching inroads of government bureaucracy which many Farm Bureau leaders have watched with concern, it is interesting to read the following excerpts from Governor Bradford's own history of the Plymouth Bay Colony over which he presided. You may draw your own conclusions.

When the Pilgrim Fathers landed they established a communist system. Everyone worked for the common good. But there never seemed to be enough food for all. A vicious circle started. There wasn't enough food so the men were too weak to produce more food so there wasn't enough food and so on.

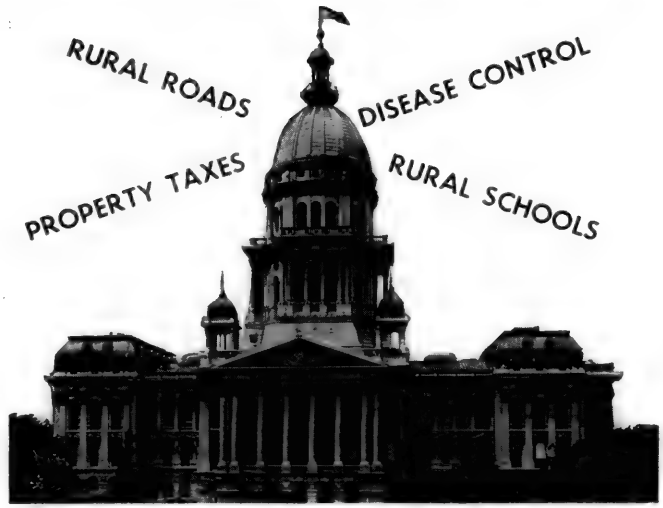
Gov. Bradford decided something had to be done. Following are his own words:

"So the colonists begane to thinke how they might raise as much corne as they could, and obtaine a beter crope than they had done, that they might not still thus languish in miserie." At length (in 1623) after much debate of things, the governor (with the advise of the cheefest amongest them) gave way that they should set corne every man for his owne perticules, and in that regard trust to them selves . . . And so assigned to every family a parcell of land. . . .

"This had very good success; for it made all hands very industrious, so as much more corne was planted than other waise would have bene by any means the governor or any other could use, and saved him a great deall of trouble, and gave farr better contente.

"The women now wente willingly into the feild, and

(*Continued on page 24*)



REPORT

FROM SPRINGFIELD

FARMERS will be interested in the record of the 66th Illinois General Assembly as it applies to agriculture in particular.

The increase in the gasoline tax and increased state aid to schools, two of the most controversial proposals considered by Illinois lawmakers during the recent session, are dealt with in greater detail elsewhere in this issue of the IAA RECORD.

Action on a few of the other important bills affecting farmers are listed below. Many bills relating to taxes, motor vehicles, insurance, schools, drainage, highways and other questions of interest to rural people were considered. The Illinois Agricultural Association took some position on them or submitted amendments which it believed were in the best interests of agriculture.

During the session 1,821 bills were introduced. Of these a reported 829 passed of which 301 were senate bills and 528 House bills. This is more than have been passed at previous sessions. However, many of the bills made only minor changes in existing laws.

This report covers only legislative action. The bills go to the governor for his consideration.

The 66th General Assembly was characterized by more than the usual amount of lethargy and inaction during the early days of the session. Very little was accomplished on legislation action during the first three months. This may have been caused by the change in administration which required some time for reorganization.

Highway Legislation other than the increase in the gas tax: The following bills recommended by the Illinois Highway and Traffic Problems Commission passed.

(a) Authorized the highway department to standardize traffic control devices. (b) Directed that a continuous program for enforcement of truck weight limits be carried on. (c) Limited the height of trucks and buses to 13 1/2 feet. (d) Increased the driver's license fee from 50 cents for three years to $1. (e) Required excess weight on overloaded trucks to be removed and increased penalties for overweight. (f) Authorized the classification of streets and highways and required highway authorities to adopt and publish their program for highway improvement. (g) Clarified the law on consolidation of townships for road purposes. (h) Prohibited the installation of television screens in motor vehicles.

IAA authorities recommended that legislation permitting townships to consolidate for road purposes be carefully considered in many townships. Townships can be consolidated for road administration purposes and districts large enough to be efficient can be set up without loss of local control under this legislation.

School Legislation other than the state aid to schools bill: A number of the recommendations of the governor's commission were adopted. These included:

(a) Permitted school boards which have made their 1948 levy to make a supplemental levy, if necessary, to meet the qualifying rate. (b) Created a commission to study state aid and school reorganization problems. (c) Required the transportation of high school pupils and required that all non-high school territory be abolished by July 1, 1953. (d) Provided that any school district which fails to maintain a school for two consecutive years after June, 1949 be abolished. (e) Required that high schools have a minimum average of 15 students per grade after June 30, 1953. (f) Authorized school districts to carry insurance on their school buses.

Six other bills relating to schools, four of which were opposed by the IAA, were defeated. The four bills opposed by the IAA were one authorizing junior colleges, a second authorizing nursery schools to be paid for with school funds, a third reducing the minimum population requirements for a community unit district from 2,000 to 1,000 and a fourth increasing the requirement from 2,000 to 3,000.

A fifth bill favored by the IAA required petitions for community unit districts to be submitted to the Superintendent of Public Instruction for his recommendations as to the feasibility of the district and required him to estimate the local tax rates required to carry on the proposed district. It did not pass.

The law with respect to organization of community unit districts was changed to require 200 instead of 100 names on a petition; to require that the names be obtained from at least three fourths of the school districts or parts of districts involved; to require that the territory be compact and contiguous, and to provide for review by the courts of the action of the county superintendent in approving a petition for the calling of an election to organize a community unit district.

Veterinary College—The bill appropriating funds for the University of Illinois Veterinary College building passed. The IAA secured an amendment to this bill making the appropriation from the general fund rather than from the agricultural premium fund.

Home Economics Building—A bill appropriating funds for a home economics building at the University of Illinois failed to pass. The appropriation was not recommended by University authorities and was not in the state administration budget.

Daylight Saving Time—The bill outlawing daylight saving time was not called for passage in the House where it was introduced. The bill was advanced to third reading (passage stage) on May 17 but was not finally acted upon.

4-H Premium Fund—Both houses passed the bill increasing the state contribution from $2.20 to $3.00 per member for boys' club work and from $1.20 to $1.50 per member for girls' club work and removing the maximum limitation per county.

Supervisor of Assessments—The bill providing for the creation of the office of county supervisor of assessments in each county other than Cook and St. Clair passed. Township assessors will be elected as usual. The county supervisor of assessments is to be appointed by the county board. His salary is to be paid by the state. The county supervisor of assessments will equalize assessments between townships and will act as clerk of the board of review. The IAA did not oppose this bill.

Bang's Disease—The bill amending the Bang's disease law licensing laboratories making tests for brucellosis and changing the requirements with reference to importing cattle passed. Under the amendment, female cattle for feeding purposes may be imported and held on the farm for feeding and grazing purposes only under quarantine. If they are sold except for slaughter they are required to be tested in the same way as native cattle. The bill making a similar change in the community sales barn law, failed to pass. The IAA supported these bills.

Oleomargarine—The bill permitting the sale of colored oleomargarine in the state was defeated. The IAA opposed this bill on the grounds that there was not sufficient provision made for identification of oleomargarine.

Milk Pasteurization—The bill requiring the pasteurization of all milk and the bill requiring the pasteurization of all milk other than certified raw milk and Grade A raw milk both were defeated. The IAA proposed certain amendments to these bills which were adopted. After the amendments were adopted the IAA did not oppose them further.

Fur Farming—The bills declaring fur farming to be an agricultural pursuit and making it possible to organize fur marketing cooperative passed. The IAA sponsored these bills.

Front Cover

TWENTY-SIXTH in our series of historic and picturesque covers is a view of the lodge at White Pines State Park in Ogle county. This is one of the most beautiful parks in Illinois (See picture on your Farm Bureau calendar). The park is noted for its southernmost stand of white pine in the Midwest, some of which measure 2 1/2 feet in diameter and stand 100 feet high.

Airplane Insurance—The bill passed requiring airplane pilots causing damage to show proof of financial responsibilities before they may continue to fly. In effect, it should result in most pilots carrying insurance.

Open Season on Foxes—The bill providing a year-around open season on foxes in the southern zone passed. Farmers in the southern zone reported that foxes are numerous and a nuisance. Approval of this bill will give us a year-around open season on foxes throughout the state. The IAA supported this bill.

Fire Protection Districts—Bills were passed to validate the organization of fire protection districts. The validity of these districts had been questioned in court. The IAA supported this legislation.

Hospital Authorities—The bill authorizing the creation of hospital authority districts to provide and maintain hospitals, passed. The IAA proposed certain amendments which were adopted.

Constitutional Convention—The legislature failed to adopt a resolution submitting the question of calling a Constitutional Convention to the voters in 1950. The IAA did not take an active position of this question. The legislature did adopt a resolution submitting a Gateway amendment of the constitution to the voters. This will be voted on in November 1950. The IAA favors the Gateway amendment.

Illinois Farm Adviser Sent on Government Mission to Greece

AMERICANS returning from southeastern Europe and the Middle East often have said there is nothing wrong with agriculture there that a few good American farm advisers couldn't cure. Perhaps it is not quite that simple, but one of our own Illinois farm advisers is now in the process of finding out.

Charles E. Yale

He is Charles E. Yale of Lee County in northern Illinois. Chuck, as he is familiarly known to farmers far and wide, is now in Greece where he was sent by the federal government as an agricultural extension specialist to the Greek government.

Last December, N. E. Christodoulou, director and minister of agriculture in Greece, visited the Lee County Farm Bureau offices at Amboy. He visited several farms and was much impressed by Yale's knowledge of farming and his explanation of the extension program.

When the U. S. informed Greece that it planned to send an agricultural extension specialist to help organize an extension program in Greece, Christodoulou asked Washington to send Farm Adviser Yale. He was given a six months leave of absence from his job and left for Greece the middle of July.

Yale said he hoped to acquaint Greek farmers with American methods in an effort to increase production.

He was accompanied by Mrs. Yale who plans to live in Athens. Yale taught vocational agriculture at Mendota in 1921 and went to Lee county as farm adviser in 1925. The Yales have two sons, Charles Jr., a physicist in Cleveland, and Don, an ensign in the U. S. navy air force stationed at Whidby Island, Wash.

Dedicate Southern 4-H Club Camp

More than 150 persons from many of the 27 Southern Illinois counties served by the camp participate in dedication ceremony in front of dining hall.

Establishment of the Southern Illinois 4-H Club Camp Was a Truly Cooperative Project With City and Rural Groups Working Together as a Well-Matched Team

SOUTHERN ILLINOIS folks have good reason to claim that their newly dedicated 4-H club camp on West Frankfort city lake in Franklin county is the most beautiful in the state. They naturally will receive challenges from other areas where three other Illinois 4-H camps are located, but such counter claims are to be expected.

The Southern Illinois camp which will serve 28 counties in the area is located on a 100-acre site overlooking a fine lake, and it has many natural features which can be developed in a long-term program. For example, jutting into the lake opposite the camp site is a body of land of from 10 to 15 acres called Inspiration Point. Plans call for building a bridge from the camp site over to this point. Of course, such improvements cannot be undertaken until the main essentials of a good camp have been attained.

Modern Dining Hall

A modern dining hall and kitchen 84 feet long and 34 feet wide was completed in time for the first camping period in July. Built on the highest point of the camp site, wide windows of the dining hall permit full view of the lake below. When fully equipped, the building will represent an investment of more than $30,000.

On either side of the dining hall, ample space has been cleared for separate boys and girls camping areas. It is contemplated that at some time in the future, sleeping cabins will be built in these areas to replace tents used at the present time.

Some 200 farm boys and girls enrolled in the first of the four camping periods in July. The camping periods are of four days each.

A Cooperative Project

Establishment of the Southern Illinois 4-H camp was truly a cooperative project with city and rural groups working together as a well-matched team. The Kiwanis, Lions, Veterans Club, Rotary, and Elks clubs of West Frankfort and the Chamber of Commerce gave 25 acres of the land for the camp site, and supplied funds for a well, power line, and roads into the camp. At the dedication ceremony late in June the Chamber of Commerce secretary, Lewis Boner, pledged the support of his group and the service clubs to raise $2,000 more in funds to complete the equipment of the dining hall so that it can be used the year around.

The counties to be served by the camp have been active in fund raising drives with Jackson county leading in the first of July with approximately $5.000. Saline county was another high contributor with $2,200. Approximately $7.742 was received from counties at the dedication ceremonies on June 25.

One of the main ideas behind the camp is to make it one of the best rural area recreation spots in the state. It is contemplated that some day the camp may even be used for agricultural leaders' conferences or any other similar event.

Counties to be served by the camp are: Randolph, Saline, Johnson, Union, Jackson, Pope, Hardin, Clinton, Perry, Wayne, White, Franklin, Williamson, Jefferson, Hamilton, Gallatin, Massac, Pulaski, Alexander, St. Clair, Washington, Monroe, Bond, Marion, Clay, Richland, Wabash, and Edwards.

The Southern Illinois camp is one of the four in the 4-H camping program of Illinois. This program got started in 1946 when Robert Allerton donated 250 acres of land in Piatt county along the Sangamon river. This camp is known as Memorial camp. With this one as a starter, the state was divided into four districts to complete the picture for Illinois.

Trips For All

Camp Shaw-waw-nas-see, a 75-acre tract along Rock Creek in Kankakee county is the site of the northern district 4-H camp. This land was donated by the power and light companies serving northern Illinois. Camping operations have been under way here since the summer of 1946.

For the western district camp, a 70-acre site has been leased on the shores of Lake Jacksonville in Morgan county.

Goal of the Illinois 4-H camping program is to give every 4-H boy and girl in the state an opportunity to attend summer camp. When that goal is reached more than 50,000 Illinois rural young people will have a place to camp each year.

Are You

READY?

This is the Month of Illinois' Great Rural SPORTS FESTIVAL

ARE you all set folks! You know this is the month of the 10th annual Illinois Farm Sports Festival. . . . Thursday and Friday, August 25 and 26, to be exact. Again it will be held on the campus of the University of Illinois at Urbana-Champaign.

Make plans now to attend this great rural sports and music pageant. Load up the family in the old car. Bring a picnic basket if you like. Better still, why not plan on taking part in some event? You say your joints creak? Well, how about checkers, hog-calling, or shuffleboard?

There's something for every member of the family, including grandma, and you don't have to strain a ligament. Stop in at the Farm Bureau office the first chance you get and tell them what you want to do.

Every person who enters an event piles up points for his county. Participation points are awarded all entrants.

Then if you win, take second, or third place you get additional points. It's that easy. Get in there now and fight for your county.

The Sports Festival was set up as a two-day period of fun, sportsmanship, and good clean play for Illinois farmers and their families. So let's make it the biggest and best festival on record. Join the fun.

On hand to greet and entertain you during the fun-packed two-day event will be radio stars, orchestras for the big swing and barn dance jamborees, the Illinois Rural Chorus with 300 mixed voices, plus 4,500 rural athletes competing in baseball, softball, track, tug o'war, shuffleboard, swimming, woodchopping, hog-calling, tennis, ping pong, shuffleboard, dart throwing, checkers, 4-H tumbling, 4-H physical fitness, clock golf, chair quoits, dart throwing, and horseshoe pitching. WLS will broadcast the Dinner Bell Hour from the Sports Festival.

Added to this is a dazzling folk festival which will find hundreds competing in such classes as barber shop quartets, song leaders, county choruses, family singers, 4-H choruses, adult singers, junior singers, instrumental groups, novelty and rhythm bands, square dance bands, acrobatic and tap dancers, dialogues, skits and stunts, and folk and square dancers.

This may be the last year that the folk festival will be held in conjunction with the Sports Festival. Starting late next winter it will possibly be held in connection with Farm and Home Week at the University. This move if made will be because it is difficult to perform when the weather is hot.

The big Thursday night program of music, dancing, and entertainment promises to be the best yet according to I. E. Parett of the IAA and Mary McKee of the University, who are in charge of the program. The three-ring event will be held as usual with modern dancing for those who like it that way, square and folk dancing for those who like the graceful dances of years ago, and the program of music and dancing in front of the Auditorium for those who want to sit and watch.

Roy P. Johnson, IAA director of special services, estimates that close to 650 softball teams have been playing preliminary to the Sports Festival finals. Of the 650 teams about 155 will survive district play to compete in the Sports Festival finals.

All of last year's winners will be back to defend their titles this year. They are: St. Clair, Adult county league; DeKalb, all county; Coles, Rural Youth; Vermilion, age 35 and over; Livingston, boys' 4-H; Winnebago, girls' 4-H; and DeKalb, girls' open. Twenty baseball teams will play in district tournaments to earn the right to play at Champaign. The champion Will county team will be on hand to defend their title.

This year 15 of the 16 district tug-o'war finals are being held in connection with county fairs. The 16 winners will compete at Champaign. Following are the districts, county fairs, towns, and dates when they will be or have been held: (1) Winnebago, Rockford, Aug. 11; (2) Kane, Elgin, Aug. 4; (3) Bureau, Princeton, Aug. 4; (4) Henderson, Stronghurst, Aug. 4; (5) Livingston, Pontiac, Aug. 10; (6) Kankakee, Kankakee Aug. 9; (7) Adams, Mendon, Aug. 8; (8) Logan, Lincoln, Aug. 11; (9) Champaign, Urbana, July 25; (10) Madison, Highland, Aug. 6; (11) Fayette, Brownstown, Aug. 5; (12) Edgar, Paris, July 27; (13) Randolph, Sparta, Aug. 4; (14) Wayne, Fairfield, Aug. 9; (15) McLeansboro in

HEALTHY SOWS and LOTS of PIGS

with

BLUE SEAL* PIG and SOW SUPPLEMENT

A favorable corn-hog ratio points to good market conditions for fall and winter pigs.

The amount of profit at market time depends to a great extent upon the kind of feed used.

BETTER CONDITION of the brood sow prior to farrowing

BLUE SEAL PIG and SOW SUPPLEMENT

Carries high levels of concentrated vitamin sources, plus high quality proteins and minerals. The outstanding qualities of this feed will aid:

1. The condition of the sow at farrowing and her performance during lactation.
2. The number of pigs farrowed alive.
3. The health and strength of the pigs farrowed.
4. The number of pigs weaned.

LARGER, STRONGER Litters of fast developing pigs

BIG LITTERS REDUCE COSTS		
COST PER LIVE PIG FARROWED	NO. OF PIGS SAVED	COST PER PIG WEANED
$17.92	2	$30.62
8.96	4	15.31
5.97	6	10.21
4.48	8	7.65
3.58	10	6.12

In 1946, the average swine producer weaned 6.4 pigs per sow at a cost of $9.57 per pig. Consider how much the overhead was per pig. This could be reduced if we were able to save just one more pig per litter through *better feeding, management* and disease control.

*Also available in Service Brand Feed

ILLINOIS FARM SUPPLY COMPANY • CHICAGO

A steady line of trucks moved to the Southern Illinois Grain Company's elevator at Benton, Franklin county, during the peak of the wheat harvest late in June.

Southern Grain's New Elevator Does RECORD BUSINESS

IT WAS a hot day and the trucks were lined up for quite a way on the road leading up to the elevator. The wheat harvest was in full swing. Some of the farmer truckers were comparing yields, but there was no complaint about the waiting. Quite the contrary.

"This is one of the greatest services we've got. I don't know how we got along without it," one of the waiting truckers said.

Such is the feeling of the patrons of the Southern Illinois Grain Company which has an 18,000 bushel capacity elevator at Benton in Franklin county. The elevator serves not only Franklin but the nearby counties of Jackson, Williamson, Saline, Jefferson, Hamilton and Perry.

On June 23 and 24, the elevator handled more grain than during all of the wheat season of 1946, the first year of operation. More than 30,000 bushels of wheat were handled on each of the two days in June.

This is the first year of operation for the Company's new elevator structure. Previously the Company used the nearby Illinois Farm Supply Benton mill elevator facilities.

So far this year, the elevator has handled 275,000 bushels of wheat and probably will pass the 280,000 bushels handled by the company last year. In 1948 the elevator also handled 220,000 bushels of soybeans.

Net profit for Southern Illinois Grain Company last year was $12,000, and a patronage dividend was paid of two cents per bushel.

Present officers and directors of the elevator are Fred Phillips, president; Nealy Bryant, vice president; W. C. Hobbs, secretary-treasurer; Gilbert Galloway, Theodore Liberard, Everett Lance and Audra Bennett, directors, all of Franklin county. All but Liberard and Lance were members of the incorporating board.

Robert Miller, (nearest camera) manager of the Southern Illinois Grain Company, and O. P. Cravens, elevator manager, were kept busy during the peak of harvest.

IAA Director Albert Webb of Ewing waits in line with a truckload of wheat ready to unload at the elevator at Benton. He represents Southwestern Illinois on IAA board.

Serum Association Makes $5,000 Grant to Fight Disease

Money Will be Used in Research By College of Veterinary Medicine

UNDER the terms of a $5,000 grant from the Illinois Farm Bureau Serum Association a two-way attack on swine brucellosis will be launched in September by the University of Illinois College of Veterinary Medicine. The Illinois Farm Bureau Serum Association is an affiliate of the Illinois Agricultural Association.

The studies to be made through the Illinois Agricultural Experiment station of the University of Illinois College of Agriculture will be aimed at prevention through vaccination or cure through the use of chemicals or antibiotics. President Russell V. McKee of the serum association said further grants may be expected although the present board cannot commit future boards of directors.

The grant was made for the study of swine brucellosis in particular but for other swine diseases as well. It also includes a service to herd owners, on request, in the study of any unusual swine disease which may arise.

Brucellosis in swine causes abortion, weak pigs, and sterility in sows and boars. Sulfonamides, antibiotics, and vaccines have been effective in the treatment of many diseases of domestic animals but no cure has been found for swine brucellosis.

Swine brucellosis costs Illinois farmers millions of dollars annually and is also a common source of undulant fever in humans.

Robert Herriott, left, Champaign county, is the new president of the Illinois Future Farmers of America. James Gifford, center, Kane county, is the new secretary-treasurer, and James Turner, Boone, right, is state reporter.

Name Illinois Star Farmer

State FFA Elects Officers For 1949-50 At Annual Meeting in Champaign

A UNIVERSITY of Illinois College of Agriculture student from Champaign county is the new president of the Illinois Future Farmers of America. He is Robert Herriott who served as secretary-treasurer of the state FFA during the past year. Herriott was vice president of section 13 of the FFA in 1947 and earlier this year was named president of the Champaign county 4-H club federation.

Merle Miller

Election of the Champaign county youth to the presidency of the Illinois FFA came at the closing sessions of the 21st convention of the organization on the U. of I. campus late in June.

James Gifford, Jr., Kane county, a high school junior, was elected state secretary-treasurer and James L. Turner, Boone county, was named state reporter.

Elected to receive the distinctive title of Star State Farmer of Illinois at the convention was Merle Miller of DeWitt county. Miller also took third in the public speaking contest.

Winner of the public speaking contest was Don Swedlund, Knox county, who received the Gov. Adlai E. Stevenson trophy from Roy Yung, state director of agriculture. Swedlund who spoke on "Water—Life Blood of Soils and Men" also received a check for $100 from the national FFA. Second place winner in the speaking contest was Albert Kurz, Lee county.

Honors also were won by FFA members in statewide competition on outstanding projects in six fields. Named best in the state in the following projects were:

Glenn Miller, Champaign county, farm mechanics; Marvin Cummersheimer. Monroe, soil and water conservation: Marvin Eckhoff, Woodford, farm electrification; Charles Lewis, Brown, star dairy farmer; Ivan Pieper, Stephenson, farm fire prevention; and Kenneth Zobrist. Bond, efficient milk production.

Fifteen Illinois FFA members were nominated as candidates for American Farmer Degrees. If accepted by the national organization, the candidates will receive their degrees at the national FFA convention in Kansas City in October. This recognition is the highest open to Future Farmers. It is limited to one in every 1,000 members. Sixteen individuals who have made definite contributions to the Illinois FFA received honorary State Farmer Degrees.

Approximately 300 members from every section of the state received the State Farmer degree.

More than 1,400 attended the convention with delegates representing 446 FFA chapters in the state with a membership of 15,250.

Illinois FFA Honors 31 At 21st Annual Convention

Pictured at right are American Farmer Degree candidates from Illinois. This degree is one of the highest honors a Future Farmer can win. Left to right are: Donald Woods, Edwards county; Willis Barber, Bureau; W. H. St. John, Jr., Macon; J. M. Mollet, Bond; George Lewis, Brown; Gerald Totzlaff, Macoupin; Maurice Soucie, Will; A.R. Henninger, Boone; G. F. Torti, Lee; Roy Brammeier, Washington; J. A. Aggen, Whiteside. Not in the picture are C. R. Kellner, Stephenson; B. E. Mattson, DeKalb; D. A. Morgan, Champaign, and P. A. Nobbe, Monroe. At left are those who received honorary Illinois State Farmer degrees at the 21st convention. Front row, left to right, are M. J. Nicol, Ill. Chain Store Council; I. E. Parett, secretary of general services, Illinois Agricultural Association; R. C. Kamm, National Stock Yards, E. St. Louis; H. T. Wanberg, Ill. Bankers Ass'n.; Roy Yung, state director of agriculture; Cecil Tendick, Jacksonville Courier Journal; back row, M. V. Van Buskirk, Ill. Dairy Manufacturers Ass'n.; R. J. Maurer, Fairbury voc. agric. teacher; Dana Lewis, Brown county farmer; W. H. Dowell, pres., Ill. Ass'n. Vocational Agriculture Teachers; C. L. Mast, Jr., editor, Agricultural Leaders Digest; Dean W. B. Spalding, U. of I. College of Agriculture. Not in picture, Paul Johnson, Editor, Prairie Farmer; Carl Brock, Greenville vocational agriculture teacher; Kendall White, Elgin Courier News.

A steady line of trucks moved to the Southern Illinois Grain Company's elevator at Benton, Franklin county, during the peak of the wheat harvest late in June.

Southern Grain's New Elevator Does RECORD BUSINESS

Robert Miller, (nearest camera) manager of the Southern Illinois Grain Company, and O. P. Cravens, elevator manager, were kept busy during the peak of harvest.

IAA Director Albert Webb of Ewing waits in line with a truckload of wheat ready to unload at the elevator at Benton. He represents Southwestern Illinois on IAA board.

IT WAS a hot day and the trucks were lined up for quite a way on the road leading up to the elevator. The wheat harvest was in full swing. Some of the farmer truckers were comparing yields, but there was no complaint about the waiting. Quite the contrary.

"This is one of the greatest services we've got. I don't know how we got along without it," one of the waiting truckers said.

Such is the feeling of the patrons of the Southern Illinois Grain Company which has an 18,000 bushel capacity elevator at Benton in Franklin county. The elevator serves not only Franklin but the nearby counties of Jackson, Williamson, Saline, Jefferson, Hamilton and Perry.

On June 23 and 24, the elevator handled more grain than during all of the wheat season of 1946, the first year of operation. More than 30,000 bushels of wheat were handled on each of the two days in June.

This is the first year of operation for the Company's new elevator structure. Previously the Company used the nearby Illinois Farm Supply Benton mill elevator facilities.

So far this year, the elevator has handled 275,000 bushels of wheat and probably will pass the 280,000 bushels handled by the company last year. In 1948 the elevator also handled 220,000 bushels of soybeans.

Net profit for Southern Illinois Grain Company last year was $12,000, and a patronage dividend was paid of two cents per bushel.

Present officers and directors of the elevator are Fred Phillips, president; Nealy Bryant, vice president; W. C. Hobbs, secretary-treasurer; Gilbert Galloway, Theodore Liberard, Everett Lance and Audra Bennett, directors, all of Franklin county. All but Liberard and Lance were members of the incorporating board.

Serum Association Makes $5,000 Grant to Fight Disease

Money Will be Used in Research By College of Veterinary Medicine

UNDER the terms of a $5,000 grant from the Illinois Farm Bureau Serum Association a two-way attack on swine brucellosis will be launched in September by the University of Illinois College of Veterinary Medicine. The Illinois Farm Bureau Serum Association is an affiliate of the Illinois Agricultural Association.

The studies to be made through the Illinois Agricultural Experiment station of the University of Illinois College of Agriculture will be aimed at prevention through vaccination or cure through the use of chemicals or antibiotics. President Russell V. McKee of the serum association said further grants may be expected although the present board cannot commit future boards of directors.

The grant was made for the study of swine brucellosis in particular but for other swine diseases as well. It also includes a service to herd owners, on request, in the study of any unusual swine disease which may arise.

Brucellosis in swine causes abortion, weak pigs, and sterility in sows and boars. Sulfonamides, antibiotics, and vaccines have been effective in the treatment of many diseases of domestic animals but no cure has been found for swine brucellosis.

Swine brucellosis costs Illinois farmers millions of dollars annually and is also a common source of undulant fever in humans.

Robert Herriott, left, Champaign county, is the new president of the Illinois Future Farmers of America. James Gifford, center, Kane county, is the new secretary-treasurer, and James Turner, Boone, right, is state reporter.

Name Illinois Star Farmer

State FFA Elects Officers For 1949-50 At Annual Meeting in Champaign

A UNIVERSITY of Illinois College of Agriculture student from Champaign county is the new president of the Illinois Future Farmers of America. He is Robert Herriott who served as secretary-treasurer of the state FFA during the past year. Herriott was vice president of section 13 of the FFA in 1947 and earlier this year was named president of the Champaign county 4-H club federation.

Merle Miller

Election of the Champaign county youth to the presidency of the Illinois FFA came at the closing sessions of the 21st convention of the organization on the U. of I. campus late in June.

James Gifford, Jr., Kane county, a high school junior, was elected state secretary-treasurer and James L. Turner, Boone county, was named state reporter.

Elected to receive the distinctive title of Star State Farmer of Illinois at the convention was Merle Miller of DeWitt county. Miller also took third in the public speaking contest.

Winner of the public speaking contest was Don Swedlund, Knox county, who received the Gov. Adlai E. Stevenson trophy from Roy Yung, state director of agriculture. Swedlund who spoke on "Water—Life Blood of Soils and Men" also received a check for $100 from the national FFA. Second place winner in the speaking contest was Albert Kurz, Lee county.

Honors also were won by FFA members in statewide competition on outstanding projects in six fields. Named best in the state in the following projects were:

Glenn Miller, Champaign county, farm mechanics; Marvin Cummersheimer, Monroe, soil and water conservation; Marvin Eckhoff, Woodford, farm electrification; Charles Lewis, Brown, star dairy farmer; Ivan Pieper, Stephenson, farm fire prevention; and Kenneth Zobrist, Bond, efficient milk production.

Fifteen Illinois FFA members were nominated as candidates for American Farmer Degrees. If accepted by the national organization, the candidates will receive their degrees at the national FFA convention in Kansas City in October. This recognition is the highest open to Future Farmers. PROTECTION and BEAUTY

with

SOYOIL PAINT

It protects against the elements–
Its beauty lasts for years!

NEW!

A new white paint sensation!

SOYOIL No. 6

Lead-free white house paint

$4.25 per gal. in 5 gal. cans

One coat of SOYOIL NO. 6 HOUSE PAINT applied over one coat of Soyseal Primer will give you a complete paint job, gleaming white that will stay white. SOYOIL NO. 6 HOUSE PAINT is our new, lead-free, fume resistant paint. A high quality product at an exceptionally low price.

A paint for every farm need!

For the House *(Outside)*

For a paint job of lasting beauty, a second coat of *Soyoil No. 5 House Paint* over *Soyseal House Primer* gives a smooth, elastic, clean, durable surface. This Soyseal, Soyoil, 2 coat system defies blistering sun, pounding rain, snow and sleet—elements which shorten the life of ordinary paint.

For Farm Maintenance

SOYOIL PAINT will add years of service to farm implements and to composition and metal roofs.

IMPLEMENT AND TRACTOR ENAMEL
ROOF AND METAL PAINTS
SOYOIL SOY-ZINC
I.F.S. ALUMINUM PAINTS
I.F.S. ROOF COATING

For the House *(Inside)*

Walls, ceilings, furniture, woodwork and floors — each yields to the magic touch of SOYOIL PAINT.

SOYNAMEL BASE
SOYNAMEL
SEMI-GLOSS ENAMEL
FLAT WALL PAINT
SOYLITE CASEIN PAINT
SOYOIL VARNISHES
I.F.S. VARNISH STAINS
SOYCOAT FLOOR SEALER

For the Barns

Even rough, weather beaten surfaces will seem like new with two coats of SOYOIL NO. 90 RED BARN PAINT. Gives controlled penetration and perfect hiding. Deep, lustrous red that is mildew resistant. Economical and long wearing.

SOYOIL PAINTS are distributed by

IAA Is Host To 65 Foreign Farm Leaders

Visit Illinois While on Nation-Wide Tour to Study U.S. Agriculture

IAA board members pause to chat with Roy Yung (left) state director of agriculture, at luncheon for foreign farm leaders. Left to right are: State Director Yung, Albert Webb, Franklin county, 25th district; Mrs. Webb; and T. H. Lloyd, Macoupin, 21st district.

WHEN you put a farmer from New Zealand at a table with a farmer from Illinois it doesn't take them long to start exchanging crop reports. That's about the way you can describe the luncheon the Illinois Agricultural Association gave for 65 delegates from about 20 countries in Chicago late in June. These farmers from foreign countries stopped in Chicago after attending a recent meeting of the International Federation of Agricultural Producers at Guelph, Ontario.

As guests of the American Farm Bureau Federation these farmers who represent farm organizations from various parts of the world were taken on a tour of the United States. In the various areas visited the state Farm Bureaus were in charge of the sight seeing. In Chicago, the tour was planned by Roy Johnson, director of special services for the IAA. It included visits to South Water Market, the stockyards, a packing plant, other points of interest and the luncheon at the Sherman Hotel.

Among the countries represented by the farmers were: United Kingdom, France, Germany, Sweden, New Zealand, India, Netherlands, China, Costa Rica, Switzerland, South Africa, Denmark, Iceland, Norway, Kenya, Japan, Southern Rhodesia, Finland, Canada, and Luxembourg.

H. H. Hannam, Ottawa, Canada, newly elected president of the International Federation of Agricultural Producers, speaking for the visitors said that real progress has been made during the first two years of the Marshall Plan. Production of the main crops in European countries was already up to pre-war level and in some cases, above it. Complete recovery of the livestock production was delayed only by current difficulties in the purchase of feeding stuffs.

Hannam said that European countries fully appreciate the aid which they have received under the Marshall Plan and are making every effort to play their full part in the rebuilding of a balanced world economy. He said that the European countries want America to know that their help has been appreciated and that it will be put to the best possible use in trying to rebuild a better world.

The Canadian leader warned, however, that the destruction caused by five years of total war is so great that it will take a lot of toil, skill, and brains to put farm and industrial production back in shape. He said that the recovery of European agriculture is vital not only to feed the people of Europe, but also to guarantee farmers, who represent more than one-third of the population, a decent standard of living.

Among the farm leaders at the luncheon for the visitors from foreign countries given by the IAA are left to right, F. E. Morris, IAA vice president; H. H. Hannam, Ottawa, Canada, newly elected president of the International Federation of Agricultural Producers; Charles B. Shuman, IAA president; Allan B. Kline, American Farm Bureau president, and Roy Yung, state director of agriculture.

Martin H. Kennelly, mayor of Chicago, officially welcomes representatives of foreign farm organizations to Chicago.

How To Milk When The Power Goes Off

FRED KNAPP, Iroquois county dairyman, has solved the problem of how to milk his cows by machine when the electricity goes off.

Knapp put a stallbox in the intake manifold of his tractor. Now he can drive the tractor up to the barn and connect it to the milker vacuum line with a hose. He just opens the stallcock and the tractor engine then creates enough of a vacuum to allow him to keep on milking by machine.

Pass New Laws On State Aid For Illinois Schools

Provisions of State Education Laws Continue To Encourage Rural Reorganization

By JOHN K. COX, Director
IAA Rural School Relations

OF the more than 200 school bills introduced in the 66th Illinois General Assembly, none was more carefully watched and by more people than the state aid bills. The original bills, called for $132,000,000 of state aid for the next two years. Budget difficulties made a reduction necessary. The governor's budget allowed $112,000,000 for the distributive fund (money divided among schools according to the number of pupils and need). An additional $23,700,000 was allowed for educating handicapped children, pupil transportation, vocational education, and the school lunch program.

Together state and federal aid to schools would have amounted to about $143,700,000. However, in his second budget message on schools Gov. Adlai Stevenson made it clear that the increased aid for schools depended largely on the raising of new taxes, mainly, by a broadening of the sales tax base.

To encourage school reorganization where previous efforts had failed he asked for a new plan for distributing state aid. He also sought several other pieces of legislation (reported elsewhere in this issue of the RECORD) designed to speed up school reorganization. The administration's ideas were presented in eight bills six of which passed.

But the bills to raise more revenue for schools failed to pass. As a result proposed distributive aid dropped from $112,000,000 to $100,800,000 or 10 per cent. Fixed costs which cannot be changed from year to year, however, makes the drop closer to 12 per cent than 10 per cent. Instead of the 70 per cent increase in state aid expected, the schools will get a 53 per cent increase.

The plan for distribution is as follows:

Flat grants of $7 per high school child and $22 per grade child remain the same. They will be cut 12 per cent in the next biennium or to about $6.16 and $19.36 per pupil respectively.

The equalization guarantees (an attempt to bring poor districts up to the financial level of wealthier districts) of $120 per grade and high school pupil the first year and $160 the second year of the biennium as provided in the act likewise are reduced and will become about $105.60 and $140.80 per pupil respectively when paid at 88 per cent of the full statutory amount.

The $1,400 temporary guarantee per one-room school was to remain the same. But the 12 per cent reduction makes it $1,232. The law requiring 10 pupils in average daily attendance to qualify for state aid went into effect on July 1 of this year. The minimum rises to 12 in 1951 and 15 in 1953.

With the state paying 88 per cent of the $120 per pupil guarantee the first year or $105.60, the 10-pupil school would be entitled to $1,056 on a straight average daily attendance basis. The second year of the biennium with the state paying 88 per cent of the $160 per pupil guarantee or $140.80 per pupil, the 10-pupil one-room school would be entitled to $1,408 on a straight average daily attendance basis or well over the $1,232 guaranteed to the one-room school.

Qualifying rates, provided in House Bill 1065 for the first year of the biennium are 25c and 25c each per $100 valuation for grade and high school districts under the dual system (high school and grade school under separate school boards) and 36c under the unit district system (high school and grade school under the same board). Qualifying rates are minimum tax levies which must be made before a school district is eligible for equalization state aid.

Districts expecting to receive equalization aid and take advantage of the $140 guarantee per pupil the second year of the biennium will be required to levy 40c in the grades, 40c in high school districts under the dual system, and 50c under the unit system.

The amount of state aid is not as much as many people had hoped it would be. Also, the program does require some districts to increase their local levies in order to qualify for equalization aid. It should be remembered, however, that every district in the state has to make the same local effort before receiving state equalization money. It is as fair for one district as for another.

The new state aid program does have some advantages, namely:

1. All additional state money is distributed on an equalization basis or on the basis of need. This feature of state aid distribution is in line with IAA school policy.

2. The $105 guarantee per pupil the first year and the $140 guarantee the second year should help spread educational opportunity throughout the state, in poor as well as more fortunate districts.

3. The difference in qualifying rates between dual (40c + 40c = 80c) and unit districts (50c) should further popularize the latter type of district.

THE Yield-proved HYBRID

Tops among the barber shop quartets last year were the Massac Melody Boys with Pianist Anna McWade.

This group of Bureau county folk dancers appears a bit grim as they strut their stuff at last year's festival.

Rural Youth at the SPORTS FESTIVAL

THE big farm Sports Festival Aug. 25-26 will give Rural Youth members a chance to take part in many athletic events. Before the festival, volleyball, bowling, skeet and trap shooting will have been completed. District competition in softball and county competition in folks and square dancing will have been run off in preparation for the final show in Urbana.

Rural Youth Members can also take part in baseball, rifle shooting, horseshoes, hog calling, swimming, chair quoits, clock golf, checkers, dart throwing, tennis, (singles) tug o'war, table tennis, wood chopping, drama features, and various music events on the University campus. In addition to all these activities, various rural youthers will assist in the folk and square dance jamboree and the swing festival to be held on Thursday evening of the Sports Festival.

Outstanding among the attractions for Rural Youth this year will be the folk and square dancing. Probably this will be the last year in which folk and square dancing will be scheduled as a summer activity inasmuch as the executive committee of the Sports Festival recommends that dancing be brought to a climax at Farm and Home Week, which comes between school semesters. The present plan providing opportunity for one square dance team for 4-H, Rural Youth, and open class divisions, sets up the possibility for keen competition on the county level.

University of Illinois Swimming coach Ed Manley teaches a group of young people the fundamentals of beginning swimming at the 4-H Memorial Camp near Monticello.

In order to bring folk and square dancing up to a high level, all groups will want to note especially the points to be used in rating dances as listed on page 18 of the festival rules and regulations. They are:

1. Excellence of performance, such as co-ordination with the music, placing on the stage, degree to which the group dances as a unit.

2. Appeal to the audience—including and interpretation of the dance, and the such points as the show of feelings for enjoyment of the experience of dancing.

3. Appearance on the stage, such as lightness and gracefulness.

Rural Youthers will do well to engage wholeheartedly in the folk festival activities from both the standpoint of participation and of help to others, for in Rural Youth the emphasis is upon personality and leadership development.

* * *

By ELLSWORTH D. LYON, Director
IAA Young People's Activities

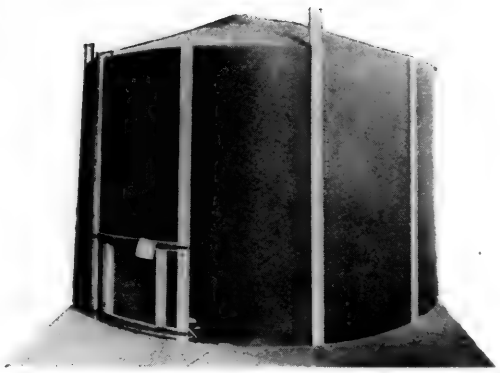
Memorial Camp

Interest, enthusiasm, and participation on the part of 205 active 4-H'ers marked the opening of camp for 4-H at State Memorial Camp near Montecello on July 6. The camp has a good staff of counselors with John Q. Scott as camp manager. Each camp group of 4-H'ers stays four days. Following an impressive flag raising ceremony and a hearty breakfast, activities get under way. Some of these are handicraft, volleyball, hay rack rides, and swimming. Ed Manley, head swimming coach, U. of I., who will be at the camp throughout the summer, takes a personal interest in all the young folks to see that they make progress in learning to swim and enjoy the water.

There is also Ed Bennett, assistant in zoology physiology at the University, just to mention another summer staff member who, among other duties, presides over the tractor-powered hayrack. Bennett's tours over the large Allerton Park with hayrack loads of youngsters

(*Continued on page 25*)

This is a new type grain bin design which uses relatively inexpensive constructional material. It was designed by the U. of I. department of agricultural engineering and has been given limited testing.



Design New Type Grain Storage Bin

Not Counting the Floor, Building Cost is 10 Cents Per Bushel. Two Men Can Build in One Day

WITH prospects of bumper crops this fall, on-the-farm grain storage looms as an important item in the farming business. Corn loans and resealing programs offered by the government also represent additional pressure for adequate farm storage. Government loans are also being offered for the construction of crib facilities for corn, wheat, soybeans and oats. Details on these programs are available at county PMA (formerly AAA) offices.

The University of Illinois College of Agriculture in July announced that its farm building specialists had designed and tested a completely new type of grain storage bin which may be an aid to the storage problem. (See picture).

D. G. Carter, professor of farm structures and designer of the new type bin, says the building cost is less than 10 cents a bushel, not counting the floor. Two men can build the new round bin in one day.

Plans can be secured by writing the University of Illinois, College of Agriculture, Urbana, Illinois. The charge is 15 cents for the blue print and instruction sheet.

Carter and his associates used a new laminated type of building material made of wood and paper. This material comes in sheets one-seventh of an inch thick. The sheet has a wood veneer core, glued and covered with a tough asphalt-resin paper.

The new bin is round, 14 feet in diameter and 8 feet high. It has a capacity of 1,000 bushels. The design uses 12 four-foot by eight-foot sheets of the laminated material.

Carter points out that there has been time to run only limited tests on the new bin. However, these tests indicate that it will stand the weight and pressure of stored grain satisfactorily. In these tests, the crib was filled with 1,115 bushels of shelled corn. That is 62,440 pounds and 10 per cent above the rated capacity of the crib. It's about the same load, he said, that would result from storage of soybeans, rye, barley or grain sorghum. The bin was left under test for 112 hours. During this time, the framework was jarred severely to reveal possible weaknesses. There was no damage, and the glued joints remained sound.

Carter says that where the crib is to be used outside, it will be necessary to have a concrete slab or wood floor. A temporary cover can be made from reinforced building paper or a tarpaulin. The plan also shows how to build a permanent roof cover which is more desirable. If the bin can be placed in a crib driveway or machine shed, the farmer can save the cost of building a floor for the crib.

With an estimated cost of less than 10 cents a bushel, farmers might also be interested in it for storing corn they reseal.

Corn growers may reseal their 1948 loan corn or convert purchase agreements into new loans and earn 10 cents per bushel storage payment for keeping the corn another year. Sealed ear corn can be shelled and resealed in less space. To be resealed as shelled corn, the moisture content must not exceed 13.5 per cent. Deadline for resealing is Oct. 31, 1949. Deadline for putting purchase agreement corn under loan is Sept. 30, 1949. The 1949 crop corn will be covered by 90 per cent of parity loans.

On May 30, the government reported that 390,478,653 bushels of 1948 corn had been put under loan or purchase agreements. It reported that the most corn ever before put under price support loans was 302 million bushels in 1939-40. On May 30, Iowa had more than 124 million bushels of 1948 corn under loan as compared with approximately 52 million bushels in Illinois. Illinois, however, had 28 million bushels under purchase agreements as compared with Iowa's 19 million bushels.

National average wheat loan of $1.96 per bushel at the farm for No. 1 grade was announced in July. The 1948 rate was $2.00 per bushel. The given price support price will be operated through loans and purchase agreements based on 90 per cent of July 1 parity price. Parity was $2.17 per bushel as compared with $2.22 for the same date in 1948.

Cook County Farm Bureau Employs Tax Specialist

INCREASINGLY tax conscious, the Cook County Farm Bureau has employed John O'Brien, 29, of Detroit, Mich., as a full-time tax analyst and consultant.

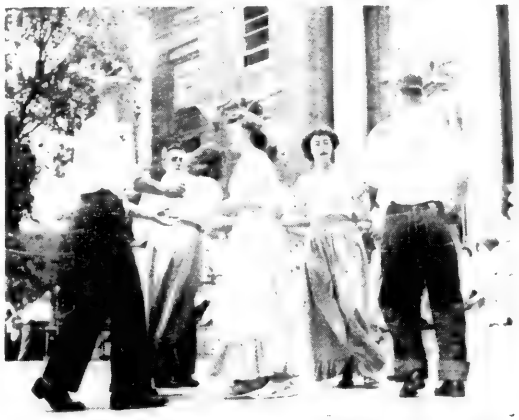
O'Brien will work with tax committees of four or five farmers in each township. He will keep the committees fully informed on all tax matters, help them analyze budgets, and keep them abreast of legal procedures on tax affairs. He will appear at township meetings for the purpose of protecting farm interests and to point out how waste can be eliminated and how the high cost of government can be reduced.

The new tax man attended Wayne University, Detroit, and graduated from Municipal University, Akron, O. He majored in public administration.

DeKalb County Farm Bureau was first to hire a tax expert more than a year ago. Other counties considering the same action are Piatt, Coles and Edgar together, and Marion. Working with the counties in an effort to obtain fairer taxation for farmers is Bert Vandervliet, director of the IAA department of property taxation.

Tops among the barber shop quartets last year were the Massac Melody Boys with Pianist Anna McWade.

This group of Bureau county folk dancers appears a bit grim as they strut their stuff at last year's festival.



Rural Youth at the SPORTS FESTIVAL

THE big farm Sports Festival Aug. 25-26 will give Rural Youth members a chance to take part in many athletic events. Before the festival, volleyball, bowling, skeet and trap shooting will have been completed. District competition in softball and county competition in folks and square dancing will have been run off in preparation for the final show in Urbana.

Rural Youth Members can also take part in baseball, rifle shooting, horseshoes, hog calling, swimming, chair quoits, clock golf, checkers, dart throwing, tennis, (singles) tug o'war, table tennis, wood chopping, drama features, and various music events on the University campus. In addition to all these activities, various rural youthers will assist in the folk and square dance jamboree and the swing festival to be held on Thursday evening of the Sports Festival.

Outstanding among the attractions for Rural Youth this year will be the folk and square dancing. Probably this will be the last year in which folk and square dancing will be scheduled as a summer activity inasmuch as the executive committee of the Sports Festival recommends that dancing be brought to a climax at Farm and Home Week, which comes between school semesters. The present plan providing opportunity for one square dance team for 4-H, Rural Youth, and open class divisions, sets up the possibility for keen competition on the county level.

University of Illinois Swimming coach Ed Manley teaches a group of young people the fundamentals of beginning swimming at the 4-H Memorial Camp near Monticello.

In order to bring folk and square dancing up to a high level, all groups will want to note especially the points to be used in rating dances as listed on page 18 of the festival rules and regulations. They are:

1. Excellence of performance, such as co-ordination with the music, placing on the stage, degree to which the group dances as a unit.

2. Appeal to the audience—including and interpretation of the dance, and the such points as the show of feelings for enjoyment of the experience of dancing.

3. Appearance on the stage, such as lightness and gracefulness.

Rural Youthers will do well to engage wholeheartedly in the folk festival activities from both the standpoint of participation and of help to others, for in Rural Youth the emphasis is upon personality and leadership development.

IAA Young People's Activities

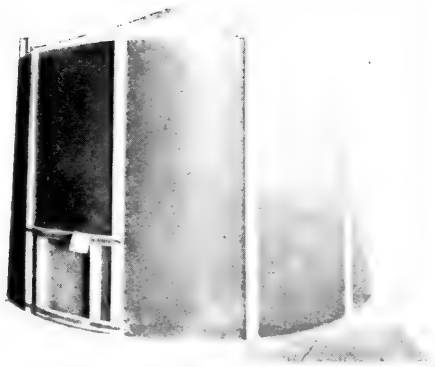
Memorial Camp

Interest, enthusiasm, and participation on the part of 205 active 4-H'ers marked the opening of camp for 4-H at State Memorial Camp near Montecello on July 6. The camp has a good staff of counselors with John Q. Scott as camp manager. Each camp group of 4-H'ers stays four days. Following an impressive flag raising ceremony and a hearty breakfast, activities get under way. Some of these are handicraft, volleyball, hay rack rides, and swimming. Ed Manley, head swimming coach, U. of I., who will be at the camp throughout the summer, takes a personal interest in all the young folks to see that they make progress in learning to swim and enjoy the water.

There is also Ed Bennett, assistant in zoology physiology at the University, just to mention another summer staff member who, among other duties, presides over the tractor-powered hayrack. Bennett's tours over the large Allerton Park with hayrack loads of youngsters

(Continued on page 25)

This is a new type grain bin design which uses relatively inexpensive constructional material. It was designed by the U. of I. department of agricultural engineering and has been given limited testing.



Design New Type Grain Storage Bin

Not Counting the Floor, Building Cost is 10 Cents Per Bushel. Two Men Can Build in One Day

WITH prospects of bumper crops this fall, on-the-farm grain storage looms as an important item in the farming business. Corn loans and resealing programs offered by the government also represent additional pressure for adequate farm storage. Government loans are also being offered for the construction of crib facilities for corn, wheat, soybeans and oats. Details on these programs are available at county PMA (formerly AAA) offices.

The University of Illinois College of Agriculture in July announced that its farm building specialists had designed and tested a completely new type of grain storage bin which may be an aid to the storage problem. (See picture).

D. G. Carter, professor of farm structures and designer of the new type bin, says the building cost is less than 10 cents a bushel, not counting the floor. Two men can build the new round bin in one day.

Plans can be secured by writing the University of Illinois, College of Agriculture, Urbana, Illinois. The charge is 15 cents for the blue print and instruction sheet.

Carter and his associates used a new laminated type of building material made of wood and paper. This material comes in sheets one-seventh of an inch thick. The sheet has a wood veneer core, glued and covered with a tough asphalt-resin paper.

The new bin is round, 14 feet in diameter and 8 feet high. It has a capacity of 1,000 bushels. The design uses 12 four-foot by eight-foot sheets of the laminated material.

Carter points out that there has been time to run only limited tests on the new bin. However, these tests indicate that it will stand the weight and pressure of stored grain satisfactorily. In these tests, the crib was filled with 1,115 bushels of shelled corn. That is 62,440 pounds and 10 per cent above the rated capacity of the crib. It's about the same load, he said, that would result from storage of soybeans, rye, barley or grain sorghum. The bin was left under test for 112 hours. During this time, the framework was jarred severely to reveal possible weaknesses. There was no damage, and the glued joints remained sound.

Carter says that where the crib is to be used outside, it will be necessary to have a concrete slab or wood floor. A temporary cover can be made from reinforced building paper or a tarpaulin. The plan also shows how to build a permanent roof cover which is more desirable. If the bin can be placed in a crib driveway or machine shed, the farmer can save the cost of building a floor for the crib.

With an estimated cost of less than 10 cents a bushel, farmers might also be interested in it for storing corn they reseal.

Corn growers may reseal their 1948 loan corn or convert purchase agreements into new loans and earn 10 cents per bushel storage payment for keeping the corn another year. Sealed ear corn can be shelled and resealed in less space. To be resealed as shelled corn, the moisture content must not exceed 13.5 per cent. Deadline for resealing is Oct. 31, 1949. Deadline for putting purchase agreement corn under loan is Sept. 30, 1949. The 1949 crop corn will be covered by 90 per cent of parity loans.

On May 30, the government reported that 390,478,653 bushels of 1948 corn had been put under loan or purchase agreements. Sprinkler System Increases Yields

Light Weight Aluminum Pipes Can Be Moved Easily

Ernie Stevens of the Poll-Bar farms of McHenry county shows how easy it is to connect the feeder line to the main line (background) on the irrigation system.

AN improved sprinkler system which gives promise of increasing yields considerably on Illinois farms was demonstrated recently on a farm near Woodstock in McHenry county. One of the most important factors in this new irrigation system is ease of movement or mobility. This is due mainly to the fact that the pipe is made of lightweight aluminum.

The system generally calls for the laying of about a 5-inch main through the field with about 500 feet of three-inch line running out laterally from the main line. This 500-foot line containing the rotating sprinklers is usually all that needs to be moved by being disconnected from the main line and dragged by tractor to another connection on the main line.

Equipment for a 40-acre field, enough to spray a 3 1/2-inch rain in 11 days would cost about $2,800. All of the equipment can be moved to other 40-acre tracts.

The system has a good use in being able to distribute such fertilizers as nitrogen and potash dissolved in water. Mention was made at the demonstration of high yields obtainable from this combination of moisture and water soluble plant foods.

Dr. R. H. Bray, University of Illinois soils nutritionist, said farmers can increase 80 to 90 bushel-an-acre yields of corn to 150 to 180 bushels by using sprinkler irrigation, planting thicker, and adding sufficient nitrogen. The inventor claims that properly used the irrigation system will raise alfalfa yields to five tons to the acre and give 700 pounds of beef off an acre of pasture.

McHenry County Farm Adviser W. H. Tammeus said he thought the system as demonstrated has big possibilities for corn, grass, and legumes.

It is also believed that the system can be used to spray DDT for corn borers and 2-4-D to kill weeds.

The advantage of being easily moved is offset somewhat by the fact that when corn usually needs water most — in late July and August — it has reached a height that makes the movement of a tractor in the field well nigh impossible. To move the pipe laterally, therefore, a 500-foot line would require about a half dozen men to lift it up over the corn to move it to another location. Corn, however, would probably be the only common crop where this disadvantage would occur.

Probably the greatest disadvantage to the whole system is the answer to the question "Where do we get the water?" Unless you have a handy source of water, that is, a lake, river, creek, or underground supply which will yield approximately 200 gallons of water per minute, this system is not for you.

With large sources of water, and the investment of more money the system can be made more extensive, cover more land, and sprinkle more water in a shorter period of time.

Aug. 19 Designated Farmers' Day At 1949 Illinois State Fair

AUGUST 19 has been designated Farmers' Day at the annual Illinois State Fair which opens August 12 in Springfield and closes August 21.

The Illinois Agricultural Association will sponsor the Farm Bureau tent again this year. It will be set up in the same location as it was last year.

Farm Bureau people visiting the Fair are invited to use the facilities of the Farm Bureau tent for resting, eating their picnic lunches or to obtain refreshments.

During Farmers' Day, a number of officials of the Illinois Agricultural Association, including the board of directors, will be on hand to welcome Farm Bureau people.

Fifty-five Illinois farm people will leave Aug. 17 for a 48-day tour of eight European countries — Britain. Norway, Sweden, Denmark, Germany, Holland, Belgium, and France. The group will present concerts in England, Norway, and Sweden.

Improved Pastures Pay Off in Moultrie County

Improved pastures are paying off for two Moultrie county dairymen, and a third has cut his milking time by washing each cow's udder before milking.

That's the word from Blaine Erhardt, dairy herd improvement association tester in Moultrie county. He says that Ralph Emel and Wayne Wilson used rye for early spring pasture, and for summer a permanent pasture of Ladino clover and other legumes and grasses. plus a separate field of Sudan grass. This program has given excellent results.

And Lloyd Sharp has been washing the udders and teats with warm chlorine water just before milking. He found the cows gave their milk down better, and he has done away with stripping after the cows are milked by machine. Sharp has a bucket of chlorine solution and a clean cloth behind the cows when he begins to milk.

J. G. Cash, Illinois College of Agriculture dairyman, says that pasture is the cheapest feed there is. He also recommends the separate-cloth-for-every-cow system for washing udders.

1. PRICE PROTECTION
2. DISCOUNTS
3. COOPERATIVE SAVINGS

3 WAYS to SAVE

MOTOR OILS

ILLINI
Cleaner Motor. Better Piston Seal. Non-corrosion. Anti-sludge and Varnish. Longer Engine Life.

BLUE CIRCLE
Safe Lubrication. A Cleaner Engine. Longer Bearing Life. Sludge and Varnish Protection. Real Economy.

PENN BOND
A 'regular-type' motor oil for those who want a reliable, 100% pure Pennsylvania oil.

I. F. S. HEAVY DUTY
Proven superiority in high-speed Diesel and heavy duty gasoline engines.

GREASES

MASTER-LUBE
A multi-purpose grease of highest quality for Chassis—Wheel Bearings —Universal Joints—Water Pumps.

LUCO-LUBE
A great favorite in general purpose gun greases. Adhesive body stays put on metal surfaces.

ALUMINATE GUN
An aluminum base grease of top quality for chassis and general lubrication.

HARVESTER GUN
The ideal grease for Combines and Corn Pickers. Operates well in all types of grease guns.

Farm Bureau Membership Passes 165,000 Goal for '49

ILLINOIS Farm Bureau membership has passed its goal of 165,000 set for the end of the 1949 fiscal year — Sept. 30. On July 1, Illinois Agricultural Association-Farm Bureau membership was 166,813 according to figures compiled by O. D. Brissenden, IAA organization director.

Five years ago membership was 115,000. At the end of the last fiscal year it was 155,793. Membership passed the 160,000 mark in January. Organization men believe they can exceed 170,000 within another year.

Are You Ready?

connection with the 4-H softball tournament; (16) Johnson, Vienna, July 27.

Roy Johnson said that county fair officials have been very cooperative about holding the tug o'war district finals and have helped the Sports Festival a great deal.

The colorful trap and skeet shoot which last year drew about 2,500 fans and followers is being held in advance of the Sports Festival because of a conflict in dates with a national shoot. This year the shoot will be held Friday, Aug. 12 at the Mather Gun Club near the old airport on route 4 southwest of Springfield.

The finals of the volleyball and bowling tournaments usually held at Champaign were held in Springfield last spring to avoid hot weather during the festival.

The climax of the two-day show will be the staging of several final contests, the parade of sports festival champions, and the presentation of trophies.

Failure of an Experiment

(*Continued from page* 5)

tooke their litle-ons with them to set corne, which before would aledg weakness, and inabilitie; whom to have compelled would have bene thought great tiranie and oppression.

"The experience that was had in this commone course and condition, tried sundrie years, and that amongst godly and sober men, may well evince the vanitie of that conceite of Platos and other ancients, applauded by some of later times; — that the taking away of propertie, and bringing in communitie into a comone wealth, would make them happy and florishing; as if they were wiser than God. For this communitie (so farr as it was) was found to breed much confusion and discontent, and retard much imployment that would have been to their benefite and comforte.

"For the yong-men that were most able and fitte for labour and service did repine that they should spend their time and streingth to worke for other mens wives and children, with out any recompense.

"And for men's wives to be commanded to doe servise for other men, as dressing their meate, washing their cloaths, etc., they deemed it a kind of slaverie, neither could many husbands well brooke it. . . .

"By this time harvest was come, and instead of famine, now God gave them plentie, and the face of things was changed, to the rejoysing of the harts of many, for which they blessed God. And the effect of their particuler (private) planting was well seene, for all had, one way and other, pretty well to bring the year aboute, and some of the abler sorte and more industrious had to spare, and sell to others, so as any generall wante or famine hath not been amongest them since to this day."

Is Your Fly Control Program Paying Off In Comfort, Profits?

HOW is your fly control program coming along? Your spraying during the past two or three months should be paying off. But don't let down now. Flies breed fast in this hot weather and unless you keep spraying you will continue to be plagued by them.

And don't forget the words of extension Insect Specialist H. B. Petty who says that 90 per cent of a good fly control program is good sanitation. Unless you eliminate fly-breeding wastes spraying isn't going to have too much effect.

If you want the best results, therefore, keep your place cleaned up, spray every building where flies roost, spray under trees where cattle rest. Spray doors and screens. Spray chicken houses and hog houses. The spray solution is cheap. Use plenty of it. Don't slacken now that summer is well under way. Contented animals pay off in larger profits in meat and milk.

COLORFUL PLASTICS

Housekeeping is easier with the new dustproof and waterproof plastic fabrics. Match the curtains with a pretty apron. For free instructions send a self-addressed stamped envelope to Women's Editor, IAA Record, 43 East Ohio Street, Chicago 11, Ill.

WE'RE BACK IN THE MUD

(*Continued from page 4*)

The Association believed the proposal for increasing the gasoline tax and motor vehicle license fees to be fair. An average motorist, driving 7500 miles per year and getting 15 miles to the gallon of gasoline, would use 500 gallons of gasoline. The additional 2c tax would cost him $10. The additional license fee would have cost $1.50, or a total of $11.50 for the year.

However, the bill failed to pass. There was general agreement on the condition of our highways and the need for additional revenues except that petroleum interests and the trucking industry opposed the increase and argued that highways could be rebuilt from present funds. The state administration did not favor the allocation of 12½ per cent for local roads.

Cities generally opposed the allocation for local roads insisting that cities were entitled to their present percentage of gasoline tax revenues and should have one-third of the total revenues from the increased tax. The Illinois Agricultural Association and representatives of townships pointed out that the 12½% allocation to townships was arrived at as a result of a compromise in the Illinois Highway and Traffic Problems Commission. They could not agree to a further reduction in the allocation for local roads.

As a result of the differences over the allocation together with the general opposition to a tax increase, the bill was defeated. No additional revenues will be available and our Illinois highway system will continue to deteriorate. The state will have very little money available for new construction. Counties and cities must get along with their present revenues.

There will be no state aid for local roads. For the past four years $7,500,000 per year from general funds has been available. A similar appropriation was not made at this session. While this appropriation has been belittled, nevertheless it has been of real aid. The local roads must rely upon local property taxes and the proceeds of local bond issues. The problem will be particularly acute in those areas where schools have been reorganized and state funds are needed in order to provide roads over which the school busses can operate. There is need for state aid for local roads from a permanent source in order that a long-range program for improvement of these roads may be developed. There also is need for reorganization of township road administration on a more efficient basis.

Some of the opposition to the allocation of state funds to townships was on the ground that the money would be wasted and no lasting results would be obtained. Local people must give attention to the problem of obtaining funds for these roads and the problem of securing more uniformly efficient administration.

Candidates for the Illinois Dairy Queen of 1949 pose with Ryland Capron (left), president of the Peoria Milk Producers' and O. H. Ryan, La Salle county, president of the Illinois Milk Producers' Association during finals of state contest held in Peoria July 14. RURAL YOUTH

(*Continued from page 20*)

give the campers an appreciation of the out-of-doors and the varied plant life of the area.

Campers under the trotter system place the food on the table and remove the dishes at the end of the meal. They lead the singing, preside at group meetings, and put on their own stunt shows; in fact, the whole program is planned to develop self-reliance, citizenship, a love for the out-of doors, and to help the campers discover their own talents.

New Laws Passed

(*Continued from page 18*)

Doubtlessly much of the additional state money will be used to increase teachers' salaries. Gradually, over a period of years, better salaries should attract better talent into the teaching field and enable school districts to retain teachers of ability who would otherwise be attracted to other jobs. Also better salaries should encourage many teachers now on the job to return to summer schools for refresher courses.

However, the main reason for additional state aid is to equalize educational opportunity. Better teachers is an important step toward this goal but only one step. Improved curriculums plus more adequate equipment are other steps toward an equalization of opportunity. School boards should see to it that additional state funds are used to strengthen all phases of their educational program.

A group of Pike County Home Bureau women are dazzled by the famous smorgasbord of the Kungsholm restaurant during their visit to Chicago. Left to right: Miss Emma Hake, Miss Helen Hackman, Home Adviser, Mrs. Ethel Landess, Mrs. Ruth Moore, Mrs. Harry Long, Chairman of Home Bureau, Mrs. John Ellis, Mrs. Roswell Kelley, and Mrs. J. Otis Denison.

Farm Bureau Membership Passes 165,000 Goal for '49

ILLINOIS Farm Bureau membership has passed its goal of 165,000 set for the end of the 1949 fiscal year Sept. 30. On July 1, Illinois Agricultural Association-Farm Bureau membership was 166,813 according to figures compiled by O. D. Brissenden, IAA organization director.

Five years ago membership was 115,000. At the end of the last fiscal year it was 155,793. Membership passed the 160,000 mark in January. Organization men believe they can exceed 170,000 within another year.

Are You Ready?

(Continued from page 10)

connection with the 4-H softball tournament; (16) Johnson, Vienna, July 27.

Roy Johnson said that county fair officials have been very cooperative about holding the tug o'war district finals and have helped the Sports Festival a great deal.

The colorful trap and skeet shoot which last year drew about 2,500 fans and followers is being held in advance of the Sports Festival because of a conflict in dates with a national shoot. This year the shoot will be held Friday, Aug. 12 at the Mather Gun Club near the old airport on route 4 southwest of Springfield.

The finals of the volleyball and bowling tournaments usually held at Champaign were held in Springfield last spring to avoid hot weather during the festival.

The climax of the two-day show will be the staging of several final contests, the parade of sports festival champions, and the presentation of trophies.

Failure of an Experiment

(Continued from page 5)

tooke their litle-ons with them to set corne, which before would aledg weakness, and inabilitie; whom to have compelled would have bene thought great tiranie and oppression.

"The experience that was had in this commone course and condition, tried sundrie years, and that amongst godly and sober men, may well evince the vanitie of that conceite of Platos and other ancients, applauded by some of later times; — that the taking away of propertie, and bringing in communitie into a comone wealth, would make them happy and florishing; as if they were wiser than God. For this communitie (so farr as it was) was found to breed much confusion and discontent, and retard much imployment that would have been to their benefite and comforte.

"For the yong-men that were most able and fitte for labour and service did repine that they should spend their time and streingth to worke for other mens wives and children, with out any recompense.

"And for men's wives to be commanded to doe servise for other men, as dressing their meate, washing their cloaths, etc., they deemed it a kind of slaverie, neither could many husbands well brooke it. . . .

"By this time harvest was come, and instead of famine, now God gave them plentie, and the face of things was changed, to the rejoysing of the harts of many, for which they blessed God. And the effect of their particuler (private) planting was well seene, for all had, one way and other, pretty well to bring the year aboute, and some of the abler sorte and more industrious had to spare, and sell to others, so as any generall wante or famine hath not been amongest them since to this day."

Is Your Fly Control Program Paying Off In Comfort, Profits?

HOW is your fly control program coming along? Your spraying during the past two or three months should be paying off. But don't let down now. Flies breed fast in this hot weather and unless you keep spraying you will continue to be plagued by them.

And don't forget the words of extension Insect Specialist H. B. Petty who says that 90 per cent of a good fly control program is good sanitation. Unless you eliminate fly-breeding wastes spraying isn't going to have too much effect.

If you want the best results, therefore, keep your place cleaned up, spray every building where flies roost, spray under trees where cattle rest. Spray doors and screens. Spray chicken houses and hog houses. The spray solution is cheap. Use plenty of it. Don't slacken now that summer is well under way. Contented animals pay off in larger profits in meat and milk.

COLORFUL PLASTICS

Housekeeping is easier with the new dustproof and waterproof plastic fabrics. Match the curtains with a pretty apron. For free instructions send a self-addressed stamped envelope to Women's Editor, IAA Record, 43 East Ohio Street, Chicago 11, Ill.

WE'RE BACK IN THE MUD

(Continued from page 4)

The Association believed the proposal for increasing the gasoline tax and motor vehicle license fees to be fair. An average motorist, driving 7500 miles per year and getting 15 miles to the gallon of gasoline, would use 500 gallons of gasoline. The additional 2c tax would cost him $10. The additional license fee would have cost $1.50, or a total of $11.50 for the year.

However, the bill failed to pass. There was general agreement on the condition of our highways and the need for additional revenues except that petroleum interests and the trucking industry opposed the increase and argued that highways could be rebuilt from present funds. The state administration did not favor the allocation of 12½ per cent for local roads.

Cities generally opposed the allocation for local roads insisting that cities were entitled to their present percentage of gasoline tax revenues and should have one-third of the total revenues from the increased tax. The Illinois Agricultural Association and representatives of townships pointed out that the 12½% allocation to townships was arrived at as a result of a compromise in the Illinois Highway and Traffic Problems Commission. They could not agree to a further reduction in the allocation for local roads.

As a result of the differences over the allocation together with the general opposition to a tax increase, the bill was defeated. No additional revenues will be available and our Illinois highway system will continue to deteriorate. The state will have very little money available for new construction. Counties and cities must get along with their present revenues.

There will be no state aid for local roads. For the past four years $7,500,000 per year from general funds has been available. A similar appropriation was not made at this session. While this appropriation has been belittled, nevertheless it has been of real aid. The local roads must rely upon local property taxes and the proceeds of local bond issues. The problem will be particularly acute in those areas where schools have been reorganized and state funds are needed in order to provide roads over which the school busses can operate. There is need for state aid for local roads from a permanent source in order that a long-range program for improvement of these roads may be developed. There also is need for reorganization of township road administration on a more efficient basis. Some of the opposition to the allocation of state funds to townships was on the ground that the money would be wasted and no lasting results would be obtained. Local people must give attention to the problem of obtaining funds for these roads and the problem of securing more uniformly efficient administration.

Candidates for the Illinois Dairy Queen of 1949 pose with Ryland Capron (left), president of the Peoria Milk Producers' and O. H. Ryan, La Salle county, president of the Illinois Milk Producers' Association during finals of state contest held in Peoria July 14. The girls, left to right, are: Carolyn Sears, Vandalia; Pat Stanley, Harvard; Shirley Moberly, Bloomington; Joan Brady, Decatur; Dorothy Davies, La Salle; Donna Waddington, Pana; Joan Amant, Olney; and the winner, June Bostrom, Chicago.

June Bostrom (center) hears the applause of the crowd as she is proclaimed Illinois Dairy Queen for 1949 during state finals in Peoria July 14. Right is last year's queen, Patricia Monroe of Decatur. At left is Announcer Milton Budd.

RURAL YOUTH

(Continued from page 20)

give the campers an appreciation of the out-of-doors and the varied plant life of the area.

Campers under the trotter system place the food on the table and remove the dishes at the end of the meal. They lead the singing, preside at group meetings, and put on their own stunt shows; in fact, the whole program is planned to develop self-reliance, citizenship, a love for the out-of doors, and to help the campers discover their own talents.

New Laws Passed

(Continued from page 18)

Doubtlessly much of the additional state money will be used to increase teachers' salaries. Gradually, over a period of years, better salaries should attract better talent into the teaching field and enable school districts to retain teachers of ability who would otherwise be attracted to other jobs. Also better salaries should encourage many teachers now on the job to return to summer schools for refresher courses.

However, the main reason for additional state aid is to equalize educational opportunity. Better teachers is an important step toward this goal but only one step. Improved curriculums plus more adequate equipment are other steps toward an equalization of opportunity. School boards should see to it that additional state funds are used to strengthen all phases of their educational program.

Watson Heads Prairie Grain; Iftner Made Ass't to Terminals Mgr.

TWO changes in personnel have been announced in connection with the IAA-affiliated grain marketing program. George H. Iftner, IAA director of grain marketing for the past eight years, has been named assistant to the manager of the Illinois Grain Terminals Company.

Ray V. Watson, Mason county farm adviser for the past 13 years, has been appointed manager of the Prairie Grain Company with headquarters at Henry, Ill. Prairie Grain Company is affiliated with Illinois Grain Terminals, an associated company of the IAA. Prairie Grain operates two large sub-terminal river elevators at Hennepin and Lacon.

As director of grain marketing Iftner did a great deal of the groundwork which resulted in the organization of Illinois Grain Terminals. He was born in Pittsfield in Pike county and attended Illinois College for two years then finished at the University of Illinois College of Agriculture in 1922.

Iftner was an assistant in crop production at the University before

Ray V. Watson

George H. Iftner

going to Sullivan to teach vocational agriculture. He was Effingham county farm adviser from 1928 to 1933, and in Tazewell county farm adviser from '33 to '41. He organized the first Rural Youth group in the nation at Effingham. He is a member of the Pekin American Legion, Rotary, Masons, Evangelical and Reformed Church, and is a past president of Pekin Kiwanis Club.

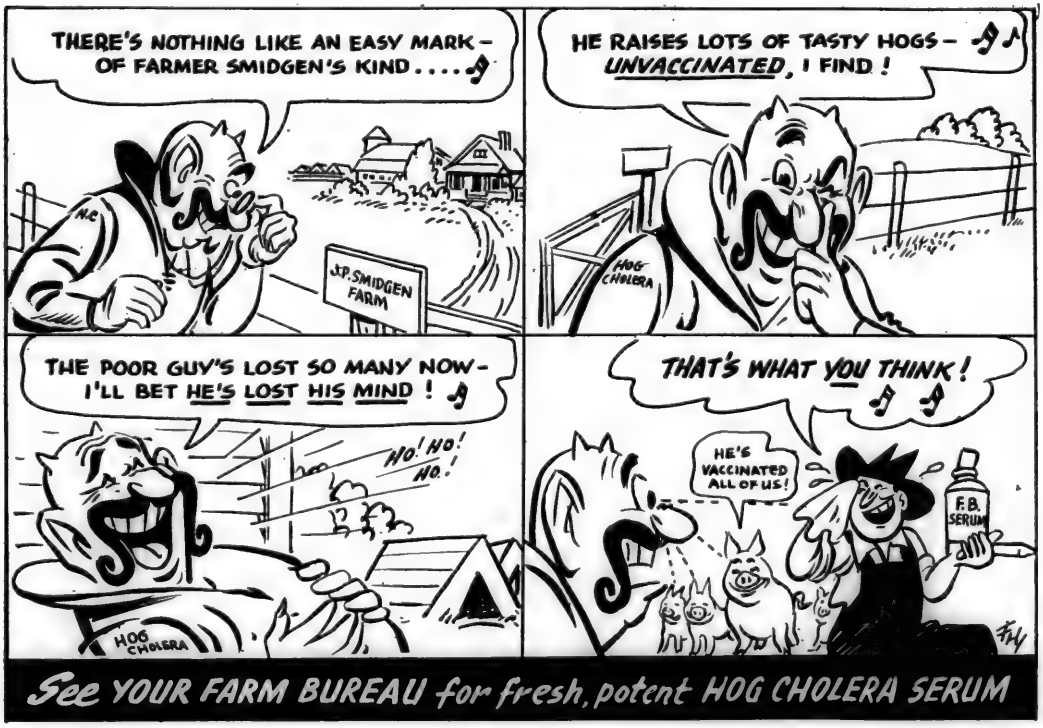
Watson graduated from the University of Illinois College of Agriculture in 1920 and farmed near Clinton until 1925. He went to McLean county as assistant farm adviser where he remained until 1929 when he became farm adviser in Grundy county. He left Grundy county in 1936 to become Mason county farm adviser. Watson is a member of the Havana Post of the American Legion, vice president of the Havana Rotary Club and is a member of the official board of the Methodist Church. He has been active in farm youth work for many years.

American Country Life Conference to Be Held Sept. 7, 8, 9

FARM leaders from Illinois have been invited to join the conference of the American Country Life Association meeting Sept. 7, 8, and 9 at Columbus, Ohio. Theme of the meeting is "The Place of the Rural Community in Farm Policy Making."

The meeting will be organized on a workshop basis to discuss 10 phases of rural life—home, church, schools, health, recreation, utilities (power, communication, transportation), farmers' organizations, private services, government agencies, and labor.

President Charles B. Shuman has been asked to preside at one of the sessions and take part in the discussions. Many prominent figures in American public life will be heard during the three-day meeting including Secretary of Agriculture Charles F. Brannan.



Circus Day . . . and you hold your breath as the lion tamer puts his "cats" through their paces. "Too risky a way to earn a living," you say? Yet tomorrow you and your hired man will face a hot-tempered bull or a nervous brood sow, both every bit as dangerous, and think nothing of it.

Possible injury to your help and to strangers on your property leaves you wide open to costly damage suits if you aren't protected by liability insurance. Every day your hired help takes chances with temperamental farm animals, high-powered machinery. A fat sow which has escaped through the fence and is sitting plumb in the middle of the highway, is more dangerous to an oncoming car than a tiger escaped from its cage.

Country Mutual Casualty Company gives you both *general* and *employers* liability coverage at extremely low cost. See your friendly Country Mutual Casualty representative today. Tomorrow may be too late.

KEEP FARM FUEL STORAGE FILLED

FINE FUELS FOR FALL FILL-UP

MAGIC ALADDIN GASOLINE

An exceptionally good fuel for automobiles, trucks, and high compression tractors. This is a high octane fuel, clean and free from impurities.

FS/50 TRACTOR FUEL

A fuel designed especially for low compression tractors. An easy starting fuel with balanced volatility for good acceleration.

IFS DIESEL FUEL

A special fuel for diesel engines. Has balanced volatility for good starting, acceleration, and power without knocking.

RANGE HEAT OIL

An oil for use in gravity-fed, space heater-type burners. Oil vaporizes evenly.

FURNACE OIL

This is the fuel to use in "forced air" or "blower type" atomizing oil burners. Clean burning and easy to start.

— for FALL WORK

The fall work season is already upon us! Combining, corn picking, and fall plowing will soon be in full swing. Thousands of gallons of fuel will be used during this busy season. You will want plenty of fuel on tap when conditions are right to get into the field. Make provision for all equipment — Fill your fuel storage tanks now.

— for WINTER WARMTH

Chilly fall days will soon be here followed by the cold blasts of winter! How's your fuel oil supply? Winter heating oil tanks should be filled now. Don't be caught with your tanks low on the first frosty night!

THE STATE FARM BUREAU PUBLICATION

Our World

ON A RECENT motor trip covering two-third the length of our own wonderfully fertile state of Illinois, we were once again impressed with the size and wealth of the great Midwest. Yet this route which required the greater part of a day by car can be traversed by a modern plane in less than an hour. Breakfast in New York and supper in Los Angeles is a practical reality. Atomic bombs manufactured in America could be carried non-stop to be dumped on Moscow — and vice versa! The childish description "as big as the world" is no longer very impressive. Our world which most of us grew up to consider so huge has been dwarfed by modern transportation.

Charles B. Shuman

WHAT DOES this startling change in size and distance mean to us in the corn belt? Can we continue to isolate ourselves and our thinking from even the most remote corners of the globe? The easy method of ignoring the problems of the rest of the world can no longer succeed if we are realistic.

ILLINOIS farmers are proud of the standard of living which they and their neighbors have attained. Nowhere in the world do the opportunities and living conditions in agriculture compare so favorably with other groups in the nation as they do in America. Some of us were vividly reminded of this fact recently when we acted as host to a group of visiting agricultural leaders from 24 foreign nations. A farmer from central Europe made this brief but vital comparison in explaining the differences in agricultural progress: "You have built a strong farm organization dedicated to equality for agriculture and based upon the principle of self help while we in Europe have placed our sole dependence upon government political charity."

ANOTHER significant comment of our foreign visitors was that if we in America desire peace rather than war, and if we expect to maintain this high standard of living, then we must help the other peoples of the world to improve their conditions. Not primarily by gifts of money and material things, but by assistance in educational programs, improvement in government, the development of independent organizations, and by the sharing of technical knowledge.

OUR WORLD is too small for us to pin our hopes for peace entirely upon isolation. It is essential that we as Midwestern farmers learn to think of foreign nations as neighbors somewhat as our ancestors welcomed a new family to the community. After all, the community of nations is today no farther apart, as measured by traveling time, than were the scattered settlers of a pioneer Illinois community 100 years ago.

Charles B. Shuman

President, Illinois Agricultural Association

Our world which most of us grew up to consider so huge has been dwarfed by modern transportation.

Charles B. Shuman

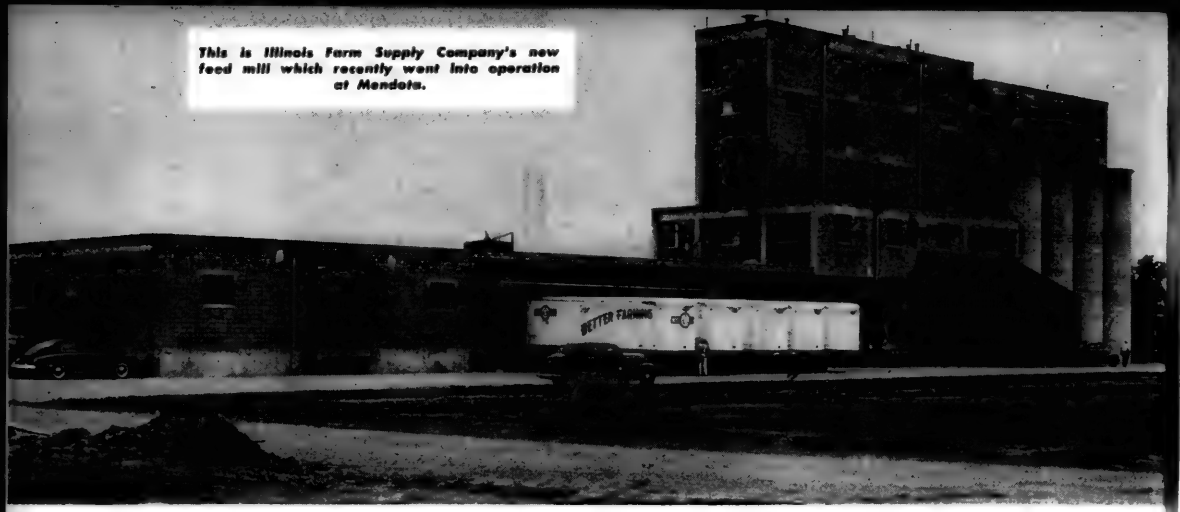
WHAT DOES this startling change in size and distance mean to us in the corn belt? Can we continue to isolate ourselves and our thinking from even the most remote corners of the globe? The easy method of ignoring the problems of the rest of the world can no longer succeed if we are realistic.

ILLINOIS farmers are proud of the standard of living which they and their neighbors have attained. Nowhere in the world do the opportunities and living conditions in agriculture compare so favorably with other groups in the nation as they do in America. Some of us were vividly reminded of this fact recently when we acted as host to a group of visiting agricultural leaders from 24 foreign nations. A farmer from central Europe made this brief but vital comparison in explaining the differences in agricultural progress. "You have built a strong farm organization dedicated to equality for agriculture and based upon the principle of self help while we in Europe have placed our sole dependence upon government political charity."

ANOTHER significant comment of our foreign visitors was that if we in America desire peace rather than war, and if we expect to maintain this high standard of living, then we must help the other peoples of the world to improve their conditions. Not primarily by gifts of money and material things, but by assistance in educational programs, improvement in government, the development of independent organizations, and by the sharing of technical knowledge.

OUR WORLD is too small for us to pin our hopes for peace entirely upon isolation. It is essential that we as Midwestern farmers learn to think of foreign nations as neighbors somewhat as our ancestors welcomed a new family to the community. After all, the community of nations is today no farther apart, as measured by traveling time, than were the scattered settlers of a pioneer Illinois community 100 years ago.

President, Illinois Agricultural Association



This is Illinois Farm Supply Company's new feed mill which recently went into operation at Mendota.

FEED AND..

WORK on Illinois Farm Supply Company's new feed mill at Mendota in La Salle county is now complete. The new mill assures northern Illinois farmers of a plentiful supply of Blue Seal feeds. Illinois Farm Supply Company is an affiliated company of the Illinois Agricultural Association. At full production daily output will average 250 tons. The mill operates on eight-hour shift of 20 men per day.

The Mendota mill is one of the finest and most modern in the state and will produce about 40,000 tons annually of Blue Seal poultry, dairy, and livestock feeds for distribution to member service companies.

The new mill replaces the leased Badenoch mill in Chicago. It is the second feed mill to be built by Illinois farmers with their own money to provide themselves with the best in feed milling operations. The Benton mill of Illinois Farm Supply Company supplies the southern half of the state.

In addition, Blue Seal feeds will continue to be produced at the Hammond, Ind., mill which is operated jointly by Illinois Farm Supply Company and two other Midwestern cooperatives.

J. J. Lanter, Illinois Farm Supply director of procurement, said the Mendota mill was designed to meet the specific needs of Illinois farmers for high-quality feeds.

A leased fleet of 16 new 18-ton trailer transports will be used in delivering feed from mill to the member companies located in the northern half of the state. Each trailer is painted a dazzling white and carries Farm Supply's Blue Seal emblem and the company's motto in red "For Better Farming."

The Mendota mill is under the management of Glen Lines. Construction was started early last winter and cost an estimated $750,000.

New Mendota Mill Assures Farmers Of Plentiful Feed Supply

John Fischer (left) operates the stitching machine which sews the bags and Edward Mohr (right) operates the bagging machinery. This device automatically fills each bag with 100 pounds of Blue Seal Feed.

Illinois Farm Supply Opens Modern Plant

A group of visitors led by Frank Flynn, (wearing sailor straw), Morgan county, a member of the Illinois Farm Supply board of directors, watch the operation of the fertilizer mixing valves which are controlled by air and are semi-automatic.

FERTILIZER

SIX HUNDRED patrons attended open house in early August at Illinois Farm Supply Company's new fertilizer plant at East St. Louis, Illinois. Illinois Farm Supply Company is an affiliate of the Illinois Agricultural Association.

The new fertilizer plant was completed recently. At capacity it can produce about 120 tons of superphosphate and 200 tons of mixed fertilizer per eight hour shift. At capacity the bagging machines can sack 750 bags per hour.

Total storage of the mill includes space for approximately 7,200 tons of materials for mixed fertilizers, 7,200 tons of finished materials, and 6,000 tons of superphosphate.

The East St. Louis building is 125 feet by 380 feet and at its highest point is nine stories high. The plant has an additional 3,250 square feet of space for the production of superphosphate by the acidulating process. This involves the action of water and sulphuric acid on raw phosphate rock to produce superphosphate.

Patrons visiting the plant during the open house were shown the various processes of the factory in action by Manager Kenneth D. Wohlford and Plant Superintendent Jesse Barnes.

The plant at East St. Louis was built to provide Illinois farmers with the best possible value in fertilizers with a minimum movement of inert materials. The product of the plant is moved by a fleet of trailer trucks with a capacity of 18 tons of material each. The loading dock is built to accommodate nine trucks simultaneously.

The 600 people attending the open house and representing 60 distributor outlets included large delegations from Adams, Macoupin, Montgomery, Menard, Sangamon, and Morgan counties.

The fertilizer plant at East St. Louis is one of the most modern in the country. Installation of labor-saving machinery enables the product to be processed, mixed, and sacked with a minimum of handling.

Much of the machinery is automatic and the modern pneumatic-controlled valves on the mixing bins enable one man to mix a ton of plant food at one time with semi-automatic controls.

Moving along to the bagging department, the visitors watch Joseph Colombara operate the machinery which can sack 25 tons of fertilizer in an hour. Corner of bags facing camera contain a self-sealing sleeve.

The Crescent City's decks are enveloped in grain dust as Illinois Grain Terminals' Irondale elevator pours 110,000 bushels of corn into the lake freighter's hold for shipment to Buffalo.

Carl Johnson, Marshal-Putnam county (left) and Jim Holderman, Grundy county, members of the Illinois Grain Terminals Company board of directors, watch loading of first grain.

First Shipment

ILLINOIS GRAIN TERMINALS COMPANY has made its first shipment of grain by lake freighter from the company's terminal elevator at 107th street and the Calumet river in South Chicago.

The ship left with 110,000 bushels of number two yellow corn loaded at the 2½ million bushel Irondale elevator and bound for Buffalo, N. Y. It was sold to Leval and Company, Buffalo grain dealers and exporters. Leval and Company indicated that the Illinois grain eventually would be shipped to Belgium.

The 250,000 bushel capacity lake freighter Crescent City also carried 140,000 bushels of wheat loaded at the nearby Calument elevator and consigned to Buffalo. By the time you read this issue of the IAA RECORD, further grain shipments will have been made from the Irondale elevator which is owned and controlled by Illinois farmers.

Illinois Grain Terminals Company is affiliated with the Illinois Agricultural Association, the State Farm Bureau organization. It bought the Irondale elevator June 1 from the Chicago Grain Corporation, a subsidiary of the Norris Grain Company.

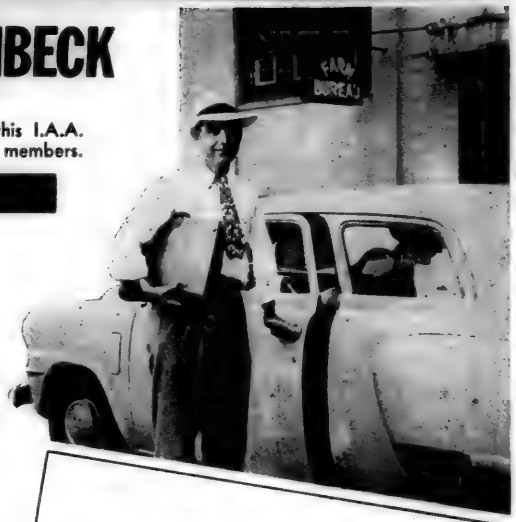
Shipment of the first grain from the Irondale elevator heralds a new era in grain merchandising for Illinois farmers. The Irondale elevator furnishes a terminal outlet for an Illinois network of farmer-owned inland and river sub-terminal elevator companies affiliated with Illinois Grain Terminals Company.

The marketing facilities include 24 county grain companies, 10 local elevators, and sub-terminal elevators on the Illinois river at Havanna, Lacon, and Hennepin, and at Dallas City on the Mississippi river.

A DAY with DICK HORNBECK

GENERAL AGENT, LA SALLE COUNTY

The following notes made Monday, July 11, show this I.A.A. Insurance Counselor's work to be varied, helpful to members.



Monday
July 11, 1949

8 A.M: Started hail adjusters Mosher + Johnson and our Cliff Nilson to clean up last 7 hail claims.

8:15: Member Robert Nuse stopped in to report auto damage; backed into neighbor's car. I completed accident report, authorized repairs.

8:35: Regular weekly agents' training meeting. Group studied new benefits now available to auto policy holders.

9:30: Delivered $15,000 Family Income policy to new member, J. K., which guarantees family security of $74.20 monthly for 20 years. Also took application on his new auto.

10:15: Had discussion with agent Lyman on presentation of a retirement income plan for members.

10:50 Phoned member Carlson that his new fire policy was effective for $30,000 of fire protection as applied for.

10:55: Assisted member B.F. in placing crop hail protection on 100 acres of corn, 50 of beans.

11:15: Dictated all pending correspondence to secretary, Mrs. Mudge.

12:15 P.M. Attended Kiwanis luncheon, meeting.

1:30: Called on member Hepburn to assist in starting small savings program for his two children with Country Life insurance.

2:05: Reappraised buildings and renewed fire policies at Stevenson farm and Beirman farm. Made dated. eve. appointment with Beirman to review all his I.A.A. insurance policies.

3:55: Inspected lightning and wind losses on farm of member Jones.

4:00: Stopped at member Rapp's farm. Helped complete F.G. & E.L. labor report. Discussed his liability protection as owner of tractor operating on highway.

5:00: Heading toward home, called at member Frosts to work out a personal accident policy. Noticed gasoline stored too close to his garage; suggested he move it.

6:00: Arrived home. Agent Hungerford phoned to confirm Thurs. eve. appointment with member Smith. Will present estate transfer policy recommendations.

Evening: Wife and I wrote letter to daughter Sherry, away on first vacation.

Dick Hornbeck answers a letter by phone. Dick believes in prompt service, helpful service.

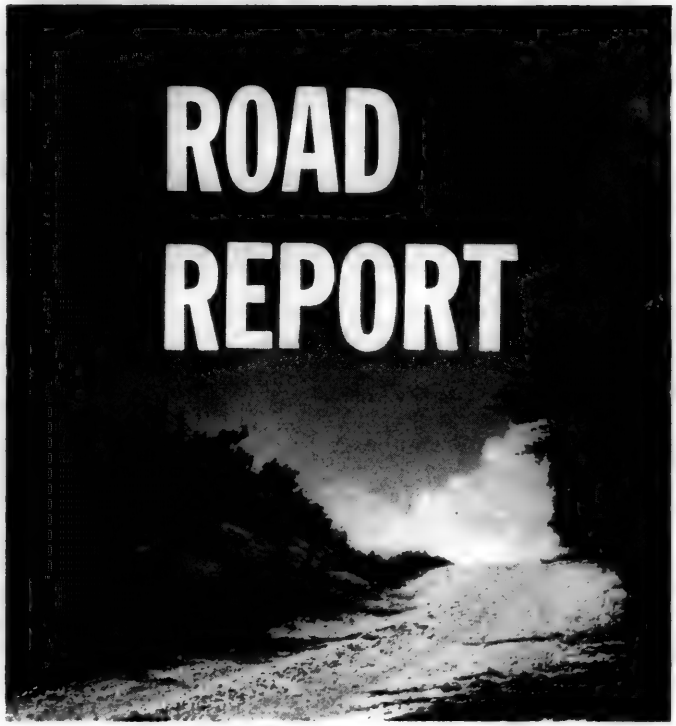
FARM BUREAU INSURANCE SERVICE
43 E. Ohio St.,
Chicago, Ill.



Copies are Available At Your County Farm Bureau NOW

By

CULLEN B. SWEET

Director IAA Department Rural Road Improvement

THE report of the Road Study Committee of the Illinois Agricultural Association is now available. Copies are now coming off the press and are being sent to county Farm Bureau officers. Additional copies are available to Farm Bureau members on request at your county Farm Bureau office.

Based on facts and their findings, the committee has made recommendations for needed and desirable changes in the administration of rural roads. The committee also suggests how these changes may be brought about. Methods of financing also are considered and recommendations are made.

The report of the IAA Road Study Committee is the work of a group of 20 farmers. One was selected from each of the 15 IAA districts. The remaining five were chosen at large. These 20 men spent more than eight months studying the road problems of Illinois. The first meeting of the committee was held March 29, 1948.

At their first meeting IAA President Charles B. Shuman outlined the purpose of the road committee. He emphasized the need for constructive work in solving the road problems facing the peoples of Illinois. He suggested that they approach the study with an open mind and give serious consideration to all sides of the problem before making recommendations.

Although the committee was interested primarily in farm roads, the solution of the problems pertaining to these roads and their relationship to those of the state and county could be considered only after a study of the problems of each of the other three systems including primary roads (hard roads), county roads, and city streets.

The committee called in and consulted with outstanding highway engineers, highway officials, and prominent leaders qualified by training and experience to present and discuss important phases of road problems.

Farm Bureau members are urged to read and study the report, to familiarize themselves with its findings and recommendations and to discuss the matter with their County Farm Bureau directors. Voting delegates at the annual meeting of the Illinois Agricultural Association will act upon a road policy which can be aggressively pursued for the benefit of all rural people.

Most Illinois farmers have always considered all-weather roads of paramount importance to the economy of the state. However, hundreds of road districts do not have the money to provide all-weather roads for use by school busses, milk trucks, mail service, farm produce trucks and farm equipment. State aid for farm roads ended June 30, 1949.

For the next two years at least, township and road districts will have to get along with the money raised through local property taxes. The charge has been made that the rank and file of farm people in most counties were not in sympathy with the proposed increase in the gasoline tax even though farm roads would have received continuing and substantial benefit from such increased tax.

If farm people want financial aid for road improvement they are going to have to fight for it. It will not be handed to them. The state highway system is in need of repair and must have more money if Illinois is to have an adequate system of highways. County and township roads also need more funds. Farm people, therefore, are urged to study their present methods of administration and finance to see where economies can be effected to get more road dollars on the road.

Ask at your Farm Bureau office for a copy of the report.

Farm Bureau Knocks Out Brannan Plan

Organized Agriculture Wants Farm Plan With Fewer Controls

FARM Bureau is on the job at Washington. As the result of Farm Bureau action, the U. S. House of Representatives turned down a trial run of the Brannan plan by a thumping vote of 239 to 170. State and national Farm Bureau representatives made it clear to the legislators that organized agriculture favored a farm program with less government control than offered in the Brannan plan.

The vote in the House showed that the majority of representatives from the rural districts did not favor the Brannan plan. The plan had more friends among representatives from the city areas.

Only one Illinois downstate Congressman voted against the Farm Bureau position on this issue and he was from East St. Louis. Recorded vote of Illinois Congressmen on the trial run of the Brannan plan is worthy of the members' study.

As the Record goes to press, the nation's farm program is being debated in Senate committee hearings.

Charles B. Shuman, president of the Illinois Agricultural Association, testifying before the Senate subcommittee on the farm program, said "we know of practically no feeling on the part of farmers of Illinois in favor of the ideas incorporated in the Brannan plan."

Referring to the Brannan proposal, Hassil E. Schenck, president of the Indiana Farm Bureau, told the committee: "If you are going to give the farmer a good price and the consumer cheap food, you are going to have to regiment every business engaged in the handling of that food from the time it leaves the farmer's hands until it reaches the ultimate consumer. . ."

The Farm Bureau favors improvement of farm program legislation already on the books.

Farm Bureau opposes the Brannan plan because it feels that the cost of the program would be staggering and farmers would have to depend upon appropriations from Congress in order to get a fair price for agricultural products.

Price goals of the plan are so high that they will lead to continuous and rigid controls over production and marketing.

Farm Bureau also opposes the Brannan plan because it throws out the idea of parity. Organized agriculture fought for many years to achieve this goal of fair exchange in the market place. Parity has come to be accepted by, nonagricultural groups as a fair measuring stick for farm prices. It does not seem logical to abandon it in favor of an untried system.

Farm Bureau does favor modernizing the parity formula, but does not favor changing its basic principle of fair exchange value between the products of the farm and industry.

Farm Bureau also is outspoken in its disapproval of the "unusual procedure employed in creating the Brannan plan and presenting it to the public which has had the effect of throwing the farm problem into the partisan political arena, a situation which we deplore and condemn. . . . In the future as in the past, sound farm legislation will depend on the best efforts of both political parties."

TOP the Over

Counties Subscribe Over 2¾ Million Dollars for Illinois Terminals Grain Marketing Program

EARLY IN 1949, the Illinois Agricultural Association board of directors authorized the financing of the Illinois Grain Terminals Company by the sale of class "A" preferred six per cent cumulative stock to individuals.

As is the general policy with all new projects of this nature, the Illinois Agricultural Association and the county Farm Bureaus assumed the responsibility of selling stock in the new company. Stock of all classes totaling $2,750,000 was authorized to be sold.

The class "A" preferred was to be sold to individuals. Class "C", which is also a six per cent cumulative stock but standing in a secondary position, was sold to corporations. Of the class "C" stock, 92 county Farm Bureaus subscribed for $96,600, making an average of $1,050 per county. The Illinois Agricultural Association took

Woodford	47,000	30,200
TOTAL		$2,448,400

This is the architect's conception of what the new Prairie Farms Creamery will look like when completed.

New Creamery

New Plant at Carlyle is 11th of IAA Affiliated Prairie Farms Creameries

PLANS are now well under way for the construction of the new Prairie Farms Creamery at Carlyle in Clinton county. It will be the 11th of the Illinois Agricultural Association's affiliated Prairie Farms Creameries.

The creamery also will serve the surrounding counties of Monroe, St. Clair, Washington, Marion, and Jefferson. A stock selling campaign is now under way in these counties under the direction of Judson P. Mason, IAA director of dairy marketing, to raise $150,000 needed to finance the plant. The stock is five per cent cumulative.

The board of directors of Sanitary Milk Producers, the farmers' cooperative which markets Grade A milk in nearby St. Louis, has approved the move to establish a farmers' creamery in Carlyle. We know of no better way to guarantee a safe market for our product, they explained, than for farmers to have their own plant ready to handle their milk.

The 10 Prairie Farms Creameries produce practically every dairy product available including butter, cheese, condensed milk, ice cream mix, powdered milk, cream, and buttermilk. The Carlyle creamery will start by handling Grade A milk only. Plans call for the further development of the plant to fit the needs of the producers and the community.

The new plant will be modern in design and will be 86 feet wide at the front and 20 feet deep and can be enlarged to more than 300 feet deep if needed.

In layout it will profit from the experience of numerous managers of other Prairie Farms Creameries. Plans were drawn up by Forrest C. Fairchild, manager of the state company. Work will be carried out under the direction of IAA Engineer Erik Smith.

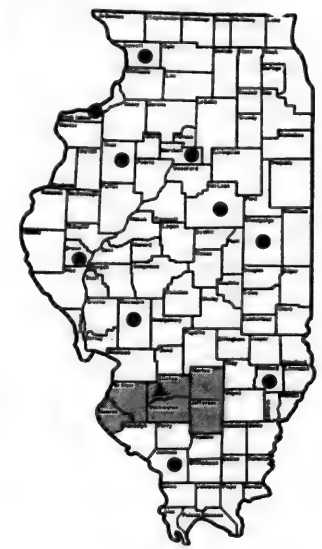
The 10 other Prairie Farms Creameries (top to bottom, see map) are located at Mt. Carroll, Moline, Henry, Galesburg, Bloomington, Champaign, Mt. Sterling, Carlinville, Olney, and Carbondale.

The Prairie Farms Creamery of Henry is also in the midst of a stock selling campaign to raise new capital for the installation of additional milk processing equipment. A new homogenizer has been installed. Plans call for the installation of a new milk cooler and equipment for the manufacture of cottage cheese and ice cream. The manufacture of a greater variety of condensed milk products is planned.

> If you wish to buy stock in the Carlyle creamery, write or call C. Glen Jones, secretary, Prairie Farms Creamery of Carlyle, Clinton County Farm Bureau, Breese, Illinois.

Manager John Raab of the Henry creamery said the new equipment will help assure dairy farmers in the area of a dependable market for their milk.

The Prairie Farms Creamery at Mt. Carroll is developing the same type milk receiving equipment to meet requirements of the Chicago health department. They are now in the process of adding $25,000 in preferred stock to their present capital structure.



Shaded area on map (above) shows district which will be serviced by the new Prairie Farms Creamery at Carlyle. Triangle shows location of new creamery. Dots show other Prairie Farms Creameries (see story).

Dr. Janice Smith Heads Home Economics Dept. At U. of Illinois

DR. Janice Smith, professor of nutrition, has been appointed acting head of the department of home economics of the University of Illinois College of Agriculture effective Sept. 1.

Dr. Janice Smith

She succeeds Mrs. Kathryn VanAken Burns who asked to be relieved of her duties to devote full time to her job as state leader of home advisers.

Since 1944 Dr. Smith has served as director of the foods and nutrition work in the department and during the past year has been responsible for all home economics research and graduate teaching. Dr. Smith is a native of Illinois and a graduate of the university.

She has done a great deal of research on the effect of diet on adults and on the growth of boys and girls.

DEATH WORK

RS OVERTIME

AFFIC ACCIDENTS

SUDDEN DEATH punches no time clock! At the end of your day, he's right there waiting — in the crossfire of speeding highway traffic. 90 PER CENT of all tractor highway accidents are caused by collision! This results in a higher proportion of deaths and injuries than occur in automobiles.

WATCH IT — for yourself and your hired man. Look behind to guard against rear end collisions (responsible for 36% of tractor highway accidents). Stay off the highway at night! See that your driver is old enough to handle a tractor.

WATCH IT — by adequate insurance protection in Country Mutual Casualty. A Farmers General and Employers Liability policy will help you play it safe against any liability that might arise from your farming operation. It costs so little to back precaution with the RIGHT insurance protection.

Good for Wheat

Application gets Action!

Drill in fertilizer with seed at planting time. Drilling places the plant food within easy reach of the germinating grain. Small grains quickly assimilate the large quantities of available phosphorus, potassium and nitrogen contained in these fertilizers and readily convert these essential elements into greater yields of better grain.

BLUE SEAL GROW CROP

MIXTURES

3 - 12 - 12
0 - 15 - 15
5 - 15 - 10
3 - 9 - 18

Wheat farmers welcome the splendid response of wheat to fertilizers. Approximately 80% of the wheat growers in Illinois now apply fertilizer.

Farmers get super wheat with superphosphates—

Many farmers use only phosphates to boost wheat yields. Wheat gives a greater response to phosphate than any other single element.

Super and triple superphosphate applied at seeding time in the row give increases even though rock phosphate has previously been applied.

High analysis mixed fertilizers—

Blue Seal Grow Crop plant food is made in the popular grades of high analysis mixed fertilizers. It has proven superiority over lower grade mixed goods. Grow Crop plant food is available in combinations to fit most soil requirements.

Linder was loaned to the FCA by his company to aid in research on sausage making. (Right) Fosse displays a rack of sausage links ready for the smoke house.

Wonderful Sausage

Williamson Locker Company Shows How It Is Done

By CRESTON FOSTER
Editor, IAA RECORD

MAKING quality sausage is like baking a blue ribbon cake for the county fair — a lot depends on the recipe and how you follow it. And making quality sausage may prove to be an important factor in the profit and loss sheets for a locker plant with processing facilities. That's why there is considerable interest in the sausage making project being carried on by the Williamson County Cooperative Locker Service at Marion.

So far one of the main things discovered in the project is that the plant can turn out fine sausage of a dozen different varieties. Some of the fortunate folks who have had a sample of the product say that they have never tasted such wonderful sausage. Careful records are being kept of all the operations involved so that accurate cost figures will be available. With these figures it will be easy to tell whether quality sausage making is profitable. Early indications are that it is.

Quality sausage making is expected to result in three major benefits for the Williamson plant and other lockers with processing equipment: (1) furnish a profitable outlet for edible by-products of locker processing; (2) keep labor and machinery operating during periods that might otherwise be slack; (3) give a wider outlet for livestock products of the area served by the plant.

Locker managers have found that during the summer months, neither labor nor processing facilities are fully used in processing locker patrons' products.

If the locker plant is to stay in the black, ways must be found to keep busy. The processing department of a locker plant cannot depend on the locker rentals to keep it out of the red.

Most processing departments also have a capacity far greater than is needed to handle the year around run of locker patrons' needs. The manufacture of sausage products can be carried on during slack summer months when these products are at their demand peak.

Farm Credit Administration furnished a sausage maker to set up the project in the Marion plant and teach the techniques of the business. Managers from other plants also have had a chance to observe the operations.

Sausage made at the Marion plant will be marketed under the famous Prairie Farms label, and will adhere to the same high quality standards as apply to the Creameries' dairy products. It is anticipated that the Prairie Farms statewide network of creameries may be used as part of a marketing setup for the sausage.

The processing and packaging of sausage at the Marion plant will also be watched with interest because it may furnish some facts on the wider use of locker plants in the marketing of fresh and cured meats. A large percentage of cooperative locker plants in Illinois have slaughter facilities which can be used more efficiently if the sale of meat products is increased.

You can see that the Marion plant is pioneering for the other cooperative locker plants in Illinois in this particular field of meat processing. Credit is due the directors and others who have invested time, money and effort in the Williamson County Cooperative Locker Service plant and facilities.

Last month new honors came to the Williamson plant when it received an award of merit for being one of the outstanding plants in the state. The award was made by the Locker Management magazine. To be eligible for the magazine award, a plant must have the highest standards of sanitation, must maintain proper locker temperatures, must handle all meats properly and furnish a real service to the people of the community. Manager Romeo Garavaglia proudly framed the award certificate and hung it in the plant lobby.

Insect Specialist Suggests Fumigation of Wheat

FUMIGATE your farm-stored oats and wheat within six weeks after you harvest it to insure your grain against insect damage is the advice of insect specialist H. B. Petty of the College of Agriculture and Illinois Natural History Survey. Petty says insects can cause more damage than most farmers realize.

Petty recommended a three to one mixture of ethylene dichloride and carbon tetrachloride or a four to one mixture of carbon tetrachloride and carbon disulphate. Both are safe, effective and inexpensive.

LETTERS
To The Editor

Last May two Germans, Hans Burbach and Otto von Feury, spent several days studying Illinois Agriculture. They visited the offices of the Illinois Agricultural Association, several County Farm Bureaus, and the University of Illinois. Below is a letter received from Herr Burbach by Roy Johnson, IAA secretary of special services.

TWO WEEKS ago tomorrow, July 23, Baron von Feury and I arrived at Bremerhaven after a very pleasant return trip and in compliance with a request of the Military Government I have just completed a detailed report on the many experiences gained during our trip through the United States. This has kept me rather busy until now.

You may feel that a rather long time has passed since we left your office on May 11 after completing the first stage of our Farm Bureau trip. I have, however, not yet forgotten the days we spent in Illinois and I want to take this opportunity to thank you most kindly for the wonderful way in which we were taken care of by the Illinois Agricultural Association, County Farm Bureaus, and the University of Illinois.

It certainly has been a great experience for us and if there is one thing I do regret, it is only the fact that I don't see any way to write to each of your associates in your Chicago office as well as in the various County Farm Bureau offices individually to express to all of them how deeply their kind assistance has been appreciated. If you have any way of conveying my sincere gratitude to them, I should be very thankful.

THE OLD SCIENCE building at Southern Illinois University in Carbondale is the 27th in our series of historic and scenic Illinois pictures. The building is unique in that it was built in 1896 during Gov. Altgeld's administration and like most of the university construction of that era was designed after a Rhineland castle which the Illinois governor had admired on a trip to Germany. It was the second building on the campus and is used now largely for the study of biology. It was built at a cost of $46,000.

Rural Youth at '49 STATE CAMP

By ELLSWORTH D. LYON, Director
Young Peoples Activities

ILLINOIS Rural Youth members and leaders are on the lookout for ways of giving definiteness and direction to county and statewide activities, and to methods of gearing programs to the needs of farm youth.

In the first place, goals are necessary. A study of the desires, needs, and activities of Illinois Rural Youth in 1945 by the IAA State Committee of Young People revealed the necessity for six objectives in the Illinois Rural Youth program: (1) Citizenship training, (2) Leadership development, (3) Training in cooperation, (4) Rural life appreciation, (5) Better human relations, and (6) Solution of vocational problems.

In many counties, programs are planned around these goals. Often reference is made in the county organizations to these six goals toward which members are working. They are stated on the green purse-size Rural Youth membership card. Definite emphasis has been given to some of these specific goals in the youth conferences of the IAA annual meeting.

In the 1948 Rural Youth Conference of the IAA annual meeting, the theme was citizenship training, with consideration given especially to democratic living in the local community. The 1947 conference was planned around the theme of rural life appreciation. The state committee is considering better human relationships for the 1949 conference theme. Of the short courses in 1947 and 1948, training was given in cooperation. Through district meetings, leadership development has been the main emphasis for a number of years.

County and community groups may pursue many interests under the six goals of Rural Youth in their various activities, if the organizational structure is sound. Here is the second big item to consider when a group divides its memberships into five active standing committees, in order to provide opportunity for leadership development.

These standing committees are education, recreation, community service, publicity, and membership and hospitality. By placing members on these various committees for a six-month period and rotating them to other committees, members have opportunity for new experiences and further development.

The 1949 State Rural Youth "49ers Camp" was planned around this committee system. The approximately 175 campers were divided into wagon trains or groups. Each train was divided into these five committees and each day each wagon train carried one of the activities of education, recreation, community service, publicity, or hospitality. By this method, responsibilities were not too great and each camper cooperated with his wagon train in one of these activities. Counties that have tried this system like it. It has many advantages.

Planning ahead from six months to a year is the established procedure of the most active county organizations. Fall activities should prove helpful in building the local groups. County talk fests and skilled drivers' contests, followed by state and district participation, will serve as incentives to joining and maintaining interest in Rural Youth.

Several counties have quickly taken young people from foreign countries into their groups this summer. These young people, visiting from other lands, have talent and provide educational value to the groups which they attended. Rural Youth has in turn provided group life and companionship for them.

Each year many Rural Youth members in all Illinois counties go away to college. Should not the home group

Volley ball provides strenuous exercise.

Supply Co. Moves

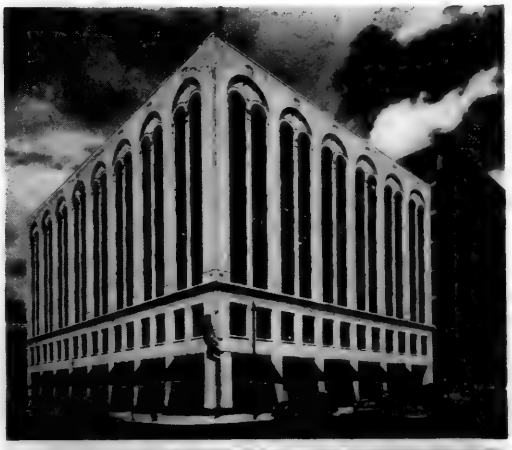
Largest IAA-Affiliate is Now Housed at 100 East Ohio Street Near IAA State Offices

ILLINOIS Farm Supply Company has moved its offices from two blocks south of Chicago's Loop to four blocks north of the Loop on the north side of the Chicago river.

The move takes the largest IAA-affiliated company from 608 South Dearborn street to 100 East Ohio street. Illinois Farm Supply offices are now just one block from the Illinois Agricultural Association offices at 43 East Ohio street.

When the IAA moved to 43 East Ohio two years ago it was intended that Illinois Farm Supply would follow shortly. Since then, however, growth of other IAA-affiliated cooperatives as well as Illinois Farm Supply expansion has made it impossible to house Farm Supply in the IAA building. Farm Supply now has more than 150 employees.

Farmers visiting in Chicago are cordially invited to visit the new offices of Illinois Farm Supply Company as well as the IAA building nearby.



This is the building at 100 East Ohio Street, Chicago, where the Illinois Farm Supply Company moved its state offices recently. Illinois Farm Supply occupies the second and third floors.

A two-ton litter by Sept. 5 is the goal of Harrold Morris, Macon county. He is shown with the 19 pigs he hopes will meet that goal when six months old. The 19 Yorkshires will weigh in Sept. 5 at the Indiana State Fair.

Dr. Kammlade is New State Leader Of Farm Advisers

ILLINOIS' new state leader of farm advisers is Dr. W. G. Kammlade, professor of animal science at the University of Illinois. He succeeds Prof. J. C. Spitler, who retired Sept. 1.

W. G. Kammlade

Dr. Kammlade has been with the animal science department at the University since 1915. As associate director of the Extension Service in Agriculture and Home Economics, he will assist Dean H. P. Rusk in administering the agricultural and home economics extension program.

The new state leader of farm advisers finished his undergraduate work at the University of Illinois where he earned his master's degree in 1917 and his doctor's in 1931. He has been head of the sheep division of the department of animal science since 1921 and is the author of a book on sheep production.

During recent years he has been chairman of the committee in charge of the 5,000-acre Dixon Springs experiment station in Pope county in southern Illinois. He has been responsible for the general supervision and coordination of all research studies conducted at the station.

See Higher Milk Prices Through Rest of 1949

ILLINOIS farmers can expect to receive higher prices for milk during the balance of 1949 than during recent months, according to J. P. Mason, director of dairy marketing for the Illinois Agricultural Association.

Higher support prices announced by the U. S. Department of Agriculture for butter and non-fat dry milk solids and the new support price announced for cheese will strengthen prices paid for milk used for manufacturing purposes. About half of the Illinois milk production is intended for such outlets, Mason says.

Producers supplying fluid milk markets will also receive increased prices and are planning their fall and winter production to take care of the needs of the market during the short supply season. The higher manufactured milk prices are reflected to fluid milk producers through pricing formulas which use dairy product prices as a base.

Producers supplying the St. Louis area received an additional price increase with their August milk checks as a result of a recent amendment made to the federal milk marketing order in effect there.

The Rockford and Freeport milk markets were made subject to a federal milk marketing order Aug. 1. The order provides classes of milk and establishes minimum prices to be paid producers. The order was made effective at the request of producers as the only means of obtaining proper prices for milk and guaranteeing the market a sufficient supply.

Several counties have quickly taken young people from foreign countries into their groups this summer. These young people, visiting from other lands, have talent and provide educational value to the groups which they attended. Rural Youth has in turn provided group life and companionship for them.

Each year many Rural Youth members in all Illinois counties go away to college. Should not the home group

Supply Co. Moves

Largest IAA-Affiliate is Now Housed at 100 East Ohio Street Near IAA State Offices

ILLINOIS Farm Supply Company has moved its offices from two blocks south of Chicago's Loop to four blocks north of the Loop on the north side of the Chicago river.

The move takes the largest IAA-affiliated company from 608 South Dearborn street to 100 East Ohio street. Illinois Farm Supply offices are now just one block from the Illinois Agricultural Association offices at 43 East Ohio street.

When the IAA moved to 43 East Ohio two years ago it was intended that Illinois Farm Supply would follow shortly. Since then, however, growth of other IAA-affiliated cooperatives as well as Illinois Farm Supply expansion has made it impossible to house Farm Supply in the IAA building. Farm Supply now has more than 150 employees.

Farmers visiting in Chicago are cordially invited to visit the new offices of Illinois Farm Supply Company as well as the IAA building nearby.

This is the building at 100 East Ohio Street, Chicago, where the Illinois Farm Supply Company moved its state offices recently Illinois Farm Supply occupies the second and third floors.

A two-ton litter by Sept. 5 is the goal of Harrold Morris, Macon county. He is shown with the 19 pigs he hopes will meet that goal when six months old. The 19 Yorkshires will weigh in Sept. 5 at the Indiana State Fair.

Dr. Kammlade is New State Leader Of Farm Advisers

ILLINOIS' new state leader of farm advisers is Dr. W. G. Kammlade, professor of animal science at the University of Illinois. He succeeds Prof. J. C. Spitler, who retired Sept. 1.

W. G. Kammlade

Dr. Kammlade has been with the animal science department at the University since 1915. As associate director of the Extension Service in Agriculture and Home Economics, he will assist Dean H. P. Rusk in administering the agricultural and home economics extension program.

The new state leader of farm advisers finished his undergraduate work at the University of Illinois where he earned his master's degree in 1917 and his doctor's in 1931. He has been head of the sheep division of the department of animal science since 1921 and is the author of a book on sheep production.

During recent years he has been chairman of the committee in charge of the 5,000-acre Dixon Springs experiment station in Pope county in southern Illinois. He has been responsible for the general supervision and coordination of all research studies conducted at the station.

See Higher Milk Prices Through Rest of 1949

ILLINOIS farmers can expect to receive higher prices for milk during the balance of 1949 than during recent months, according to J. P. Mason, director of dairy marketing for the Illinois Agricultural Association.

Higher support prices announced by the U. S. Department of Agriculture for butter and non-fat dry milk solids and the new support price announced for cheese will strengthen prices paid for milk used for manufacturing purposes. About half of the Illinois milk production is intended for such outlets, Mason says.

Producers supplying fluid milk markets will also receive increased prices and are planning their fall and winter production to take care of the needs of the market during the short supply season. The higher manufactured milk prices are reflected to fluid milk producers through pricing formulas which use dairy product prices as a base.

Producers supplying the St. Louis area received an additional price increase with their August milk checks as a result of a recent amendment made to the federal milk marketing order in effect there.

The Rockford and Freeport milk markets were made subject to a federal milk marketing order Aug. 1. The order provides classes of milk and establishes minimum prices to be paid producers. The order was made effective at the request of producers as the only means of obtaining proper prices for milk and guaranteeing the market a sufficient supply.

This is the Decatur warehouse recently taken over by Producers' Seed Company for use by its small seeds division.

Producers' Buys Small Seeds Warehouse

PRODUCERS' Seed Company, an associated company of the Illinois Agricultural Association, has bought a modern plant in Decatur as a central warehouse for distribution of small seeds to serve the needs of Illinois Farm Bureau members.

Additional distribution points for small seeds will be at the company's plants at Piper City in Ford county. Polo in Ogle county, and Fairbury in Livingston county.

Purchase of the central plant at Decatur means that Farm Bureau's small seed program, long sought by the membership, will soon be in operation. It is expected that Producers' Seed will be ready to distribute small seed processed in its own plant by December. The Producers' will try to accommodate member companies this fall by locating possible seed sources in case such assistance is needed.

Distributors in this statewide small seed program will be Farm Bureau-type cooperatives operating in the county and designated by the County Farm Bureau board of directors.

The small seeds program will require a capital fund of $275,000 to be raised through the sale of six per cent cumulative first preferred stock, par value $10, of the Producers' Seed Company.

The plant purchased at Decatur was completed by the Monsanto Chemical Company in July of 1948. Changes in the manufacturing field made the plant available for sale.

Heading up the Producers' small seed program is one of the outstanding specialists in the field. He is Evart Vander Meulen, a native of Michigan who established a fine record of research work on the staff of Michigan State College from which he was graduated in 1939 and where he received his master's degree in 1943.

In 1944, Vander Meulen was employed by the Corneli Seed Company, St. Louis. He had charge of establishing corn and vegetable growing stations in Illinois, Missouri, Oklahoma and later was transferred to the field seed department in charge of buying crop seeds at the source of production. He also had charge of the field seed research department.

Vander Meulen joined the Producers' staff on May 1, 1949. He already has established contacts in the producing areas for the purchase of seed that has to be imported into the state.

What About PRICES?

WHAT will cattle and hog prices be in 1950? Will the general economic situation be favorable for farmers? Will the sources of feeder cattle be plentiful? Will the prices of feeder stock be right? How are available feed supplies shaping up?

These and a host of other questions will be answered during the annual Feed and Livestock Outlook meetings being held throughout the state this month.

Speakers will include men connected with the principal livestock marketing agencies and agricultural economists and livestock men from the University of Illinois College of Agriculture. Programs have been arranged by the above in cooperation with the livestock marketing department of the Illinois Agricultural Association and county farm advisers.

All livestock farmers are invited to attend. A general discussion period will follow each meeting and farmers will be encouraged to ask questions relating to the livestock industry.

Following are the dates and places of outlook meetings scheduled for September:

(1) Kane, Washington, McHenry, Clay.
(2) DeKalb, St. Clair, DuPage, Effingham.
(6) Stark, Scott, Henderson.
(7) Peoria, Morgan, Mercer.
(8) McLean, Cass, Warren, Schuyler, Kankakee.
(9) Fulton, Menard, Sangamon, Brown, Iroquois.
(12) Tazewell, Winnebago.
(13) Mason, Stephenson.
(14) Logan, Jo Daviess, Jersey, Wabash.
(15) Knox, Carroll, Bond, Pike, White.
(16) Woodford, Ogle, Montgomery, Adams, Lawrence.
(19) Crawford, Macoupin, Lee.
(20) Jasper, Christian, Whiteside.
(21) Moultrie, Shelby, Rock Island.

the "Country Life"

THAT BUYS DAYS LIKE THESE

You have few opportunities in life to have your cake and eat it, too. Yet, Country Life insurance lets you do just that — provides needed protection throughout your "bread-winning" years, and is still there to provide for you if you reach retirement age.

Whatever your age, whatever your responsibilities, whatever your plans, there's a Country Life policy to meet your needs. Let your experienced Country Life representative show you how little it costs to put your future in the strong, friendly hands of Country Life.

Hold Your Soil With Terraces

Morgan County Terracer Says Illinois Farmers With Sloping Land Eventually Will Have to Terrace

By JIM THOMSON
Asst. Editor, IAA RECORD

Terrace on which Warren Brockhouse (right) stands lies lower on sloping field than spot where Farm Adviser Ed Garlich (left) stands.

"UNLESS they lengthen their grass rotation, farmers on land with a two per cent slope or more will eventually have to accept terracing." This is the opinion of a Morgan county farmer who has been terracing since 1936.

"Farmers on sloping land will build terraces," says Warren Brockhouse of near Concord, "if for no other reason than that terracing means higher fertility and higher yields." Brockhouse speaks as a man whose corn averages 90-100 bushels to the acre.

Warren and his brother Vancil operate two farms together. One is 420 acres and the other 495 acres.

The Brockhouse brothers and their father, Alfred, decided to try terracing 13 years ago when they read about it in extension bulletins from the College of Agriculture.

"The home farm," Warren said "had four to six per cent slopes, washing was getting pretty bad, and ditching was developing. We felt that something had to be done. About that time Dad got to know a lot of the boys at a neighboring Civilian Conservation Camp. He visited the camp a number of times and learned that terracing was a very important part of soil conservation."

Starting with some road equipment we smoothed over the ditching and built several terraces without technical assistance then seeded the terraced fields to grass to bind the soil. The job paid off. Washing stopped and ditching practically disappeared. The terraces were arranged to slow runoff to a trickle.

Brockhouse emphasizes the importance of slowing down water runoff. On the home farm he has two large concrete spillways which hold back the water. He plans to build more later on the smaller farm where some of the water drops 16-18 feet to a creek bed. Brockhouse has slackened the torrent of water which often pours down the hill by making sediment boxes and silting basins in the higher ground.

From their father the Brockhouse brothers learned early the value of feeding the soil. Father Brockhouse was applying limestone and later phosphate more than 30 years ago.

Warren says any farmer can set up a practical soil conservation, soil building-crop rotation scheme of his own. He lists his own program thus: (1) terracing, (2) contour plowing and planting, (3) supplementary conservation such as grass waterways, silting basins, and spillways, (4) more extensive grass farming, (5) sensible crop rotation, (6) and proper application of plant foods.

Brockhouse bought 112 acres several years ago for $1,600. Most of it was rough land with timber, creek bluff, and creek bottom. He has applied limestone and phosphate and sown it in grasses. His favorites are brome grass with alfalfa or brome grass with timothy. Most of it will remain in grass. Land that is not too rough will be sown to grass four years then cropped (corn or oats) the fifth year.

They try to feed 250 beef cattle and 250 hogs on the two farms each year. Most of the grassland is used for grazing and all of the 15,000 bushels of corn raised is fed. They take care to keep hogs off rolling ground as much as possible because of the danger of erosion. Warren says: "We even watch our wagon tracks and cow paths across fields for beginnings of ditching."

Brockhouse thinks average corn yields in Illinois should be at least 100 bushels to the acre. But he admits that it requires good farming practices. Even the farmer who is short of money can do a good job of building up his soil, he says, and it sometimes takes a lot of hard work. But he still must spend money for plant foods. I would advise him to invest in limestone first, then as he can afford it, buy rock phosphate, and finally, commercial fertilizers.

The important thing to remember, Brockhouse believes, is that soil conservation pays off in dollars and cents and you are able to leave a better farm to your sons. Warren has two sons, Brooks, 23, and John, 18. Brooks works on the farm and accepts most of the changes made by his father and grandfather as commonplace and good farming. John is a student at the University of Illinois College of Agriculture.

They are fortunate young men to have a father who takes such good care of the land.

A strong exponent of all the tricks of soil conservation, Warren Brockhouse (left) shows Morgan County Farm Adviser Ed Garlich one of his concrete spillways.

PICTURE OF THE MONTH WINNER

This picture wasn't hard to take but it has an original touch which earns Mrs. Sam Gocken of Ogle county the $5 Picture of the Month Award. It was taken of her three kittens watching birds through the window.

Farm Bureau Folks in Pictures

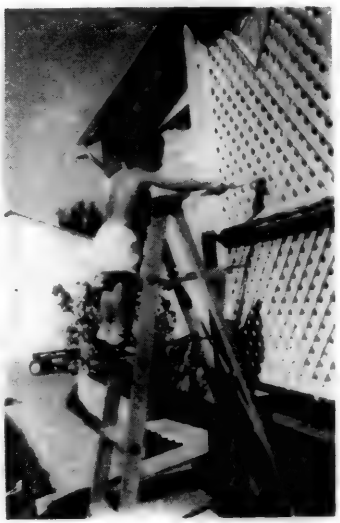
Karen Ann Marshall, daughter of the Edward H. Marshalls of La Salle county, can hardly wait to sample her second birthday cake as she spurns spoon to dig in with her fingers.

★

Mrs. Alvin Koeberlin, Champaign county, left her husband with the twins, Dickie (left) and Nickie. When she returned this is what she found—all asleep.

★

Mrs. Joe Holtman, Clinton county, sends along this scene the day of the wedding of her brother. Getting the little flower girls into the spirit of the occasion always keeps someone busy.



Tommy Brennan, grandson of the Alfred Berbaums of Champaign county, becomes another welcome hand on the farm as he wields the paint brush as a two-year-old.

EDITOR'S NOTE

Pictures for the Farm Bureau Folks in Pictures page should be addressed to Picture Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois. Entries are judged on originality, clearness, and interest. Please do not send negatives. Avoid shots of persons merely looking at the camera. Best picture receives $5, others published, $1. If you want photographs returned enclose a self-addressed stamped envelope.

This started out to be two pleasant smiles. But if you want to make two little girls angry, try to make them stay put. Ann Trotter (left) is daughter of Bill Trotters and Lonne Talbert is daughter of Orville Talberts of Wayne county.

OVER THE TOP

(*Continued from page* 11)

$100,000 worth of this stock. Elevator companies and other organizations have taken $126,400. The balance, or a total of $2,448,500 of class "A" preferred stock, was sold to individuals.

Two counties, namely, Champaign and Christian, did not endorse the program or authorize the sale of stock in those counties. Boone County Farm Bureau board of directors through proper action did endorse the program, but when it came to the sale of stock, through resolution of their board of directors, laid the whole matter on the table. Three counties, therefore, did not participate in the stock selling campaign.

Every county Farm Bureau board in the state was visited by a representative of the Illinois Agricultural Association on this project. After the county Farm Bureau had endorsed the project, they usually designated the county organization director or some other individual in the county to be responsible for stock sales. Much credit must be given the paid personnel in the cooperating counties for putting over this stock sales campaign.

Several counties succeeded in raising their entire quota by mail and a number of these counties were counties with sizeable quotas. In other counties the letter apparently had no pulling power and it had to be done by solicitation.

Credit should also be given to the following men, representing the Illinois Agricultural Association, for the work in supervising and directing this campaign, and particularly for their good work in carrying it to the county Farm Bureaus: O. D. Brissenden, C. S. Mayfield, L. B. Hornbeck, J. C. Howlett, H. B. Claar, W. B. Peterson, G. H. Iftner, L. L. Colvis, Carl Johnson, Carl Robinson, D. E. Kuntz, J. C. Moore.

Sixty-five county Farm Bureaus exceeded their quotas. The total stock subscription in these 65 counties over and above their quotas is $401,800.

The accompanying map shows distinctly the counties that made or exceeded their quotas. The counties that did not make or exceed their quotas in most instances purchased very substantial amounts of stock in the company.

The accompanying table sets forth the quotas assigned to the counties and the amount of class "A" preferred stock purchased in each of the counties. These quotas were arrived at by multiplying the number of bushels of grain marketed in a year's time in each of the counties by one cent a bushel. Some adjustments were made upward in some of the heavy livestock counties that market very little grain.

In conducting the campaign, the first county Farm Bureau board was met by a representative of the Illinois Agricultural Association on March 17. The campaign was closed on August 17, exactly five months after the date of beginning with the total quota of stock oversubscribed by $21,500. A number of counties should have special mention because of the oversubscription of their quotas, as shown in the total. Other counties, even though they failed to make their quota, also should be commended because of the large amount of money that was subscribed by those counties in financing this program.

Illinois Grain Terminals Company started operations on June 1 in the elevator that was taken over from the Norris Grain Company. The amount of grain handled in June was 1,254,476 bushels, and in July nearly 2,000,000.

RURAL YOUTH

THIS FARMER BOUGHT SECURITY

. . . FOR A FEW CENTS A DAY

At sunset it's nice to plump yourself down on a comfy chair in the yard. . .do nothing but enjoy your family, your home. Times like this you feel good about things, knowing that those about you are safe and free from want. You think of your small Country Life investment some years back, and how it will always take care of them, even if something should happen to you.

Just a few cents a day, that's all it's been. But, if needed, how that low-cost insurance policy would be returned many, many times over — to care for them all, and to keep their home SAFE, their future years provided.

For those of you who can't face the coming years with full peace of mind, DO something about it now. Stop in at Farm Bureau next trip to town. Talk it over with your Country Life representative. Let him explain how really inexpensive it is to be SURE.

THE STATE FARM BUREAU PUBLICATION

What Do You Think?

By Charles B. Shuman
President, Illinois Agricultural Association

A NATIONALLY prominent business man being interviewed by a reporter on current issues of the day was asked, "What do you think?" This executive picked up an unread copy of his favorite newspaper, turned to the editorial page and said, "This is what I think." We can be thankful that most American citizens are not willing to designate someone else to do their thinking. Certainly farmers generally have jealously guarded their right to their own independent, individual opinions.

Charles B. Shuman

THE very nature of our work encourages us to develop the ability to think objectively. Modern urban life with its congestion and confusion discourages meditation. Thanks to the effective efforts of the farm press, newspapers, radio, Extension Service and our own organization we are truly "the best informed Agricultural people in the world." This information coupled with the opportunity and ability to think clearly has earned for the American farmers a position of leadership in our nation. Daily from every segment of our society and every conceivable issue comes the question, "What do farmers think?"

IF YOUR leaders are to properly discharge their responsibility to accurately reflect farmer thinking there are two essential requirements that must be met. It is not enough for our leaders to be close to agriculture, they must have their feet on the land so that they feel, and think, and react in the same way that farmers feel, and think, and react. Secondly, it is equally important that every farmer accept his responsibility to express his own thinking to those leaders.

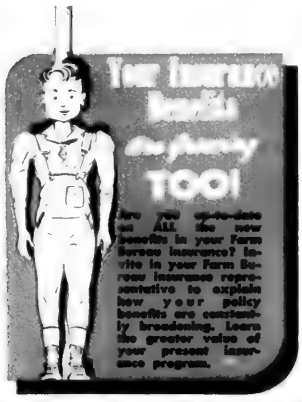
FROM time to time we are approached by various individuals or groups who have a beautiful idea or clever plan with the request that we "sell" it to the Farm Bureau membership. These folks are usually quite startled to learn that we do not operate on this plan in Illinois. In our fast moving world it is necessary for your organization to be free to act promptly on many issues. It is the responsibility of boards of directors to be sure that the actions taken accurately portray the views of the members.

WE are approaching the annual meeting season at county, state and national levels. The current and future programs of your organization will be subject to review, discussion and determination. I hope that every member will appreciate the importance of his attendance and participation. It is up to you to see that your officers and board members are conscientious, capable men and actual farmers. It is to your interest that they be advised currently of your thoughts on various problems.

What do you think? I would be glad to hear from you.

THIS FARMER BOUGHT SECURITY

. . . FOR A FEW CENTS A DAY



At sunset it's nice to plump yourself down on a comfy chair in the yard. . .do nothing but enjoy your family, your home. Times like this you feel good about things, knowing that those about you are safe and free from want. You think of your small Country Life investment some years back, and how it will always take care of them, even if something should happen to you.

Just a few cents a day, that's all it's been. But, if needed, how that low-cost insurance policy would be returned many, many times over — to care for them all, and to keep their home SAFE, their future years provided.

For those of you who can't face the coming years with full peace of mind, DO something about it now. Stop in at Farm Bureau next trip to town. Talk it over with your Country Life representative. Let him explain how really inexpensive it is to be SURE.

It is up to you to see that your officers and board members are conscientious, capable men and actual farmers. It is to your interest that they be advised currently of your thoughts on various problems.

What do you think? I would be glad to hear from you.

You've got to be a daredevil to drive a car across a bridge like this, yet Illinois has hundreds that are about as bad as this.

IS THIS THE ANSWER TO

The ROAD Problem?

IAA Road Study Committee Presents Recommendations For Approval of Voting Delegates at Annual Meeting

THE Illinois Agricultural Association Road Study Committee has recommended that Illinois rural roads be consolidated into a county unit system.

The report of the IAA Road Study Committee recently published, is subject to the approval of the voting delegates to the IAA annual meeting in Chicago, Nov. 14-17.

Under the Road Committee plan, for example, a county like La Salle with 37 separate township road districts would be reduced to one county road district.

The IAA Road Committee recommendations, contained in the report, came after a year's study of Illinois' deplorable rural road conditions by 25 farmers. These men represent every section of the state.

The report suggested further that before there is any consolidation, the people be given a chance to vote on the county unit district.

"More than half of the 48 states," the report says, "have permanently abolished districts smaller than a county. The record in these states shows greater mileage of roads built, more effective maintenance, and more road dollars going on the actual roads.

In criticizing the present system of road administration, the report emphasizes that Illinois has a confusing amount of over-organization in its road system. "This over-organization," it says, "is responsible for much of the expensiveness of highway service in Illinois road districts and the inadequacy of the service in many respects, in many localities.

"Highway commissioners are allowed to spend large sums of money sometimes without the proper understanding of what work should be done and how best to do it. . . Expensive pieces of equipment are bought and used only a few days each year. Labor is ineffectively employed and directed. The wrong materials, or those which have not been tested are used in many instances. Also, poor methods of repair, construction and maintenance are often followed. The results are a waste of tax money.

"There is a decided lack of any coordinated highway plan embracing all systems for the state as a whole. There is a great need for the financial planning of highway work on all levels.

The committee emphasized, however, that there were a number of highway commissioners who were doing a good job with the funds and equipment available.

"Rural people in Illinois," the report continues, "want better farm-to-highway roads. They want roads that are passable every month of the year. They want them maintained and properly supervised. They want the roads they need and are willing to pay a reasonable price for them. They feel they are receiving very little for their dollar in many localities."

The report points out that the greatest problem facing practically all road administration units is the lack of sufficient revenue. Increased costs of labor, materials and equipment have made the job more difficult.

"Since users of the highways benefit most from them, the Road Committee believes that an increase in the motor fuel tax would be the most equitable method for raising additional revenue. Revenue from vehicle registrations and motor fuel tax has not increased at the same pace as road costs. The average cost of this tax per vehicle is less than $30 a year. Only six states have an average as low.

"It is evident," the report continues, "that a majority of the road districts are at present unable to furnish road service consistent with the demands of the road users. Local property taxes do not yield sufficient income. Increasing the road and bridge tax rate will produce but meager additional income in districts with low assessed valuations."

It is the opinion of the committee as contained in the report, copies of which can be obtained at all Illinois county Farm Bureaus, that the following benefits would be derived from the county unit road system:

(1) Main feeder roads would be built continuous where

needed, not observing township lines. (2) Bridges would be more adequately financed by the county, whereas the cost of the construction of a bridge might be a crushing load for a township. (3) Adequate equipment could be operated from strategic locations in the county for both construction and maintenance the year around, instead of but a few days or weeks each year by the township.

(4) Trained men, efficient in their fields of operations, paid adequate salaries, would be given employment as administrators and operators. (5) Contracts could be awarded for much larger units and costs be reduced thereby. (6) There would be unity of construction and maintenance of all secondary roads through the county.

(7) All roads would be more equally financed because of the larger tax base. (8) Adequate buildings for housing and repair of equipment could be built. (9) There would be less division of authority.

Summarizing its recommendations, the report of the IAA Road Study Committee says: "The citizens of Illinois want good roads. The citizens of each county and road district should study their road problems and agree as to their needs. Basic control of the road systems should remain in the hands of the people living on them. Additional revenue is necessary.

"Present surveys and observations," the summary continues, "indicate that many county and local road district bridges are in need of reconstruction or major repairs. At least a part of this work should be paid for by highway-user revenue. Township road districts and road districts in commission governed counties should receive state grants for roads and bridges on a permanent long-range basis. Any future state grants made to counties or road districts should be allocated on the basis of mileage. Any future state assistance should be allocated to road districts in such a manner as to encourage road district organization for greater efficiency.

"The present motor fuel tax, collected from highway users, should be increased three cents on each gallon. Additional revenue from this increase in tax should be allocated as follows: ½ cent to the state division of highways for primary road purposes; ½ cent to cities; ½ cent to counties; 1 cent to road districts; ½ cent to be used for replacement or road district bridges.

The territory administered by a single unit of the highway organization should be large enough to produce a sufficient amount of work to justify the full-time employment of competent personnel; to warrant the expenditure of money for the purchase of adequate machinery; and be able to give road service on an economical basis.

Serious consideration should be given by each county to the reorganization of existing road districts into single county unit districts in charge of a county road board. Legislation should be enacted permitting counties to form county unit road districts by referendum. Present axle and gross weight limits should be rigidly enforced.

A system of weighing stations strategically located should be set up to aid enforcement of the gross weight regulations. It is urged that the University of Illinois and the state division of highways institute an adequate program of research on the problems of materials, design, construction, and maintenance of secondary farm-to market roads.

Members of the IAA Road Study Committee are: K. T. Smith, Greenfield, chairman; Homer Curtiss, Stockton, co-chairman; Lyman Bunting, Ellery; Lane Clapsaddle, Earlville; Guy Gee, Forrest; Edwin Gumm, Galesburg; Mark Harry, Humbolt; Ronald Holt, Galva; Emory Irwin, Petersburg; Erwin Isenberg, Alhambra; Herbert R. Kiltz, Woodstock; Ray B. Litchfield, Toluca; Quay Matthews, Alvin; Virgil Milner, Fairfield; Floyd E. Morris, Buffalo; Ed Niehaus, Butler; Loyd Pickard, Thompsonville; George Reigle, Oblong; Robert Schubert, Mt. Carroll; and S. S. Stetson, Reynolds.

The top and bottom pictures below illustrate the dangers of cars meeting on bottleneck roads and bridges. Center picture shows how hazardous a bad bridge can be to the children who have to cross it 360 times a year on their way to and from school.

You've got to be a daredevil to drive a car across a bridge like this, yet Illinois has hundreds that are about as bad as this.

PLAN NOW TO ATTEND IAA

ANNUAL MEETING

Romeo Short

WHAT does Illinois Farm Bureau leadership think of the Brannan Plan? the Anderson Plan? the Aiken Plan? What effect will all these plans have on Illinois farmers? What is going to happen to the prices of grain and livestock?

You can expect to hear the answers to most of these questions by attending the 35th annual meeting of the Illinois Agricultural Association to be held Nov. 14-17 at the Hotel Sherman, Chicago.

You will hear discussions of national issues by prominent speakers, talks on specific farm problems, and discussions of programs and projects being sponsored by the IAA to help solve local rural problems. An example will by the IAA Road Study Committee Report discussed on page 4 and 5 of this issue of the RECORD. The recommendation in this report will be up for discusion and approval by the voting delegates to the IAA annual meeting.

A review of the year's activities of the IAA and its affiliated companies with their financial reports will be presented during the sessions by company managers and department heads. And a summary of the year's progress will be made in the report of President Charles B. Shuman.

More than 5,000 farmers registered for last year's convention which also was held in Chicago.

The first two days of the convention will be devoted to conferences, Rural Youth activities, and the annual meetings of the IAA-affiliated cooperatives. The third and fourth days will be devoted to the general session of the Illinois Agricultural Association and to farm problem conferences.

The closing hours of the convention will be concerned with the election of a president, vice president, and half the IAA board of directors.

Finals of the state Rural Youth Talk Fest will be held during the IAA annual meeting. A champion will be selected to represent Illinois at the American Farm Bureau Convention in Chicago in December. Finals of the state Rural Youth skilled drivers' contest also will be held in connection with the IAA annual meeting. More than 500 Rural Youthers are expected for the youth sessions.

Among the men who have been invited to address the convention are Gov. Adlai Stevenson of Illinois.

Among the speakers who are scheduled to speak are Romeo Short, 54, president of the Arkansas Farm Bureau and vice president of the American Farm Bureau Federation.

Short is a rice, cotton, and livestock farmer in Lee county, Arkansas. He has been president of the Arkansas Farm Bureau since 1936 and a member of the American board since 1937.

He was born in Illinois, reared in Iowa, and has been a resident of Arkansas since 1920. He farmed briefly in Canada following his graduation from Iowa State College before enlisting in the army as a private in World War I. He is one of Arkansas's leading rice growers and now owns 2,600 acres of land, of which 700 acres is usually in rice, 250 acres in cotton and the balance in pasture and feed crops. He maintains a herd of about 300 cows and feeds about 700 to 800 beef cattle. He has one child, Romeo Jr.

NOTICE OF ANNUAL MEETING ILLINOIS AGRICULTURAL ASSOCIATION

Notice is hereby given that the annual meeting of the members of Illinois Agricultural Association will be held in the Sherman Hotel, Chicago, Illinois, on the 16th day of November, 1949, at 9:30 o'clock A.M. for the following purposes:

To receive, consider and if approved, to ratify and confirm the reports of the officers and the acts and proceedings of the Board of Directors and officers in furtherance of the matters therein set forth since the last annual meeting of members of the Association;

To approve, ratify and confirm the several purchases heretofore made by this Association of stocks and evidences of indebtedness of corporations whose activities will directly or indirectly promote agriculture or the interests of those engaged therein;

To secure consent and authorization to acquire on behalf of the Association by purchase certain stocks and evidences of indebtedness of corporations whose activities will directly or indirectly promote agriculture or the interests of those engaged therein;

To elect seven (7) members of the Board of Directors to serve for a term of two years;

To elect a President and Vice-President who shall also serve as directors, for a term of one year;

To consider and act upon such proposed amendments of the Articles of Incorporation or of the By-Laws of Illinois Agricultural Association as may be properly submitted;

For the transaction of such other business as may properly come before the meeting.

Paul E. Mathias, Secretary

Front Cover

THE 28th in our series of historic and picturesque Illinois scenes is the Sangamon county court house at Springfield. This building was started in 1837 and served as Illinois' fifth state capitol building until it became too small in the 1860's and was sold to Sangamon county for $200,000. Sangamon county raised the building and built the ground floor under it.

that never stops burning

Right now, as you read, this farm fire is raging somewhere across the country! Every minute of every day sees a barn, a farm home, reduced to ashes. With luck, perhaps it's just a "few thousand dollars loss." . . . If you can't afford risking that YOU may be next, take a few minutes' time next trip to town. Drop in at Farm Bureau to see your Country Mutual Fire representative. A few minutes' chat, a few cents a day invested in an inexpensive Country Mutual Fire insurance policy, may save YOU thousands of dollars!

Let's Cut RED TAPE

Commission Report Shows How To Do It

IF YOU had a $5,000 debt on your farm 20 years ago and operated your business like the government, you would now have a mortgage of $60,500 on it. This may sound pretty high, but it's based on the fact that in the last 20 years the federal debt has grown from 16.9 billion dollars to 215.5 billion dollars.

Here's some other facts to explain your high taxes. The cost of operating the government has jumped from $4 billion to $42 billion. The number of employees in the executive branch of the federal government has climbed from 600,000 to 2,100,000.

It costs the post office 2½ cents to print and deliver a penny postcard.

It takes more than $10 worth of paper work to complete a governmental purchase order—yet half the 3 million items purchased yearly by the civilian agencies are for less than $10.

These figures are taken from the Hoover commission report. This study of our government was begun in July, 1947, when Congress unanimously created the commission. Six Democrats and six Republicans comprised the commission and former president Herbert Hoover was named chairman at the suggestion of President Truman.

Some 300 outstanding citizens served on 24 committees studying the major problems of government. After working from 10 to 14 months they brought back more than 2,000,000 words of facts, figures and analysis.

The commission then shaped its report to Congress in which it pointed out that: "The nation is paying heavily for a lack of order, a lack of clear lines of authority and responsibility, and a lack of effective organization in the executive branch. The commission's report recommended reforms to provide efficiency, economy and good government.

Legislation has been passed by Congress to put some of the commission's recommendations into effect, but much more needs to be done. If all of the recommendations were put into effect that the commission says are necessary, it is estimated that three billion dollars per year would be saved.

You as an American interested in better government can do your part in seeing to it that the commission report is kept alive and not buried by passing time and lack of interest. Farm Bureau members and leaders can promote an understanding of the recommendations of the commission.

A National Citizens' Committee for the Commission report was set up on June 12, 1949, to help in the educational program so necessary to the success of the commission's report. Leaders representing agriculture, business, churches, education, labor, the professions, veterans' and women's organizations are on the committee. An Illinois Citizens' Committee also has been set up and includes representatives of all civic-minded groups of the state. If you want more literature and information on the commision's report, it can be secured by writing the Illinois Committee for Reorganization of the Executive Branch of the Government, 79 West Monroe Street, Chicago 3, Ill.

Estimate Milk Subsidy Under Brannan Program At $1½ Billion Per Year

AN ILLINOIS College of Agriculture economist presents figures to show that the Brannan farm plan would cost each family almost $70 a year more in taxes for milk alone.

R. W. Bartlett claims that the government subsidy per family for milk would amount to $61.32. With an estimated 10 per cent added for administration cost, the total cost — just for milk — would be $67.45. And only about one-twelfth of national farm income comes from dairying. Bartlett says consumers would pay this bill in larger taxes.

Here's how he figures the $67.45: If a family bought three quarts of milk a day at 15 cents a quart — the price Brannan suggested — the cost would be 45 cents a day, or $164.25 a year.

With no subsidy, and at the average 1948 price of 20.6 cents a quart, the three quarts a day would cost 61.8 cents, or $225.57 a year. The government would pay dairy farmers the difference, or $61.32. Administration costs would boost the cost to $67.45 . . . . . per family, that is.

Bartlett estimates that the Brannan plan applied to milk alone would cost $1,484,000,000 every year.

Yardsticks For a Sound Co-op

IAA President Shuman Lists: 1. Need; 2. Sufficient Capital 3. Good Management; 4. Adaptability; and 5. Fit in with General Farm Organization

Keynote speakers at the American Institute of Cooperation are shown here left to right: Ezra T. Benson, member, Council of Twelve, Church of Jesus Christ, Salt Lake City; IAA president Charles B. Shuman and Dr. Karl D. Butler, retiring president of the American Institute of Cooperation.

FIVE yardsticks for measuring the soundness of farmer-owned co-operatives were outlined by Charles B. Shuman, president of the Illinois Agricultural Association, in late August before the American Institute of Cooperation at the University of Wisconsin, Madison, Wis.

In his address entitled "Building for the Future," he pointed out that quite generally the farmer's idea of the functions and objectives of a cooperative are quite different from the ideas of social reformers and idealists who look upon the cooperative movement as a means to some end. Most farmers, he said, consider their co-ops as essential farm tools with a completely useful function.

"The first test," President Shuman said, "that I would apply to a cooperative or privately-owned business is whether or not there is a real and continuing need for the services offered. This survey must be factual and realistic and not based on what farmers should want but rather on the services for which they are willing to pay.

"Strict application of this test," he said, "will not hamper the future expansion of farmer cooperatives as there remains an abundance of areas and fields of activity where existing monopolistic practices provide a real need for cooperative action."

His second point posed the question: "Has an adequate capital structure been provided?" In other words, is the co-op properly financed? "During recent years of constantly increasing price levels," he continued, "it has been easy to neglect financial planning. With the return of more uncertain economic conditions, it will be suicidal for any co-operative to neglect this fundamental of good business."

President Shuman pointed out that the farmers in Illinois have long believed that the soundest cooperatives were financed by farmers themselves from their own funds through purchase of preferred stock. "A cooperative," he said, "that builds its financial structure solely or even largely upon earned or 'loyalty' capital may easily spend more time and money in its membership relations efforts than the added interest cost to an organization with greater ownership loyalty."

His third safeguard pointed to the importance of a strong, experienced, progressive management. "The future progress of cooperatives will depend to a great extent upon the placing of proper emphasis on two fundamentals of good management by boards of directors and administrators. First, the cooperative exists only to serve the membership and not for the benefit of any employee and secondly, continuation of an employee in a position to which he is not suited is not in the self interest of the individual concerned."

His fourth principle called for management sensitive and adaptable to changing conditions and needs. Among the valuable aids to good management with which our cooperative leaders are becoming familiar, Shuman said, include retirement plans, personnel departments, job evaluation and description, internal auditing, uniform accounting and controls, business engineering surveys, job efficiency tests, and functional organization charts.

"Like a new farm tractor," he said, "the successful cooperative of the future will need constant repair, modernization, and alteration. Membership use and patronage will continue at a satisfactory level only if the cooperative continues to improve service and anticipates the needs of its patrons.

"My fifth yardstick for measuring the fitness of a cooperative to build into the future is somewhat apart from the more tangible business factors previously discussed. While not yet generally recognized, it is my conviction that the most successful farmer cooperatives of the future will be parts of a coordinated pattern for a better agriculture rather than a special interest or commodity group tending to split into segments.

"More and more, agriculture is becoming a minority group in our nation. We cannot afford to stand alone in small commodity or sectional groups. As big government grows bigger and as labor and business groups organize more solidly it becomes increasingly important that agriculture speak with one strong voice. Farmers will certainly insist that their cooperative business organizations be closely coordinated with their general farm organization.

"Perhaps these few examples will suffice to illustrate that building for the future is not alone a matter of exact formula. The future of our farmer cooperatives will more and more depend upon the quality of our leadership. We can no longer depend solely upon the momentum of idealism and evangelism. Our continued progress will be earned by building on men and ideas plus loyalty. I am certain that with a properly trained leadership insisting upon maintaining the ideal of service to farm people our cooperatives will grow and prosper through the application of sound business principles by men who are not afraid of new ideas."

Let's Cut RED TAPE

Commission Report Shows How To Do It

IF YOU had a $5,000 debt on your farm 20 years ago and operated your business like the government, you would now have a mortgage of $60,500 on it. This may sound pretty high, but it's based on the fact that in the last 20 years the federal debt has grown from 16.9 billion dollars to 215.5 billion dollars.

Get Ready- WINTER IS COMING!

Our snow man warns that it's time to get your cars and tractors ready to meet the cold wintery blasts of the next few months.

Have your Blue Seal service station man or trucksalesman check over your equipment. He will make recommendations for "winter-proofing" your car, truck or tractor.

WINTER CHANGEOVER RECOMMENDATIONS

COOLING SYSTEM

WINTERMASTER Blue Seal Wintermaster anti-freeze is a medium priced methanol-type anti-freeze of excellent quality. It contains a rust inhibitor and an evaporation retardant.

PERMA-TYPE Blue Seal Perma-Type anti-freeze is a superior ethylene glycol anti-freeze which will not boil away. One fill lasts all winter. It is non-corrosive and contains rust inhibitors.

IGNITION SYSTEM

BLUE CIRCLE BATTERIES For dependable service and plenty of power for cold weather starts, the new Blue Circle battery is unsurpassed. See page 35 for full details.

EDISON SPARK PLUGS Edison plugs are engineered to deliver the hottest spark on the coldest days. Exclusive features include the albanite insulator and the sealed-in gasket.

LUBRICATION

OIL FILTER Filter should be checked, and if dirty, a new Blue Seal Oil Filter Cartridge should replace the old one.

CHASSIS Proper chassis lubrication is extremely important, as moisture from snow and ice can soon damage unprotected surfaces. Blue Seal winter greases are designed for Illinois winters and assure good cold weather lubrication.

CRANKCASE Avoid hard starting by using your service company's winter oils. Illini and Blue Circle are available in winter grades and are your guarantee of good winter lubrication.

TRANSMISSION Winter grade transmission oils should be used to reduce strain on gears and other transmission parts. Either No. 7 Transmission or "M"-Lube can be furnished in winter weights.

DIFFERENTIAL Change differential oils to remove foreign particles which normally accumulate during summer months. These lighter weight oils also reduce strains on moving parts.

ILLINOIS FARM SUPPLY COMPANY, CHICAGO

There was standing room only when cattle feeders turned out for the annual fall outlook meeting at Aledo in Mercer county. Farm Adviser Howard Haynes said he never saw the hall so jam-packed for a meeting of that type.

The three men who spoke to Mercer county farmers on the cattle feeding outlook for 1950 are left to right: Walter Howe, Chicago Producers; Harry Russell, College of Agriculture; and C. W. Mitchell, Illinois Livestock Marketing Association.

FORESEE
Good Prices
In 1950

By
JIM
THOMSON
Ass't Editor,
IAA RECORD

THERE'S still money in the feeding business. So say a number of men experienced in the ups and downs of the livestock markets.

And they are optimistic about the future. Few would predict what will happen beyond six months from now, but for the next six months the general opinion was that prices would hold steady.

The general outlook for cattle feeders was presented throughout the state last month in the annual series of fall outlook meetings sponsored by the College of Agriculture, Illinois Agricultural Association, Producer Agencies, and County Farm Bureaus.

At the meeting at Aledo in Mercer county Walter Howe of the Chicago Producers Commission Association said: "There is still a lot of apprehension among cattle men but the facts show that there needn't be. We are a nation of meat eaters. Demand for meat is still heavy and the nation's economy is still healthy. As long as people have money to spend they are going to buy plenty of meat."

Reasons for the optimism were set forth by Harry Russell of the College of Agriculture as follows:

1. The liquidation of business inventories is about finished.
2. There appears to be no foreseeable decline in the capital expenditure program of business.
3. Private and public construction programs are at record highs and are expected to continue.
4. Government spending will remain high into the foreseeable future with inflationary trends.
5. Savings in the hands of the people are high and will act as a cushion at the first signs of deflation and unemployment.
6. Consumer incomes are still relatively high. People have the buying power for a generous meat diet.

Offsetting these favorable price factors, Russell pointed out that the nation is carrying an all-time record supply of corn in storage and has a tremendous wheat carryover. This factor is further aggravated by bumper crops of both wheat and corn this year. The fall pig crop will be 15 per cent higher than a year ago and the export rate on corn and other grains may not be maintained at the high levels of the past several years.

Speaking on feed supplies, Russell said there probably would be little change in the supplies and prices of protein supplements from last year. He recommended that farmers cut their protein feed costs by pasturing pigs on ladino clover.

Both Howe and Russell pointed out that farmers were missing a good bet in not feeding more lambs. "Sheep are going to be all right for the next several years." Russell said.

"We cattlemen," Howe added, "Feel that lamb feeding is a good proposition. More lamb is being consumed in the Midwest than ever before. But before you go into lamb feeding be sure you know what you are doing. Not everyone can feed and sell lambs profitably."

Speaking as a representative of the IAA-affiliated Illinois Livestock Marketing Association, C. W. Mitchell pointed out that present storage stocks of lard and pork are at record lows. Earlier farrowing, he said, has leveled off the marketing period and hogs are now being marketed at lighter weights.

"With continued good judgement in hog marketing," he said, "there is no reason why prices of hogs should drop to support levels. I would advise you to market your hogs when they are ready even if it means more often."

Offering a suggestion which may or may not meet the approval of hog farmers, considering the tremendous stocks of corn on hand, Russell recommended that farmers raise the same number of pigs in 1950 as they have in 1949. "Don't govern your pig crop by the amount of feed available," Russell said.

Howe said that with feeding profitable there was a tremendous demand for light stock feeder cattle, both calves and yearlings, with a supply to draw from about the same as last year.

In conclusion he told farmers to look for several months of profitable prices, but, he said, be cautious and stay in the field you like best. If you keep switching from one field to another you may come to grief.

Driver Loren Mitchell of the Prairie Farms Creamery of Bloomington (top photo) is a welcome sight to Mary Ellen and Betty Jane, daughters of Richard Gardner, DeWitt county. They know his truck carries ice cream.

Mrs. Richard Gardner, DeWitt county, puts a half gallon container of Prairie Farms ice cream in her deep freeze.

ICE CREAM every day

Remember How Long You Used to Have To Turn The Crank on the Home Freezer to Get Ice Cream. You Don't Have To Do That In Central Illinois

THERE'S a yellow Prairie Farms Creamery truck that the young farm citizenry of central Illinois watch with particular interest. It looks just about like the other Prairie Farms trucks, but the contents are something a little different. This truck operates out of the Prairie Farms Creamery of Bloomington, and the driver in addition to picking up cream and selling butter, sells ice cream in three delicious flavors.

The Bloomington plant is trying out this ice cream delivery service to see whether or not it is practical. The truck, equipped with a deep freeze compartment, alternates over all of the routes of the Bloomington plant. It travels the creamery routes in McLean, DeWitt, Logan, Macon, Grundy, LaSalle, Livingston and part of Kendall county. The ice cream is loaded into the deep freeze compartment in half gallon and gallon cartons which bear the familiar Prairie Farms emblem.

So far the experiment has met with great success. Now that so many farmers have electric refrigerators and deep freezers in their homes, ice cream has come to be a regular item on the dinner menu. The farm youngster doesn't have to wait until the folks go to town to enjoy an ice cream cone. Mom can dip into a gallon or half-gallon Prairie Farms ice cream carton and put a double dipper of ice cream into the youngster's favorite type cone. The cones are readily available at the grocery store.

So far the Prairie Farms Creamery of Bloomington is making ice cream in three flavors — vanilla, strawberry and chocolate. These three flavors are carried in Mitchell's truck. The ice cream keeps in top condition in the deep freezer compartment so that it is delivered to the farm in the same shape as if it were delivered over a store counter.

Mrs. Richard Gardner who lives with her husband and two daughters, Betty Jane, two, and Mary Ellen, four and one-half years old, on a farm one and one-half miles north of Wapella in DeWitt county, says that they use from one-half to a gallon of ice cream per week.

"Our family, with the exception of my husband, really likes ice cream," Mrs. Gardner said.

Other Prairie Farms plants making ice cream are Mt. Sterling, Carlinville, and Henry. Whether or not these plants will add ice cream delivery service depends upon demand from the patrons.

Betty Jane Gardner, left photo, has a firm grip on a half gallon of Prairie Farms strawberry ice cream as she greets an old friend, Ralph Bronning, former route driver and now fieldman. Right: You don't have to go to town to get ice cream say Mary Ellen and Betty Jane.

Presidents of county Farm Bureaus named by districts who form a committee studying Farm Bureau financing are shown at their second meeting in the Illinois Agricultural Association offices in Chicago. Front row, left to right: Lawrence Todt, Montgomery county, district 21; Frank Loucks, Will, district one to 11, chairman; W. H. Beaumon, Johnson, 24; Lloyd Berryman, Jo Daviess, 13; George Bauer, Bond, 22, and Parke Kerbaugh, McLean, 17. Back row, Oliver Rasmussen, Iroquois, 18; W. F. Whipple, LaSalle, 12; W. R. Suhling, Calhoun, 20; Clarence McCauley, Jefferson, 23; George Attig, Mercer, 14; Russell Hayes, Randolph, 25; Charles A. Haller, Peoria, 16; R. H. Gantz, Piatt, 19. John M. Lock, Fulton, 15, was not present for the picture.

Fire Hazard Greater
ON THE FARM

IF YOU live in a farmhouse, you are in greater danger of being killed by fire than you would be if you lived in a city, according to the National Fire Prevention Association, sponsor of Fire Protection Week, Oct. 9-15.

Twelve per cent more persons lost their lives in rural area dwelling fires than in similar fires in urban areas. For children the percentage difference is 2½ times as great as for persons of all ages, the NFPA says. Thirty per cent more children died in rural dwelling fires.

In computing the percentages, no allowance was made for the fact that the urban population of the United States is approximately one-fourth larger than the rural population. On this basis it would appear that the person living on a farm or in a small town is in even greater danger.

About 11,000 persons were killed in fires last year and in addition there were many who died later as a result of burns or injury to the lungs. For this reason it is important that farm people be concerned about the removal of fire hazards.

Following are some suggestions for rural fire prevention: (1) Clean stovepipes and flues annually. (2) Protect walls from overheating by stoves and ranges. (3) Get rid of flammable rubbish, old papers, magazines, worn-out clothes, broken furniture, and boxes.

(4) Keep oily rags in metal containers to avoid spontaneous ignition. (5) Repair defective electrical appliances and replace frayed cords. Fuses should always be used and should be of the size recommended for adequate protection. (6) Don't smoke in bed or in barns and don't discard lighted cigarettes or matches. (7) Safeguard and label any supply of gasoline or kerosene that may be kept on the premises.

(8) Have fire extinguishers in handy conspicuous places and be sure everybody knows how to use them. (9) Have a ladder sufficiently long to reach the roofs of all buildings and keep it always in the same place so it will be available at instant notice. (10) Hooks or wires should be provided in barns and other buildings on which lanterns may be hung. (11) Cover flammable wood shingles with fire-resistant roofing.

According to a NFPA spokesman, the biggest fault is not that people don't know what to do to prevent fires but simply that they don't do it. If all common, easily understood fire hazards were eliminated, the number of farm fires could be reduced as much as 90 per cent.

THIS COULD HAPPEN TO YOU

It's important to know what to do to prevent fires on your farm but it is far more important to do it. Observe Fire Protection Week, Oct. 9-15.

Illinois had queens of all sorts and descriptions this summer from corn to sauerkraut. Here's the pumpkin queen and her court at the Eureka festival in late September. She is Clarabelle Garber. The court from left to right: Annette Hartter, Peggy Ulrich, Virginia Sutter, and Dolores Krumholz.

Driver Loren Mitchell of the Prairie Farms Creamery of Bloomington (top photo) is a welcome sight to Mary Ellen and Betty Jane, daughters of Richard Gardner, DeWitt county. They know his truck carries ice cream.

Mrs. Richard Gardner, DeWitt county, puts a half gallon container of Prairie Farms ice cream in her deep freeze.

ICE CREAM every day

Remember How Long You Used to Have To Turn The Crank on the Home Freezer to Get Ice Cream. You Don't Have To Do That In Central Illinois

THERE'S a yellow Prairie Farms Creamery truck that the young farm citizenry of central Illinois watch with particular interest. It looks just about like the other Prairie Farms trucks, but the contents are something a little different. This truck operates out of the Prairie Farms Creamery of Bloomington, and the driver in addition to picking up cream and selling butter, sells ice cream in three delicious flavors.

The Bloomington plant is trying out this ice cream delivery service to see whether or not it is practical. The truck, equipped with a deep freeze compartment, alternates over all of the routes of the Bloomington plant. It travels the creamery routes in McLean, DeWitt, Logan, Macon, Grundy, LaSalle, Livingston and part of Kendall county. The ice cream is loaded into the deep freeze compartment in half gallon and gallon cartons which bear the familiar Prairie Farms emblem.

So far the experiment has met with great success. Now that so many farmers have electric refrigerators and deep freezers in their homes, ice cream has come to be a regular item on the dinner menu. The farm youngster doesn't have to wait until the folks go to town to enjoy an ice cream cone. Mom can dip into a gallon or half-gallon Prairie Farms ice cream carton and put a double dipper of ice cream into the youngster's favorite type cone. The cones are readily available at the grocery store.

So far the Prairie Farms Creamery of Bloomington is making ice cream in three flavors — vanilla, strawberry and chocolate. These three flavors are carried in Mitchell's truck. The ice cream keeps in top condition in the deep freezer compartment so that it is delivered to the farm in the same shape as if it were delivered over a store counter.

Mrs. Richard Gardner who lives with her husband and two daughters, Betty Jane, two, and Mary Ellen, four and one-half years old, on a farm one and one-half miles north of Wapella in DeWitt county, says that they use from one-half to a gallon of ice cream per week.

"Our family, with the exception of my husband, really likes ice cream," Mrs. Gardner said.

Other Prairie Farms plants making ice cream are Mt. Sterling, Carlinville, and Henry. Whether or not these plants will add ice cream delivery service depends upon demand from the patrons.

Betty Jane Gardner, left photo, has a firm grip on a half gallon of Prairie Farms strawberry ice cream as she greets an old friend, Ralph Brenning, former route driver and now fieldman. Right: You don't have to go to town to get ice cream say Mary Ellen and Betty Jane.

Presidents of county Farm Bureaus named by districts who form a committee studying Farm Bureau financing are shown at their second meeting in the Illinois Agricultural Association offices in Chicago. Front row, left to right: Lawrence Todt, Montgomery county, district 21; Frank Loucks, Will, district one to 11, chairman; W. H. Beaumon, Johnson, 24; Lloyd Berryman, Jo Daviess, 13; George Bauer, Bond, 22, and Parke Kerbaugh, McLean, 17. Back row, Oliver Rasmussen, Iroquois, 18; W. F. Whipple, LaSalle, 12; W. R. Suhling, Calhoun, 20; Clarence McCauley, Jefferson, 23; George Attig, Mercer, 14; Russell Hayes, Randolph, 25; Charles A. Haller, Peoria, 16; R. H. Gantz, Piatt, 19. John M. Lock, Fulton, 15, was not present for the picture.

Fire Hazard Greater
ON THE FARM

IF YOU live in a farmhouse, you are in greater danger of being killed by fire than you would be if you lived in a city, according to the National Fire Prevention Association, sponsor of Fire Protection Week, Oct. 9-15.

Twelve per cent more persons lost their lives in rural area dwelling fires than in similar fires in urban areas. For children the percentage difference is 2½ times as great as for persons of all ages, the NFPA says. Thirty per cent more children died in rural dwelling fires.

In computing the percentages, no allowance was made for the fact that the urban population of the United States is approximately one-fourth larger than the rural population. On this basis it would appear that the person living on a farm or in a small town is in even greater danger.

About 11,000 persons were killed in fires last year and in addition there were many who died later as a result of burns or injury to the lungs. For this reason it is important that farm people be concerned about the removal of fire hazards.

Following are some suggestions for rural fire prevention: (1) Clean stovepipes and flues annually. (2) Protect walls from overheating by stoves and ranges. (3) Get rid of flammable rubbish, old papers, magazines, worn-out clothes, broken furniture, and boxes.

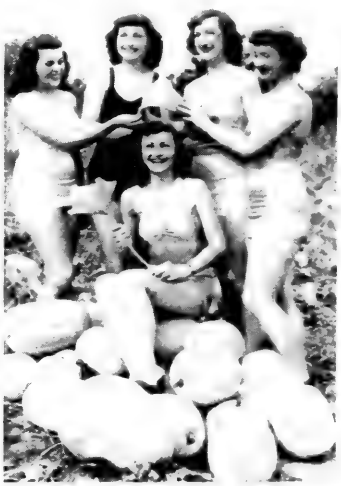
(4) Keep oily rags in metal containers to avoid spontaneous ignition. (5) Repair defective electrical appliances and replace frayed cords. Fuses should always be used and should be of the size recommended for adequate protection. (6) Don't smoke in bed or in barns and don't discard lighted cigarettes or matches. (7) Safeguard and label any supply of gasoline or kerosene that may be kept on the premises.

(8) Have fire extinguishers in handy conspicuous places and be sure everybody knows how to use them. (9) Have a ladder sufficiently long to reach the roofs of all buildings and keep it always in the same place so it will be available at instant notice. (10) Hooks or wires should be provided in barns and other buildings on which lanterns may be hung. (11) Cover flammable wood shingles with fire-resistant roofing.

According to a NFPA spokesman, the biggest fault is not that people don't know what to do to prevent fires but simply that they don't do it. If all common, easily understood fire hazards were eliminated, the number of farm fires could be reduced as much as 90 per cent.

THIS COULD HAPPEN TO YOU

It's important to know what to do to prevent fires on your farm but it is far more important to do it. Observe Fire Protection Week, Oct. 9-15.



Illinois had queens of all sorts and descriptions this summer from corn to sauerkraut. Here's the pumpkin queen and her court at the Eureka festival in late September. She is Clarabelle Garber. The court from left to right: Annette Hartter, Peggy Ulrich, Virginia Sutter, and Dolores Krumholz.

IAA Rural School Relations

IAA School Progress Report

ILLINOIS RURAL SCHOOL REFORM FOLLOWS PATTERN LAID DOWN BY IAA SCHOOL COMMITTEE

MANY of the recommendations of the IAA School Report of 1944 are now law. IAA school policy has, in fact, been the leading factor in school reorganization legislation.

To show how IAA School Report recommendations have been written into law we shall quote recommendations from the Report, then point out the legislation in which the intent of these recommendations is carried out.

1. "The IAA School Committee urges people of every rural community to study their school problems." Page 51.

The School Survey Act of 1945 provided for this local study.

2. "State aid for transporting pupils should be increased by raising the maximum annual allowance from the present $15 per pupil to $20." Page 63.

Legislation passed in 1945 raised the amount per pupil from $15 to $20.

3. "Reorganization of rural highway administration. . . . . is much needed in Illinois." Page 30.

Legislation passed in 1947 and amended in 1949 provided a way to make some progress in reorganizing inefficient township road districts.

4. (a) Grade Schools

". . . . state aid should not be used to subsidize and continue in existence small, inefficient schools. The minimum average daily attendance needed to qualify an elementary school for state aid should be gradually increased. (The present law passed previous to 1945 but postponed to 1945 will require a minimum of seven after 1945.) This should be increased to 10 in 1949 and eventually raised to 15." Page 64.

The seven pupil law became effective in 1945. In 1947 an A.D.A. (average daily attendance) law was passed requiring grade schools before receiving state aid to have 10 pupils in A.D.A. by June 30, 1949, 12 by June 30, 1951 and 15 by June 30, 1953.

(b) High Schools

"High schools having an average daily attendance of less than 10 per grade should not be eligible for state aid after a short period. This minimum figure should be increased to 15 within a few years and raised to 20 in not more than 10 years (1954)." Page 64.

Legislation was adopted in 1947 to become effective after June 30, 1951 that would require high schools to have an average of nine pupils in A.D.A. per grade before making a claim for state aid. House Bill 1072 passed in 1949 requires high schools to have an average of 15 pupils per grade after June 30, 1953, before receiving state aid.

5. "Positive steps should be taken to prevent further divisions of 12-grade districts and to encourage the organization of new ones."

The Community Unit Act was passed in 1947 and amended and improved in 1949, thus providing a simple method of creating a 12-grade unit in place of dual system districts. Also, the unit district was popularized in the 1945 session of the General Assembly by being allowed a lower qualifying rate (37½c) for equalization state aid as compared to the qualifying rate (25c + 25c = 50c) required of dual system districts. The legislature in 1949 went still further in H.B. 1065, the state aid bill, by allowing the unit district a qualifying rate of 50c as compared to 40c for both grade and high school or a total of 80c.

6. "The Illinois Agricultural Association has repeatedly pointed out the need for reducing the burden of taxes on farmers and home owners. The Association has also emphasized the necessity of securing for the schools revenue from sources other than property taxes." Page 45.

The amount of state aid appropriated by the General Assembly for the biennium beginning July 1, 1943 was $33,000,000. This figure was increased to $44,000,000 in 1945, $65,000,000 in 1947 and $100,300,000 in 1949.

7. "Aid to wealthy districts and those well able to carry their own load should not be increased from present levels. Page 45.

The state aid bill just passed and signed by the governor provides for no increase in the flat grants, all the additional state money going into equalization guarantees."

8. "Legislation should be enacted requiring all new high school districts, except these created by the consolidation of two or more previously existing districts, to include a population of at least 2000 persons and to have an assessed valuation of at least $1,500,000." Page 37.

The $1,500,000 assessed valuation when property was assessed at one-third its full value on the average would be comparable to $4,500,000 now. The law now requires a minimum of $6,000,000 assessed valuation (full value)

Will Co. Wins '49 Sports Festival

Headline illustration shows the horseshoe pitching tournament in progress. Man in undershirt (center) is Earl Bomke of Sangamon county, winner of the men's singles event. This is the third year in succession Bomke has been crowned men's singles champion.

By
JIM THOMSON,
Ass't Editor, IAA Record

HAIL to the Illinois Farm Sports Festival champions of 1949 — Will county! The farmers from Will took first in both the folk festival and sports divisions to oust Champaign county, Sports Festival leaders for the past two years.

Taking frosting with their cake, the Will county folks from the rich lands surrounding Joliet, captured the Illinois Farm Bureau Baseball Championship for the second successive year by defeating Peoria 13 to 4. Will has won the baseball title for six of the last seven contests.

The champions scored heavily in the folk festival division with 780 points compared with 380 by La Salle, their nearest competitor. Will tallied 2,495 points in the sports division for a total of 3,275. In second place was Champaign with a total of 2,610 points.

Less than one-third of the 92 counties entered in the 10th annual Illinois Farm Sports Festival took part in the folk festival where participation points and points scored count the same as in the sports division.

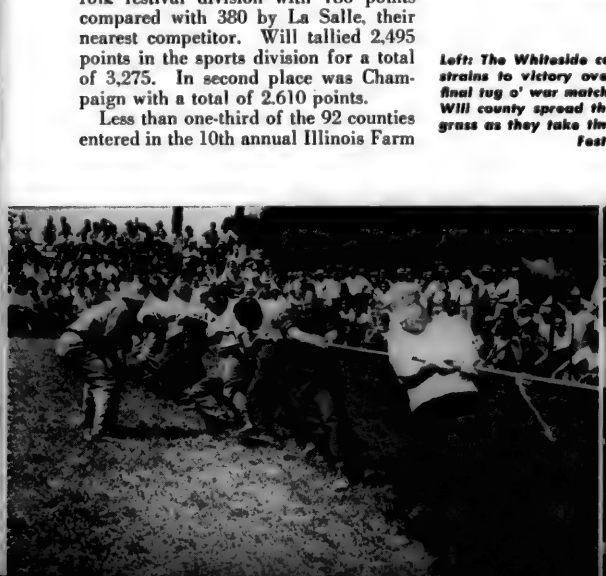
Others among the top 10 in points scored were Sangamon, 2,210; DeKalb, 2,165; Bond, 1,930; Whiteside, 1,845; Henry, 1,745, McLean, 1,720; Vermilion, 1,695; and Iroquois, 1,685.

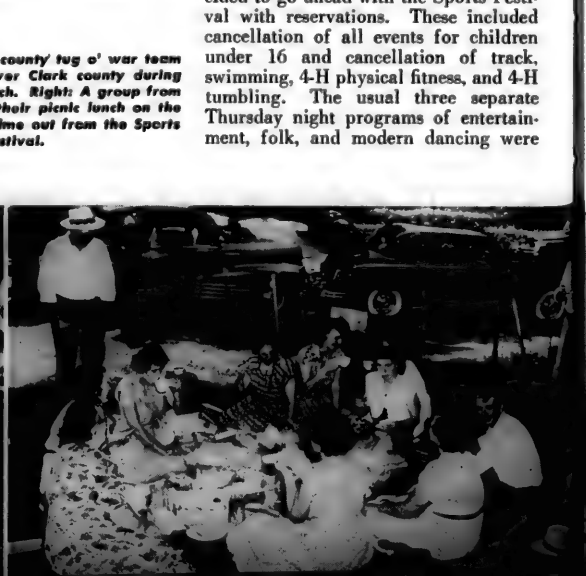
District champions were (1) Carroll; (2) DeKalb; (3) Whiteside; (4) Henderson; (5) McLean; (6) Will; (7) Adams; (8) Sangamon; (9) Champaign; (10) Bond; (11) Fayette; (12) Coles; (13) Randolph; (14) Clay; (15) Franklin; and (16) Jackson.

Left: The Whiteside county tug o' war team strains to victory over Clark county during final tug o' war match. Right: A group from Will county spread their picnic lunch on the grass as they take time out from the Sports Festival.

Spectator attendance at the nation's greatest rural sports pageant, held annually on the campus of the University of Illinois, was cut considerably by an outbreak of poliomyelitis in Champaign-Urbana. Participation by contestants over 15, however, was near normal.

Because of the polio outbreak, the Sports Festival committee met in Springfield Aug. 12 to decide whether or not the Sports Festival should be cancelled. On the advice of Dr. L. E. Schuman of the State Department of Public Health and head of the Illinois anti-polio campaign, the committee decided to go ahead with the Sports Festival with reservations. These included cancellation of all events for children under 16 and cancellation of track, swimming, 4-H physical fitness, and 4-H tumbling. The usual three separate Thursday night programs of entertainment, folk, and modern dancing were





combined in one outdoor program of entertainment with square dancing on the lawn in front of the university auditorium. Among the speakers during the program were President Charles B. Shuman of the Illinois Agricultural Association and Dean H. P. Rusk of the University of Illinois College of Agriculture, representing two of the sponsors of the Sports Festival.

Although the two days of blazing heat and high humidity could easily have made players irritable, no displays of poor sportsmanship were reported. On the contrary, it was observed that virtually all of the losing teams were the first to congratulate their opponents at the end of the games. This was the hope of the men who started the Sports Festival — to get as many farmers as possible to take part in competitive sport, to lose with a smile and with a determination to do better next year.

Symbolic of this fine sportsmanship and the colorful pageantry of the games was the crowning of the Queen of Sport by Ray Eliot, University of Illinois football coach. Eighteen-year-old Beatrice Mayer of Millstadt in St. Clair county was chosen queen from a group of outstanding girl contestants.

Miss Mayer was born and reared on a farm in Madison county, joined the Millstadt Rural Youth group a year ago, served as vice president, and has been active in the club's recreational activities. The queen was a member of the St. Clair square dance team and a first-time participant in the Sports Festival. She is engaged to a Rural Youther and is looking forward to becoming a farmer's wife in November.

Left: Peoria county Pitcher-Third Baseman Stephenson is safe at first during championship baseball game with Will county on throw to Will First Baseman Broadrick. Right: Seehausen, Will second baseman is out at first on throw to First Baseman Slane. Will won, 13 to 4.

This year's Sports Festival covered considerably less than the 10 square miles of events of last year. Both golf and archery were cancelled this year because of too few participants last year. Besides both bowling and volleyball were held last March and the trap and skeet shoot events were held Aug. 12. All were held in Springfield. Points for these events counted in the total scores of the contestants.

Over at the Y.M.C.A. interest in the checker tournament was at fever heat brought about by a larger roster of entrants and a finalist deadlock which kept them playing until 5:30 p.m. Friday. Up in the loft of the Huff gym the clack-clack of the ping pong balls could be heard nearly all day Thursday while the nearby shuffleboard players slid their disks across the shiny hardwood. Darts drew a throng of spectators and the clang of the horseshoes striking the stakes just outside Huff gym could be heard all day long.

All over the campus could be heard the chatter of the ball players and the steady calling of the umpires as games progressed from the university stadium to Illini field about two miles away.

It was a big day for Earl Bomke, 36-year-old Sangamon county farmer, as he won the Farm Bureau horseshoe pitching singles title for the third successive year. A new woodchopping champion was named Friday afternoon when Granville Hodson of Shelby county chopped through a 9¼-inch hickory log in one minute 50.3 seconds. Turner Mayfield, Adams county, three-times champion, was not eligible to compete because he now makes his home in Missouri.

There were many entertaining events in the folk festival which made it rather difficult to pick the best. All were the cream of district competition in which more than 2,000 participated.

King of the hog callers Al DeCap, Whiteside county, three-time winner, abdicated his title by default. The new champion is Gale Yocum of Adams county who nosed out Mrs. William Goff of Sangamon county.

Climaxing a series of tug 'o war contests held at county fairs throughout the state was the final contest between Whiteside and Clark counties which was

Left: George Schleeter (left) and H. E. Torbert smile after winning the horseshoe men's doubles for McLean county. Center: Junior trap shoot champion Bob Reise (left), Henry, talks the matches over with father and son team champions, Clyde and Joe Marble, Vermilion. Right: George Bauer and Maxine Cook win chair quoits doubles for Bond county.

won by Whiteside county, last year's champions.

The traditional Farm Advisers-IAA Staffers game was won by the boys from the skyscraper in Chicago, 8 to 3.

The climax of the Sports Festival came during the Friday afternoon program with the playoff of a number of colorful final events, the crowning of the Queen of Sport and the introduction of her court of six, and the presentation of the trophies by Queen Beatrice Mayer and Sports Festival committee chairman Otto Steffey.

Contestants from several counties were surprised at the final standings by districts because some counties which appeared weak in the sports division amassed enough points in the folk festival to give them stronger standing. It should be borne in mind that points in both divisions have equal value. The fact that only one-third of the counties take part in the folk festival gives many of the counties weaker in the sports division a chance to score heavily in the folk festival division. You score points by just taking part. Remember that when you get ready for next year's Sports Festival, the music festival points count too, so plan to have entires in the folk festival as well as the sports division next year. It pays off in points.

Winners of the mixed doubles in darts event (left to right) are M. Garbelman and Ruby Van Artsdale, DeKalb, 1st; George Bauer and Nellie Cripe, Bond, 2nd; and Ray Johnson and Doris Bickers, Henry. Right: Mrs. George Wallen, Vermilion, draws a bead on the target during the individual women's rifle shooting event. She did not place.

Will Blasts Peoria 13-4 For State Baseball Title

WILL county blasted Peoria county 13 to 4 to win their second successive Farm Bureau Baseball Championship during the finals held at the Sports Festival Aug. 26.

Manager Bob Seeley's Joliet-area team has won six of the last seven Farm Bureau baseball titles. Will defeated Montgomery in the opener 8-2, and ripped through Tazewell, 17-2, in the semi-finals before going on to the title.

The game with Peoria was featured by the hitting of McHugh, Drecksler, and McQuarrie and the steady pitching of Honsbruch. Hurler Horsbruch fanned 11 Peorians and issued only three passes. Catcher Shaw and Fielder Allen hit well for the losers but ragged fielding and tired pitching set the stage for the rout. Box score:

OIL at a DISCOUNT
—if you order NOW!

Hurry, hurry—you can still get a substantial discount on winter supply of oil and grease. Make a list of your motor oil and grease requirements and place your order before October 31st.

5 ADVANTAGES:

PRICE PROTECTION

Whether prices go up or down, you get the lowest price in effect at time of booking or date of delivery.

SPECIAL DISCOUNT

In addition to this low price, you get a special discount if you place your order for motor oil or grease before October 31st.

GUARANTEED QUALITY

Your Farm Bureau Organization stands back of its products. The Illinois Farm Supply Company maintains quality control laboratories which continually test these products to see that they measure up to our high standard of quality.

ASSURED SUPPLY

With your farm storage of oil and grease filled to capacity, you won't have to worry about getting through the winter. Supplies are already on hand whenever they are needed.

NO MONEY DOWN

You can place your order any time before October 31st without making a deposit. You don't pay out anything until your oil is delivered.

ACT NOW!

See your salesman who drives the big Blue and White tank truck

SOLD EXCLUSIVELY BY

FARM BUREAU-TYPE COOPERATIVES

affiliated with

ILLINOIS FARM SUPPLY COMPANY

SPECIAL ORDER FEATURES:

BLUE CIRCLE MOTOR OIL

Safe lubrication. A cleaner engine. Longer bearing life. Sludge and varnish protection. Real economy.

ILLINI MOTOR OIL

Keeps a clean motor clean longer. Better piston seal. Non-corrosive. Anti-sludge and varnish. Longer engine life.

BLUE SEAL GREASES

Here is a line of grease tailored to fit farm needs. Special greases for special machines and parts of machines.

HARVESTER GUN—A grease designed for maximum ease of handling and good lubrication of farm machinery during cool weather.

WHEEL BEARING—Both smooth and fibrous types with high melting points are available. Recommended for front wheel bearing lubrication on all automobiles and trucks.

HUSKER ROLLER—A special compound designed to help get a clean job of husking. Made from heavy petroleum stocks, Husker Roller Compound clings tightly to husker rollers.

LUCO LUBE—The grease that "stays put" longer, gives lubrication where other greases would "fly out." Has good heat and water resistance.

ALUMINATE GUN—An aluminum base grease with smooth texture. Excellent for medium to high speed anti-friction bearings.

"M"-LUBE (Formerly Master-Lube)—This is a lithium base grease which combines the good features of most other greases. A general purpose grease which is heat and water resistant, adhesive to metal and has good physical stability.

OIL at a DISCOUNT
—if you order NOW!

Hurry, hurry—you can still get a substantial discount on winter supply of oil and grease. Make a list of your motor oil and grease requirements and place your order before October 31st.

Whether prices go up or down, you get the lowest price in effect at time of booking or date of delivery.

In addition to this low price, you get a special discount if you place your order for motor oil or grease before October 31st.

Your Farm Bureau Organization stands back of its products. The Illinois Farm Supply Company maintains quality control laboratories which continually test these products to see that they measure up to our high standard of quality.

With your farm storage of oil and grease filled to capacity, you won't have to worry about getting through the winter. Supplies are already on hand whenever they are needed.

You can place your order any time before October 31st without making a deposit. You don't pay out anything until your oil is delivered.

ILLINOIS FARM SUPPLY COMPANY

Safe lubrication. A cleaner engine. Longer bearing life. Sludge and varnish protection. Real economy.

Keeps a clean motor clean longer. Better piston seal. Non-corrosive. Anti-sludge and varnish. Longer engine life.

Here is a line of grease tailored to fit farm needs. Special greases for special machines and parts of machines.

HARVESTER GUN—A grease designed for maximum ease of handling and good lubrication of farm machinery during cool weather

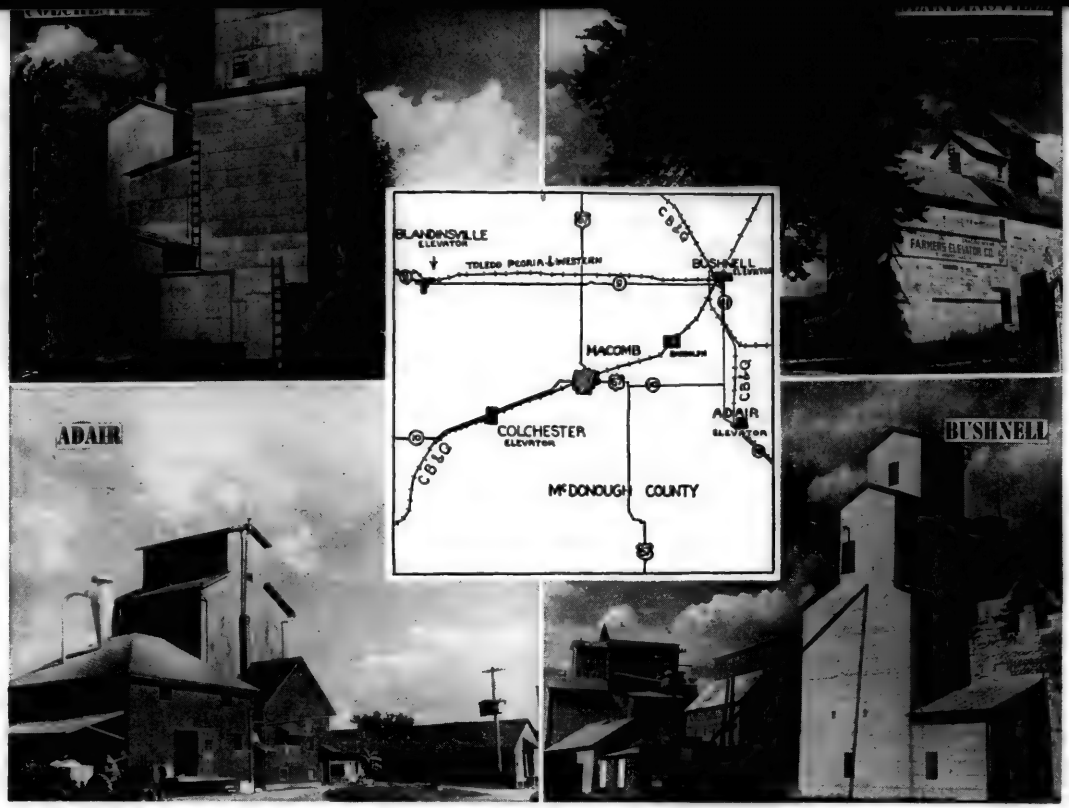
WHEEL BEARING—Both smooth and fibrous types with high melting points are available. Recommended for front wheel bearing lubrication on all automobiles and trucks.

HUSKER ROLLER—A special compound designed to help get a clean job of husking. Made from heavy petroleum stocks, Husker Roller Compound clings tightly to husker rollers

LUCO LUBE—The grease that "stays put" longer, gives lubrication where other greases would "fly out." Has good heat and water resistance.

ALUMINATE GUN—An aluminum base grease with smooth texture. Excellent for medium to high speed anti-friction bearnings.

"M"-LUBE (Formerly Master-Lube)—This is a lithium base grease which combines the good features of most other greases. A general purpose grease which is heat and water resistant, adhesive to metal and has good physical stability.



COUNTY-WIDE SERVICE

Here Is A Modern Cooperative Elevator and Feed Distribution Program That Can Serve Every Farmer In The County.

WOULD you be interested in getting better prices for your grain and also in buying quality feeds at lower cost? Sounds like a good deal, doesn't it? It's the kind of a deal that patrons of the McDonough County Grain and Milling Company are enjoying through their county-wide cooperative grain marketing and feed distribution setup.

A farmer in McDonough county can market his grain at any one of four elevators — whichever one is conveniently located for him. He can have feed hauled to his place from any one of the elevators. If he needs some extra corn, it will be delivered to his farm for five cents per bushel trucking charge. He can get his corn shelled, grain ground, and feed mixed at the elevators. If he needs coal, that will be trucked to his farm.

High quality Service Brand feeds are available to McDonough county farmers through their own cooperative. These are manufactured at the Bushnell mill, main headquarters of the McDonough Grain and Milling Company. An operating elevator and a storage elevator are also located there.

Service Brand is a locally and economically manufactured feed using Blue Seal pre-mixes and locally grown grains. Some freight costs are saved through this local manufacturing program. (A number of similar county grain companies are distributing Blue Seal feeds and performing a similar service to their members.) In addition Blue Seal pellet feeds which are manufactured by the Illinois Farm Supply Company's new mill at Mendota are also available. Rigid specifications of quality and manufacture setup by the Farm Supply Company must be met when the Service Brand label is used.

Thus the patrons of the McDonough cooperative enjoy the advantages of a statewide feed program that was designed for just such benefits to Farm Bureau members.

Patrons of the cooperative also benefit by the new state-wide grain merchandising program as a portion of their grain is trucked to the Havana River Grain Company. In this way, McDonough county farmers share in the favorable waterway freight rates. This part of the program will be of increasing importance as the river operating companies secure more barges. This year about 50,000 bushels or approximately one-fourth of the wheat delivered to the McDonough cooperative was

Leo Walter, above, president of the McDonough Grain and Milling Company, and his son listen to Arch Elam, manager of the company, who stopped by the Walter farm at the end of day's business.

The map of Illinois at the right shows the favorable position of the McDonough cooperative between the two river elevator companies.

trucked to the Havana River Grain elevator. This meant a three-cent per bushel advantage over the local bid on wheat. Eventually some of the cooperative's grain will move to the Western Illinois Grain Company elevator at Dallas City on the Mississippi.

The McDonough grain cooperative's experiences prove the wisdom of river operations since modern trucking makes it profitable to move grain from a wide area surrounding the river elevators. The McDonough cooperative's elevators are also well located as far as rail transportation is concerned, as shown by the map on the opposite page.

As Leo Walter, president of the McDonough Grain and Milling Company says, "We have just begun to enjoy our benefits. We have all the facilities now and have just had one year's use of them. Lots of our farmers don't realize yet what a great thing we have here in McDonough county. They will only realize that as they have a chance to use the services of our cooperative."

This is the first year of complete operation of all four elevators in the McDonough cooperative. In the beginning, five years ago, operations were limited to the Bushnell plant and elevator. Then in September and December of 1948. elevators were purchased at Blandinsville, Colchester, and Adair. Thus the leaders achieved their goal of having four points within the county where members could market their grain cooperatively and also where Service Brand feeds could be distributed. Stock was sold to finance this program. In addition the Bushnell mill was modernized in 1948 to meet Service Brand requirements, new trucks and equipment were purchased and a new office and scales installed at Bushnell.

At present, the Colchester elevator is being modernized, warehouse expanded and new sheller equipment installed.

In addition to all the benefits to members, the county-wide setup of the McDonough cooperative makes for real operating efficiency. For example, the heavy duty trucks used for hauling grain to the river elevators, are also used for hauling feed corn or merchandise to farms, or to bring corn into the four elevators of the cooperative. In the same way, the county-wide setup makes it possible to shift workers from one elevator to another or from one operation to another wherever the labor need is greatest.

The cooperative has a fleet of four heavy duty trucks for hauling feed to patrons; five large grain trucks; two coal trucks and two pickup trucks.

Officers and directors of the McDonough Grain and Milling Company include Mr. Walter who is also secretary of the Farm Bureau and secretary of the Havana River Company; Ryal Keithley, vice-president, Macomb; Ernest B. Combs, secretary, Bushnell; J. D. Murphy, treasurer, Bushnell; Ralph Wilson, Industry; Marion Herzog, Blandinsville; Grover Swigart, Macomb; B. H. Swedell, Adair; and Orville Cuba, Colchester.

NOTICE OF ANNUAL MEETING

COUNTRY MUTUAL CASUALTY COMPANY

Notice is hereby given that the annual meeting of the members of Country Mutual Casualty Company will be held in the Sherman Hotel, Chicago, Illinois, on Tuesday, the 15th day of November, 1949, at 1:00 P.M. to receive, consider and if approved, confirm and ratify the reports of the officers and of the Board of Directors of the Company for the year ending December 31, 1948; to elect directors for the coming year and for the transaction of such further and other business as may properly come before the meeting.

Otto Steffey, Secretary

Pausing for refreshments at the Farm Bureau tent during the Illinois State Fair were Montgomery Rural Youthers (left to right): Polly Rebhun, Mr. and Mrs. Earl Sorrells, and Olen Wornsing.

Rural Youth in ACTION

By ELLSWORTH D. LYON, Director
IAA Young Peoples Activities

DISTRICT Talk Fest and Skilled Driver programs are rapidly moving toward a climax. On Oct. 17, activities will get under way and be completed at Galesburg Nov. 2. The schedule with driving in the afternoon and speech activities in the evening will be as follows:

Oct. 17, Louisville, public school gymnasium; Oct. 18, Marion, Carnegie library; Oct. 21, Carlyle, high school auditorium; Oct. 24, Bloomington, Farm Bureau auditorium; Oct. 25, Jacksonville, Farm Bureau auditorium; Oct. 27, Oregon, high school auditorium; Oct. 28, Yorkville, Farm Bureau office; Nov. 1, Champaign, Farm Bureau office; and Nov. 2, Galesburg, Farm Bureau office.

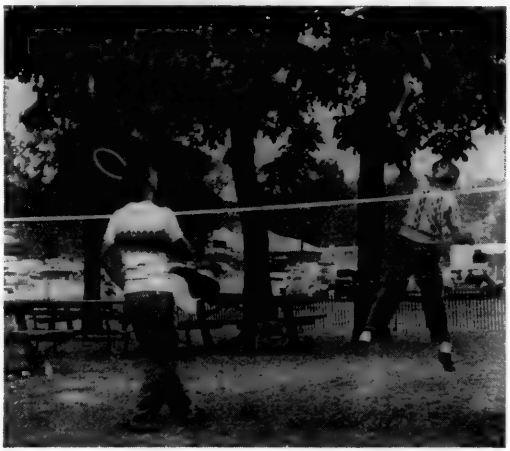
Here are two action programs with definite appeal for young people of Rural Youth age. Both are a challenge to the best efforts of participants. Both require practice. Both produce results in the growth of the individual. From the standpoint of public interest, both programs are of vital importance. The skillful operator of a motor vehicle is a blessing to the motoring public. The high death record over the Labor Day week-end resulted mostly from reckless operation of automobiles on the highway.

Rural Youthers taking part in highway safety programs of any nature will further the cause of public safety, also our Illinois communities need leaders who can speak well for the factors which make for better community development.

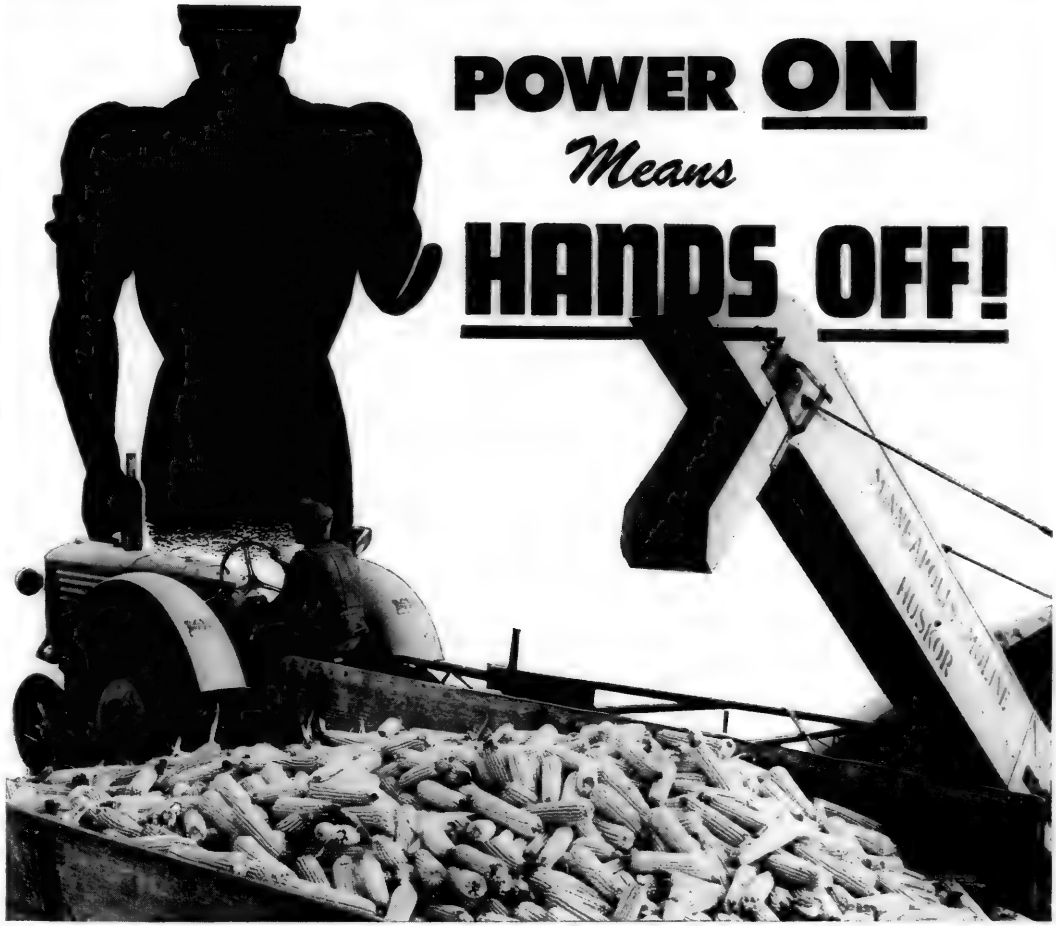
Speaking of action programs, possibly Rural Youth groups should be thinking again of livestock tours on a county and district basis. With the new program in the marketing of livestock, and the continued growth and interest in the cooperative locker service, it is possible for Rural Youthers to increase their knowledge in the production and processing of meat through a closer contact with the whole program. The tours would be made attractive and helpful for both young men and women from the social and technical sides. Leaders in the field of marketing and cold storage have given assurance of cooperation in furthering this growing and interesting side of agriculture and homemaking for Rural Youthers. Suggestions for launching such a program for Rural Youth will be welcome in the office of Young People's Activities.

Merle Miller, Star Farmer from DeWitt county, believes in positive action for young farmers. Recently elected Star Farmer, he is highly deserving of the honor as pointed out in the September issue of the IAA RECORD. The keeping of careful farm records for several years, his partnership arrangement with his father, and his cooperation with his mother in beautifying home grounds is only part of Merle's program of activity.

Last year he was rated the best talker in the Talk Fest at the annual meeting of the Illinois Agricultural Association. At that time Merle, at the age of 16, was too young to take part in the national meet held in connection with the annual meeting of the American Farm Bureau Federation. When he becomes 18 years of age he will again be permitted to participate in the Talk Fest with the possibility of going on to the national meet. It is possible that he would have won the national meet in 1948 had the national rules coincided with the rules of his county. Our congratulations go to Merle Miller for his outstanding achievements in homebuilding, in actual farming, his speech attainments, and general ability. Ability alone is not enough. Faithful application to responsibilities and earnest endeavor in the programs that are in harmony with interests are needed also. Here is a Rural Youther who is not afraid of hard work. His wide range of interest plus participation have made possible his attainments which have brought to him the honor of Star Farmer.



Taking advantage of the play facilities at the Illinois State Fair were Gary Bielfeldt (foreground) and Kenny Riecks, both of McLean county.



When machinery is *running*, it's *hands off* . . . or *hands off!* This fall make safety first your first rule. It's better to lose a *minute* than to lose a *hand*. And another important safety tip: Dont' start the corn picking season without liability insurance. Stop at your Farm Bureau office today. Let your Country Mutual Casualty representative explain how a Farmers General and Employer's Liability policy provides vitally needed liability protection at minimum cost.

Pausing for refreshments at the Farm Bureau tent during the Illinois State Fair were Montgomery Rural Youthers (left to right): Polly Rebhan, Mr. and Mrs. Earl Sorrells, and Olen Wernsing.

AGREEMENTS AVAILABLE ON New Corn

BOTH loans and purchase agreements will be available for the new corn crop, according to announcements from the Illinois Production and Marketing Administration. Rates will be 90 per cent of parity as of Oct. 1, and probably will be somewhat below the $1.44 a bushel, the 1948 national average.

The 1949 loans and purchase agreements will be available except in designated areas from harvest through May 31, 1950, and will mature July 31, 1950.

Corn placed under loan must grade No. 3 or better or No. 4 on test weight only, and meet moisture requirements for safe storage.

Another change in this year's program is that 1949 corn placed under loan may be stored in warehouses as well as on the farm.

A PMA official has figured that it would take a row of CCC grain bins 210 miles long to store all the corn that Commodity Credit Corporation is scheduled to take over from Illinois farmers this fall. The bins in such a line would be placed only four feet apart.

A price support of $2.11 a bushel for the 1949 crop of green and yellow soybeans grading U. S. No. 2, and containing not more than 14 per cent moisture, has been established by the U. S. Department of Agriculture.

Purchase agreements and loans both on farm-stored and warehouse stored soybeans will be available through Jan. 31, 1950.

Purchase agreement corn moves into steel bins of McDonough County Grain and Milling Company. These bins, 21 in number, are located at the cooperative's Blandinsville elevator, and will take care of some 60,000 bushels of corn. The cooperative took over the bins when it purchased the elevator in the fall of 1948.

NOTICE OF ANNUAL MEETING COUNTRY MUTUAL FIRE COMPANY

Notice is hereby given that the annual meeting of the members of Country Mutual Fire Company will be held in the Sherman Hotel, Chicago, Illinois, on Tuesday, the 15th day of November, 1949 at 10:00 A.M. to receive, consider and if approved, ratify and confirm the reports of the officers and the acts and proceedings of the Board of Directors since the last annual meeting of members of the Company; to elect three directors for a term of three years, to elect two directors for a term of one year and for the transaction of such further business as may come before the meeting.

Dated at Chicago, Illinois, this 15th day of September, 1949.

Geo. F. Hayes, Secretary

Peoria Team Will Be Guests at Football Game in Chicago

GEORGE HALAS, president of the Chicago Bears professional football team, has invited members of the Peoria county 4-H softball team, division champions at the Illinois Farm Sports Festival, to be his guests at the Bears-Detroit Lions game Nov. 13 at Wrigley Field.

"This is a wonderful gesture on the part of Mr. Halas," Roy P. Johnson, IAA director of special services, said, "and perhaps there are some Farm Bureau football fans who would like to see the game. It is suggested that you send in ticket purchase requests to the department of special services, Illinois Agricultural Association, 43 East Ohio Street, Chicago 11, Ill. Perhaps arrangements can be made to secure tickets for this particular game in one block so Farm Bureau folks can sit together."

Johnson also reported that members of the Will county baseball team, champions of the Illinois Farm Bureau Baseball League, were guests of the Chicago White Sox management at the White Sox-Cleveland game, Sept. 29.

NOTICE OF ANNUAL MEETING ILLINOIS WOOL MARKETING ASSOCIATION

Notice is hereby given that the annual meeting of the shareholders and members of Illinois Wool Marketing Association will be held on Tuesday, the 15th day of November, 1949, at the hour of 9:30 A.M. in the Sherman Hotel, Chicago, Illinois, to elect directors for the succeeding year; to receive and if approved, confirm the report of the Board of Directors of the Association for the fiscal year ending September 30, 1949; to consider and if approved, ratify and confirm all of the acts and proceedings of the Board of Directors done and taken since the last annual meeting of the shareholders and members of the Association; and for the transaction of such further and other business as may properly come before the meeting.

J. King Eaton, Secretary

'49 Harvest is Greatest In Illinois History with Corn Yield 62 bu.

ILLINOIS' 1949 harvest will be the greatest in the state's history, according to the U.S. Agriculture Department's crop reporting service.

Corn and soybean yields in Illinois are expected to top all other states. The expected 62-bushel-an-acre yield for corn will be the highest since 1948's 61 bushel yield. The soybean per acre yield will be 25 bushels compared with the previous high of 24½ bushels in 1939.

The crop reporting service predicted last month that the Illinois corn crop would be 559,000,000 bushels or 9,000,000 bushels higher than last year's record crop and 40 per cent larger than the average crop during the 1937-48 10 year period.

The soybean crop is expected to total 77,700,000 bushels or one per cent below last year's production.

Boys 4-H Softball Champions. Peoria — Back row: B. Foster, H. Nicholson, D. Murdock, R. Aman, R. King, B. Gibbs, J. McCoy, S. Lanoue. Front: A. Coon, H. McCoy, D. Korth, C. Korth, H. Tompkins, B. Carter, L. Frank.

Top right: Adult County League Softball Champions. St. Clair — Back row: W. Muskopf, E. Krupp, B. Baltz, B. Becker, J. Holdener, R. Baltz, O. Koerber, F. Stahl, B. Seib. Front: R. Vogel, W. Miller, C. Mueth, F. Schneider, H. Lang, L. Vogel. St. Clair won the title in '40, '41, and '48.

Girls 4-H Club Softball Champions. Mason —Back row: M. Kleier, E. Wahlfeld, M. Strube, R. Kleier, M. Knoppel, B. Steinhauer. Front: M. Ringhouse, M. Huber, E. Strube, R. Ringhouse, A. Onten, J. Van Horne.

Girls Open Softball Champions: DeKalb-Back row, left to right: B. Wennlund, manager; P. Stevens, G. Dugan, B. Farrell, B. Moser, N. Arnold, N. Heibenthal and L. Colby. Front row: J. Buffington, D. Carr, J. Bale, B. Colby, H. Pesut, and J. Holm.

AGREEMENTS AVAILABLE ON New Corn

Purchase agreement corn moves into steel bins of McDonough County Grain and Milling Company. These bins, 21 in number, are located at the cooperative's Blandinsville elevator, and will take care of some 60,000 bushels of corn. The cooperative took over the bins when it purchased the elevator in the fall of 1948.

BOTH loans and purchase agreements will be available for the new corn crop, according to announcements from the Illinois Production and Marketing Administration. Rates will be 90 per cent of parity as of Oct. 1, and probably will be somewhat below the $1.44 a bushel, the 1948 national average.

The 1949 loans and purchase agreements will be available except in designated areas from harvest through May 31, 1950, and will mature July 31, 1950.

Corn placed under loan must grade No. 3 or better or No. 4 on test weight only, and meet moisture requirements for safe storage.

Another change in this year's program is that 1949 corn placed under loan may be stored in warehouses as well as on the farm.

A PMA official has figured that it would take a row of CCC grain bins 210 miles long to store all the corn that Commodity Credit Corporation is scheduled to take over from Illinois farmers this fall. The bins in such a line would be placed only four feet apart.

A price support of $2.11 a bushel for the 1949 crop of green and yellow soybeans grading U. S. No. 2, and containing not more than 14 per cent moisture, has been established by the U. S. Department of Agriculture.

Purchase agreements and loans both on farm-stored and warehouse stored soybeans will be available through Jan. 31, 1950.

NOTICE OF ANNUAL MEETING COUNTRY MUTUAL FIRE COMPANY

Notice is hereby given that the annual meeting of the members of Country Mutual Fire Company will be held in the Sherman Hotel, Chicago, Illinois, on Tuesday, the 15th day of November, 1949 at 10:00 A.M. to receive, consider and if approved, ratify and confirm the reports of the officers and the acts and proceedings of the Board of Directors since the last annual meeting of members of the Company; to elect three directors for a term of three years, to elect two directors for a term of one year and for the transaction of such further business as may come before the meeting.

Dated at Chicago, Illinois, this 15th day of September, 1949.

Geo. F. Hayes, Secretary

Peoria Team Will Be Guests at Football Game in Chicago

GEORGE HALAS, president of the Chicago Bears professional football team, has invited members of the Peoria county 4-H softball team, division champions at the Illinois Farm Sports Festival, to be his guests at the Bears-Detroit Lions game Nov. 13 at Wrigley Field.

"This is a wonderful gesture on the part of Mr. Halas," Roy P. Johnson, IAA director of special services, said, "and perhaps there are some Farm Bureau football fans who would like to see the game. It is suggested that you send in ticket purchase requests to the department of special services, Illinois Agricultural Association, 43 East Ohio Street, Chicago 11, Ill. Perhaps arrangements can be made to secure tickets for this particular game in one block so Farm Bureau folks can sit together."

Johnson also reported that members of the Will county baseball team, champions of the Illinois Farm Bureau Baseball League, were guests of the Chicago White Sox management at the White Sox-Cleveland game, Sept. 29.

NOTICE OF ANNUAL MEETING ILLINOIS WOOL MARKETING ASSOCIATION

Notice is hereby given that the annual meeting of the shareholders and members of Illinois Wool Marketing Association will be held on Tuesday, the 15th day of November, 1949, at the hour of 9:30 A.M. in the Sherman Hotel, Chicago, Illinois, to elect directors for the succeeding year; to receive and if approved, confirm the report of the Board of Directors of the Association for the fiscal year ending September 30, 1949; to consider and if approved, ratify and confirm all of the acts and proceedings of the Board of Directors done and taken since the last annual meeting of the shareholders and members of the Association; and for the transaction of such further and other business as may properly come before the meeting.

J. King Eaton, Secretary

'49 Harvest is Greatest In Illinois History with Corn Yield 62 bu.

ILLINOIS' 1949 harvest will be the greatest in the state's history, according to the U.S. Agriculture Department's crop reporting service.

Corn and soybean yields in Illinois are expected to top all other states. The expected 62-bushel-an-acre yield for corn will be the highest since 1948's 61 bushel yield. The soybean per acre yield will be 25 bushels compared with the previous high of 24½ bushels in 1939.

The crop reporting service predicted last month that the Illinois corn crop would be 559,000,000 bushels or 9,000,000 bushels higher than last year's record crop and 40 per cent larger than the average crop during the 1937-48 10 year period.

The soybean crop is expected to total 77,700,000 bushels or one per cent below last year's production.

SCHOOL REPORT

(*Continued from page* 14)

in community unit districts and high school districts. The law requires a minimum population figure of 2,000 as one of the requirements for the establishment of either a high school or a community unit.

9. "Where non-high territory in any county has been reduced to less than 10 per cent of the entire area of the county, the non-high school board and the county superintendent of schools should allocate the territory to existing or new high school districts, subject to the approval of the superintendent of public instruction. Page 65.

H.B. 1070 passed in 1949 provides that all non-high districts shall be abolished prior to July 1, 1953.

10. "Legislation should be enacted providing that in all instances where public transportation is not available, elementary pupils living more than two miles from school, and all high school pupils living more than three miles from school should be transported at district and state expense." Page 30.

After non-high territory is abolished high school pupils shall be transported if no high school is established in such territory that was formerly non-high. No new high school can be established there if its population base is smaller than 2,000.

11. "The closing of some schools and the transporting of the pupils to a neighboring district is an emergency and temporary arrangement. More permanent arrangements must be made." Page 54.

H.B. 1071 passed in 1949 provides that any school district that failed to maintain a public school for two consecutive years after June 30, 1949 shall be dissolved and attached to adjoining districts.

12. "Under the present law providing for 'Community Consolidated Districts', in cases where the reorganization involves both incorporated and unincorporated areas, separate votes are required in each area and the organization of the new larger district can proceed only if the votes are favorable in both areas." Page 58.

Both the School Survey Act of 1945 and the Community Unit Act of 1947 provide for a separate vote in rural and urban territories.

13. "Teachers and teaching, especially in the rural elementary schools, should be much more carefully supervised. Each county should have from one to three rural school supervisors." Page 62-63.

Legislation adopted in 1945 provided for the appointment by the county superintendent of schools of one rural school supervisor in each county. In view of the rather rapid and widespread progress of reorganization, many of these supervisors are no longer needed and their jobs may be discontinued.

14. "Every effort should be made to secure and retain the very best of teachers for rural schools. Teachers' salaries should be increased substantially." Page 63.

Increased state aid has enabled all districts to pay better salaries, which over a period of years should attract and retain better teacher talent and enable many teachers now on the job

DUROC BREEDER WINS with BLUE SEAL FEED

Produces a Ton Litter of Breeding Stock in 149 Days!

Purebred Duroc-Jersey swine breeder Sherman A. Vance and sons, of Carthage, Illinois, have achieved an outstanding record with Blue Seal Swine Feeds.

They produced a ton litter of breeding stock in 149 days.

On March 23, a litter of 12 pigs was farrowed by one of Vance's purebred Duroc sows. Ten pigs were saved and raised.

The litter was shown at the recent Illinois State Fair and placed high in the judging against stiff competition. The pigs were sold at auction the same evening for $1,600.00.

From the very beginning, the pigs did well on their ration of Blue Seal Swine Supplement, farm grains and other feeds fed by Vance. At 56 days the litter weighed in at 471 pounds. This greatly exceeded the 320 lb. minimum requirement for a Production Record litter.

At 149 days, the 10 pigs weighed a total of 2,020 pounds—*a ton litter in less than 5 months.*

Mr. Vance is a Fieldman for the "Hog Breeder" magazine. He has had many years' experience in raising and showing pigs. He attributes his success principally to good management, good breeding and good feeding practices.

He is to be congratulated on his achievement over the years in producing champion hogs.

Extra profits are in store for Illinois hog men when they follow the Blue Seal Swine Feeding system.

See your Blue Seal Feed Salesman for feeding suggestions.

BLUE SEAL HOG FEEDS

Blue Seal Hog Feeds are high in quality. They have the pound-producing ability to put faster and cheaper gains on your swine. Their use has helped thousands of Illinois hog feeders reduce their cost of production and increase their profits from hogs. Blue Seal Feed starts the pigs out right—and keeps them gaining at a rapid pace to market weight.

Pig and Sow Supplement

Contains 35% protein. Fed with farm grains to sows during the reproduction and nursing period and to pigs up to 75 lbs. in weight. Pig and Sow Supplement will help you wean large, healthy litters at a low cost per pig.

Hog Supplement

For feeding growing-fattening hogs from 75 lbs. to market weight in drylot. When fed with farm grains maximum production at high profits over feed costs is assured. Hog Supplement contains 40% highest quality protein. Available as meal or pellets.

Pig Meal

A complete and balanced ration for creep-fed pigs. Contains 22% highest quality proteins. Contains the energy, minerals and vitamins needed in the critical growing period of young pigs.

Pasture Supplement

Will give low production costs on good pasture. Contains 42% protein. When self-fed with farm grains forms the ideal pasture feeding program. Pigs make faster and more economical gains.

Illinois Farmers Tour Europe

English Folks Say Visitors Don't Look Like Farmers. Think That They Resemble Movie Stars. "A Lot of Clark Gables."

THE 50 Illinois farm men and women who went on a six-week tour of north western Europe created quite a stir in the nation's press because of the good impression they made on the people of England.

The tour was under the guidance of Dr. D. E. Lindstrom of the University of Illinois College of Agriculture and was offered primarily for Illinois rural chorus, music, drama, and folk arts participants and their friends.

The tour left Chicago the middle of August and was scheduled for one week in England, one week in Denmark, and one week in Sweden. The Illinois folks visited model and typical farms, chatted with agricultural officials and farmers, and attended and put on concerts, festivals, and folk dances.

Here is what The Associated Press story from Little Gaddesen, England, said about the visit of the Illinois farmers there:

Fifty Illinois farmers here to study English country life are drawing a lot of study from the English.

Their business suits and general grooming don't fit the English idea of straw-chewing, overalled hayseeds. They have caused a bigger stir than a whole brood of three-legged chicks.

"I've never seen any farmers like these," chuckled Steve Oakins, 70-year-old retired village postmaster. "A lot of Clark Gables, that's what they are."

Margaret Somersby chimed in: "They all look like film stars."

"Sure, I guess we guys on the land like our clothes to fit well," laughed Fred Zimmerman, a sun-tanned, 200-pound farmer from San Jose, Ill.

His outfit included a nylon shirt with socks to match, a blue silk tie with red squares and yellow ships sailing all over it, a gold ring and a gold tiepin.

The Americans, on a five-week tour of Europe, pitched into an old-fashioned farmers' feed in the lamplit school hall —homemade sausage rolls, jam tarts, tomato juice, beer and cider.

Later, it was just like a county fair back home. There were American square dances and the British version, called the Roger de Coverley. Mrs. Mary Milligan of Urbana, Ill., led a song fest.

Ralph Allen who farms 200 acres at Delavan, Ill., said, "Already we are finding out your farming problems—Shortage of labor, of food for your workers and of land suitable for cultivation."

"I have a 640-acre farm back home," broke in Mrs. Laura Barbick, "and I run it with four men. Over here I was shown a farm of the same size which took 13 men to run it, but I guess that we are helped back home by having so much machinery."

NEAT FELT BAG

Big but not bulky that's the stylish handbag. You can make this one in beautiful new felt colors. For free instructions enclose a self-addressed stamped envelope to Women's Editor, The Record, Illinois Agricultural Association, 43 East Ohio Street, Chicago 11, Illinois.

Lightning rods protect buildings only when the connections and ground wires are in good order, say University of Illinois agricultural engineers.

Left: Patricia Hoehn, Mason county, gets her Ayrshire calf ready for the 4-H contests at the Illinois State Fair. Right: A clown band invades the IAA-Farm Bureau courtesy tent during the Illinois State Fair in Springfield.

for HOMEMAKERS

PICTURE ARRANGEMENT

Four large floral prints and four smaller fruit prints artistically grouped above the couch make an attractive arrangement. A large framed mirror above the credenza is a good contrast for the wallpaper and adds depth to the room.

Draperies For Your Home

New Leaflet from University of Illinois Tells How To Make Best Use of Shades and Draperies. Write For A Copy.

THE attractiveness of your home depends largely on the way you treat the windows. What shades or draperies you choose and how you use them calls for thought and planning, says Miss Dorothy Iwig, home furnishings specialist, University of Illinois College of Agriculture.

Before you decide on the treatment, study the situation thoroughly. What effect do you wish to accomplish? What do you want the windows to do for your home—outside and inside? Shades, draperies, and other devices can provide privacy, hide ugly views, regulate light, soften the lines in the wood trim, and even correct windows that are badly proportioned. It depends how they are used.

The best window treatment depends, first of all, on the size, shape and arrangement of the windows. If the window is very narrow, it may be necessary to leave every bit of it unobstructed in order to provide sunlight and a feeling of spaciousness. If the span of glass is so large that the room lacks a friendly atmosphere, you'll want to make it look smaller.

There is also the problem of height to consider. Is there a pleasing relation between the height of the window and the height of the ceiling? Or is the window so short that it appears chopped off, or so tall that it appears lanky?

The University of Illinois leaflet, "Window Treatment," will help you solve window problems. Ask your county home adviser for a copy, or write to University of Illinois College of Agriculture, Urbana, Illinois.

About 18 per cent of the nation's population is now in rural areas, whereas 95 per cent of the population was rural 150 years ago.

Average vitamin A value of creamery butter produced in the U. S. is more than 15,000 International Units per pound.

INFORMAL SETTING

Burlap substitutes for linen in this plaid-embroidered place mat. The oblong piece of burlap is fringed and worked with running herringbone stitches in red, green, and blue. For free instructions send a self-addressed stamped envelope to Women's Editor, The Record, Illinois Agricultural Association, 43 East Ohio Street, Chicago 11, Illinois.

St. Clair County Studies Health Plans

ST. CLAIR county got off with their fall program with a series of six district meetings in September at which Miss Marjorie Tabor of Collinsville, director of home economics extension activities in the county, discussed "The Pro and Cons of the Proposed Federal Compulsory Health Insurance Program," and Mrs. Norman Stites, president of Caseville, and Mrs. Henry Dietz, vice president of Mascoutah reported on the state citizenship and legislative conference held during the summer at Jacksonville.

A sewing machine attachment clinic at Belleville is scheduled for Oct. 21, and a sewing machine clinic for Nov. 7. A bus trip to Pere Marquette park was scheduled for Sept. 29 and to the 4-H Memorial Camp at Monticello on Oct. 8.

Better Silks Back

Silks are back again with better dyes, more elegance and beauty than last year. Most silks are printed for spring sewing but there are some solid colors in crepes, shantungs and taffetas. More and more synthetic fabrics are appearing with special properties of sheerness, long wear, crush resistance, flame resistance and many other helpful features.

Soybean straw that is plowed under will just about maintain the organic matter and the nitrogen content of the soil.

If the span of glass is so large that the room lacks a friendly atmosphere, you'll want to make it look smaller.

There is also the problem of height to consider. Is there a pleasing relation between the height of the window and the height of the ceiling? Or is the window so short that it appears chopped off, or so tall that it appears lanky?

The University of Illinois leaflet, "Window Treatment," will help you solve window problems. Ask your county home adviser for a copy, or write to University of Illinois College of Agriculture, Urbana, Illinois.

About 18 per cent of the nation's population is now in rural areas, whereas 95 per cent of the population was rural 150 years ago.

Average vitamin A value of creamery butter produced in the U. S. is more than 15,000 International Units per pound.

INFORMAL SETTING

Burlap substitutes for linen in this plaid-embroidered place mat. The oblong piece of burlap is fringed and worked with running herringbone stitches in red, green, and blue. For free instructions send a self-addressed stamped envelope to Women's Editor, The Record, Illinois Agricultural Association, 43 East Ohio Street, Chicago 11, Illinois.

St. Clair County Studies Health Plans

ST. CLAIR county got off with their fall program with a series of six district meetings in September at which Miss Marjorie Tabor of Collinsville, director of home economics extension activities in the county, discussed "The Pro and Cons of the Proposed Federal Compulsory Health Insurance Program," and Mrs. Norman Stites, president of Caseville, and Mrs. Henry Dietz, vice president of Mascoutah reported on the state citizenship and legislative conference held during the summer at Jacksonville.

A sewing machine attachment clinic at Belleville is scheduled for Oct. 21, and a sewing machine clinic for Nov. 7. A bus trip to Pere Marquette park was scheduled for Sept. 29 and to the I-H Memorial Camp at Monticello on Oct. 8.

Better Silks Back

Silks are back again with better dyes, more elegance and beauty than last year. Most silks are printed for spring sewing but there are some solid colors in crepes, shantungs and taffetas. More and more synthetic fabrics are appearing with special properties of sheerness, long wear, crush resistance, flame resistance and many other helpful features.

Soybean straw that is plowed under will help to maintain the organic matter and the nitrogen content of the soil.

CHECKERS

1st, Glenn Schall, Macon; 2nd, John Steele, Shelby; 3rd, Wm. Goff, Sangamon.

CLOCK GOLF

Open Class Men's Singles — 1st, Howard Elliott, DeKalb; 2nd, Bob Tuchel, Champaign; 3rd, Bob Sommers, Champaign.
Open Class Women's Singles — 1st, Mrs. Charles Minor, Champaign; 2nd, Mrs. Doris Bickers, Henry; 3rd, Mrs. Pete Sanders, Bond.
Mixed Doubles — 1st, Jeanette Wilson, Bill Hanks, Champaign; 2nd, Sue Sykes, Clayton Cobb, Whiteside; 3rd, Doris Bickers, Henry — Wayne Dolk, Henry.

DART THROWING

Men's Singles — 1st, Howard Trone, Schuyler; 2nd, George Bauer, Bond; 3rd, M. Garbelman, DeKalb.
Women's Singles — 1st, Mrs. Charles Rhoden, Edgar; 2nd, Mrs. Ruby Van Artsdale, DeKalb; 3rd, Mrs. Nellie Cripe, Bond.
Mixed Doubles — 1st, Ruby Van Artsdale, M. Garbleman, DeKalb; 2nd, George Bauer, Nellie Cripe, Bond; 3rd, Doris Bickers, Ray Johnson, Henry.

FOLK FESTIVAL — Only those with A ratings listed.

Rural Youth Square Dance — Henry, St. Clair, Adams, Fayette, Rock Island, Sangamon, LaSalle, and Bureau.
Open Class Square Dance — Henry, LaSalle, Champaign, and Coles.
4-H Square Dance — Effingham County.
Square Dance Bands — LaSalle, and Douglas.
Square Dance Callers — Ray Alderson, Will; Ray Leach, LaSalle; George Bauer, Bond; Don McClay, Kane; Bill Grammet, St. Clair; Anthony Droster, Whiteside; and John Smith, Will.
Stunt and Skit — Whiteside County, (Skit).
Vocal Features — Barber Shop Quartette, Iroquois.
Adult Vocal Group — Sharp Trio, Iroquois; Trio, Carroll.

HOG CALLING

1st, Gale Yocum, Adams; 2nd; Mrs. William Goff, Sangamon; 3rd, John Stanley, Edgar.

HORSESHOES

Men's Singles — 1st, Earl Bomke, Sangamon; 2nd, Leslie Long, Whiteside; 3rd, Alfred Terry, Grundy.
Women's Singles —, 1st, Mrs. Ruby Van Artsdale, DeKalb; 2nd, Mrs. Dan McFarland, Adams; 3rd, Mrs. Roscoe Smith, Kane.
Women's Doubles — 1st, Mrs. H. J. Eikhorst, Mrs. J. H. Irle, Champaign; 2nd, Mary Lewis, Mrs. Virginia Dierking, DeKalb; 3rd, D. Holder, JoAnn Nice, Rock Island.

RIFLE SHOOTING

Men's Singles — 1st, Paul Norfleet, Morgan; 2nd, Wilbur Withrow, Sangamon; 3rd, Robert Baird, Champaign.
Women's Singles — 1st, Mrs. Holman Robbins, Morgan; 2nd, Mrs. Virginia Baird, Champaign; 3rd, Mrs. Robert Foster, Morgan.
Men's Teams — 1st, DeKalb; 2nd, Sangamon; 3rd, Morgan.

SKEET SHOOT

Team — 1st, Crawford; 2nd, McLean; 3rd, Shelby; 4th, Kankakee; 5th, Logan.
Individual-Men — 1st, Carl Cufuade, McLean; 2nd, Lewis Hout, Crawford; 3rd, Marvin Snyder, Logan; 4th, George Potts, McLean; 5th, R. J Ford, Mason; 6th, Virl Welch, Shelby.
Individual-Women — 1st, Carolyn Colliflower, Crawford; 2nd, Evelyn Bittner, Grundy.
Junior — 1st, Hugh Van Voorst, Kankakee; 2nd, Jack Tietge, McLean; 3rd, Joe Marble, Vermilion.
Brother and Brother — 1st, U. Tendick and J. E. Tendick, Logan; 2nd, Harry and Elmer Dannewitz, DeKalb; 3rd, Harold and Harvey Johnson, Montgomery.
Husband and Wife — 1st, Mr. and Mrs. Forrest Colliflower, Crawford.
Father and Son — 1st, J. S. and R. J. Ford, Macon; 2nd, G. and H. Van Voorst, Kankakee; 3rd, M. and J. Tietge, McLean.
Two-Man Team — 1st, Carl Cufuade and George Potts, McLean; 2nd, Crawford; 3rd, Peoria; 4th, Macon; 5th, Shelby; 6th, Logan.
Old Timer — 1st, Urian Tendrick, Logan; 2nd, Orville Haugh, DeKalb.

TABLE TENNIS

Men's Singles — 1st, Ed Dugan, Kane; 2nd, Dale Woodworth, Whiteside; 3rd, Lloyd Marcott, Bond.
Women's Singles — 1st, Joyce Sommers, Henry; 2nd, Pat Staser, Clay; 3rd, Jean Neese, DeKalb.
Mixed Doubles — 1st, Mr. and Mrs. Ed Dugan, Kane; 2nd, Jean Neese and Kenneth Cook, DeKalb; 3rd, Eleanor Kopelman, Bill Krapf, Will.

TENNIS

1st, Eugene Mills, Vermilion; 2nd, Harland Hoffman, Will; 3rd, Charles Lawrence, Vermilion.

TUG O' WAR

1st, Whiteside; 2nd, Clark; 3rd, Pike.

VOLLEY BALL

1st, Will; 2nd, Mason; 3rd, Champaign.

WOODCHOPPING

1st, Granville Hodson, Shelby; 2nd, Clifford Rauch, Clay; 3rd, Duane Voreis, DeKalb.

Farm Bureau Members, 35 years and over Softball Champions. Peoria — Back row: D. Miller, B. McCluggage, L. Crouch, L. Capron, H. Greenfield. Front: A. Whitaker, L. Coyle, M. Greenfield, P. Wagner. Not in picture: L. Hoffman, H. Doubet. Peoria county won the title in '37.

All County Softball Champions. DeKalb — Back row: J. Smiley, J. Mosher, L. Doner, J. Worden, D. Ritter, R. Challand, W. Tompkins, R. Will. Front: B. Stahl, J. Voss, B. Challand, A. Dannewitz, J. Bruenig, B. Anderson. DeKalb county won the title in '40, '41, '46, '47, and '48.

Top crackshot in the men's rifle shoot was Paul Norfleet, Morgan county.

School Report

(*Continued from page* 30)

and previously handicapped by financial difficulties to take refresher courses.

15. "Two-teacher schools have a marked educational advantage over one-teacher schools. Likewise eight-room schools, with an appropriate building, etc., have some substantial advantages over smaller schools, and are preferred by many educators and by a substantial number of farm people." Page 63.

The fact that the number of school districts, by far the greater percentage of which are one-room school districts, have decreased during the past four years by approximately 6,000 and been replaced by larger districts is indication enough that legislation has successfully brought much of the above IAA recommendation to realization.

It is remarkable that the school legislation during this period has in the main so closely reflected the policy of the IAA as expressed in the IAA School Report of 1944. The 34 farmer members of the IAA School Committee should be commended for their ability to visualize so clearly the needs of Illinois schools and to recommend such widely approved steps designed to bring about reorganization.

IT'S NEW

The Magic Power-packed

BLUE CIRCLE BATTERY

NOW **A COMPLETE LINE OF BATTERIES FOR ALL TRACTORS, TRUCKS AND CARS, AVAILABLE IN CHOICE OF AMPERE-HOUR OUTPUT.**

- **CONSTRUCTION FEATURES:**
  - Plates full height and full thickness
  - Power packed with high-grade active materials
  - Valve seal liquid level control
  - Lead seal post construction
  - Experienced workmanship
- **CASE CONSTRUCTION**
  - Modern design
  - Resistance to electrolyte absorption
  - Greater strength and durability
- **FIBRE GLASS INSULATION**
  - Quicker starts in cold weather
  - More power
  - Positive protection against "shorts"
  - Longer life for plates
- **GUARANTEED**
  - Guaranteed long service life

PASSENGER CARS

The new Blue Circle line of batteries makes available a battery to fit every motorist's need. This new line provides a selection of multiple plates-per-cell construction that is best suited to the service need in very car. This selection also provides a battery within the range of every pocketbook.

TRUCKS

The new Blue Circle line of batteries includes a selection of sturdy commercial truck batteries to fit the need of the light farm pickup or the heavy duty grain and livestock truck.

TRACTORS

Practically all modern tractors are equipped with self starter, lights, and other electrical equipment. Because of the extreme heat and severe shock that tractor batteries are subjected to, this power unit must be carefully constructed. These factors were taken into consideration in building Blue Circle batteries for farm tractors. There is a size and capacity available for all popular makes of tractor.

He Knows Where He is Going, Too!

Small fry with big ideas, that's you, Jimmy. Headed west, are you? (As far west as the pasture gate, and then you'll begin to miss Mother's ginger cookies, apple pies.) Wait till you're a little older; then nothing could tear you away from the best life in the world.

Take Dad, now. He knows where he is going, too, but it's toward improving the farm, putting to work all the new ideas introduced to him at Farm Bureau. He's saved enough — through better management, cooperative buying and selling, lower insurance rates — to put up the new barn this fall . . . a new silo next spring.

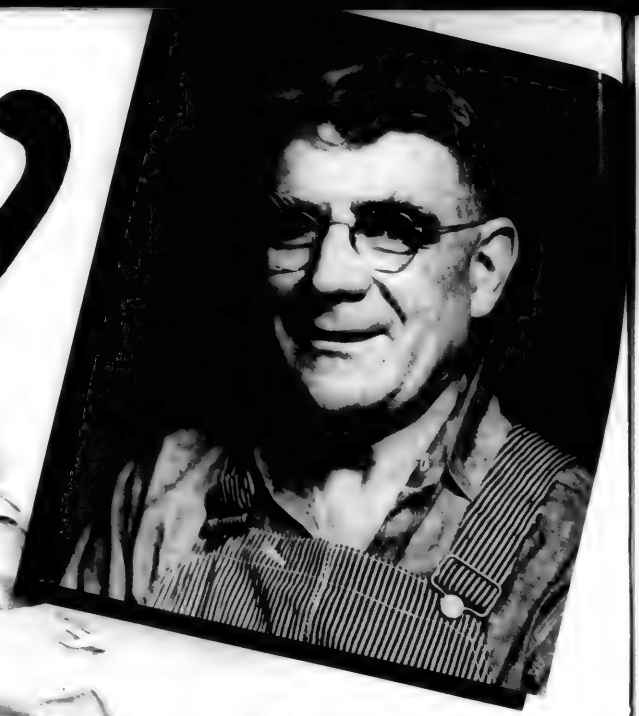
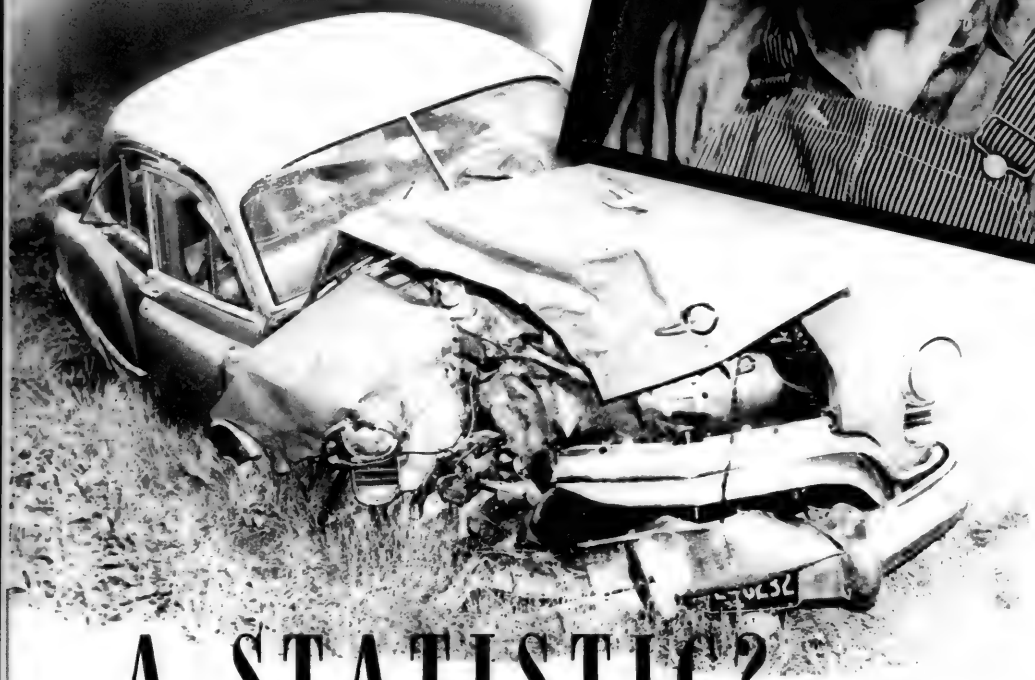
YOU?





A STATISTIC?

You and every other Farm Bureau member are a better risk for auto insurance than the average policy holder. That makes YOU a statistic, but a good, healthy, LIVE one! Your safer driving habits are paying off with Country Mutual Casualty Company's lower rates to Farm Bureau members.

Drive CAREFULLY, and continue to take advantage of being a "live" statistic, a better risk. Check with the Country Mutual Casualty representative at your Farm Bureau office to be sure you're fully protected at these low cost insurance rates.

THE STATE FARM BUREAU PUBLICATION

Unanswered Questions

By Charles B. Shuman
President, Illinois Agricultural Association

A FEW MONTHS AGO many people, in advocating abundant production, said that agriculture's problem was not one of surplus but rather of under consumption. Today consumers are using farm products at near-record levels. Yet we are faced with dangerous accumulations of practically every major crop. Corn, wheat, cotton, hogs, potatoes, eggs, apples, citrus fruit, vegetables — these and many others are in trouble. Where are the folks who predicted that population growth had caught up with our productive capacity and that the days of surpluses were over?

Charles B. Shuman

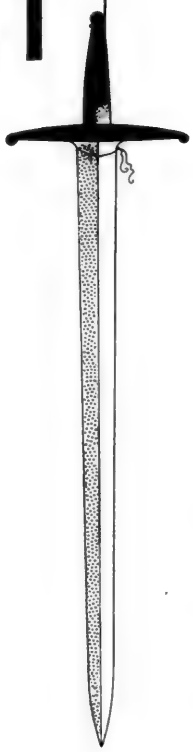
This complex puzzle seems to have no easy solution. Government storage programs only postpone the day of reckoning — crops produced must be either used or become a burdensome surplus. Prospects are not good for any great increase in consumption at home or abroad. As distasteful as it is to farmers, reduced production now seems to be the only alternative. The recent debate in Congress was not concerned with whether there should be a farm program but rather how much responsibility government should assume in maintaining prices and controlling production. After reading several of Secretary of Agriculture Brannan's addresses as presented to labor groups it might be interesting to ask a few unanswered questions.

CAN ILLINOIS FARMERS be classified solely as laborers or are they also business men? Are we interested in a political union with organized labor? If, under the Brannan plan, the price of wheat were reduced to 10 cents per bushel would city consumers be satisfied with a one cent reduction in the price of a loaf of bread, or would they demand that government take over all processing and distribution to secure further price cuts? After becoming accustomed to low food prices would the public again be willing to pay a fair price if the scheme should fail or be abandoned because of increased taxes? Would labor groups who support the Brannan plan be willing to accept lower wages in a free labor market and depend upon the federal government for a subsidy to bring them up to a living wage?

WOULD SECRETARY BRANNAN'S guaranteed high income plan encourage efficiency in agriculture? Who would decide which farmers were to be retired and who would approve their replacements? What would be the effect on land prices of a rush into agriculture by those desiring a government assured income? If increased taxation is necessary to assure high level agricultural income, would not consumer groups feel justified in demanding that farm income in excess of the support level be recovered through special taxes on farmers? Finally, will taxpayers be willing to add extra billions to their present heavy tax load?

IF THESE QUESTIONS seem complicated and confusing it may indicate that Secretary Brannan's plan is not as simple as it has been portrayed. What is the answer to our dilemma? It will pay you to attend the annual meeting of your state organization in Chicago Nov. 14-17. Perhaps you can help us find an answer.

WHAT is the ANSWER?



The Dilemma of Farm Surpluses

You May Find Out by Attending Your IAA Annual Meeting in Chicago, November 14-17

LIKE the Sword of Damocles which hung over a king's head suspended by a single thread, a great sword is poised over the heads of American farmers. It is labeled "surplus."

What are farmers going to do about it? Yes, farmers. Not bureaucrats. Your state Farm Bureau leaders want to know what YOU think. You will have a chance to tell them at the Illinois Agricultural Association annual meeting to be held Nov. 14, 15, 16, and 17 at the Hotel Sherman in Chicago.

Your Farm Bureau leaders are faced with a dilemma. It is the problem of surplus. Surplus corn, surplus hogs, surplus wheat, surplus cattle, surplus fruits, and vegetables. If farmers don't decide what they want done, bureaucrats will.

Already a half dozen farm plans are on the fire. . . . the Brannan plan, the Anderson plan, the Aiken plan. What effect will all these plans have on Illinois farmers? What is going to happen to the prices of grain and livestock in 1950? What are the answers? Come to the annual meeting in Chicago this month. Perhaps you can find out.

You will hear discussions of national issues by prominent speakers, talks on specific farm problems and discussions of programs and projects being sponsored by the Illinois Agricultural Association.

Two of the principal speakers will be Illinois' Governor Adlai Stevenson and Romeo Short, vice president of the American Farm Bureau Federation and former president of the Arkansas Farm Bureau. Gov. Stevenson will address a general session Wednesday evening. Short will speak Thursday morning.

More than 5,000 farmers are expected for the four-day sessions which will review the year's activities of the IAA and its affiliated companies. Their financial reports will be presented by company managers and a summary of the year's progress will be made in the president's annual address by Charles B. Shuman.

An example of the projects that will come up for discussion and approval is the IAA Road Study Committee Report. This report was made recently by the IAA Road Study Committee. It points out the defects in the Illinois road system and recommends what should be done about it.

The same high class program of entertainment as last year is being planned for the Tuesday night session by Roy P. Johnson, IAA director of special services. This year two performances of the entertainment will be given—one starting at 6:30 p.m. and the other at 8:30 p.m. Voting delegates will attend the second show. Tickets will be used for admission to each performance and Johnson advises everyone to be sure to obtain tickets, when he registers, to the performance he plans to attend.

The first two days of the annual meeting will be devoted to conferences, Rural Youth activities, and the annual meetings of the IAA-affiliated cooperatives. The third and fourth days will be devoted to the general sessions of the Illinois Agricultural Association and to conference meetings on subjects of importance to Illinois farmers.

Conferences will be held on national legislation, schools, roads, soils, marketing, safety, and taxation.

7:30 General Session

Thursday, November 17

A.M.
9:15 General Session
12:00 Directors' Luncheon
P.M.
1:15 General Session

Convention Speaker

Gov. *Adlai Stevenson*

will be devoted to the election of a president and a vice president and the election of half the membership of the IAA board of directors.

Finals of the Rural Youth State Talk Fest and finals of the Rural Youth Safe Drivers' contest will be held during the annual meeting. Winner of the Rural Youth Talk Fest will present his three-minute speech during a general session of the convention. The winner of the Talk Fest also will represent Illinois in the national Talk Fest to be held in connection with the American Farm Bureau Federation annual convention in Chicago in December. More than 500 Rural Youthers are expected to attend the youth sessions during The IAA annual meeting.

Home Bureau Federation women will meet Tuesday morning in the Crystal room for their annual women's conference.

Two companies which will be meeting at the IAA annual convention for the first time are Illinois Producers' Seed Company and the recently organized Illinois Livestock Producers' Association.

Add Key Men to Terminals Staff

TWO key men have been added to the staff of Illinois Grain Terminals Company, the IAA-grain marketing affiliate. They are Albert E. Leger, 45, assistant to the manager (Sam Hassell), and Roger E. Sayre, 30, assistant superintendent in charge of trucked grain at the Irondale terminal elevator on Chicago's south side.

A. E. Leger

R. E. Sayre

Leger comes from the Soy Flour Association where he was president. Before going to Soy Flour he was employed as a marketing specialist by the Commodity Credit Corporation in Chicago. He has had several years experience buying and selling grain.

Sayre was graduated from Loyola university in 1940. During summer vacations he worked part time at the Irondale elevator and performed the duties of spoutman, drierman, millwright's assistant, and scaleman. He served overseas with the army during the war and was discharged as a first lieutenant.

ILLINOIS LIVESTOCK PRODUCERS ASSOCIATION

NOTICE OF ANNUAL MEETING
To Shareholders and Members of ILLINOIS LIVESTOCK PRODUCERS ASSOCIATION

Notice is hereby given that the annual meeting of the shareholders and members of Illinois Livestock Producers Association will be held in the Sherman Hotel, Chicago, Illinois, on Monday, the 14th day of November, 1949 at 4:00 o'clock P.M., to receive and act upon the reports of the officers and Board of Directors for the fiscal year ending September 30, 1949, to elect directors for the ensuing year and for the transaction of such further and other business as may come before the meeting.

Dated at Chicago, Illinois, this 10th day of October, 1949.

ILLINOIS LIVESTOCK PRODUCERS ASSOCIATION
M. Ray Ihrig, Secretary.

IAA Opposes 1-Cent Gas Tax

FARM BUREAU LEADERS MEETING IN SPRINGFIELD EXPRESS OPPOSITION TO MOVING AFBF CHICAGO OFFICE

By JIM THOMSON
Asst. Editor, IAA Record

THERE's nothing in the proposed one-cent gasoline tax boost for Illinois that can benefit rural roads, Farm Bureau men attending the recent annual fall Farm Bureau leaders' conference in Springfield were advised by officers of the Illinois Agricultural Association. The proposed one-cent gasoline tax collections would go entirely to finance the primary or hard road system.

IAA Secretary Paul Mathias pointed out that if a one-cent increase in the Illinois gasoline tax proposed by a Chicago group is passed, there will be no further increase in the tax for a long time and thus no gas tax funds for rural roads.

Mathias said that the people who are backing the one-cent gas tax increase are principally the same people who have opposed spending any gas tax revenue on rural roads.

"We may as well face the facts," IAA President Charles B. Shuman said. "None of the organizations pushing the one-cent gasoline tax increase recognize that rural roads are part of the state road system. We had better be careful or we will be traded out of our shirts on this road deal."

Mathias suggested that farmers let their state legislators know how they feel on the road question. He urged them to back the administration's efforts to curb the overloading of trucks.

A review of the IAA Road Study Committee report on the Illinois road situation was presented by I. E. Parett, IAA secretary of general services. Parett suggested that Farm Bureau people study the report carefully, particularly if they are voting delegates to the IAA annual meeting in Chicago in November. He also urged voting delegates, after reading the report, to discuss it with as many of their neighbors as possible. This, Parett said, would enable the voting delegate to bring a more representative attitude of the Farm Bureau people in his area to the IAA annual meeting.

Speaking on the proposed plan to move the American Farm Bureau Federation office from Chicago to Washington, President Shuman said: "Historically the AFBF office has been in Chicago, in the Midwest area where more than half of the membership is located. Convenience of the AFBF office to the IAA offices is entirely beside the point. If we moved the Chicago office to Washington we would lose much of our prestige.

"There is good reason for locating the American Farm Bureau office in the Midwest even though not necessarily in Chicago." President Shuman called for a show of hands favoring the proposal to move the AFBF offices to Washington. No hands went up.

L. L. Colvis, IAA secretary of marketing, and George E. Metzger, IAA secretary of organization and information, reported on the progress of stock-selling campaigns to raise money for Producers' Seed Company, the new Prairie Farms Creamery at Carlyle, besides other Prairie Farms Creameries, and eight to 10 locker companies affiliated with the Illinois Cooperative Locker Service Company.

Colvis reported that Jasper, Williamson, and Will counties were first to oversubscribe their stock quotas in the money raising campaign for the small-seeds program of Producers' Seed Company.

IAA Director Homer Curtiss, Jo Daviess county, president of Illinois Grain

Homer Curtiss (center), IAA director for the district in the northwestern corner of Illinois discusses a date for a district Farm Bureau meeting with men from his district.

Terminals Company, thanked everyone who had a hand in the success of the campaign which raised $2,750,000 from the sale of stock to finance the company.

A word of caution was spoken on the further expansion of the physical plants of the IAA affiliated companies by President Shuman. "I would strongly advise that further expansion be curbed at this time," he said. "We need to assimilate the expansion that has already been made."

IAA Director Otto Steffey asked for a show of sentiment among Farm Bureau leaders as to whether the Sports Festival should be continued. Steffey said the Sports Festival had grown to great proportions and that it was fulfilling the purpose for which it was started — to get farmers to play together, to get more young people interested in Farm Bureau and to promote leadership qualities.

When Steffey asked the audience if they wanted to have the Sports Festival continued, virtually all raised their hands. When asked if they wanted it discontinued, two or three hands went up.

President Shuman commented on the importance of the County Farm Bureau annual meeting and suggested that it be made attractive enough to draw as many Farm Bureau people as possible and that they be encouraged to express themselves and take part in open discussions.

Discussing a rivalry of business interest that has arisen between three IAA-affiliated cooperatives—Illinois Grain Corporation, and Illinois Grain Terminals Company, and Illinois Farm Supply Company, President Shuman called for greater cooperation and greater effort in the interests of all the farmers of Illinois.

"Coordination of all Farm Bureau cooperatives," he said, "is essential, and can be accomplished through the efforts of the state management board, the Illinois Agricultural Service Company."

THE scene of the birth of the atomic age is the 29th in our series of historic and picturesque pictures of Illinois. The first successful atomic pile was started under the west stands of Stagg Field (picture) at the University of Chicago. A plaque with the following inscription has been set in the wall just ahead of the car in picture: "On December 2, 1942 Man Achieved Here the First Self-Sustaining Chain Reaction and thereby Initiated the Controlled Release of Nuclear Energy."

Announce Price Support Rates on Corn and Hogs; Corn Averages $1.40 Bu.

PRICE support rates on corn and hogs have been announced by the United States Department of Agriculture. Corn price support rates for the 1949 crop are at an average of $1.40 per bushel nationally. Tentative information as the IAA RECORD goes to press indicates that the rates for Illinois will range by county from $1.37 to $1.44 per bushel. This shows a three cents per bushel decrease from 1948 county rates straight across the board for each county.

The 1949 loan and purchase agreement rates are based on 90 per cent of the parity price of corn as of Oct. 1, 1949. Parity for that date was $1.55 per bushel as a national average, according to the Illinois Production and Marketing Administration committee.

Under the 1949 crop program, loans and purchase agreements will be available to farmers from time of harvest through May 31, 1950, and will mature on July 31, 1950.

The monthly hog price support levels for the period Oct. 1949 through March 1950 are as follows: October, $16.40 per hundred pounds; November, $15; December, $14.20; January, $14.90; February, $15.50, and March, $16.20.

Previously the support prices were on a weekly basis.

The Department of Agriculture says that since purchases of live hogs for price support do not now appear feasible, purchases of pork and pork products will be the method used if support for hog prices become necessary.

LETTERS....

I NOTICED that one of your pictures in the article "The Road Problem" in the October issue of the IAA Record showed a school bus with the door on the driver's side. I ride the school bus every day and I have never seen a bus with the door on the driver's side.

I find good information in your publication and read about every story in your magazine.

Better Roads Demand Changes

IAA REPORT RECOMMENDS CONSOLIDATION OF RURAL ROAD DISTRICTS FOR EFFICIENCY, ECONOMY

By CULLEN B. SWEET, Director
IAA Rural Road Improvement

THE ILLINOIS Agricultural Association Road Study Committee has recommended two methods by which farm people can get more dollars on the roads to provide all-weather year-around surfaces on farm roads.

The automobile has been with us for more than 40 years and trucks and buses for more than 30 years. Yet we, in Illinois, are still trying to provide road surfaces for year-around travel for these vehicles with horse and wagon methods. We are still in the mud. With more than one-fourth of the total rural road mileage (20,000 miles) unimproved earth and more than half of the gravel surfaced roads (47,500 miles) in need of resurfacing Illinois faces a serious problem in providing year around travel surface for 60 per cent of the total road mileage of the state.

Providing all-weather surfaces for rural roads is a problem of the people living on these roads and must be done solely through local property taxes now that aid from the state has ceased. Farm roads received $30,000,000 in aid from the state from July 1945 to June 30, 1949. Many miles of roads were resurfaced and surfaced with this money. Maintenance of these roads must be carried out by the local township or road district having such roads, and in addition to this must continue other improvements on roads and bridges.

For a solution to the problem the IAA Road Committee recommends that Illinois farmers help get themselves out of the mud through reorganization of the present township and road districts into larger units of administration. They recommend the formation of county unit road districts by referendum.

Based upon facts and figures the committee states that through the elimination of duplication of equipment, elimination of inefficient personnel and general reduction in overhead expense more miles of road can be built and more effective maintenance can be obtained with the same money than under the present condition.

For illustration, a county having 16 townships, that under present condi-

tions require 16 separate sets of road building and maintenance equipment, could do better work with four sets of equipment that are strategically located. With an average cost of $30,000 the 16 sets of road equipment represent an outlay of $480,000. Almost half a million dollars. With only four sets of equipment to do a better job a saving of $300,000 could be effected. Enough to gravel 100 miles of road. And these roads would be continuous for township lines would not have to be observed. Also, as much road building equipment as needed in an area, could be had from the four sets owned by the county unit.

Under the present situation it is almost out of the question for each township or road district to own all of the pieces of equipment needed to build a road. In many counties even the county highway department doesn't own the needed equipment, and even if it did they do not like to discriminate in renting the equipment to townships or road district commissioners. Moreover, there is a lack of unified planning for long-range highway construction and maintenance. There is too much division of thought and action as well as authority in the present situation.

Other economies that could be obtained under county unit road districts are these:

1. Trained men, efficient in their fields of operations, paid adequate salaries would be given employment as administrators and operators of this adequate equipment that would be used for both construction and maintenance the year around instead of but a few weeks each year.

2. Contracts could be awarded for much larger jobs and costs be reduced.

3. All roads would be more equally financed because of the wider tax base.

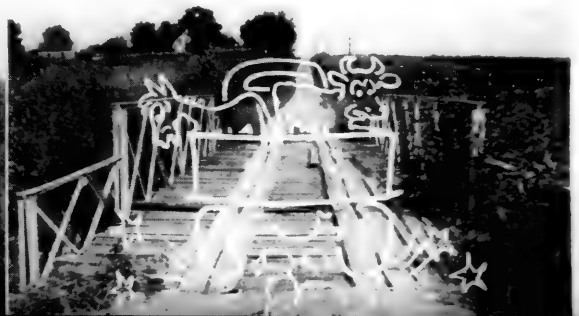
4. Adequate buildings for housing and repair of equipment could be built instead of letting the equipment rest in a fence corner to rust for long periods of time.

But even with all of the economies effected under reorganization it is very doubtful that the entire job of having all of the highways all-weather roads can be done. In a later issue of the RECORD the need for additional funds will be discussed.

Left: This is a state aid road in Pike county that is impassable many days in the year and forces trucks, school buses, and grocery trucks to travel a route of 27 to 30 miles to get 10 miles. This is the main road between the county seat and a town of 500 population. Photo was made in July.

Bottom left: This is a township road in Fayette county of unimproved earth that is impassable several months of the year. It probably looked its best when this photo was taken in August.

Bottom right: This bridge is on a main travelled township road in Menard county used by school buses, mail carriers, livestock and grain trucks as well as passenger autos. Photo was made in August, 1949.



Drop in Farm Prices Not Expected With Currency Devaluation

CURRENCY devaluation by about 25 countries may not reduce prices of Illinois farm products so much as some persons had feared. Actually, there seems to be much more worry than is needed.

This estimate came today from E. J. Working, Illinois College of Agriculture economist.

By devaluating their currency Britain and about 25 other devaluating countries hope to export more of their own goods and import less from other countries. Wool is the only Illinois farm product which is imported, and it is likely to be much affected by devaluation. We also sell fairly large amounts of Illinois lard, soybean oil, and wheat in foreign markets. Devaluation may cut our foreign sales of these products.

However, Working thinks our exports of manufactured goods will suffer more. The reason—devaluing countries have already cut their imports of needed farm products almost to the limit.

Our own government price support program and Economic Cooperation Administration funds should also help hold prices of farm exports up.

Working says nothing in devaluation is going to reduce the buying power of ECA American dollars. ECA funds stop in 1952, but until then they should help to keep the volume of our farm exports large.

Here's a brief look at what may happen to prices of Illinois farm products because of devaluation:

Beef and pork: little if any price change. We don't need an export market for these meats because we eat all we produce right here at home.

Lard: foreign demand will probably drop off slightly. We export about 10 percent of our lard, but that share varies widely from year to year.

Soybean oil: situation like lard. Exports may drop, but industrial demand for soybean oil is strong in this country.

Food Prices Down?

FARM PRICES ARE!

By FRANK M. ATCHLEY
IAA Director of Research

HOW much is ammonium nitrate this year, Mr. Supplier?"

"Seventy-two dollars a ton."

"It is! Well, guess I'll have to have it anyway. Better send me about three tons. By the way, what are peach baskets going to cost us this year?"

"We'll have to get $3.36 a dozen, Mr. Farmer. Seems high, doesn't it, but that's the price."

(Time passes. It is now harvest time.)

"Hello, is this the Blizzard Peach Packing Company?"

"Yes."

"This is Mr. Farmer. How much are you paying for peaches this morning?"

"Hale-Havens, $1.25 and Rochesters, $1."

"Well, I guess I can't afford to pick 'em for that. My spray and labor have been so high this year that I couldn't make ends meet at that price."

"That's all we can pay. Sorry."

Conversations similar to those above might be carried on almost any year, whether Mr. Farmer was an orchardist or a corn-hog farmer. Whether the farmer is raising peaches, pigs, or pumpkins, the story is much the same. He asks the price of the things he has to buy, and pays what is asked. When he gets ready to sell his product, he asks how much they are paying and gets the price the other man quotes.

Doing business in a market where somebody else sets all the prices makes it easy to see why farmers demand some degree of price protection. Some people think that fixed price supports would be the best thing for the farmer. Others think that flexible supports, designed to prevent the collapse of farm prices, would be preferable. Furthermore, there are many cases where properly operated farm cooperatives can do a great deal to change the market system in which a farmer sells his produce.

It is common knowledge that some producers in this country have dumped large quantities of their produce in the ocean rather than sell it at a price they considered too low. Perhaps that is the extreme. It seems too bad to destroy food when "half the people in the world go to bed hungry every night." Perhaps there are other less drastic means by which cooperatives can help determine prices of things farmers sell.

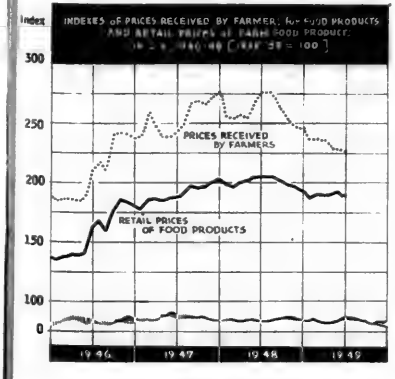
We hear a great deal of conversation these days both on the street corner and in the halls of Congress about why

prices of food do not go down when the prices of things farmers sell go down. One of the recent publications from the USDA shows that the farm value of the corn in a box of corn flakes went down 47 per cent from July 1948 to July 1949. During the same period, the price of corn flakes went up two per cent.

During that period of time, the price of livestock the farmer sold went down 24 per cent while the retail price of meat Mr. U. S. Citizen bought went down only 15 per cent. Such things as these are hard to explain to the consumers of this country, whether they be well-paid executives or hard-working laboring men. (See chart.)

The government publication indicated that the farm value in July 1949 was only 48 per cent of the retail price of the food in what we normally describe as the "market basket." That means that the farmer only gets 48 cents out of each dollar the consumer pays for food. What happens to the other 52 cents? It goes to pay the trucking company, the jobber, the railroad, the wholesaler, the retailer, and last, but not least, the tax collector. What basic part of our society gets that 52 cents? It is primarily labor — the truck driver, the section hand, the brakeman, the warehouseman, the grocery clerk. They all get their share. Do their wages go down when prices of farm products go down? Certainly not. In fact, during the past few months, considerable effort has been made to increase their wages, while farm prices have continued to decline.

Two prominent executives of large food processing companies recently testified before a Congressional committee that higher labor costs, not profits, were largely responsible for the difference between the prices housewives pay for their food products and what the farmer receives for his produce. Farmers' prices remain flexible — Labor's prices remain relatively inflexible.



Retail cost of the "market basket" in July was down 10 per cent from the level reached in July 1948. During that 12-month period, the declines in retail prices averaged between 13 and 18 per cent in the meats, dairy, and miscellaneous-products groups. The declines were only between two and three per cent for the bakery and cereal products and all — fruit — and — vegetable products groups. Data are not available on retail prices since July, but weekly price indexes indicate that the downward trend has continued.

During the period from pre-war (1935-39) to December 1948, when the retail cost of the market basket was rising, the farm value increased nearly twice as fast as did marketing margins. (See table.) In this period, farmers received $202 and marketing agencies $121 of the $323 increase in the retail cost. As a result, the farmer's share of the consumer's dollar increased 11 cents — from 40 to 51 cents.

Marketing charges in July 1949 were about the same as they were in July 1948. They totaled $332 in July 1949, compared with $333 the year before. These charges for assembling, processing, transporting, and distributing farm food products declined three per cent from June to July of this year. In June 1949, marketing charges were at a record high of $343. Marketing charges were $22 *higher* in July 1949 than they were in December 1947. Farm product values were $64 *lower* in July 1949 than they were in December 1947. This is just another indication of why retail food prices have gone down less than farm prices during the past 18 months.

Total retail cost of all foods currently consumed by a family of three is roughly 50 per cent higher than the retail cost of the market basket. The market basket does not include imported foods, fishery products, or other foods of foreign or non-farm origin. It does not include the value of food consumed in the households of farms where it was produced. It merely measures the cost at current prices of the average amount of food purchased by a three-person family in the period 1935-39. It does not allow for the fact that per capita food consumption is now about 15 per cent above the 1935-39 level.

A publication of one of the labor unions came across my desk recently which included several charts and signs. On one of these signs, it said, "Pork up! Hogs down! Why???" There was a chart that indicated farmers' income was going down fast. Still another chart indicated that meat-packing wages were too low. One might wonder if the writer realized what was causing a major part of the increase in pork prices.

Herman W. Danforth, First IAA President, Dies

Association's Early Leader Saw Organization Which He Helped To Organize Grow From A Membership of 4,000 to 167,000. His Death Recalls Beginnings of Farm Bureau in Illinois.

Herman W. Danforth, the Illinois Agricultural Association's first president who died recently, is shown as he registered for the IAA annual meeting last November at the Hotel Sherman in Chicago. Registering him is Grace Powell of the IAA.

HERMAN W. DANFORTH, first president of the Illinois Agricultural Association, died Oct. 8 after a short illness in Danforth, the Iroquois county community founded by his family. He was 77 at the time of his death.

Mr. Danforth, in addition to serving as the first president of the IAA in 1916, had a great deal to do with organizing the state Farm Bureau. At first the IAA was not a direct membership organization as it is today, but a federation of county Farm Bureaus. It was Mr. Danforth, who was then president of the Tazewell County Farm Bureau, and E. T. Robbins, Tazewell farm adviser, who promoted the setting up of a federation of the county Farm Bureaus in Illinois.

Mr. Danforth served as temporary chairman when 20 of the 22 organized counties met at a preliminary session on Jan. 26, 1916 in the Old Agricultural Building, University of Illinois, to form a state federation of Farm Bureaus.

At this preliminary meeting Mr. Danforth was named to a committee of five to work out a plan for organization. The committee decided that the name of the new organization was to be the Illinois Agricultural Association. Its object was to be "the improvement of agriculture." Its membership was to consist of several agricultural associations and membership fees for each county were to be $100 a year.

It was on March 15, 1916, when delegates from 17 counties met in Ottawa, La Salle county, to put the finishing touches on the new federation and elect Mr. Danforth as the first IAA president. On June 19, 1916, the IAA held a special meeting in Urbana to launch its infant legislative program. Over the signature of President Danforth, a letter was sent to "influential senators" at Washington urging passage of a grain grading bill then being considered. In his letter, Mr. Danforth told the senators that "the Illinois Agricultural Association is a federation of county Farm Bureaus in the state of Illinois having a total membership of about 4,000 of the most up-to-date and progressive farmers throughout central Illinois." Mr. Danforth lived to see that membership grow to 167,000.

After completing a year as president of the IAA, Mr. Danforth was named the first president of the Federal Land Bank of St. Louis, and John W. Kirkton, Livingston county, was named to succeed the retiring IAA president. Mr. Danforth served as Land Bank president for five and one-half years, resigning in 1922 to join the Real Estate Mortgage Trust Company of St. Louis as vice president. This organization was later absorbed by the Franklin American Trust Company and Mr. Danforth continued with the company until his retirement in 1936 when he returned to Danforth. Mr. Danforth was elected to a two-year term on the IAA board in 1936 to represent the 18th district which comprises Kankakee, Iroquois, Vermilion, Edgar, Clark and Cumberland counties.

Mr. Danforth first entered cooperative and farm organization endeavors in 1907 when he took over the operation of his father's farms. He helped organize the farmers' elevator at Danforth, served as its president and later was elected president of the National Farmers Grain Dealers Association. In the latter position he was called upon many times to defend the farmers' rights. Mr. Danforth used to recall in interviews that in the early days "he went to the mat with the Board of Trade," in representing the producer. He also appeared many times before the Interstate Commerce Commission as a witness to protest proposed increases in freight rates on grain.

In 1913 Mr. Danforth helped to organize the Tazewell County Farm Bureau, was its first president, and served in that capacity for seven years. It is interesting to note that the name Farm Bureau was first used in the United States when Tazewell county farmers set up their organization on June 1, 1913. Eventually the other counties that had organized under the names of soil and crop improvement associations, better farming associations, etc., changed their names to county Farm Bureaus. Tazewell was the eighth county Farm Bureau to be organized in Illinois.

Mr. Danforth's family can rightly be called early settlers of the state. Mr. Danforth's grandfather, Asa, came to Washington in Tazewell county in 1852. The grandfather saw an advertisement offering swampland in Iroquois county, bought 27,000 acres under contract, put in ditches and drained it. The community of Danforth was established in Iroquois county and Mr. Danforth was born there in 1872. Mr. Danforth's father and family left Danforth in 1884 and went to Washington in Tazewell county. Mr. Danforth was graduated from high school in Washington and attended the University of Illinois. He later transferred to the University of Michigan where he was graduated from the school of law in 1899. He was a member of the track team at Michigan and attended the Olympics meet at Paris in 1900. Following graduation, Mr. Danforth practiced law in Peoria for eight years and then returned to manage the home farm because of his father's illness. He took short courses at the University of Illinois to increase his knowledge of farming and continued to operate the farms until 1917 when he went to St. Louis with the Federal Land Bank.

Mr. Danforth leaves his widow, two daughters and one son. Funeral services were held Oct. 10 in the Danforth Community Hall. Among the representatives from the Illinois Agricultural Association at the services were Paul E. Mathias, secretary, and Floyd E. Morris, vice president.

Map shows districting for representation on Illinois Livestock Producers' Association board of directors. Added to the eight directors on the board from the eight districts on map are representatives from each of the associated producer agencies shown as dots on map.

Producers' Livestock Manager Named

Eugene V. Stadel, Jo Daviess Farm Adviser, To Head Association Six Livestock Marketing Co-ops

EUGENE V. STADEL, Jo Daviess county farm adviser, has been hired as manager of the Illinois Livestock Producers' Association, newly organized affiliate of the Illinois Agricultural Association set-up to coordinate cooperative livestock marketing in Illinois. Stadel is scheduled to take over his new job Dec. 1, with headquarters in Chicago.

Annual meeting of the Illinois Livestock Producers' Association will be held at 4 p.m. Monday, Nov. 14 in the Hotel Sherman in conjunction with the annual meetings of the Illinois Agricultural Association and Associated Companies. L. L. Colvis, secretary of marketing for the IAA, will be the main speaker on the Producers' program.

The Livestock Producers' Association will work closely with Illinois' six livestock marketing cooperatives to achieve three objectives: (1) strengthen present marketing cooperatives; (2) establish additional markets or agencies where needed or where desirable, and (3) co-ordinate selling.

The five cooperative agencies and their representatives on the Producers' Association board are: Chicago Producers' Commission Association, Carl M. Johnson, DeKalb county; Peoria Producers' Commission Association, M. F. Holmes, Peoria; Springfield Producers' Livestock Commission Co., Scott Irwin, Sangamon; and Illinois Livestock Marketing Association, Ray Ihrig, Adams; Bushnell Producers' Commission Company, Henry L. Combs, McDonough. Otto Steffey, Henderson county, is the IAA representative on the board.

Eight other board members are elected from eight districts in which the state is divided for representation purposes and are as follows: district 1, William Temple, La Salle county; district 2, Frank P. Norrish, Whiteside; district 3, Robert Armstrong, McDonough; district 4, L. E. Mathers, Mason; district 5, Lester E. Martin, Morgan; district 6, Clark E. Wise, Champaign; district 7, vacancy caused by death of J. P. Redman, Alexander; district 8, Marion A. Fry, Shelby.

E. V. Stadel

Officers are: Johnson, president; Armstrong, vice-president; Ihrig, secretary, and A. F. Schuck, Cook county, treasurer. W. J. Nevermann, DuPage, is assistant treasurer, and C. C. Chapelle, Cook, comptroller.

Stadel, the new manager of the Illinois Livestock Producers' Association, has a long record of Farm Bureau work in Illinois. A native of Marshall county, Stadel was graduated from the University of Illinois College of Agriculture in 1941. He worked as dairy herd improvement association milk tester in Brown, Schuyler and Adams counties in 1934; as assistant farm adviser and organization director in Marshall-Putnam counties from 1936 to 1938; and as assistant farm adviser and organization director in Winnebago county, in 1939 and 1941. He served three and one-half years in the Army and was a first lieutenant when he was discharged in 1946. He has been farm adviser in Jo Daviess county since Oct. 1, 1946. He is married and has two children.

The five member agencies of the Illinois Livestock Producers' Association during August handled 92,642 hogs, 21,623 cattle, 2,300 calves and 10,066 sheep.

Illinois Livestock Marketing Association, one of the agencies, handled 45,175 hogs, and Chicago Producers Commission Association handled 18,359 cattle during August. Chicago Producers also handled 22,943 hogs in that month.

Farm Bureau Joins Campaign To Promote Sale of Pork Products

THE Farm Bureau, both state and national, is joining with other representatives of the livestock industry in a campaign to boost the sale of pork and pork products during heavy production periods. Hog marketings are expected to reach their peak in December and early part of January.

IAA President Charles B. Shuman, Herman C. Aaberg, AFBF livestock department director, P. O. Wilson, manager of the National Livestock Producers Association and University of Illinois specialists, Dr. L. E. Card and Dr. J. L. Krider, attended a conference of the livestock industry in September to study the pork problem.

The Illinois Agricultural Association and county Farm Bureaus are expected to support publicity and promotion to aid in the sale of pork.

National magazine advertising featuring nourishing pork will appear in such magazines as Life, Look, Ladies' Home Journal, Woman's Home Companion, and Good Housekeeping in December and January. At the same time, newspaper advertising will be run in more than 250 daily newspapers in 181 cities throughout the country. The advertising program will be directed by the American Meat Institute.

Sweet clover is a vigorously growing plant but is sensitive to shortages of fertility elements in soils.

Herman W. Danforth, First IAA President, Dies

Association's Early Leader Saw Organization Which He Helped To Organize Grow From A Membership of 4,000 to 167,000. His Death Recalls Beginnings of Farm Bureau in Illinois.

Herman W. Danforth, the Illinois Agricultural Association's first president who died recently, is shown as he registered for the IAA annual meeting last November at the Hotel Sherman in Chicago. Registering him is Grace Powell of the IAA.

HERMAN W. DANFORTH, first president of the Illinois Agricultural Association, died Oct. 8 after a short illness in Danforth, the Iroquois county community founded by his family. He was 77 at the time of his death.

Mr. Danforth, in addition to serving as the first president of the IAA in 1916, had a great deal to do with organizing the state Farm Bureau. At first the IAA was not a direct membership organization as it is today, but a federation of county Farm Bureaus. It was Mr. Danforth, who was then president of the Tazewell County Farm Bureau, and E. T. Robbins, Tazewell farm adviser, who promoted the setting up of a federation of the county Farm Bureaus in Illinois.

Mr. Danforth served as temporary chairman when 20 of the 22 organized counties met at a preliminary session on Jan. 26, 1916 in the Old Agricultural Building, University of Illinois, to form a state federation of Farm Bureaus.

At this preliminary meeting Mr. Danforth was named to a committee of five to work out a plan for organization. The committee decided that the name of the new organization was to be the Illinois Agricultural Association. Its object was to be "the improvement of agriculture." Its membership was to consist of several agricultural associations and membership fees for each county were to be $100 a year.

It was on March 15, 1916, when delegates from 17 counties met in Ottawa, La Salle county, to put the finishing touches on the new federation and elect Mr. Danforth as the first IAA president. On June 19, 1916, the IAA held a special meeting in Urbana to launch its infant legislative program. Over the signature of President Danforth, a letter was sent to "influential senators" at Washington urging passage of a grain grading bill then being considered. In his letter, Mr. Danforth told the senators that "the Illinois Agricultural Association is a federation of county Farm Bureaus in the state of Illinois having a total membership of about 4,000 of the most up-to-date and progressive farmers throughout central Illinois." Mr. Danforth lived to see that membership grow to 167,000.

After completing a year as president of the IAA, Mr. Danforth was named the first president of the Federal Land Bank of St. Louis, and John W. Kirkton, Livingston county, was named to succeed the retiring IAA president. Mr. Danforth served as Land Bank president for five and one-half years, resigning in 1922 to join the Real Estate Mortgage Trust Company of St. Louis as vice president. This organization was later absorbed by the Franklin American Trust Company and Mr. Danforth continued with the company until his retirement in 1936 when he returned to Danforth. Mr. Danforth was elected to a two-year term on the IAA board in 1936 to represent the 13th district which comprises Kankakee, Iroquois, Vermilion, Edgar, Clark and Cumberland counties.

Mr. Danforth first entered cooperative and farm organization endeavors in 1907 when he took over the operation of his father's farms. He helped organize the farmers' elevator at Danforth, served as its president and later was elected president of the National Farmers Grain Dealers Association. In the latter position he was called upon many times to defend the farmers' rights. Mr. Danforth used to recall in interviews that in the early days "he went to the mat with the Board of Trade," in representing the producer. He also appeared many times before the Interstate Commerce Commission as a witness to protest proposed increases in freight rates on grain.

In 1913 Mr. Danforth helped to organize the Tazewell County Farm Bureau, was its first president, and served in that capacity for seven years. It is interesting to note that the name Farm Bureau was first used in the United States when Tazewell county farmers set up their organization on June 1, 1913. Eventually the other counties that had organized under the names of soil and crop improvement associations, better farming associations, etc., changed their names to county Farm Bureaus. Tazewell was the eighth county Farm Bureau to be organized in Illinois.

Mr. Danforth's family can rightly be called early settlers of the state. Mr. Danforth's grandfather, Asa, came to Washington in Tazewell county in 1852. The grandfather saw an advertisement offering swampland in Iroquois county, bought 27,000 acres under contract, put in ditches and drained it. The community of Danforth was established in Iroquois county and Mr. Danforth was born there in 1872. Mr. Danforth's father and family left Danforth in 1884 and went to Washington in Tazewell county. Mr. Danforth was graduated from high school in Washington and attended the University of Illinois. He later transferred to the University of Michigan where he was graduated from the school of law in 1899. He was a member of the track team at Michigan and attended the Olympics meet at Paris in 1900. Win National Honors

12-Illinois Young Men Awarded The American Farmer FFA Degree

ILLINOIS youth brought new honors to the state last month as they took awards at the 22nd annual convention of the Future Farmers of America in Kansas City, Mo.

Marvin Gummersheimer, 19, from Waterloo, Monroe county, walked away with the FFA's first national award for soil and water management. He received $250 cash award for first place. Marvin was graduated from Waterloo high school last spring after completing four years of vocational agriculture study and membership in FFA. He has adopted many soil conservation and improvement practices on the 114 acre home farm, including terracing 15 acres, placing a grass spillway at the end of the terraces, building a concrete spillway and a farm pond.

This young Monroe county farmer reclaimed six acres of wasteland into profitable pasture and woodlot, eradicated five acres of Johnson grass, uses 24-D to kill weeds in pasture and roadways, and since 1941 has planted 3,000 locust trees, 500 loblolly pines and 500 shortleaf pines. He systematically gathers and tests soil samples on the home farm and 25 tons of fertilizer have been applied as the result of these tests.

Marvin won local chapter and sectional honors in the FFA public speaking contest with a soil conservation topic in which he said, "To leave a farm less productive than you found it is a crime against humanity."

Marvin R. Eckhoff, 18, Benson, Woodford county, is the second Illinois youth to win honors at Kansas City. He was named regional winner in the FFA 1949 farm electrification contest. Marvin, who lives with his parents on a 160-acre farm, was graduated last spring from Benson high school where he completed four years of vocational agriculture and membership in FFA, and was treasurer of his senior class. His electrical work has included wiring a brooder, installing lights in the machine shed so repair work could be done at night and in the winter, rewiring the barn including the installation of three-way switches for convenience, installing a pole light in the chicken yard, building an electric pig brooder, an electric fence, and an electric water heater for chickens.

Eckhoff has been using an electric welder for the past three years and did all the wiring for two houses built by his father. He has repaired electric motors and appliances. His supervised farming program includes 50 head of hogs, eight sheep, one beef animal, 20 acres of corn, 20 acres of oats, 10 acres of soybeans and 400 poultry.

Marvin Eckhoff

Official Illinois delegates to the national FFA convention were George Lewis, Hersman, Brown county, and Robert Herriott, Champaign, Champaign county.

Two Illinois FFA chapters were among the 34 out of the nation's 7,250 local chapters receiving gold emblem awards at Kansas City. They were the Lanark chapter, Carroll county, and Fairbury chapter, Livingston county. Awards are made on the basis of community service, leadership activities, cooperative activities, etc.

Illinois youth receiving the American Farmer degree, highest degree of the organization, were: Bertil Mattson, Sandwich, DeKalb county; J. M. Mollet, Greenville, Bond; Paul A. Nobbe, Waterloo, Monroe; W. H. St. John, Maroa, Macon; Maurice Soucie, Peotone, Will; Gerald E. Tetzlaff, Carlinville, Macoupin; George F. Torti, Dixon, Lee; James A. Aggen, Morrison, Whiteside; Roy Brammeier, Venedy, Washington; A. R. Henninger, Kirkland, DeKalb; Carl R. Keltner, Pearl City, Stephenson, and George J. Lewis, Mt. Sterling, Brown.

NOTICE OF ANNUAL MEETING
PRODUCERS SEED COMPANY

To Shareholders and Members of Producers Seed Company:

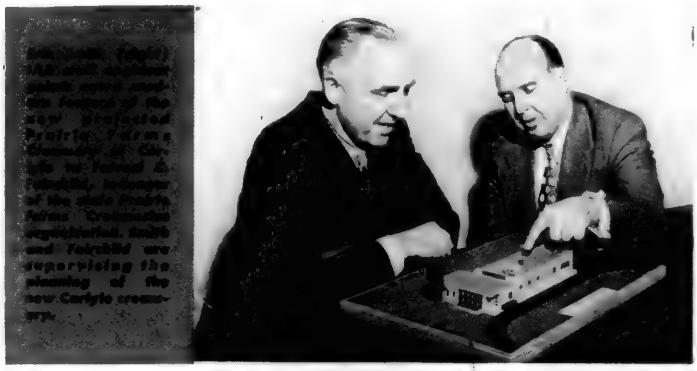
Notice is hereby given that the annual meeting of the shareholders and members of Producers Seed Company will be held on Monday, the 14th day of November, 1949, at the hour of 7:00 P.M. in the Sherman Hotel, Chicago, Illinois, to elect directors for the succeeding year; To receive and if approved, confirm the report of the Board of Directors and Officers of the Association for the fiscal year ending June 30, 1949; to consider and if approved, ratify and confirm all of the acts and proceedings of the Board of Directors done and taken since the last annual meeting of the shareholders and members of the Association; and for the transaction of such further and other business as may properly come before the meeting.

Frank L. Simpson, Secretary

Former IAA Staffer Joins Illinois Grain

HARRISON FAHRNKOPF, Champaign county, director of grain marketing for the Illinois Agricultural Association from 1928 to 1940, has been hired as assistant to the manager of Illinois Grain Corporation.

Fahrnkopf will work out of the Champaign office of the Illinois Grain Corporation and will be engaged primarily in membership acquisition, according to Howard McWard, Grain Corporation manager.



Believe your EARS

YIELD BETTER

One important "ear mark" of a great hybrid is that it gets talked about. And farmers throughout Illinois are TALKING ABOUT Producers' Hybrids, and their big Producers' YIELDS. That's why Producers' Hybrids have quickly become an important hybrid in Illinois. Next spring plant Producers' Hybrids on your own farm. They are YIELD-PROVED, according to University of Illinois yield tests.

Does the Unit District Work?

HERE IS WHAT'S HAPPENING AT PAXTON

By JIM THOMSON,
Ass't Editor, IAA Record

THE 12-grade unit district school system is being tried out by the Paxton community. The unit district system unites high school and grade schools as one system. The 12 grades have one school board and one responsible administrator.

How is it working? Do the teachers like it? Do the children like it? Does it do as much for the pupil as the one-room school district of yesterday? What does it cost? Does the parent get a better educational system for his tax dollar?

It is too early to give a conclusive report on the Paxton community 12-grade school system. This is only its first year of operation. But it isn't hard to answer with conviction some of the above questions.

In the first place, it can be said that in general the teachers are enthusiastic about the new system. They like its efficiency and concern for the individual pupil.

Do the kids like it? Just ask them. Shirley Carlson, 14, 10th grade, said she likes the new system better. "There are more opportunities and I like the movies, sports, and music. I am with more kids my own age." Jerry Johnson, 13, who spent his first six years in a one-room school, said it was a lot nicer going to a consolidated school. His face lit up as he explained that he had never realized he was missing such things as industrial arts, field trips, music, and physical education.

Of the dozen or so farm children spoken to, none preferred the one-room school. The youngsters noticed mainly the things they enjoyed such as vocational agriculture, football, glee club, movies, and home economics.

But other factors they did not mention may be of considerable importance to the parent. One is the fact that with consolidation a system of health records has been set up which will keep tab on the child from the first through the 12th grades. A full time nurse keeps the health records and examines the children. Dental X-rays are also taken periodically by a state technician and are checked by the school nurse. She also gives each pupil eye and ear tests.

Parents whose children are slow to speak properly also are pleased that the Paxton community school has the services of a trained speech correctionist. Children slow to adjust themselves to association with other children receive the

RECORD

***Top:** Paxton Community Unit District Supt. E. H. Schroth (right) and Asst. Supt. J. H. Quick (left) discuss their school program with John K. Cox, IAA director of rural school relations. Second from top: Children get advantage of school's hot lunch program.*

attention of Asst. Supt. J. H. Quick, a teacher skilled in conducting aptitude, intelligence, and readiness tests. From these tests he tries to adjust Johnny to his playmates and his studies. If the child is difficult to handle he will call in a state psychiatrist for further examination but only with the consent of the parents.

Before we go any further perhaps we should have a little more background information on the Paxton area schools. When farmers in the surrounding area started the move for consolidation the original area comprised 13 school districts. In 1947 the 13 districts were reduced to five and in the same year these were reduced to three districts which formed a doughnut-shaped area surrounding Paxton as the hole. In 1948 Paxton became part of the consolidated district which surrounded it.

Paxton had much to offer. It was centrally located with paved roads leading to it from four directions. It had a modern high school plant and grade schools which could take care of part of the overflow from the country.

In its first stages, with still a number of kinks to iron out, here is how the district physical plant is organized: Three primary schools are centrally located to take care of rural children in grades one to four inclusive; the two-room grade school at Clarence takes children up to seventh grade; from the seventh through the 12th grades the rural children attend school in Paxton. Another primary school, grades 1-4, is in Paxton for city children and some rural children.

The district comprises about 120 square miles. According to Superintendent E. H. Schroth the school population of the area is about 800. Of this number about 270 are in the rural areas and 530 in town. High school enrollment is about 250.

It might appear to the reader that these programs, which include so many things the rural child never had before, must be costly. Such things as music, woodworking, metalworking, vocational agriculture, field trips, hot lunches, health supervision, speech correction, personality adjustment supervision, intelligence and aptitude tests, home economics, glee club, athletics and physical education programs, movies, etc., cost money. But the wonderful thing about consolidation is that the added efficiency makes these things cost far less than you might imagine. In other words, under the old one-room school district the taxpayer was paying for a lot of these services as far as tax payments were concerned. Yet his children never got the benefits.

How do we figure that? Well, let's take the tax rate. Before the start of the unit district, it was 96 cents for rural schools and $1.11 per $100 assessed valuation for city schools. Today after consolidation it is 96 cents in both town and country. Farm children will have the advantage of numerous modern educational programs at no increase in the tax rate!

Ass't Supt. Quick estimates that the per student cost of the unit district before final consolidation was about $130 for 1948-49, and that the per capita cost for 1949-50 will be $133. This latter figure includes about $20,000 in back bills assumed by the new unit district.

Quick pointed out that the Blake school east of Paxton, a typical one-room rural school, had a per pupil cost of

attention of Asst. Supt. J. H. Quick, a teacher skilled in conducting aptitude, intelligence, and readiness tests. From these tests he tries to adjust Johnny to his playmates and his studies. If the child is difficult to handle he will call in a state psychiatrist for further examination but only with the consent of the parents.

Before we go any further perhaps we should have a little more background information on the Paxton area schools. When farmers in the surrounding area started the move for consolidation the original area comprised 13 school districts. In 1917 the 13 districts were reduced to five and in the same year these were reduced to three districts which formed a doughnut-shaped area surrounding Paxton as the hole. In 1943 Paxton became part of the consolidated district which surrounded it.

Paxton had much to offer. It was centrally located with paved roads leading to it from four directions. It had a modern high school plant and grade schools which could take care of part of the overflow from the country.

In its first stages, with still a number of kinks to iron out, here is how the district physical plant is organized: Three primary schools are centrally located to take care of rural children in grades one to four inclusive; the two-room grade school at Clarence takes children up to seventh grade: from the seventh through the 12th grades the rural children attend school in Paxton. Another primary school, grades 1-4, is in Paxton for city children and some rural children.

The district comprises about 120 square miles. According to Superintendent E. H. Schroth the school population of the area is about 800. Of this number about 270 are in the rural areas and 530 in town. High school enrollment is about 250.

It might appear to the reader that these programs, which include so many things the rural child never had before, must be costly. Such things as music, woodworking, metalworking, vocational agriculture, field trips, hot lunches, health supervision, speech correction, personality adjustment supervision, intelligence and aptitude tests, home economics, glee club, athletics and physical education programs, movies, etc., cost money. But the wonderful thing about consolidation is that the added efficiency makes these things cost far less than you might imagine. In other words, under the old one-room school district the taxpayer was paying for a lot of these services as far as tax payments were concerned. Yet his children never got the benefits.

How do we figure that? Well, let's take the tax rate. Before the start of the unit district, it was 96 cents for rural schools and $1.11 per $100 assessed valuation for city schools. Today after consolidation it is 96 cents in both town and country. Farm children will have the advantage of numerous modern educational programs at no increase in the tax rate!

Ass't Supt. Quick estimates that the per student cost of the unit district before final consolidation was about $130 for 1948-49, and that the per capita cost for 1949-50 will be $133. This latter figure includes about $20,000 in back bills assumed by the new unit district.

Quick pointed out that the Blake school east of Paxton, a typical one-room rural school, had a per pupil cost of

Success Story

Bond County Service Company Attracts More Farmers for Higher Brand of Service

This is how the office looked when the Bond County Service Company bought the place.

This is how the office looked after the Bond County Service Company worked it over.

Shown during a visit to the Bond County Service Company elevator is Farm Advisor George Perisho (right) and elevator manager Spencer Johnstone.

YOU'VE often heard it said, "You've got to spend money to make money." You've also got to spend money to give your patrons better service. That's what the Bond County Service Company has done. Increased patronage has been the payoff.

On March 1, 1945 the Bond County Service Company bought the old Equity elevator. It had grain storage for 10,000 bushels. Cost of the elevator, scale house, fertilizer shed, corn crib, warehouse, two trucks, inventory, and land totaled $19,921.60.

The board of directors spent an additional $38,000 to modernize the old elevator. The total investment is now $53,000.

Better service to patrons usually means more business. What has been the result? Let's look at the business picture in 1945 when the elevator was bought. In that year sales amounted to $329,202.31. Total grain purchased amounted to 165,691 bushels. By 1948 dollar sales had leaped to $950,201.80 and grain purchased was up to 185,580 bushels.

For 1949 sales were expected to top the million dollar mark for the first time. For the first 10 months this year dollar sales were $979,660 and grain purchased stood at 281,672 bushels.

The greater amount of business means higher patronage refunds to Farm Bureau patrons. One of the important factors in the Bond county success story is the attitude of board and management. Under Manager Spencer Johnstone this attitude is contained in the belief that better buildings and better machinery alone won't do the job.

Manager Johnstone feels that the Bond County Service Company should look and act like a successful business enterprise thus giving the patron the confident feeling that he is trading with an established concern. The premises are kept neat and clean and the employees are encouraged to be courteous at all times.

It cannot be denied, however, that better equipment means better service. In 1946 and 1947 a grinder with a 50 h.p. motor was installed and a one-ton feed mill. A sewing machine was added to sew sacks of Service Brand feed and a Friedman calculator was purchased for the elevator office.

A year ago work was started on the elevator expansion work which added two Korok silos 16x40 feet which made 13,000 bushels of additional storage space available. New hoists, legs and conveyors also were added. A new corn sheller was purchased and the unloading of grain has been speeded up from 1400 bushels per hour to 3600 bushels per hour. Other incidentals have been added, such as a corn cracker, to expand the service program.

They say "It pays to advertise," and just as important "It pays to deliver the goods and the services." By following this simple fact the Bond County Service Company has grown and prospered. By continuing to follow this philosophy of sales and service, the company is assured of a successful future.

2 GREAT POULTRY FEEDS TO INCREASE YOUR LAYING HOUSE PROFITS

Get more eggs from your laying flock with high quality

BLUE SEAL FEEDS

Getting better-than-average egg production is no trick at all with Blue Seal Poultry Feeds. And no wonder — with plenty of vitamins — proteins — minerals — fats — and energy producing nutrients — Blue Seal feeds help your hens lay better by providing more than ample amounts of those important ingredients that make eggs! And more eggs means more laying house profits both now and in the months to come.

For the "mash-grain" feeder, we have Blue Seal Lay Mash. For the "free-choice" feeder, we have Blue Seal Poultry Balancer. Select the feed which fits your feeding program.

Better Corn Possible

Too Many Fields in Midwest Cornbelt Go on Hunger Strike That in Time Cuts Yields and Profits

YES, we are making more corn than ever. In the face of such facts you will be shocked at my contention that at least two-thirds of the corn fields of the corn belt failed to perform according to the high standard we have set for them.

By July 4th and knee-high time most corn fields in the Midwest looked beautiful and were far ahead of schedule. Many fields were beginning to show tassels. Hunger signs could hardly be found, the color was perfect. Over most of the corn belt the rainfall was as good or better than normal. Suddenly, about the last week in July many fields began to show a slight paling in the green color — this was the first sign of nitrogen starvation. By Aug. 20 the nitrogen hunger signs were wide-spread. Many corn fields were beginning to show white husks and dented kernels the last week in August. This was shutting down the factory too soon. Another point, these nitrogen plants probably made a lower protein content corn.

Too many of our corn fields put on a hunger strike that cut the yield. The nitrogen shortage that occurred in August in so many of these fields forced the corn into premature ripening. We forced corn under such conditions to ripen in the hottest weather of our summer. This was bad.

Hot weather increases the rate at which sugars burn up in plants, a process called respiration. Sugars were therefore excessively lost by this burning process rather than packed into the ear as starch to make deep kernels and higher yields.

The unusually warm June put life into the soil micro-organisms. They went to work early and loosened up a lot of available nitrogen tied up in the soil organic matter. This does not happen as long as the soil is cold. Crops starve for nitrogen in early spring while the soil is still cold even though there will be a lot of nitrates available later in the season. The warm soil and high available biologic nitrogen in early June of the 1949 season kicked the corn off to a mighty vigorous start. The corn became ambitious and made a big plant. However, in too many fields these ambitious young corn plants found the cupboard running empty too soon. There was not enough organic matter in the soil to rot down throughout the summer and give enough nitrogen to carry on through to a successful finish.

Many fields showed nitrogen hunger even though a considerable quantity of organic matter had been turned under. This was especially true where the stand was thick. Farmers have learned that a thick stand means more corn when there is plenty plant food. With thick stands, extra nitrogen in addition to that supplied by the organic matter proved the soundness of the two working together.

Again I emphasize that it took the minerals of phosphorus, potash, calcium, magnesium, and certain trace elements to build the crops of legumes that made most of the organic matter. I emphasize again that the whole array of sound conservation practices and management are needed, but let's not overlook why some of these corn fields failed to meet the test.

Briefly these observations seem to boil down to the following conclusions:

1. Have a large supply of decomposing organic matter in the soil as the number one back-log for success. (Practice rotations and fertilization that make an abundant residual supply of organic matter).

2. Use available nitrogen in the starter row fertilizer to give the corn a sure-fire push off in spite of cool and wet weather.

3. It looks like a highly prolific (more than one ear per stalk) corn with a longer pollen season should have some advantages on soils of high fertility. (More research is needed to prove this point to be right or wrong).

4. Plant thick enough to assure a big capacity for production.

5. In addition to the minerals supplied through other crops fertilized in the rotation and in the starter fertilizer, be sure extra nitrogen is supplied either

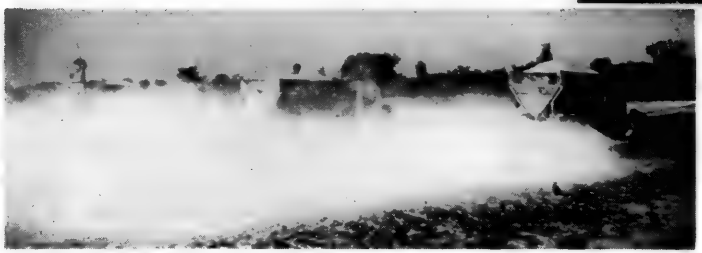
How to BUY *LIMESTONE*

By ROGER E. GISH, Director
IAA Soil Conservation Activities



There Is No State Law Requiring The Producers And Sellers Of Limestone To State Quality Of Material But Quarry Tests Are Available At Your Farm Adviser's Office.

CLAUDE Barlow rested a foot on the fence as he waited for his neighbor, Jim Britt, to drive his tractor on out to the end of the field. "Let 'er cool a minute, Jim, I want to ask you something. My alfalfa and clover are not looking so good this year. Do you suppose I need some more limestone?"

"Well," said Jim, "I've noticed on soil maps that the soil types on your farm and mine are similar, so they would likely require about the same treatment. But I was sure I needed limestone last fall because I had soil tests made to tell me how much I needed."

"I was talking to Will Haulit," said Claude, "and he said he hauls from the Truckers' Pit Quarry over in the corner of the county. I've heard that the quarry price at the Shipping Point Quarry is cheaper but the freight costs to get it here eats you up."

"It all depends on relative cost on the quality you get," replied Jim. "Limestone costing a little bit more might be worth the difference. I understand there is a lot of difference in limestone."

And Jim is absolutely right. There is a lot of difference in limestone sold in the state. When you buy a bag of fertilizer, the analysis is on the bag and the contents are guaranteed by law. There is a lot of difference in fertilizers, as for example, a 4-16-16 is obviously worth much more than a 2-12-6, but at least you are not buying a "pig in a poke" with the analysis in plain sight on the bag. Illinois has no limestone law, and producers and sellers are not required by law to state the quality of the material.

Among other things, the director of the IAA department of soil conservation activities visits quarries and takes samples of limestone offered to farmers. Sampling is done at the quarry where the material is divided and a portion left for the operator to have check tests made if he desires. Information on calcium carbonate equivalent, fineness of grinding, price, amount produced and location of each quarry is passed on to the farm advisers in the trade area surrounding a given quarry.

There were 94 quarries visited during the last several months. The calcium carbonate equivalent of material produced varied from 72 to 80 for a few quarries, while several quarries' material tested 100 or better. Six quarries had a test of 105 per cent calcium carbonate equivalent. The question often arises as to how a material can test more than 100 per cent. This is possible with a rather pure stone high in magnesium.

Magnesium is lighter by weight than calcium but neutralizes as much acid per carbonate unit. Thus, a high magnesium stone may test more than 100 per cent based on the C.C.E. of a calcium limestone. The lower testing material is suitable for correcting soil acidity. However, it is obvious that material testing 72, for example, would not be as valuable as material testing 105 C.C.E. One-half as much again would have to be applied to the soil to obtain the same neutralizing value. The average calcium carbonate equivalent of limestone offered was 93.7.

Fineness of grinding varies from 62 for two quarries to 100 per cent through an eight mesh screen on one quarry visited. The average fineness of grinding was 81.6 per cent through an eight mesh screen which has eight openings to the linear inch, or 64 openings per square inch. The requirement for agricultural limestone in Illinois is that it have a calcium carbonate equivalent of at least 80 and that at least 80 per cent pass an eight mesh screen to qualify for full PMA payment.

(Continued on page 30)

Any farmer abhors devastation like this. But when fire does destroy his dairy barn, his prize dairy cattle, he CAN be thankful for his small investment in Country Mutual Fire insurance. He can collect AT ONCE, start to build AT ONCE, with calm plans for the future.

Are YOU sufficiently protected? If there's any doubt, stop in at your Farm Bureau office. Go over your fire insurance program with the Country Mutual Fire representative. Be SURE you're adequately protected from losses like this!

By ELLSWORTH D. LYON, Director
Young People's Activities

Rural Youth Plans for ACTION

THE stronger Rural Youth groups of Illinois plan definitely and well in advance the educational programs for monthly meetings.

Real education in a Rural Youth group is not a passive influence. It must be planned with opportunity for participation by the members. Pertinent facts must be pursued. Individuals and committees must be given responsibilities for certain parts of the program. This procedure brings interest to the learning process and makes Rural Youth worthwhile.

In developing a sound educational program the following factors must be considered: (1) It must grow out of the needs and interests of the group. (2) It must be based upon the aims of the group. (3) It must embrace the activities of the five basic standing committees of education, recreation, community service, publicity, and membership and hospitality.

It is understood that the educational program is more than the educational features. When the five basic activities as outlined by the standing committees is pursured, all who take part in any one of them is broadening his educational experiences. A summer activity of Clinton county serves as an example of an interesting project which possessed educational values. Clinton took part in a community parade, presenting its major activities in a float with the theme "Steering for Better Education, Recreation, and Community Service."

Here was a program which the county was proud to portray. The project had educational values from various angles: (1) It caused the group to think definitely about what it had to offer other young people and to the community. (2) It led to the planning of an effective medium to tell the major emphases of the organization — the float being that medium. (3) It provided opportunity for the members to work together. (4) Certain publicity had to be considered in advance. (5) There were recreational elements realized in sponsoring the float.

However important as these projects or the committee work involved in the standing committees may be from an educational standpoint, it is the educational feature itself that counts most. Marshall-Putnam recently prepared an attractive program booklet covering meeting plans for the six months from Oct. '49 to March '50. The introductory paragraph in the booklet says, "The program planning committee has used the committee system in providing for plans for each Rural Youth meeting and in addition has selected the educational feature for each meeting." Marshall-Putnam realizes that a sound program of educational features is necessary to satisfy the needs and interests of farm youth who now or soon will become members of its group. The themes to be followed are: October — Talk Fest with competitive games, November — Our plan for an ideal Rural Youth meeting (to be outlined by small discussion groups), December — Understanding your local farm organizations, January — Annual meeting, February — Behind the scenes in radio, March — Ideal Rural Youth program as selected at the November meeting.

This group begins with the educational features as the basic need of the young people and is building recreational and other aspects of the program around this need. Worthy of mention is the climaxing of the six months' series with a projection of additional educational programs beyond the March 1950 meeting from the actual plans of the membership as drawn up in small discussion groups in the November, 1949, meeting. Here is Rural Youth in action! Here is a process of finding the desires of the membership. The group is servicing itself. It is solving its own problems.

Throughout the state there is great need for Rural Youth to be on the alert in planning its entire county program with special emphasis upon the educational features of its regular meetings. One of the purposes of Rural Youth is to take care of the educational needs of young farm men and women who are out of school and unmarried.

When a group forgets this original purpose it is failing to serve its membership. When the leaders meet this basic need, they are not only training leaders in agriculture and community life, but they are building for the future strength of Rural Youth as well.

There are many sources of educational topics. Begin with the local county. Groups could profitably study local government, taxes, roads, schools, health, soil needs, the problems and privileges of home building, the meaning of citizenship, good agriculture, the advantages of cooperatives, and the place of Home and Farm Bureau. These subjects are at the front door of every rural citizen. Farther away are the problems of the state, nation, and the world.

There are rich resources from which to obtain information upon the topics chosen. Again, the local county should be tapped. The Farm and Home Bureau offices, public agencies, religious leaders, editors, teachers, travelers, hobbyists, Rural Youth members, and parents are glad to help Rural Youth groups. Our own great state University, the Illinois Agricultural Association, the various agencies of our state and national governments and libraries can supply material upon unlimited subjects to individuals and groups which come with inquiring minds. Rural Youthers, this day is yours for educational advancement. Become informed young men and women through your Rural Youth educational program.

Rice yields are reported to exceed 100 bushels per acre in Spain, 90 bushels in Italy, 80 bushels in Japan, 60 bushels in Egypt and 45 to 50 bushels in the United States.

Miss Lola Reab's cat paws guitar strings and wonders where the sweet music comes from. This picture scores heavily on originality and wins the $5 picture of the month award. Miss Reab's home is in Macon county.

Farm Bureau Folks in Pictures

William Pritchett Jr., of Edgar county took this picture at home of early corn on infra-red film.

With Halloween in the offing, here is a timely picture of the daughters of the Frank Joys of Bond county ready for the occasion.

EDITOR'S NOTE

Pictures for the Farm Bureau Folks in Pictures page should be addressed to Picture Editor, Illinois Agricultural Association Record, 45 East Ohio Street, Chicago 11, Illinois. Entries are judged on originality, clearness, and interest. Please do not send negatives. Avoid shots of persons merely looking at the camera. Best picture receives $5, others published, $1. If you want photographs returned enclose a self-addressed stamped envelope.

Jimmy Hedrick of Edwards county does a smart thing on a hot summer day — takes a dip in the clear cool water of a backyard trough.

Cynthia Glenn, Winnebago county, whispers a big secret to her cousin, Phyllis Lorraine Stralow, during visit to farm in Whiteside county.

Mrs. June McLuckie, Grundy county, sends along this picture of a neighbor boy on a Fourth of July float depicting Abraham Lincoln.

Clinton Rural Youth float committee and trophy received for best float in county-wide Black and White Show. Reading from left to right — Back row, Edward Ackmann, Wilbert Hermsmeyer, George Sohn, Jack Vahlkamp, Casper Richter, and Youth Assistant Laverne A. Jenne. Front row, Willene Vahlkamp, Betty Jenne, Rosemary Vahlkamp, Dolores Kampwerth, Milford Conrad, Jane Richter, Marjorie Sohn, and Youth Assistant Esther Schuchmann.

Young People's Activities

Rural Youth Plans for ACTION

THE stronger Rural Youth groups of Illinois plan definitely and well in advance the educational programs for monthly meetings.

Real education in a Rural Youth group is not a passive influence. It must be planned with opportunity for participation by the members. Pertinent facts must be pursued. Individuals and committees must be given responsibilities for certain parts of the program. This procedure brings interest to the learning process and makes Rural Youth worthwhile.

In developing a sound educational program the following factors must be considered: (1) It must grow out of the needs and interests of the group. (2) It must be based upon the aims of the group. (3) It must embrace the activities of the five basic standing committees of education, recreation, community service, publicity, and membership and hospitality.

It is understood that the educational program is more than the educational features. When the five basic activities as outlined by the standing committees is pursued, all who take part in any one of them is broadening his educational experiences. A summer activity of Clinton county serves as an example of an interesting project which possessed educational values. Clinton took part in a community parade, presenting its major activities in a float with the theme "Steering for Better Education, Recreation, and Community Service."

Here was a program which the county was proud to portray. The project had educational values from various angles: (1) It caused the group to think definitely about what it had to offer other young people and to the community. (2) It led to the planning of an effective medium to tell the major emphases of the organization — the float being that medium. (3) It provided opportunity for the members to work together. (4) Certain publicity had to be considered in advance. (5) There were recreational elements realized in sponsoring the float.

However important as these projects or the committee work involved in the standing committees may be from an educational standpoint, it is the educational feature itself that counts most. Marshall-Putnam recently prepared an attractive program booklet covering meeting plans for the six months from Oct. '49 to March '50. The introductory paragraph in the booklet says, "The program planning committee has used the committee system in providing for plans for each Rural Youth meeting and in addition has selected the educational feature for each meeting." Marshall-Putnam realizes that a sound program of educational features is necessary to satisfy the needs and interests of farm youth who now or soon will become members of its group. The themes to be followed are: October — Talk Fest with competitive games. November — Our plan for an ideal Rural Youth meeting (to be outlined by small discussion groups). December — Understanding your local farm organizations. January — Annual meeting. February — Behind the scenes in radio. March — Ideal Rural Youth program as selected at the November meeting.

This group begins with the educational features as the basic need of the young people and is building recreational and other aspects of the program around this need. Worthy of mention is the climaxing of the six months' series with a projection of additional educational programs beyond the March 1950 meeting from the actual plans of the membership as drawn up in small discussion groups in the November, 1949, meeting. Here is Rural Youth in action! Here is a process of finding the desires of the membership. The group is servicing itself. It is solving its own problems.

Throughout the state there is great need for Rural Youth to be on the alert in planning its entire county program with special emphasis upon the educational features of its regular meetings. One of the purposes of Rural Youth is to take care of the educational needs of young farm men and women who are out of school and unmarried.

When a group forgets this original purpose it is failing to serve its membership. When the leaders meet this basic need, they are not only training leaders in agriculture and community life, but they are building for the future strength of Rural Youth as well.

There are many sources of educational topics. Begin with the local county. Cynthia Glenn, Winnebago county, whispers a big secret to her cousin, Phyllis Lorraine Stralow, during visit to farm in Whiteside county.

Mrs. June McLuckie, Grundy county, sends along this picture of a neighbor boy on a Fourth of July float depicting Abraham Lincoln.

Above are the five purple ribbon theme winners, front row, left to right, as follows: Mary Beth Manning, Hollendeck school; Virginia Hexdall, Wally; Howard Schock, Robison; Joyce Decker, Carbon Hill, and Illomay Lyons, Goose Lake. Back row are Miss Lillias K. Walker, assistant county superintendent of Grundy schools; M. E. Tascher, farm adviser and Miss Anna Ondesco, county superintendent.

Top right photo shows a tree planting machine used to plant multiflora rose. Below is a view from the speaker's platform of the crowd at the Grundy field day climaxing Soil Conservation Week.

Selling Conservation

Grundy County Folks Get Story of Soil Care From Church Pulpits, Theaters, Clubs and Schools.

IN GRUNDY COUNTY they figure that folks can't know too much about soil conservation. That's why this year they enlarged their program and had a soil conservation week instead of just one day. And all the important people in the county got behind the idea and really put it over. Starting on a Sunday, church-goers throughout the county heard a sermon on "Stewardship of the Land." The county board of supervisors made it official by declaring the week of Sept. 25 as "Soil Conservation Week in Grundy County."

All city and town grade and high schools, both public and parochial, held assembly programs on soil conservation. All theaters gave a three-day run to "The Flood," a motion picture telling of the importance of soil conservation to urban people.

Five civic organizations held "farmer nights" in which a member brought a farmer as guest. Businessmen of the community of Morris sponsored a corn festival with $300 in awards for the best ears of corn. The contest was set up so that the closing date was at the end of the soil conservation week. The businessmen reminded contestants that it took good soil care to produce top crops.

All in all, the Grundy County Soil Conservation district directors got the cooperation of 25 groups in sponsoring the week's program.

Not a small part of the program was the participation of pupils from 44 county schools in a theme writing contest on the topic, "Why Each Farmer Should Practice Soil Conservation on His Farm." With the cooperation of Miss Anna Ondesco, the afternoon of soil conservation field day was declared a holiday and presentation of purple ribbons to five of the top essay writers was made during the program. Presiding at the award ceremony attended by 450 school children were James F. Holderman, Farm Bureau president. and M. E. Tascher, farm adviser. Blue ribbons were given to each of the winners in the 44 schools.

The field day was held on a rented farm in keeping with the Grundy program to emphasize the benefits of soil conservation to both renters and landowners. As farmers and school children toured the farm they were shown the response of alfalfa to phosphate and to potash. These materials had been applied to the alfalfa only a few weeks before, but it was easy to tell where they were applied.

A contour line had been marked out across the alfalfa field to show how plowing would be done in the spring when the alfalfa is plowed under for corn.

Ben Muirhead, extension agricultural engineer, pointed to the use of surface drainage to carry water out of low places and grass waterways to lead the water down to the drainage ditch which had been shaped for maximum capacity and use.

Much interest was shown in a tree planting machine which is pulled by a tractor at the pace of a moderate walk. One man on the machine placed multiflora rose plants about 14 inches apart.

The machine completed the setting operation by opening a furrow before the plant and closing the soil immediately afterward. Planting of the multiflora rose was made on a listing on the contour. The land on the slope above the contour line is to be left in cultivation and land below is to be used as permanent pasture after about two years. By that time the rose will have grown to make a fence capable of turning livestock and offering cover and runway for wildlife.

Speakers on the field day program included Arlo F. Benzman, local soil conservation farm planner; Dennis Manning, chairman of the Grundy County Soil Conservation district directors; Frank Purnell, extension soil conservationist, and Dr. F. C. Bauer, U. of I. agronomist. Dr. Bauer said that maintenance of organic matter, proper soil structure, water holding capacity, aeration and prevention of soil compaction are best attained with legumes in rotation. Use of legumes that stand over more than one year and then plowed under was recommended as best.

Said Farm Adviser Tascher at the conclusion of the week. "We had two objectives in this week. First, we wanted to reach a large number with the importance of soil conservation, and second, encourage soil conservation teaching in the schools. We tried to use as many organizations and individuals as possible to give them a part in the program. I only hope some of the techniques we used may be useful to others."

NOTICE
ILLINOIS AGRICULTURAL ASSOCIATION ELECTION OF DELEGATES

Notice is hereby given that in connection with the annual meetings of all County Farm Bureaus to be held during the month of November, 1949, at the hour and place to be determined by the Board of Directors of each County Farm Bureau, the members in good standing of such County Farm Bureau and who are also qualified voting members of Illinois Agricultural Association, shall elect a delegate or delegates to represent such members of Illinois Agricultural Association and vote on all matters before the next annual meeting, or any special meeting of the Association, including the election of officers and directors, as provided for in the By-Laws of the Association.

During November, annual meetings will be held in Bond, Brown, Cumberland, Franklin, Gallatin, Lawrence, Hancock, Massac, Macoupin, Montgomery, Schuyler, Shelby, St. Clair, Warren, Williamson and Richland Counties.

Paul E. Mathias, Secretary

Honor Illinois Adviser's At National Meeting

EDWIN BAY, Sangamon county farm adviser, has been named vice-president of the National Association of County Agricultural Agents, and three other Illinois farm advisers have been cited for special recognition.

Distinguished service awards were received at the recent Denver convention by William F. Coolidge, Livingston county; Russell E. Apple, Jasper, and Lloyd W. Chalcraft, Menard. These awards are given for long and efficient service.

Marion Adviser Retires

ILLINOIS' oldest farm adviser on point of service, Fred J. Blackburn, retired Oct. 1 after 31 consecutive years as Marion County Farm Adviser.

Blackburn went to Marion county in 1918. He was graduated from the College of Agriculture in 1914. He worked for the University and farmed on his own before becoming Marion county farm adviser. Blackburn said he had no plans as yet for the future.

ILLINOIS FARM BUREAU SERUM ASSOCIATION

ILLINOIS *Defeats* IOWA, 2—0

ILLINOIS Farm Bureau Baseball League 1949 champions, Will county, took the Illinois-Iowa interstate title in two straight wins in a series played at Manhattan, Ill., in late September. Both games were won by a 4 to 3 score with the first game going 11 innings. Both games were well played with good sportsmanship being exhibited by the players. An outstanding job of fielding was turned in by Seehausen of Will county and the pitching was good on both sides.

The first game, played on a Saturday, drew 360 paid admissions and the second game on Sunday drew 750. Manager Bob Seely of Will county did a real promotion job with placards, street banners, etc., advertising the game.

Iowa was represented by its championship team from Palo Alto county.

In another interstate series with Iowa, Carroll county's Rural Youth softball team which won the state division title at the Sports Festival won three games from Kossuth county on Oct. 1 and 2. The first game was played at Whittemore, Ia., with Carroll topping the Iowa nine 10 to 2. In the second game at Wesley, Carroll took a 6 to 0 victory, and in the third win for Carroll county at Algona the second was 7 to 1.

DeKalb county's 4-H softball team split a double header with Butler county in Iowa on the weekend of Sept. 24, but did not stay for a playoff game. DeKalb thought the third game would make their departure time too late.

Following are the box scores on the baseball interstate series with Iowa:

First Game

Will County (Illinois)

	AB	R	H	C	E
McHugh, lf	5	0	1	0	0
Seehausen, 2b	4	2	0	8	0
McEvilley, 3b	4	2	2	3	0
Stoeven, cf	5	0	0	2	0
Broadrick, 1b	5	0	2	11	2
Palmer, rf	4	0	0	3	0
Drecksler, ss	4	0	1	3	1
Bormet, c	4	0	1	14	0
Honsbruch, p	3	0	0	4	1
Totals	38	4	7	48	4

Palo Alto County (Iowa)

	AB	R	H	C	E
Compton, 2b	3	0	0	5	0
E. Eckert, 3b	6	0	0	3	0
Johnston, ss	6	1	0	3	0
Stafford, 1b	5	1	3	11	0
Frederick, rf	4	1	2	1	0
Bleuer, lf	5	0	0	5	0
Fogarty, cf	2	0	0	0	0
Merrill, cf	0	0	0	1	0
Shriner, ph	1	0	0	0	0
Barber, c	5	0	0	10	1
R. Eckert, p	4	0	1	4	0
Totals	41	3	6	43	1

Shriner batted for Fogarty in 8th.

Will County	100	002	000 01—4
Palo Alto County	000	300	000 00—3

Summary: 2 base hits—Drecksler, McEvilley, Broadrick, Stafford; Sacrifice hits—Honsbruch; Stolen bases—Seehausen 2, Frederick, Fogarty; Struck out by Honsbruch 9, by Eckert 8; Base on balls off Honsbruch 6, Eckert 2; Left on bases—Will County 5, Palo Alto County 13. Earned runs—Will County 3, Palo Alto County 0.

Second Game

Will County (Illinois)

	AB	R	H	C	E

R. Eckert batted for Frederick in 9th.

Will County	100	120	000—4
Palo Alto County	020	001	000—3

Summary: 3 base hit—Stafford; Doubleplays—Johnston to Compton to Stafford; Wild Pitch—Shriner 3; Stolen bases—Seehausen; Struck out by Smith 4, by Shriner 6; Base on balls—off Smith 4; off Shriner 5; left on base Will County 6; Palo Alto County 5; Earned runs, Will county 4, Palo Alto County 2.

ILLINOIS FARM LEADER DIES

JOHN S. BUMGARNER, prominent member of Marshall-Putnam Farm Bureau, and a member of the Illinois Agricultural Association economic study committee, died Sept. 15. He was a former member of the Illinois state AAA committee starting in 1936. In 1941 he went to Washington as assistant to the director of the loan division of the north central region for the AAA. Shortly after the end of the second World War he returned to his farm in McNabb.

Mr. Bumgarner had always taken an active interest in farm problems and programs and made a worthwhile contribution to their solution and operation because of his sound judgment. His service on the IAA economic study committee was greatly appreciated by the Farm Bureau leadership.

Mr. Bumgarner was an organizer and president of the Marshall-Putnam Farm Bureau, director of the Marshall-Putnam Oil Company, member of the board of directors of the Farmers State Bank and McNabb Grain Company. He also was a director of the John Swaney High School. He was 69 at the time of his death.

BETTER CORN....

(Continued from page 20)

plowed under or sidedressed. (Plowing under has proven advantageous in cases of minor drouths. Sidedressed nitrogen is very efficient with plenty of rain).

6. Don't let the corn ripen too early while the weather is still hot. This occurs too often when corn starves from nutrients, especially nitrogen. (There is some observation, still not proven by adequate research, that the leaf disease Helminthosporium will be less damaging when the potash supply is adequate.)

7. Make use of a full season by having your corn remain active as long as you dare to risk escaping the frost line.

B. F. Kent, farm forester, Charleston, Coles county, and J. O. Howell, Crawford county farmer, select trees which are ready for harvesting.

Timber Farming

A Properly Managed Wood Lot Will Grow Timber Faster and More Profitably Than Mother Nature

By B. F. KENT
District Farm Forester, Charleston

POOR and destructive cutting practices are followed on 85 per cent of the farm woodlands in Illinois. Seventy per cent of the private forests are managed so that limited or no means of reproduction is left on land when timber is cut. If this condition continues, returns from our timberlands will not pay the taxes.

A properly managed forest or woodland will grow better timber faster than Mother Nature will grow it unassisted. This is done by selecting the kind of trees best adapted to the soil and climatic conditions and by growing the maximum number of desirable trees on an area to produce the largest volume of usable or merchantable products and still not cause stagnation.

An example of what a farmer can do with good woodland management is to be found on the Dick Noble farm of 180 acres located four miles south of Charleston in Coles county. Sixty acres of the farm is in timber and is fenced to keep out livestock. The timberland in general is rough, cut by many deep ravines with steep hillsides. The trees, mostly of the oak and hickory groups, are of average size with the average tree being 14 inches in diameter and will cut out 21 lineal feet of saw logs. The average tree will reach maturity of 18 inches diameter in about 70 years.

Here is Noble's experience in cutting timber from his lot after he had secured advice from the farm forester in his district. For equipment he had two rubber tired wagons, a tractor, block and tackle, saws and axes. His man power included himself, a hired man and a neighbor with whom Noble exchanges work. Work usually started about 8:30 in the morning after the chores had been done and continued until 4 o'clock in the afternoon. Two weeks were spent logging and hauling; also, one-fourth mile of fence was rebuilt during this same period.

The results of the two weeks' work were: 4,140 feet of lumber cut, 103 fence posts and 20 short cords of firewood were harvested. The tractor pulling two rubber tired wagons hauled the logs 10 miles to the saw mill. The lumber was sawed for $2 per 100 board feet.

The lumber was used for the frame of a barn which Noble rebuilt. Now if Noble had purchased the 4,140 feet of lumber at a local mill it would have cost him $310.50. The fence posts would have cost him $46.35. And he would have had to pay $60 for the firewood. These items total $416.85. Now let's take off the expenses. The sawing bill was $83, labor, $100, and tractor expense, $50, making a total of $233 of expenses. Taking $233 from the $416.85 retail price of the materials secured in the logging operation leaves a net income of $183.85 for two weeks' work.

How long can Noble continue to cut off his lot at this rate? A growth study was made on the 60 acres of timber and showed that each acre is producing 151 board feet per year. Eighty per cent of this can be harvested each year without depleting the stand. Twenty per cent is left to guard against insects, disease and breakage. This will make a total of 7,248 board feet as the annual growth which Noble can harvest from his timberland.

In short, Noble can continue to cut forever at his present rate of 4,655 board feet which includes 4,140 of lumber and 515 feet of fence posts. Very little of the firewood was cut from good growing trees. It was cut mainly from tops, defective and dead trees.

Many farmers are taking advantage of the chance to save money by doing their own cutting and logging and having the logs sawed into lumber for farm use. Each year the average farm will use 900 feet of wood for maintenance, new buildings and fence posts. Those farmers who have the rough land are growing their own wood, thereby saving money. With farm prices leveling off, more and more farmers are looking for ways to save or make money. Working in the timber is one way of doing this.

The district farm foresters, located in nine districts of the state, are anxious to help the woodlot owner manage his timber to increase his production of wood or wood products. If you do not know where to locate your district farm forester, consult your county farm adviser and he will get his address.

1949 Pig Crop Larger

THE total pig crop this year is 15 percent larger than for 1948, but total pork supplies are expected to be only about 10 percent larger. The reason is that so far this season hogs are going to market at lighter weights.

This report comes from E. J. Working, economist in the Illinois College of Agriculture.

ILLINOIS *Defeats* IOWA, 2—0

ILLINOIS Farm Bureau Baseball League 1949 champions, Will county, took the Illinois-Iowa interstate title in two straight wins in a series played at Manhattan, Ill., in late September. Both games were won by a 4 to 3 score with the first game going 11 innings. Both games were well played with good sportsmanship being exhibited by the players. An outstanding job of fielding was turned in by Seehausen of Will county and the pitching was good on both sides.

The first game, played on a Saturday, drew 360 paid admissions and the second game on Sunday drew 750. Manager Bob Seely of Will county did a real promotion job with placards, street banners, etc., advertising the game.

Iowa was represented by its championship team from Palo Alto county.

In another interstate series with Iowa, Carroll county's Rural Youth softball team which won the state division title at the Sports Festival won three games from Kossuth county on Oct. 1 and 2. The first game was played at Whittemore, Ia., with Carroll topping the Iowa nine 10 to 2. In the second game at Wesley, Carroll took a 6 to 0 victory, and in the third win for Carroll county at Algona the second was 7 to 1.

DeKalb county's 4-H softball team split a double header with Butler county in Iowa on the weekend of Sept. 24, but did not stay for a playoff game. DeKalb thought the third game would make their departure time too late.

Following are the box scores on the baseball interstate series with Iowa:

First Game

Will County (Illinois)

	AB	R	H	C	E
McHugh, lf	5	0	1	0	0
Seehausen, 2b	4	2	0	8	0
McEvilley, 3b	4	2	2	3	0
Stoeven, cf	5	0	0	2	0
Broadrick, 1b	5	0	2	11	2
Palmer, rf	4	0	0	3	0
Dreckslер, ss	4	0	1	3	1
Bormet, c	4	0	1	14	0
Honsbruch, p	3	0	0	4	1
Totals	38	4	7	48	4

Palo Alto County (Iowa)

	AB	R	H	C	E
Compton, 2b	3	0	0	5	0
E. Eckert, 3b	6	0	0	3	0
Johnston, ss	6	1	0	3	0
Stafford, 1b	5	1	3	11	0
Frederick, rf	4	1	2	1	0
Bleuer, lf	5	0	0	5	0
Fogarty, cf	2	0	0	0	0
Merrill, cf	0	0	0	1	0
Shriner, ph	1	0	0	0	0
Barber, c	5	0	0	10	1
R. Eckert, p	4	0	1	4	0
Totals	41	3	6	43	1

Shriner batted for Fogarty in 8th.

Will County	100	002	000	01—4
Palo Alto County	000	300	000	00—3

Summary: 2 base hits—Dreckslер, McEvilley, Broadrick, Stafford; Sacrifice hits—Honsbruch; Stolen bases—Seehausen 2, Frederick, Fogarty; Struck out by Honsbruch 9, by Eckert 8; Base on balls off Honsbruch 6, Eckert 2; Left on bases—Will County 5, Palo Alto County 13. Earned runs—Will County 3, Palo Alto County 0.

Second Game

Will County (Illinois)

	AB	R	H	C	E
McHugh, lf	2	1	0	3	1
Seehausen, 2b	4	1	2	8	0
McEvilley, 3b	4	0	0	1	0
Stoeven, cf	3	1	0	1	0
Broadrick, 1b	4	0	2	11	0
Palmer, rf	3	0	0	2	0

McQuarrie, c	4	0	0	8	0
Smith, p	4	1	1	2	0
Totals	32	4	6	44	1

Palo Alto County (Iowa)

	AB	R	H	C	E
Compton, 2b	4	0	0	9	0
E. Eckert, 3b	1	0	0	4	0
Johnston, ss	4	0	0	4	0
Stafford, 1b	4	1	2	14	0
Frederick, rf	3	0	0	1	0
R. Eckert, ph	1	0	0	0	0
Merrill, cf	4	1	2	1	0
Bleuer, lf	3	1	0	3	0
Barber, c	3	0	1	5	1
Shriner, p	3	0	1	3	0
Totals	30	3	6	44	1

R. Eckert batted for Frederick in 9th.

Will County	100	120	000	—4
Palo Alto County	020	001	000	—3

Summary: 3 base hit—Stafford; Doubleplays—Johnston to Compton to Stafford; Wild Pitch—Shriner 3; Stolen bases—Seehausen; Struck out by Smith 4, by Shriner 6; Base on balls—off Smith 4; off Shriner 5; left on base Will County 6; Palo Alto County 5; Earned runs, Will county 4, Palo Alto County 2.

ILLINOIS FARM LEADER DIES

JOHN S. BUMGARNER, prominent member of Marshall-Putnam Farm Bureau, and a member of the Illinois Agricultural Association economic study committee, died Sept. 15. He was a former member of the Illinois state AAA committee starting in 1936. In 1941 he went to Washington as assistant to the director of the loan division of the north central region for the AAA. Shortly after the end of the second World War he returned to his farm in McNabb.

Mr. Bumgarner had always taken an active interest in farm problems and programs and made a worthwhile contribution to their solution and operation because of his sound judgment. His service on the IAA economic study committee was greatly appreciated by the Farm Bureau leadership.

Mr. Bumgarner was an organizer and president of the Marshall-Putnam Farm Bureau, director of the Marshall-Putnam Oil Company, member of the board of directors of the Farmers State Bank and McNabb Grain Company. He also was a director of the John Swaney High School. He was 69 at the time of his death.

BETTER CORN....

(Continued from page 20)

plowed under or sidedressed. (Plowing under has proven advantageous in cases of minor drouths. Sidedressed nitrogen is very efficient with plenty of rain).

6. Don't let the corn ripen too early while the weather is still hot. This occurs too often when corn starves from nutrients, especially nitrogen. (There is some observation, still not proven by adequate research, that the leaf disease Helminthosporium will be less damaging when the potash supply is adequate.)

7. Make use of a full season by having your corn remain active as long as you dare to risk escaping the frost line.

B. F. Kent, farm forester, Charleston, Coles county, and J. O. Howell, Crawford county farmer, select trees which are ready for harvesting.

Timber Farming

A Properly Managed Wood Lot Will Grow Timber Faster and More Profitably Than Mother Nature

By B. F. KENT
District Farm Forester, Charleston

POOR and destructive cutting practices are followed on 85 per cent of the farm woodlands in Illinois. Seventy per cent of the private forests are managed so that limited or no means of reproduction is left on land when timber is cut. If this condition continues, returns from our timberlands will not pay the taxes.

A properly managed forest or woodland will grow better timber faster than Mother Nature will grow it unassisted. This is done by selecting the kind of trees best adapted to the soil and climatic conditions and by growing the maximum number of desirable trees on an area to produce the largest volume of usable or merchantable products and still not cause stagnation.

An example of what a farmer can do with good woodland management is to be found on the Dick Noble farm of 130 acres located four miles south of Charleston in Coles county. Sixty acres of the farm is in timber and is fenced to keep out livestock. The timberland in general is rough, cut by many deep ravines with steep hillsides. The trees, mostly of the oak and hickory groups, are of average size with the average tree being 14 inches in diameter and will cut out 21 lineal feet of saw logs. The average tree will reach maturity of 18 inches diameter in about 70 years.

Here is Noble's experience in cutting timber from his lot after he had secured advice from the farm forester in his district. For equipment he had two rubber tired wagons, a tractor, block and tackle, saws and axes. His man power included himself, a hired man and a neighbor with whom Noble exchanges work. Work usually started about 8:30 in the morning after the chores had been done and continued until 4 o'clock in the afternoon. Two weeks were spent logging and hauling; also, one-fourth mile of fence was rebuilt during this same period.

The results of the two weeks' work were: 4,140 feet of lumber cut, 103 fence posts and 20 short cords of firewood were harvested. The tractor pulling two rubber tired wagons hauled the logs 10 miles to the saw mill. The lumber was sawed for $2 per 100 board feet.

The lumber was used for the frame of a barn which Noble rebuilt. Now if Noble had purchased the 4,140 feet of lumber at a local mill it would have cost him $310.50. The fence posts would have cost him $16.35. And he would have had to pay $60 for the firewood. These items total $116.35. Now let's take off the expenses. The sawing bill was $83, labor, $100, and tractor expense, $50, making a total of $233 of expenses. Taking $233 from the $116.35 retail price of the materials secured in the logging operation leaves a net income of $133.35 for two weeks' work.

How long can Noble continue to cut off his lot at this rate? A growth study was made on the 60 acres of timber and showed that each acre is producing 151 board feet per year. Eighty per cent of this can be harvested each year without depleting the stand. Twenty per cent is left to guard against insects, disease and breakage. This will make a total of 7,248 board feet as the annual growth which Noble can harvest from his timberland.

In short, Noble can continue to cut forever at his present rate of 4,655 board feet which includes 4,140 of lumber and 515 feet of fence posts. Very little of the firewood was cut from good growing trees. It was cut mainly from tops, defective and dead trees.

Many farmers are taking advantage of the chance to save money by doing their own cutting and logging and having the logs sawed into lumber for farm use. Each year the average farm will use 900 feet of wood for maintenance, new buildings and fence posts. Those farmers who have the rough land are growing their own wood, thereby saving money. With farm prices leveling off, more and more farmers are looking for ways to save or make money. Working in the timber is one way of doing this.

The district farm foresters, located in nine districts of the state, are anxious to help the woodlot owner manage his timber to increase his production of wood or wood products. If you do not know where to locate your district farm forester, consult your county farm adviser and he will get his address.

1949 Pig Crop Larger

THE total pig crop this year is 15 percent larger than for 1948, but total pork supplies are expected to be only about 10 percent larger. The reason is that so far this season hogs are going to market at lighter weights.

This report comes from E. J. Working, economist in the Illinois College of Agriculture.

Food Prices Down? Farm Prices Are!

(Continued from page 11)

There have been several studies made recently, by the bureau of agricultural economics, U. S. Department of Agriculture, and others, to indicate the portion of the retail food dollar that the farmer receives. One study indicated that a box of Delicious apples from the state of Washington sold in Chicago at retail for $5.13 during the 1947-48 season, returned the farmer $1.36. The difference was distributed as follows: Costs at the shipping point, $1.21; freight, 73 cents; auction, nine cents; wholesaler and retailer, $1.74. In other words, the farmer got 26 cents of the retail apple dollar, and the marketing system received the other 74 cents.

Another similar study showed that the Florida orange grower received 16 cents of the retail dollar for oranges sold in the spring of 1948 in Chicago. Other studies have indicated that when you pay 41 cents for a pound of pork (not center-cut pork chops), the farmer receives only 27 cents. When you pay 69 cents for a pound of butter, the farmer's share is only 49 cents. When you pay eight cents for a pound of white flour, the farmer gets only four cents.

These are further indications of the need for educating the consumers of the American market basket. The man who spends all of his time tilling the soil receives less than half of the consumer's food dollar. Why should the farmer, whether he be a producer of peaches, apples, corn, meat, or milk, be charged as being the sole contributor to the high cost of food?

Annual rate of retail cost of a "market basket" for a family of 3, and its division between farmers and marketing agencies for different periods of time with comparisons.

	Retail cost	Farm value	Marketing margin	Farmer's share of consumer's food dollar
	(dollars)	(dollars)	(dollars)	(cents)
1935-39 avg.	340	137	203	40
Dec. 1947	683	373	310	55
July 1948	708	375	333	53
Dec. 1948	663	339	324	51
July 1949	641	309	332	48
Changes:				
1935-39 avg. to Dec. 1948	+323	+202	+121	+11
June 1946 to Dec. 1948	+183	+ 85	+ 98	— 2
July 1948 to Dec. 1948	— 45	— 36	— 9	— 2
Dec. 1947 to Dec. 1948	— 20	— 34	+ 14	— 4
July 1948 to July 1949	— 67	— 66	— 1	— 5

How To Buy Limestone

(Continued from page 22)

Also the calcium carbonate equivalent or the percentage passing an eight mesh screen must be enough higher than 80 that a multiplication of these two factors will give at least .72. The material from a few quarries tested less than 80 per cent calcium carbonate equivalent. Several quarries are shown to offer material coarser than 80 per cent through an eight mesh screen. When the calcium carbonate equivalent and fineness of grinding for each quarry were multiplied together twenty-four quarries were below the .72 required. Most quarry operators expressed a willingness to correct deficiencies when they were brought to their attention, and subsequent samples usually showed an improvement. Multiplication of these two factors is a good numerical indicator of limestone quality.

The average CCE times fineness of the ninety-four quarries was 76.5. Fifty-seven is the lowest shown and ninety-four the highest. The highest possible would have beeen 105, had the highest testing material been ground to a fineness of 100 per cent through an eight mesh screen.

The standards of agricultural limestone in Illinois are much lower than in some other states which, for example, require a much finer grinding. However, the 80 per cent through an eight mesh screen and to include the fine material of grinding gives a lot of fine material which soon reacts with the soil acid. The somewhat coarser fragments allowed give a lasting quality which fits in with the Illinois system of permanent soil fertility. Application need not be made so often. On the other hand, particles much larger than an eight mesh size offer little surface exposure and are thus very slow in effectiveness. Pebble size limestone will probably last longer than the farmer. and he will likely "be pushing up daisies" before this size material will be pushing up his legumes.

Quarry price is not an indication of the quality of limestone. Prices vary from quarry to quarry because of the difference in production costs. Quarry prices range from one dollar to $2.40 per ton. Dirt overburden and other problems of production govern the price.

Investment in limestone returns greater profits than in any other fertilizer materials, however. Money spent for limestone can bring the best returns only if properly used. Several steps should be followed in the application of agricultural limestone:

1. Make soil tests. Soil tests will show not only how much limestone is needed but also need for phosphorus and potassium. The slogan "limestone is not enough" applies to many areas of the state. Good crop growth is obtained in many areas only if phosphorus or potash or both are also applied in addition to limestone.

2. Use limestone ahead of legumes. Plow under the legumes for cash or row crops.

3. Investigate the quality of limestone and use the most economical material. quality considered.

4. Request weight tickets on limestone spread. Experienced truckers say that a person can easily miss the weight of a truckload by 1,000 to 2,000 pounds when estimate is made on the volume on the truck rather than weighing.

5. Demand a good spreading job. Farmers have experienced gaps in the growth of legumes because spreading was uneven.

Only by buying on quality, demanding a good job of spreading, applying limestone and other materials in proper amounts according to soil tests, and using these materials in good rotations will the farmer get most returns from money spent for limestone and fertilizer materials.

ANNOUNCING

A NEW PRE-SEASON

GROW CROP PLANT FOOD

DELIVERY PROGRAM

WHO

Your Farm Bureau-type Grow Crop plant food distributor offers a new pre-season fertilizer delivery program which will be of interest to every Illinois farmer.

WHEN

This new pre-season delivery program becomes effective on December 1, 1949, and extends through February, 1950.

WHAT

By taking early delivery of Grow Crop plant foods, Illinois Farm Bureau members can save money on liberal pre-season discounts. Also, an ample supply of high-analysis grades can be had — without delay.

WHY

Pre-season orders and delivery help your Illinois Farm Supply Company plant at E. St. Louis maintain steady operation throughout the winter as well as spring months — they avoid late spring "rush" periods which boost production costs — and which may make it impossible to meet your plant food needs on time.

Regular operations without a "rush" — mean more savings and more Grow Crop higher analysis plant foods for you and all our Farm Bureau member patrons.

ADVANTAGES:

- **PRE-SEASON DISCOUNT**
  A liberal pre-season discount will be made on every ton of Grow Crop plant food delivered to your farm during December, January and February.
- **PRICE PROTECTION**
  Every purchase of Grow Crop plant foods delivered to the farm during December, January and February will be protected against price drops. If the price does drop you will receive the benefit of any lower price.
- **GUARANTEED CONDITION**
  Your Grow Crop distributor stands behind the physical condition of these plant foods. Properly manufactured — properly cured — Grow Crop plant foods are packed in heavy asphalt-lined bags to insure free-flowing whenever the bag is opened.

Inspect Your Electric Cords For Fire Hazards Before It Is Too Late

HAVE you checked your electric cords lately? Are they in perfect condition—an asset to your home? Or are they frayed and loose, inviting fire or serious shock?

It's a good time to check for such hazards in the home, advises Miss Gladys Ward, home management specialist, University of Illinois College of Agriculture. One in ten fires of known causes is of electrical origin.

Some safety rules to follow to prevent fires and home accidents are:

Keep a cord away from heat and water. Don't run cords under rugs; they'll get unnecessary wear and trip people. Wear may make them dangerous.

Never handle a cord with wet hands. Handle a wet cord only with a thick pad of dry cloth.

Put cords away free from kinks, knots, or sharp bends, Miss Ward says. Store them in a clean, dry and cool place. If you put cords in a drawer, be sure there's nothing in the drawer to cut the cord covering.

Be sure to employ a skilled electrician to repair or extend wiring when this is necessary. Do not use improper fuses. An overload of current may heat the wire to the point of starting a fire. Be sure your fuses are of correct amperage for the circuits—15 amperes usually are right.

MASCULINE FAVORITE

He'll like the three symmetric cables, the trim fit of this hand-knit sweater. Canary yellow or white yarn in a medium weight is a good choice. For free instructions on how to make this sweater in sizes 38, 40 and 42, send a self-addressed stamped envelope to Women's Editor, The Record, Illinois Agricultural Association, 43 East Ohio Street, Chicago 11, Illinois.

Veteran Physician Advises Rural Practice

YOUNG doctors are advised to spend a few years of their lives in rural areas by Dr. John Peter Johnson of Varna who was recently honored by his patients and friends with a party on his 75th birthday recently. Dr. Johnson is the only physician in the village of 500.

Many communities such as Varna are in real need of medical men to serve them in future years, he warned. A few years spent in small communities, he advised offer valuable experience to young doctors not gained so readily in larger places. Dr. Johnson was born in Sweden, came to the United States in 1893, and didn't become a doctor till he was nearly 40.

HOT MATS IN CHINTZ

Oval and round pieces of ready-quilted chintz make excellent mats for tucking under hot dishes and appliances. For added attraction, applique them with contrasting fabric cut-outs. For free instructions, send a self-addressed stamped envelope to Women's Editor, The Record, Illinois Agricultural Association, 43 East Ohio Street, Chicago 11, Illinois.

More Than 8,000 Youth of Illinois Attend Summer Camps in '49

MORE than 8,000 Illinois 4-H'ers and Rural Youthers attended one of their own summer camps this year.

F. H. Mynard, state 4-H extension specialist, reports that about 4,200 young folks enjoyed one-week outings at the four district camps. The others attended county, day, and local camps.

About 1,600 young people attended Camp Shaw-waw-nas-see, the northern Illinois district camp, near Kankakee. State 4-H Memorial camp near Monticello took care of 1,200 youth from east-central Illinois.

The western district camp at Lake Jacksonville had about 800 campers, while the southern district camp at Lake West Frankfort had 600. This is the first year in which these two camps have been used.

Mynard says that more than $200,000 has been raised to date in the 10-year drive for $1,000,000 to develop these four district camps for rural youngsters.

More Farmers Keeping Farm Account Records

THE simplified Illinois farm record book for keeping farm accounts is going over with a bang with young men.

George Whitman, farm management specialist in the Illinois College of Agriculture, reported today that high school vocational agriculture teachers and instructors of GI on-the-farm trainees ordered more than 5,000 copies of the record book in the last two weeks of September alone.

Whitman estimates that at least 10,000 young farmers will be using the record book this school year to keep records of their own farm business.

The simplified Illinois farm record book can be used in making up your income tax report, as a basis for getting credit, and in studying your farm business. Ask your farm adviser at the County Farm Bureau about this account book.

for HOMEMAKERS

Recommend Cooking Time Of One-Half Hour Per Pound for all Pork Cuts

PORK is plentiful these November days and it is a good, nutritious food. Whether your choice is roast, steak, or chops, check the cooking time carefully.

Miss Grace Armstrong, nutritionist, University of Illinois College of Agriculture, reminds us that all pork—regardless of cut—should be cooked to the well-done stage. A small percentage of hogs contain the parasite which causes trichinosis if the pork is not cooked well. Thorough cooking makes these parasites harmless—just as pasteurization kills harmful bacteria in milk.

One-half hour of cooking time per pound of pork is a good allowance for hams and other large cuts of pork. To check for doneness, make a small incision next to the bone and also in the thicker part of the meat. Fresh pork cooked to the well-done stage is grayish in color—not pink.

HAND-KNITS

One prettily flared skirt, two separate toppers, and your youngster is well ahead with her wardrobe. This three-piece knitwear features a candy-stripe jacket which buttons up the front to a pointed collar. All three pieces knit up quickly in worsted floss. For free instructions in sizes 8, 10, and 12, send a self-addressed stamped envelope to Women's Editor, The Record, Illinois Agricultural Association, 43 East Ohio Street, Chicago 11, Illinois.

CROCHET GLOVES

You can make these attractive gloves yourself with some pearl cotton and a crochet hook. Choose a pretty pastel that will complement your suits and dark dresses. For free instructions, send a self-addressed stamped envelope to Women's Editor, The Record, Illinois Agricultural Association, 43 East Ohio Street, Chicago 11, Illinois.

This is the Season for Taffy Apples; Here is Good Recipe

EVER make taffy apples? They rate high with the younger set, and they are easy to make. Once the taffy or syrup is ready, they can be turned out by the dozen, and quickly. Not-too-young children will enjoy lending a hand.

Select firm ripe apples that are not too large. Be sure they are free from imperfections. Wash and stem and run a wooden skewer into the center of each. Metal skewers tend to discolor the apple and give it an off-flavor.

To prepare the syrup or taffy, combine 1 cup granulated sugar, 1 cup brown sugar, 1 tablespoon lemon juice or vinegar, and ½ cup hot water. Mix thoroughly and boil to 290° F., or until it cracks when tested in cold water.

Place the syrup over boiling water to keep it hot and to prevent hardening. A double boiler is a good utensil to use. Dip the apples in the syrup, coating each one thoroughly. Stand them on wax paper to cool.

Now is Time to Check Your Winter Coat Says Extension Adviser

CHECK your winter coat now to see if the lining needs to be replaced. It is easy to reline it yourself if you take time to do careful work, say clothing specialists at the University of Illinois College of Agriculture.

Use the old lining as a pattern for making the new one. Before you rip out the old lining, use thread or chalk to mark notches on sleeves and armholes to be matched when setting in the new lining. Also, mark points on the sleeve lining where elbow fullness begins and ends.

Now you're set to rip out the old lining. Be careful not to cut, tear or stretch it at the seams. Mark all the darts. Press the best sleeve and front, and the whole back.

Lay out the lining pieces in a space 39 inches wide to estimate the yardage needed. Allow for a 1-inch pleat down center back. Usually twice the coat length plus the sleeve length is ample for a straight coat. However, it is safest to measure from the old lining for exact yardage.

Complete directions and illustrations for doing the relining job are included in the bulletin, "Put a New Lining in Your Old Coat." Ask your home adviser for it, or write to the College of Agriculture, University of Illinois, Urbana.

STORING APPLES

Store Apples Carefully, says Miss Grace Armstrong, nutritionist, University of Illinois College of Agriculture. They keep their crisp quality longer in a cool, moist place. Too warm a temperature will make them mealy and soft.

Keep small quantities in the refrigerator. Store boxes and baskets and other wholesale-sized containers in a cool, well-ventilated cellar or on a sheltered back porch. The cooler the storage place, the better, so long as the temperature does not go below 32° F.

Oval and round pieces of ready-quilted chintz make excellent mats for tucking under hot dishes and appliances. For added attraction, applique them with contrasting fabric cut-outs. For free instructions, send a self-addressed stamped envelope to Women's Editor, The Record, Illinois Agricultural Association, 43 East Ohio Street, Chicago 11, Illinois.

More Than 8,000 Youth of Illinois Attend Summer Camps in '49

MORE than 8,000 Illinois 4-H'ers and Rural Youthers attended one of their own summer camps this year.

F. H. Mynard, state 4-H extension specialist, reports that about 4,200 young folks enjoyed one-week outings at the four district camps. The others attended county, day, and local camps.

About 1,600 young people attended Camp Shaw-waw-nas-see, the northern Illinois district camp, near Kankakee. State 4-H Memorial camp near Monticello took care of 1,200 youth from east-central Illinois.

The western district camp at Lake Jacksonville had about 800 campers, while the southern district camp at Lake West Frankfort had 600. This is the first year in which these two camps have been used.

Mynard says that more than $200,000 has been raised to date in the 10-year drive for $1,000,000 to develop these four district camps for rural youngsters.

More Farmers Keeping Farm Account Records

THE simplified Illinois farm record book for keeping farm accounts is going over with a bang with young men.

George Whitman, farm management specialist in the Illinois College of Agriculture, reported today that high school vocational agriculture teachers and instructors of GI on-the-farm trainees ordered more than 5,000 copies of the record book in the last two weeks of September alone.

Whitman estimates that at least 10,000 young farmers will be using the record book this school year to keep records of their own farm business.

The simplified Illinois farm record book can be used in making up your income tax report, as a basis for getting credit, and in studying your farm business. Ask your farm adviser at the County Farm Bureau about this account book.

for HOMEMAKERS

Recommend Cooking Time Of One-Half Hour Per Pound for all Pork Cuts

PORK is plentiful these November days and it is a good, nutritious food. Whether your choice is roast, steak, or chops, check the cooking time carefully.

Miss Grace Armstrong, nutritionist, University of Illinois College of Agriculture, reminds us that all pork—regardless of cut—should be cooked to the well-done stage. A small percentage of hogs contain the parasite which causes trichinosis if the pork is not cooked well. Thorough cooking makes these parasites harmless—just as pasteurization kills harmful bacteria in milk.

One-half hour of cooking time per pound of pork is a good allowance for hams and other large cuts of pork. To check for doneness, make a small incision next to the bone and also in the thicker part of the meat. Fresh pork cooked to the well-done stage is grayish in color—not pink.

HAND-KNITS

One prettily flared skirt, two separate toppers, and your youngster is well ahead with her wardrobe. This three-piece knitwear features a candy-stripe jacket which buttons up the front to a pointed collar. All three pieces knit up quickly in worsted floss. For free instructions in sizes 8, 10, and 12, send a self-addressed stamped envelope to Women's Editor, The Record, Illinois Agricultural Association, 43 East Ohio Street, Chicago 11, Illinois.

CROCHET GLOVES

You can make these attractive gloves yourself with some pearl cotton and a crochet hook. Choose a pretty pastel that will complement your suits and dark dresses. For free instructions, send a self-addressed stamped envelope to Women's Editor, The Record, Illinois Agricultural Association, 43 East Ohio Street, Chicago 11, Illinois.

This is the Season for Taffy Apples; Here is Good Recipe

EVER make taffy apples? They rate high with the younger set, and they are easy to make. Once the taffy or syrup is ready, they can be turned out by the dozen, and quickly. Not-too-young children will enjoy lending a hand.

Select firm ripe apples that are not too large. Be sure they are free from imperfections. Wash and stem and run a wooden skewer into the center of each. Metal skewers tend to discolor the apple and give it an off-flavor.

To prepare the syrup or taffy, combine 1 cup granulated sugar, 1 cup brown sugar, 1 tablespoon lemon juice or vinegar, and ½ cup hot water. Mix thoroughly and boil to 290° F., or until it cracks when tested in cold water.

Place the syrup over boiling water to keep it hot and to prevent hardening. A double boiler is a good utensil to use. Dip the apples in the syrup, coating each one thoroughly. Stand them on wax paper to cool.

Now is Time to Check Your Winter Coat Says Extension Adviser

CHECK your winter coat now to see if the lining needs to be replaced. It is easy to reline it yourself if you take time to do careful work, say clothing specialists at the University of Illinois College of Agriculture.

Use the old lining as a pattern for making the new one. Before you rip out the old lining, use thread or chalk to mark notches on sleeves and armholes to be matched when setting in the new lining. Also, mark points on the sleeve lining where elbow fullness begins and ends.

Now you're set to rip out the old lining. Be careful not to cut, tear or stretch it at the seams. Mark all the darts. Press the best sleeve and front, and the whole back.

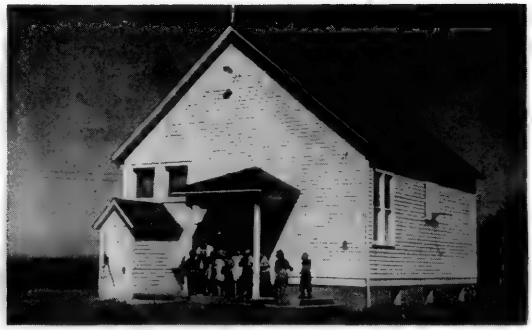
Lay out the lining pieces in a space 39 inches wide to estimate the yardage needed. Allow for a 1-inch pleat down center back. Usually twice the coat length plus the sleeve length is ample for a straight coat. However, it is safest to measure from the old lining for exact yardage.

Complete directions and illustrations for doing the relining job are included in the bulletin, "Put a New Lining in Your Old Coat." Ask your home adviser for it, or write to the College of Agriculture, University of Illinois, Urbana.

STORING APPLES

Store Apples Carefully, says Miss Grace Armstrong, nutritionist, University of Illinois College of Agriculture. They keep their crisp quality longer in a cool, moist place. Too warm a temperature will make them mealy and soft.

Keep small quantities in the refrigerator. Store boxes and baskets and other wholesale-sized containers in a cool, well-ventilated cellar or on a sheltered back porch. The cooler the storage place, the better, so long as the temperature does not go below 32°.



Left: One of the abandoned one-room schools in the Paxton unit district. Right: The Hall school, one of the one-room schools in the district being used by the first four grades. It has been modernized.

Does the Unit District Work?

(Continued from page 17)

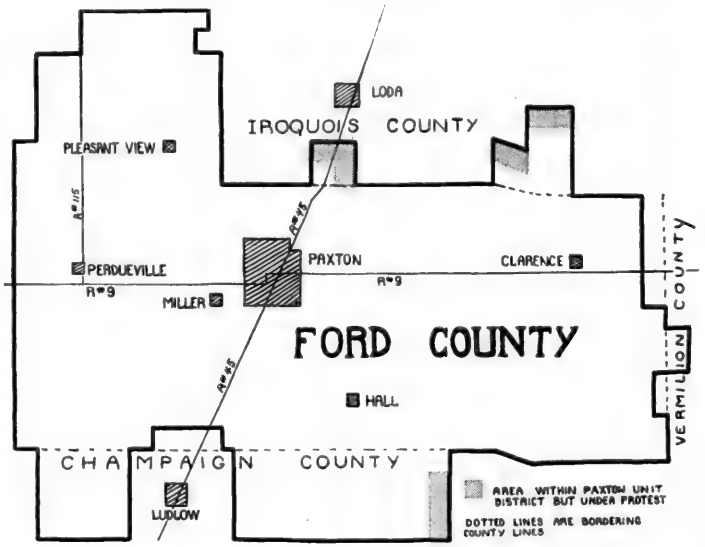
$395.56. The Blake school district is now part of the new Paxton unit district.

But with the union of grade and high school under one admistration, more high school programs can be extended downward with very little jurisdictional trouble. The transition, therefore, from grade to high school will be much smoother for the pupil than it has been in the past. The nurse examines both grade school and high school pupils alike. She visits the outlying rural grade schools regularly. The physical education instructor does likewise and helps organize sports programs in the lower grades that were not possible before. Grade school pupils take part in the band work that was formerly limited to high school students.

To show how the lower grade satellite schools in the country benefit, each has had a remodeling and redecorating job. All have indoor lavatories and telephones. If a child takes sick, a call to the school office in Paxton will bring the school nurse with little loss of time. With a school car she can drive the sick child home in a few minutes.

By consolidating the school system, these one-room satellite schools also benefit from the fact that a janitor-bus driver can be shared. The Paxton unit is fortunate in having a dependable driver-janitor, Floyd Shunk, who works full time. Out in the country he makes visits to the schools, makes minor repairs to schoolhouse and playground equipment, paints, moves furniture, and cleans and polishes floors. In cold weather he banks school fires on Sunday nights so the schoolroom will be warm for teacher and children on Monday morning. Shunk also does light maintenance on school buses.

You don't have to be an expert on



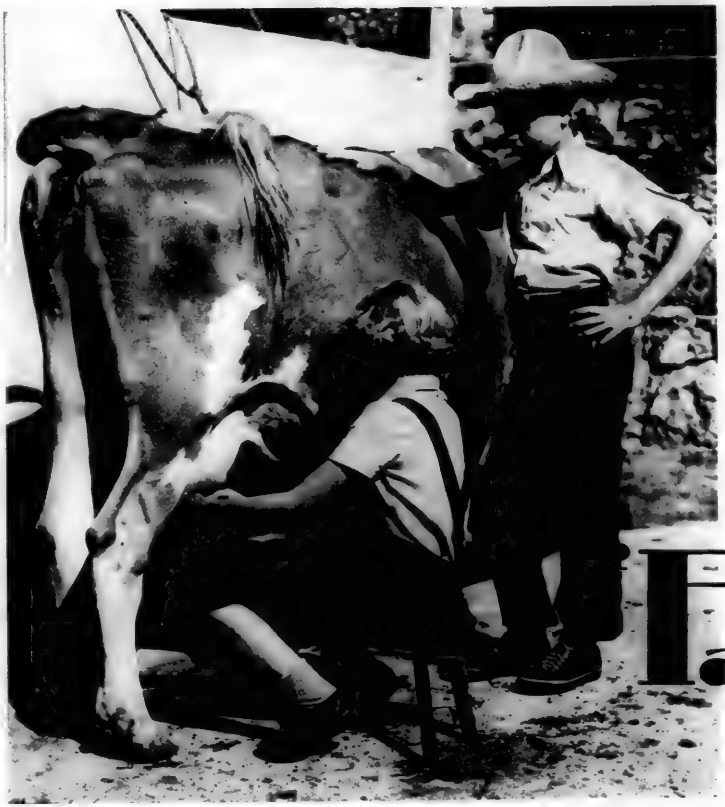
schools to see the improvements. Many in the village of Clarence were opposed to the idea at first of consolidating with the neighboring school districts. They were skeptical about the proposed advantages. When the advantages became obvious to the parents of Clarence schoolchildren, they insisted that their children be included too.

Under the unit district system at Paxton farmers have much to say about school policy. Five of the seven school board members are farmers and two others who live in Paxton are owners of farms.

What can we conclude from the Paxton experiment thus far? In the first place it has the warm endorsement of both students and teachers. Second, it is superior to the former system because it offers, to rural children in particular, a wide range of modern school subjects and outside activities. It gives them a better chance to develop character, sportsmanship, and sociability through wider contacts with children of their own age. And it gives the handicapped child a better opportunity to adjust his handicaps and attitudes to everyday life with his classmates.

Finally, through efficient use of time, teachers, materials, and the school plant, the 12-grade unit at Paxton is able to offer much more at about the same cost. To a tax-conscious public this last point is by no means the least.

These three points are certain to carry a great deal of weight in the development of the 12-grade unit district throughout Illinois. Enough, we might say, to predict the eventual elimination of the dual system (grade and high schools separate) of school administration throughout most of the state.



Facts of LIFE"

...and LIFE INSURANCE

How these youngsters love to help make the wheels go 'round. And how GROWN-UP they feel when they start to milk! Yes, Dad knows how helpless they would be to carry on without him. But that's HIS secret! He and his Country Life Insurance representative took care of that years ago with a strong Country Life Insurance program. Should Dad be taken, these youngsters will be well provided for.

Dad never misses the few dollars his Country Life Insurance costs. Nor does he ever know the fears, the uncertainties some of us have whose families aren't protected by life insurance.

We suggest you see your local insurance service representative or call the Country Life office at your county Farm Bureau, for appointment.

Good? You bet he'll be; something to be REALLY thankful for. Like the Pilgrims on the first Thanksgiving, you'll celebrate with a festive table loaded down with good things to eat. Like the first Thanksgiving, too, you will give thanks for the land that made this good year possible. For the bumper crops that paid for the new tractor, put money in the bank. And if you're counting all your blessings, you will give a silent thanks for Farm Bureau and the many benefits it has brought in broadened opportunities in a stronger agricultural America.

THE STATE FARM BUREAU PUBLICATION

Security vs Opportunity

ONE OF OUR BOYS has a purebred dairy heifer as a 4-H project. He has done everything possible to provide for her security. She has a warm stall, plenty of feed and water, and even a life insurance policy, yet she is not satisfied as evidenced by her habit of crawling through the fence. She prefers the opportunity for companionship, for new experiences, for greener pastures to all of the comforts and security that loving hands can provide.

Charles B. Shuman

OUR ancestors who fought in the Revolutionary War to secure their independence from England were somewhat like that heifer. England offered the colonies supervision and security. The authors of the Declaration of Independence had nothing to offer their followers except freedom and opportunity. Fortunately the American colonies chose the more hazardous route and the greatness of this nation is largely based upon our constant search for ever broader opportunities.

WITH ALL OF THIS history to guide us it is rather surprising to hear the present clamor for more and more security. Have we forgotten that the two are not compatible — that we cannot have a maximum of both security and opportunity? If we wish to preserve America as the land of opportunity, we must not insist on a program of security from the cradle to the grave. However, I believe there is some middle ground. Certainly there is need for the protection by government of those who through no fault of their own are unable to continue to exist without assistance.

THERE ARE DANGERS involved when we turn to government for security for those other than the helpless. If government is to provide security it must be given the power to supervise. How else could we be assured of equality of treatment? If we really prefer complete security we must be ready to accept a new philosophy of government — the theory that the state owes its citizens a guaranteed income. From this theory it might be assumed that no one should be penalized for failure and that nobody should benefit by success.

I AM SURE that most farmers are like that 4-H Club heifer. They would favor the use of security programs as a protection against dire need but would prefer the freedom that can only come with opportunity.

Charles B. Shuman

Editor, IAA RECORD

START NEW FARM PROGRAM JAN. 1

NEW FARM PLAN PROBABLY WILL HAVE FAR-REACHING EFFECT ON ILLINOIS PRODUCERS

A NEW farm program goes into operation on Jan. 1, 1950, which probably will have a far-reaching effect on the operations of Illinois producers during the months ahead.

It appears quite likely that corn acreage allotments will be in force in 1950. Farmers are being asked to report the acreage of all principal crops grown in the past three seasons. The report forms which are to be turned in to PMA (formerly AAA) committees asks for acreage planted to both soil building and soil-depleting crops.

The new farm program provides for price supports of 90 per cent of parity for the six basic crops, including corn and wheat, provided acreage allotments or marketing quotas are in effect in 1950. If a vote is taken on marketing quotas and producers turn them down, the support level to those who stay within their acreage allotments will be only 50 per cent.

There is considerable difference between acreage allotments and quotas. If marketing quotas are voted in 1950 on corn, it will mean that producers will be given a quota on how many bushels of these crops they can sell based on acreage allotments and yields. There has never been a marketing quota on corn, and a wheat quota was voted only twice in Illinois. The Secretary of Agriculture is given until Feb. 1, 1950 to determine whether or not marketing quotas will be needed on the 1950 corn crop. If he decides they are needed, then an election would have to be held among producers to tell whether or not corn growers would approve marketing quotas.

Acreage seeded to wheat this fall is being measured by PMA committeemen to determine if producers are within their 1950 acreage allotments. To get wheat support loans and purchase agreements, producers have to stay within their acreage allotments.

The new farm program, known as the 1949 Agricultural Act, was passed by Congress in October and signed by President Truman in November. It shows the results of many months of debate, hearings and testimony. It is a compromise farm program and there are several points on which the Illinois Agricultural Association and Farm Bureau representatives voiced opposition when they appeared in person to testify during Congressional Committee hearings in Washington.

The IAA objected to the continuation of high price support levels in 1950 on basic crops because they are likely to necessitate drastic controls on farm production. Objection also was raised to the provision permitting the alternate use of parity formulas depending on which results in the highest support level.

The IAA and Farm Bureau won a partial victory in that the flexible support principle is included in the new farm program to go into full effect by 1952.

In commenting on the new farm program, IAA President Charles B. Shuman said credit was due the senior senator for Illinois, Scott W. Lucas for his fight to represent the Farm Bureau position in the debates in Congress. Senator Lucas as majority leader in the Senate, together with Sen. Clinton P. Anderson, were largely responsible for keeping the farm program out of partisan politics. It was also through their efforts together with effective support from midwestern members of Congress that the principle of the flexible price supports was preserved.

The IAA has consistently opposed rigid high support proposals which would require a completely government administered agriculture. While the recent compromise agricultural legislation does not, in the opinion of the IAA, improve the agricultural program, it should serve as a basis for settling the argument between those who want flexible support prices and those who desire rigidly administered prices.

A group of certain non-basic commodities are given price supports under the new farm program. Levels are to be determined by the Secretary of Agriculture within maximums and minimums set out in the law.

Shorn and pulled wool is to be supported at 60 to 90 per cent of parity as the Secretary determines necessary to result in an annual production of 360 million pounds.

Whole milk, butterfat, and the products of these commodities have a support of 75 to 90 per cent of parity.

The Secretary of Agriculture is directed to use either the old or the modernized parity, whichever gives the higher level, in figuring supports on the basic crops, such as corn and wheat.

On a number of commodities which are not included among the basic crops and not among the non-basic crops mentioned in the new law, there are no minimum price supports provided, and supports can be all the way from zero to 90 per cent of parity.

Under the farm program in effect this year, the minimum support is 90 per cent for hogs, chickens and eggs. The government has promised to support hogs at 90 per cent until March 31, 1950.

Nehru Visits Illinois Farms

Indian Prime Minister is Greatly Impressed by Our High Production

A LEADER greatly interested in farming and farm people. That's how three Kendall County Farm Bureau members described Jawaharlal Nehru, prime minister of India, after he recently made an inspection tour of their farms.

Accompanying Nehru were his sister, Mme. Vijaya Pandit, ambassador to the United States, and his daughter, Mrs. Indira Gandhi. The trip took them along the Fox River valley near Yorkville and Oswego to the farms of Albert Mighell, William Smith and Glen Peterson.

The ruler of 330 million Indians made the tour to view modern farming practices that might help Hindu farmers grow enough food for the people in a land that often knows famine.

A comparison of farming methods here and in India also was a topic of discussion between the prime minister and his Kendall county farm hosts.

On seeing the Hereford yearlings in the Mighell barn lot, the Indian premier said: "If an Indian farmer fed one steer the produce of his farm, he would have nothing left at the end of the year for his family to eat except the beef from the steer."

Other comments on differences in the farm life of the two regions pointed out by Nehru were:

"Much corn is raised in India, but most of it is eaten by the people. They are vegetarians not only because of religious beliefs, but also because the land will not support both livestock and the huge population.

"Corn in India is short and the kernels are more like blisters than the kernels on Illinois corn.

"The average farm in India contains only one or two acres.

"Manure is used as fuel, so it can't be applied back to the land."

Mme. Pandit showed another difference in corn production when she said that most of the work of planting, cultivating and husking is still done by hand in India. Corn yield is much higher here than there, she declared.

The corn supply is low in India, Mme. Pandit stated, because the state of Pakistan, biggest corn growing area, is now separated from India.

Some of the things about Illinois farm life that impressed Nehru were the surplus grain storage, the number of acres in a farm and the amount of livestock and food that one farm produced.

He said India had a great need for farm machinery but farmers couldn't afford it. Improved varieties and hybrids in grain would greatly benefit Indian food production, according to Nehru. He stated he thought introduction of artificial insemination would help in some areas of his country.

He was surprised that farmers lived right on their farms instead of in town. The activities of 4-H clubs and FFA groups drew favorable comment from the Indian leader.

Nehru was impressed with the school bus that picked up the farm children and took them to school. Methods of controlling the corn borer also drew his careful attention.

During the tour, farmers from neighboring areas joined the group showing the Hindu leader around the three farms. They noted his keen interest in modern farm machinery.

(Continued on page 23)

Kendall County Farm Bureau member W. A. Smith has the pleasure of a visit to his farm by Jawaharlal Nehru, the prime minister of India, during his visit to the Midwest in late October. Woman in center is Mrs. Ole Erickson.

The prime minister of India, his sister and daughter pose in an informal family group with the Albert Mighell family during visit to Kendall county. Back, left to right: Nehru, Mrs. Mighell, Mrs. Vijaya Pandit, Nehru's sister; Mr. Mighell. Front: Ada Mighell, Mrs. Indira Gandhi, Nehru's daughter; Ellen Mighell, and Albert Mighell.

A Kendall county farm boy, Keith Peterson, shows the prime minister of India part of an ear of Illinois corn which the prime minister admired for its large kernels. At the boy's left is Mme. Pandit, Prime Minister Nehru's sister and ambassador to the U.S. from India.

Indian Prime Minister is Greatly Impressed by Our High Production

A LEADER greatly interested in farming and farm people. That's how three Kendall County Farm Bureau members described Jawaharlal Nehru, prime minister of India, after he recently made an inspection tour of their farms.

Accompanying Nehru were his sister, Mme. Vijaya Pandit, ambassador to the United States, and his daughter, Mrs. Indira Gandhi. The trip took them along the Fox River valley near Yorkville and Oswego to the farms of Albert Mighell, William Smith and Glen Peterson.

The ruler of 330 million Indians made the tour to view modern farming practices that might help Hindu farmers grow enough food for the people in a land that often knows famine.

A comparison of farming methods here and in India also was a topic of discussion between the prime minister and his Kendall county farm hosts.

On seeing the Hereford yearlings in the Mighell barn lot, the Indian premier said: "If an Indian farmer fed one steer the produce of his farm, he would have nothing left at the end of the year for his family to eat except the beef from the steer."

Other comments on differences in the farm life of the two regions pointed out by Nehru were:

"Much corn is raised in India, but most of it is eaten by the people. They are vegetarians not only because of religious beliefs, but also because the land will not support both livestock and the huge population.

"Corn in India is short and the kernels are more like blisters than the kernels on Illinois corn.

"The average farm in India contains only one or two acres.

"Manure is used as fuel, so it can't be applied back to the land."

Mme. Pandit showed another difference in corn production when she said that most of the work of planting, cultivating and husking is still done by hand in India. Corn yield is much higher here than there, she declared.

The corn supply is low in India, Mme. Pandit stated, because the state of Pakistan, biggest corn growing area, is now separated from India.

Some of the things about Illinois farm life that impressed Nehru were the surplus grain storage, the number of acres in a farm and the amount of livestock and food that one farm produced.

He said India had a great need for farm machinery but farmers couldn't afford it. Improved varieties and hybrids in grain would greatly benefit Indian food production, according to Nehru. He stated he thought introduction of artificial insemination would help in some areas of his country.

He was surprised that farmers lived right on their farms instead of in town. The activities of 4-H clubs and FFA groups drew favorable comment from the Indian leader.

Nehru was impressed with the school bus that picked up the farm children and took them to school. Methods of controlling the corn borer also drew his careful attention.

During the tour, farmers from neighboring areas joined the group showing the Hindu leader around the three farms. They noted his keen interest in modern farm machinery.

Are You STARVING Your CATTLE?

CALVES and yearlings do not do as well in corn-belt feed lots as they did 10-30 years ago. They gain slower because "the quality of the grain is not what it was 20 years ago. I definitely think a cow can stand at a corn crib on some corn-belt farms and slowly starve to death."

These claims highlighted the 21st Cattle Feeders' Day in late October at the Illinois College of Agriculture. The speaker was C. E. Johnson, former Iroquois county, Illinois, farm adviser and cattle feeder who now is growing feeder calves in Colorado. He spoke on "What the Rancher and Corn-Belt Feeder Have in Common."

More than 1,500 cattle men also heard R. W. Grieser, Chicago Producers' Commission declare that prolonged strikes in steel and coal would hurt fat cattle prices. But when the strikes are settled, the immediate future for well-fed cattle prices will be bright.

And the importance of low-cost, high-protein pastures in a steer feeding program was emphasized in reports by R. R. Snapp, head of beef cattle work at the college, and R. J. Webb, superintendent of the Dixon Springs Experiment Station in southern Illinois.

A. F. Grandt, agronomist, reported on college tests in pasturing steers on strip-mine "spoil banks" which had been reseeded, and Fred Francis explained the amount of feed needed to finish choice heifer calves to good, choice, and prime carcass finish.

Johnson called on his audience to "be crusaders in the movement" back to a grassland-livestock type of farming.

"Soil mining can't go on forever," he asserted, "and you cattle feeders know it. You stockmen are going to have to lead and show the way back to soil building or your entire agriculture is going to suffer.

"My records as a feeder in Iroquois county, Illinois, disclosed that it took over 14 per cent more corn to put on 100 pounds of beef in 1946 than in 1936," Johnson declared. "Assume that it took only seven per cent more. A seven per cent decline in 10 years is a lot in terms of the life of a county, state, or nation. That would be 70 per cent in 100 years.

"I bought 40,000 to 60,000 bushels of corn a year. It all came from grain farmers, as livestock men had none to sell. Iroquois county is a surplus grain area. The average farmer does not feed any livestock and so doesn't produce any manure. The same is true of many Illinois counties. True, you use fertilizers, a little clover, but in general your luck has about run out on raising quality feeds on 'farmed-out' land.

"I tried to protect myself by buying corn from limed, phosphated, and clovered land. There just wasn't enough corn available from this sort of land. I finally decided I was too old to do anything about it and moved. Truly it was a deciding factor in my leaving Illinois.

"I may be old-fashioned but, coming back after three years, the thing I notice most is the number of farms that have no livestock. Many farms with no fences can't even care for a milk cow. All the experimental evidence to the contrary, no substitute has been found for manure as a soil builder, and soil is basic."

Johnson claimed that manure was largely responsible for consistent yields of 100 to 125 bushels of corn an acre in northern Colorado and the Arkansas valley. Four tons of alfalfa an acre is common.

True, they irrigate, Johnson admitted, but their grain is off alfalfa sod that has had manure, tons of it to the acre. The grain is high in protein and minerals. Good feeders are making gains of nearly three pounds a day on their cattle, he said.

In presenting the "Beef Cattle Outlook," Grieser felt that despite the threat of strikes, "we have a very good slaughter cattle market now, and the prospects seem to point to another profitable year for the better-than-average cattle feeder."

The veteran Chicago cattle buyer noted that the rate of national income now is high, and general business conditions for the coming year are by far the chief factor that will govern cattle prices because the supply will not change much. He said that if the big strikes were settled soon, there would be a good prospect of making a profit this year in short-feeding two-year-old steers and yearling heifers."

In his report, R. R. Snapp explained one test in which 60 steers made 68 per cent of their 490-pound gain during a 12-month feeding period on pasture and roughage.

"Our gains in the 1948-49 feeding trial were the cheapest we've ever been able to make during three tests of this feeding system," Snapp said. "The estimated feed cost per 100 pounds of gain was only $16.55."

Webb explained the strong and weak points of eight different methods of handling cattle that were tested at Dixon Springs Station.

Grandt reported that steers gained almost as well on stripmine "spoil banks" that had been reseeded to legume-grass pasture as similar steers grazing on native bluegrass or improved pasture.

Francis' report showed that it does not pay to finish heifer calves to any higher carcass finish than their starting live grade, because the cost of gain is too high.

GRASSLAND FARMING?

A steep slope tied down with an excellent pasture of ladino clover and timothy is examined by Punk Anderson and Donald Davis. USDA Photo

By EVART VANDER MEULEN
Director, Field Service Division, Producers Seed Co.

"TURN TO GRASSLAND FARMING NOW"!! It is a way of farming in which level fields are used for cultivated crops in rotation with productive forages. Rolling fields are kept in grass as long as possible. "Washing" hillsides are held in grass all the time, and the steepest slopes are left permanently in protecting woods.

E. Vander Meulen

Grassland farming is a well balanced system of farming. Its success depends upon having an abundance of economically produced and effectively used hay and pasture forage. This calls for sound cropping and soil conserving practice, planned to avoid waste of fertility by erosion, leaching and excessive plowing. It aims not only to maintain the fertility of the soil, but to increase and improve it.

Grass in the concept of grassland farming is not limited to the grasses; it embraces also their common associates of the legume family — the clovers, lespedeza, alfalfa, and many others.

Good legumes and grasses mean good farming. Little head-way can be made in real soil improvement and conservation, or efficient dairy and live-stock production, without adequate acreage of high yielding and high quality legumes and legumes-grass mixtures.

Except for a few areas in the state a large percentage of farms fall far short in both acreage and yield of legumes and grasses. For the past decade we have been taxing our soils to the utmost and beyond the danger point. Illinois farmers should look to the future and consider again the land and its management — this time as never before in terms of grass. For around grass, farmers can organize general crop production so as to promote effective practices that lead to permanency in agriculture.

Grassland farming by its very nature must be planned with a long time program. It needs increased acreage of superior and well adapted forage crops. These should be combined when necessary with proper soil and water conserving practices. Grassland farming in Illinois is a way of farming whereby:

More land is in grass most of the time, some land is in grass all of the time.

More consideration is given to increased production and seeding of high quality forage, harvested at the right time and with a minimum of loss. This will require increased acreage of improved pasture and hay fields.

Cultivated crops are restricted to the less erodable soils and are planted less frequently in rotation.

Corn and grain when used in rotations will be more productive because of the soil saving and soil improving effects of preceding crops of productive forages.

Good farming practices are continuously followed. These include longer rotations, manuring, liming, fertilizing, strip cropping, terracing, contour plowing and cultivation, and drainage where necessary. In such a program, forage, whether used for pasture, hay, grass silage, or soil improvement, is worthy of culture on good land.

A reserve of organic matter will be built and maintained in the "soil bank" against the day when more intensive production of cultivating crops may be necessary.

Research workers and nature have given us improved varieties of grasses and legumes. These varieties have a definite place in our grassland farming, with a particular feature of being more productive, or more cold or heat-resistant, or more disease-resistant, or more tolerant to less fertile soils, or more compatible with a companion crop. We will innumerate only a few that have been given to us in the past decade.

Alta and Kentucky 31 Fescue — Improved strains of tall fescue adapted to a wide diversity of soil and climatic conditions. An excellent pasture grass for use with legumes such as ladino clover, lespedeza and others. Recommended principally for the southern half of the state on land where they are not able to grow brome grass successfully.

Brome grass (southern strains), Auchenbach, Lincoln, Fischer and *Elsberry* — Strains well adapted to the entire state of Illinois having the following advantages over the northern domestic or Canadian strains: (1) more resistance to summer heat, especially in seedling stage, (2) spread more rapidly, (3) start growth earlier in the spring, (4) yield more forage, (5) more drought resistant.

Ladino Clover — A giant form of White Dutch adapted to the more fertile, moisture holding soils of the state. It has proven to be an excellent pasture legume and used principally with grasses.

Left to right: W. G. Kammlade, newly-appointed associate director of Extension Service in agriculture and home economics; Mrs. Spitler; and J. C. Spitler, former associate director who retired this fall after 32 years of service.

J. C. Spitler, (center) is congratulated on his retirement after 32 years with the Extension Service by H. P. Rusk, (left) dean of the College of Agriculture, and H. C. Wheeler, farm adviser in Lawrence country for 29 years.

Tribute to Spitler

Dean Rusk, Farm and Home Advisers, Other Extension Service People Acclaim J. C. Spitler's 32 Years Of Devotion to Farm Folks of Illinois

"IT'S BEEN a real privilege to work with all you Extension folks over the years, and I only hope I can continue to be of service as long as the good Lord will let me."

With these words, J. C. Spitler, retiring associate director of the University of Illinois Extension Service in agriculture and home economics, sat down. More than 400 farm and home advisers and other extension workers rose in standing tribute and applauded for several minutes the man who was ending 32 years of service to Illinois farm folks.

This incident climaxed the Recognition banquet for "J. C." last October at the Illini Union building on the University campus at Urbana. If there had been room, some 200 more friends of his would have attended the dinner which was held during the annual fall extension conference so all farm and home advisers could join in tribute to "J. C."

Earlier in the evening warm words of appreciation had come from H. P. Rusk, dean of the College of Agriculture, speaking for the college; H. N. Myers, DeWitt county farm adviser and president of the Farm Advisers' Association, speaking for that group; and Mrs. Hazel Adams, McDonough county home adviser and president of the Home Advisers' Association, speaking for that group.

And J. D. Bilsborrow, assistant state leader of Farm Advisers, speaking "For Everyone," had presented "J. C." with a bound volume of more than 200 testimonial letters from his friends all over the country.

C. S. Tenley, representative of the U. S. Department of Agriculture, also had given the retiring associate director a bronze lapel pin representing 20 years of service and a certificate signed by Secretary of Agriculture Charles F. Brannan.

In commenting on "J. C.'s" work, Dean Rusk said: "No other man has served the Extension Service in Illinois in so many different capacities for so many years as has J. C. Spitler. And his influence has steadily grown over this long period of service.

"I could say many complimentary things about Spitler as a man, as a citizen, and as an administrator and colleague. But to my mind, no more sincere expression of respect and approval of Spitler's service would be possible than the widespread and friendly interest that has been taken in the selection of his successor.

"Among the varying expressions of interest which came from all over the country, the unsolicited comments of three men — one a college dean on the Pacific coast, one a former extension director in the midwest, and a third an important official in Washington, D. C. — constitute an unusual tribute to Spitler and to all who have been associated with him in this Service.

"What two of these men said in almost identical language, and the third said in substance, can be paraphrased as follows:

" 'The Illinois Extension Service stands for something not quite matched by any other state.'

" '. . . It has shown independence in handling its problems approached by only a few other states.'

" '. . . It has stood for sound principles regardless of pressures.'

" '. . . It has its sincere and wholehearted admirers, distrustful admirers, and severe critics. But we need in this country a strong exponent of the Illinois system. We hope,' they said, 'that Spitler's successor will be a man capable of giving the Illinois Extension Service the strong leadership it has always had.'

"Mr. Spitler, we are eager to maintain the high standards of service and the enviable reputation established by the Extension Service during your long period of duty; and we are glad that your successor is one of the many capable men who had had an opportunity to see and participate in the work under your guidance. Though you have been relieved of active duty, we are not ready to grant you a complete release. On the official University rolls you are carried with the title of emeritus, but on the unofficial rolls you have the title of senior consultant. The agriculture of the state and nation still has need for

RURAL Illinois can be just as beautiful in the winter as in the other seasons of the year. Particularly in the woodland after a new fallen snow. Our cover scene this month was taken in a northern Illinois woods after a fresh snowfall.

It is the 30th in our series of cover pictures of historic and picturesque Illinois.

AFBF CONVENTION

Top Speakers to be Heard at Chicago Meeting Dec. 13-15 Include Eric Johnston, Paul Hoffman, Sen. Clinton Anderson, Allan Kline and Mme. Vijaya Pandit

A PROGRAM featuring nationally prominent leaders has been arranged for the 31st annual meeting of the American Farm Bureau Federation Dec. 13-15 in Chicago. Headquarters for the convention will be in the Hotel Stevens.

A full airing of national farm policy and other issues, a speaking program made up of top authorities in many fields, adoption of policy resolutions, and election of officers and directors will provide the highlights of the convention.

Among the guest speakers will be Paul G. Hoffman, administrator, Economic Cooperation Administration, and Eric Johnston, president, Motion Picture Association of America, Inc.

Others who will address the convention delegates are: Sen. Clinton P. Anderson, former Secretary of Agriculture (D., New Mexico), Rep. Christian A. Herter (R., Mass.), Rep. Mike Moroney (D., Okla.), and Rep. Albert Gore (D., Tenn.).

President Allan B. Kline of the AFBF will give his adress the morning of Dec. 13 following the annual report of Wilfred Shaw, secretary of the AFBF.

Another of the featured speakers will be George H. Wilson, member of the AFBF board of directors from California. Wilson will tell the convention about his recent 'round-the-world "Town Meeting" tour.

Additional speakers will appear at the convention to discuss topics of interest to farm people.

The closing business session of the convention Dec. 15 will be devoted to the adoption of resolutions and the election of officers and directors.

Eric Johnston

Paul Hoffman

The 15th annual convention of the Associated Women Dec. 11-12 will precede the AFBF meetings. One of the principal speakers to address the Associated Women will be Vijaya Lakshmi Pandit, the ambassador of India, who will speak on "India and the United States" the evening of Dec. 12.

The dinner for voting delegates of the Associated Women will be held at 6:30 p.m. Dec. 11 in the South Ball Room of the Stevens.

The Rural Youth meeting will open Dec. 12 and also scheduled for the same day are conferences on fruit and vegetables, poultry, livestock, tax and legislative problems, organization and other subjects.

Mrs. Raymond Sayre, national president of the Associated Women, will make her keynote address Monday morning and a business session will be held that afternoon to elect officers and board members and to plan a program for 1950.

Brown County Youth is Elected FFA President

AN ILLINOIS farm boy has been elected national president of the Future Farmers of America.

He is George Lewis, 19, of Mt. Sterling in Brown county. Lewis was voted to the top FFA post at the organization's 22nd annual convention held in Kansas City. He succeeds Doyle Connor of Starke, Fla.

George is the son of Mr. and Mrs. Dana Lewis who farm near Hersman. His father is a member of the Brown County Farm Bureau.

Election to the national presidency climaxes a brilliant FFA career for Lewis, who has also won the Illinois State Star Farmer award, recognizing him as tops of the state's more than 14,000 Future Farmers.

He has been president of his state, sectional and local FFA organizations. Last year Lewis placed fourth in the national speaking contest and has won state and regional speaking contest honors.

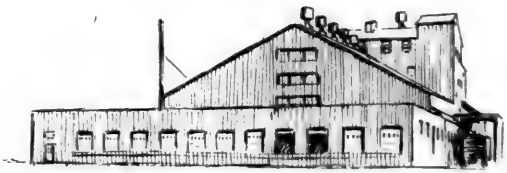
He is a freshman in the University of Illinois College of Agriculture but will leave school for a year in order to fulfill his duties as a national FFA officer.

He was graduated from Mt. Sterling high school in 1948. Lewis is farming in one-third partnership with his father on 120 acres and holds 50 per cent interest with his brother in herds of registered Guernsey cows and registered Hampshire hogs. George is the sixth of nine children in the Lewis family.

NEW FFA PRESIDENT

George Lewis (right), of Mt. Sterling in Brown county, newly-elected national FFA president, receives gavel from Doyle Connor, Starke, Fla., retiring president.

YOUR Opportunity to buy PLANT FOOD for LESS!



NEW PLAN MAKES IT POSSIBLE TO GUARANTEE AMPLE MATERIAL AT A SAVING TO YOU!

GROW CROP PLANT FOOD PRE-SEASON DELIVERY PROGRAM

Your Farm Bureau-type Grow Crop plant food distributor offers a new pre-season fertilizer delivery program of interest to every Illinois farmer.

This new pre-season delivery program became effective on December 1, 1949, and extends through February, 1950.

By taking early delivery of Grow Crop plant foods, Illinois Farm Bureau members can save money on these pre-season discounts. Also, an ample supply of high-analysis grades can be had — without delay.

Pre-season orders and delivery help your Illinois Farm Supply Company plant at E. St. Louis maintain steady operation throughout the winter as well as spring months — they avoid late spring "rush" periods which boost production costs — and which may make it impossible to meet your plant food needs on time.

Regular operations without a "rush" — mean more savings and more Grow Crop higher analysis plant foods for you and all our Farm Bureau member patrons.

YOU ARE SURE OF QUALITY MATERIAL

Grow Crop plant foods are manufactured at our Hartsdale plant near Chicago and at our new East St. Louis fertilizer plant. Every step in their manufacture is under the strict supervision of Illinois Farm Supply Company trained personnel. Blue Seal Grow Crop plant foods are of the highest quality and merit the confidence of every Illinois Farm Bureau member.

A TRIPLE GUARANTEE

1 PRE-SEASON DISCOUNT

A pre-season discount will be allowed on every ton of Blue Seal Grow Crop plant foods delivered to your farm during the months of December, January and February.

Ask your Blue Seal Salesman for full particulars.

2 GUARANTEED CONDITION

We guarantee the physical condition of Grow Crop plant foods if properly stored on your farm. Our plant foods will remain in good condition—they are properly manufactured—properly cured—and are packed into heavy asphalt-lined bags.

3 PRICE PROTECTION

By taking delivery NOW, you are fully protected against any change in price—either up or down during January, February and March. If the price goes up, your price will be that in effect on the day the order is placed. If price goes down during this period, you will receive the benefit of the lower price.

HERE'S HOW

Determine your spring crop needs for Grow-Crop fertilizers NOW. Place your order with your Blue Seal Salesman. Ask him to deliver your Grow-Crop plant foods during December, January or February. However, to receive the advantages of our three-way guarantee you agree to accept delivery of your Grow-Crop plant foods during this three month period.

Front Cover

URAL Illinois can be just as beautiful in the winter as in the other seasons of the year. Particularly in the woodland after a new fallen snow. Our cover scene this month was taken in a northern Illinois woods after a fresh snowfall.

It is the 30th in our series of cover pictures of historic and picturesque Illinois.

AFBF CONVENTION

PROGRAM featuring nationally prominent leaders has been arranged for the 31st annual meeting of the American Farm Bureau Federation Dec. 13-15 in Chicago. Headquarters for the convention will be in the Hotel Stevens.

A full airing of national farm policy and other issues, a speaking program made up of top authorities in many fields, adoption of policy resolutions, and election of officers and directors will provide the highlights of the convention.

Among the guest speakers will be Paul G. Hoffman, administrator, Economic Cooperation Administration, and Eric Johnston, president, Motion Picture Association of America, Inc.

Others who will address the convention delegates are: Sen. Clinton P. Anderson, former Secretary of Agriculture (D., New Mexico), Rep. Christian A. Herter (R., Mass.), Rep. Mike Moroney (D., Okla.), and Rep. Albert Gore (D., Tenn.).

President Allan B. Kline of the AFBF will give his adress the morning of Dec. 13 following the annual report of Wilfred Shaw, secretary of the AFBF.

Another of the featured speakers will be George H. Wilson, member of the AFBF board of directors from California. Wilson will tell the convention about his recent 'round-the-world "Town Meeting" tour.

Additional speakers will appear at the convention to discuss topics of interest to farm people.

The closing business session of the convention Dec. 15 will be devoted to the adoption of resolutions and the election of officers and directors.

Eric Johnston

Paul Hoffman

The 15th annual convention of the Associated Women Dec. 11-12 will precede the AFBF meetings. One of the principal speakers to address the Associated Women will be Vijaya Lakshmi Pandit, the ambassador of India, who will speak on "India and the United States" the evening of Dec. 12.

The dinner for voting delegates of the Associated Women will be held at 6:30 p.m. Dec. 11 in the South Ball Room of the Stevens.

The Rural Youth meeting will open Dec. 12 and also scheduled for the same day are conferences on fruit and vegetables, poultry, livestock, tax and legislative problems, organization and other subjects.

Mrs. Raymond Sayre, national president of the Associated Women, will make her keynote address Monday morning and a business session will be held that afternoon to elect officers and board members and to plan a program for 1950.

To highlight annual meeting time the IAA RECORD photographed one of the outstanding county Farm Bureaus, Fayette, at its 15th anniversary meeting. Its membership has climbed from 350 to more than 1,200. These are 15-year charter members.

More than 500 came from far and near to hear reports. Here are Ella Robbins and son, Charles Mitchell of Vandalia.

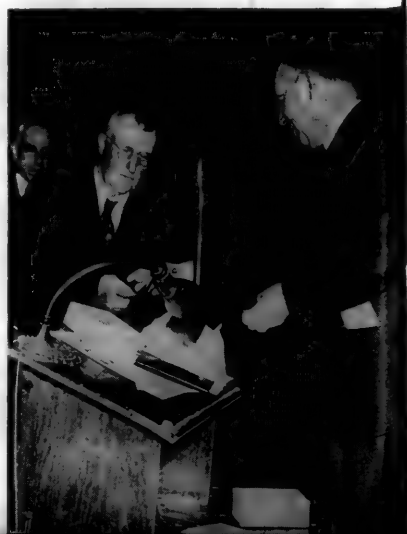
County Farm Bureau

ANNUAL MEETING

IAA President Charles B. Shuman, guest speaker, chats with Farm Adviser J. B. Turner while General Insurance Agent O. C. Miller waits to ask a question.

IAA Assistant Organization Director Charles Mayfield chats between sessions with two 15-year members, R. H. Kelly and President W. C. Buzzard.

Radio Station WLS entertainers at the Fayette meeting were Mary Jane Johnson, Jimmy James and Tom Corwine.



Harry Clear, IAA district organization director, hands out a recognition pin to one of the 15-year members, W. F. McFarland.

Three IAA Men Get New Assignments; Hire Field Editor

R. Van Cleve

Sam Russell

J. L. Pidcock

Cecil Musser

NEW assignments for three men are the results of recent changes in the staff of the Illinois Agricultural Association and its associated companies. In addition, the IAA publicity department has announced it has hired a new field editor for The RECORD.

J. L. Pidcock, manager of Illinois Cooperative Locker Service, has been named director of the newly-created department of locker service.

Sam F. Russell, IAA director of livestock marketing, has taken over the additional duty of managing the Illinois Farm Bureau Serum Association, an IAA affiliated company.

New director of grain marketing is Cecil F. Musser, who formerly managed the Serum Association.

Russell Van Cleve, 27, Yorkville, has been added to the IAA staff as publicity assistant and field editor of The RECORD.

Pidcock will continue as manager of the Locker Company but will spend about two-thirds of his time on his new duties.

He started work as head of the new department on Oct. 1, just two years after being employed as manager of the Locker Company, an associated company of the IAA.

Pidcock came to the Locker Company post from the Indiana Farm Bureau Cooperative Association. He was graduated from the University of Kentucky and served as farm adviser in that state.

Russell, a native of Wyoming, has been with the IAA since December 1937, when he took over as head of the livestock marketing department. For 10 years before that, he was farm adviser in Adams county.

He attended the college of agriculture at Missouri University and worked as a county agent in the "show me" state.

Musser started to work for the IAA in Oct., 1939, as a field man and six years later became manager of the Locker Company. He previously was employed as assistant manager of the Logan-Mason County Service Company and as Logan county organization director.

Van Cleve, who was graduated from the Northwestern University school of journalism in 1947, has had experience in both the newspaper and publicity fields.

He was employed by the national public relations division of the American Legion for one year. He came to the IAA after spending a year as sports editor and reporter for the Sikeston, Mo., Daily Standard.

His father, Hugh Van Cleve, is a member of the Kendall County Farm Bureau. Van Cleve grew up on his father's farm near Yorkville.

He attended the University of Illinois for three and one-half years but left there before being graduated to enter the air forces. He served as a pilot for three years during the recent war.

He is married and the father of one son, Roger, 2.

The OUTLOOK for '50

as seen by Government Economists

NEXT SPRING'S pig crop will be larger than the 1949 spring crop by five per cent or possibly more, in the viewpoint of the Bureau of Agricultural Economics. The logic of this forecast is found in ample supplies of corn and the hog-corn ratio this fall.

BAE's forecast was outlined last month by Harold F. Breimyer, agricultural economic statistician, at an outlook conference in Washington. Here are some points made by Breimyer:

"The seasonal decline in hog prices now under way may be a little more than the long-time average of 18 per cent, but it may not be as great as would usually be expected from the 15 per cent increase in last spring's pig crop. . . . Early and lighweight marketings and the manner in which cold storage holdings have been handled have tended to cushion the price decline for hogs.

"Usual price relations would indicate that a 10 per cent larger output of pork through much of 1950 would result in a somewhat greater precentage drop in prices of hogs. . . . The hog-corn ratio is expected to be above average during a large part of the year. . . . Slaughter weights of hogs have been lighter than a year ago and are expected to continue lighter by a few pounds next year.

More Beef Foreseen

"During 1949, cattle numbers are probably being increased by about one million. . . . Cows and calves in particular are being held back and the increase in numbers promises more beef in the future. About as much beef will be produced next year as in 1949 and a larger part than usual will again be of the better quality produced from grain-fed cattle.

"Since supplies of beef are expected to be about the same, the year-average prices of beef and cattle in 1950 are not likely to be greatly different in 1949. . . . A small drop is likely because of the larger supply of pork and a possible slow decline in incomes of consumers.

Sheep and Wool

"Sheepmen may rebuild their herds somewhat next year. As a result, slaughter may be even smaller than this year and lambs are likely to remain high in comparison with prices of other meat animals. . . . Prices of wool received by producers as well as market prices are likely to average somewhat lower in 1950 than this year."

Feed Outlook

With another big feed supply available, the Bureau of Agricultural Economics anticipates that farmers will continue feeding their livestock fairly liberally during the coming year even though livestock-feed price ratios may not be quite so favorable as during the 1948-49 season.

This was pointed out by Malcolm Clough of the Bureau of Agricultural Economics. Said Clough:

"The processing of feed grains into food and industrial products is expected to continue somewhere near the 1948-49 level, but exports may be a little small-

FIELD SEED DIVISION — DECATUR, ILLINOIS

The 1949 National Rural Youth Committee poses with its advisers during meeting in Chicago this fall. Left to right (seated): Richard Volt, Wisconsin; Doreen Martl, Illinois; Nellie Nelson, Oklahoma; Herb Warren, California; Mae Zarr, Iowa; Ruth Jordan, New Hampshire; Albert Finkel, Indiana. Standing are advisers Carlysle DeLaCroix, Rural Youth, AFBF; Mrs. Charles W. Sewell, Associated Women of AFBF; Bob Hooper, Tennessee; Frank Ehman, Young People's Activities, Iowa; Ellsworth Lyon, IAA; Richard Fitzsimmons, Minnesota; Verland McLeod, Michigan; Ward McDuffy, Ohio; and Leroy Hoffman, Indiana.

In Edgar county, a representative of Rural Youth sits in with the Farm Bureau board of directors to familiarize young farm leaders with Farm Bureau business procedure. Rural Youther shown here is Rural Youth President Phillip Dickenson (wearing checkered shirt).

By ELLSWORTH D. LYON, Director
IAA Young Peoples Activities

Rural Youth Goal is Good Citizenship

THE American Farm Bureau Federation, the nation's largest farm organization with nearly 1 1/2 million members, will hold its annual meeting in the Stevens Hotel, Chicago, Dec. 11-15. Representatives from 46 states and Puerto Rico will assemble for the serious purpose of finding solutions to the problems of agriculture.

Rural Youth Day activities will consist of an important conference, the annual National Talk Meet, and an evening mixer on Dec. 12. Rural Youthers will assemble from 15 states to make new friends and meet the old, present new committee members who will plan programs for the coming year, and discuss the relationships of farm youth to democratic government.

Rural Youthers will be privileged to attend some of the sessions of Associated Women on Sunday and Monday, and the general sessions on Tuesday, Wednesday, and Thursday. Those attending the convention will hear many outstanding leaders speak. Among them will be Mrs. Raymond Sayre, president, Associated Women of AFBF and Country Women of the World; Mrs. Charles Sewell, administrative director of Associated Women; Dr. Mrs. Isabel Morgan Mountain, scientist in the poliomyelitis center of Johns Hopkins University; Vijay Lakchmi Pandit, ambassador of India to U. S.; Allan B. Kline, president of AFBF; Senator Clinton Anderson, New Mexico; and Paul Hoffman, ECA head, and Eric Johnston, president, Motion Picture Association.

Rural Youthers of Illinois should take advantage of this opportunity to come in contact with leaders of such high ability. Each county organization would do well to send at least one member to represent it at this big national meeting. There will be much emphasis upon good citizenship on the place of young adults in making their country more democratic.

Much good material may be obtained from the many discussions for educational programs at home. Stimulation and information received at our AFBF annual meeting will challenge all Rural Youth members present to become more adult and will influence action at home.

One of the main goals of Rural Youth is understanding and solving problems on the local level. A number of county Farm Bureau and cooperative boards assist their young people to grow in knowledge of local problems and solutions by inviting representatives from Rural Youth to become ex officio members.

One of the adult leaders of Edgar county reports that the Rural Youth representative has attended the board meetings faithfully since the early fall of '48. This representative highlights the Rural Youth meetings by informing the Rural Youth group monthly of the previous Farm Bureau board meeting holding back information of a confidential nature.

There is no doubt that local and possibly even state and national leaders are being trained by these contacts to take the place of trained adults. Farm Bureau boards now taking this personal interest in the young men of their counties will soon be repaid by informed and competent leadership. Rural Youth members and groups appreciate such confidence and personal interest and are eager to prepare themselves for state leadership.

The Co-op Training Course for farm youth of Rural Youth, 4-H, and FFA started last January and scheduled for February 1950 has stimulated much interest among young men on our Illinois farms. There is a realization that co-ops are of vital concern to agriculture.

The statewide programs of the talk fest, skilled drivers, camping, Farm and Home Week, and the fall conference have all proven their value in influencing the growth of personality as expressed in leadership ability.

The regular monthly meeting is a test of the seriousness of purpose and the production of leaders for agriculture, home economics, and community life. Here action must be uppermost in the minds of the young people in positions of leadership. Here the leadership teams of education, recreation, community service, publicity, and hospitality can really go into action.

Rural Youthers, do you want growth of personality? If so, then go into action in your county. Look toward the wider experiences but focus them upon home problems.

Did Driver Melvin Reinders, Ogle county, stop car in given distance? Sgt. F. E. Piper and Rolf Vogen, Ogle, check.

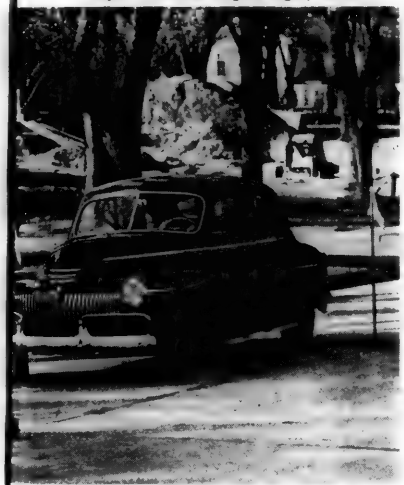
Sgt. F. E. Piper, left, and Sgt. Joe Simon flank Bob Walton, Bureau, district winner, and Millard Wells, Whiteside, second.

LEARNING *to Drive* *Safely*

Photographed here at the Oregon district competition are most of the tests in the skill section of the Rural Youth Skilled Drivers contest.

In addition to the skill tests, contestants are also checked on performance which includes proper hand signals, stopping and starting on hills, recognition of road signs and knowledge of traffic and highway laws.

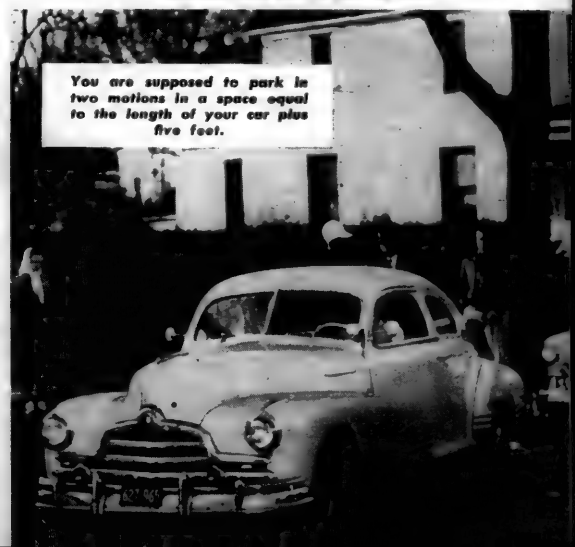
Wonder how the oldsters would do on these tests?



It's hard enough to drive between these flags spaced 24 feet apart, but you also have to back through them.

E. D. Lyon, IAA young people's director, and Sgt. F. E. Piper, find Bob Walton's car six inches from curb in parking test.

Keeping your right wheels on a 100-foot white line as you drive forward and backward is no cinch.



You are supposed to park in two motions in a space equal to the length of your car plus five feet.

The 1949 National Rural Youth Committee poses with its advisers during meeting in Chicago this fall. Rural Youth Day activities will consist of an important conference, the annual National Talk Meet, and an evening mixer on Dec. 12. Rural Youthers will assemble from 15 states to make new friends and meet the old, present new committee members who will plan programs for the coming year, and discuss the relationships of farm youth to democratic government.

Rural Youthers will be privileged to attend some of the sessions of Associated Women on Sunday and Monday, and the general sessions on Tuesday, Wednesday, and Thursday. Those attending the convention will hear many outstanding leaders speak. Among them will be Mrs. Raymond Sayre, president, Associated Women of AFBF and Country Women of the World; Mrs. Charles Sewell, administrative director of Associated Women; Dr. Mrs. Isabel Morgan Mountain, scientist in the poliomyelitis center of Johns Hopkins University; Vijay Lakchmi Pandit, ambassador of India to U. S.; Allan B. Kline, president of AFBF; Senator Clinton Anderson, New Mexico; and Paul Hoffman, ECA head, and Eric Johnston, president, Motion Picture Association.

Rural Youthers of Illinois should take advantage of this opportunity to come in contact with leaders of such high ability. Each county organization would do well to send at least one member to represent it at this big national meeting. There will be much emphasis upon good citizenship on the place of young adults in making their country more democratic.

Much good material may be obtained from the many discussions for educational programs at home. Stimulation and information received at our AFBF annual meeting will challenge all Rural Youth members present to become more adult and will influence action at home.

One of the main goals of Rural Youth is understanding and solving problems on the local level. A number of county Farm Bureau and cooperative boards assist their young people to grow in knowledge of local problems and solutions by inviting representatives from Rural Youth to become ex officio members.

One of the adult leaders of Edgar county reports that the Rural Youth representative has attended the board meetings faithfully since the early fall of '48. This representative highlights the Rural Youth meetings by informing the Rural Youth group monthly of the previous Farm Bureau board meeting holding back information of a confidential nature.

There is no doubt that local and possibly even state and national leaders are being trained by these contacts to take the place of trained adults. Farm Bureau boards now taking this personal interest in the young men of their counties will soon be repaid by informed and competent leadership. Rural Youth members and groups appreciate such confidence and personal interest and are eager to prepare themselves for state leadership.

The Co-op Training Course for farm youth of Rural Youth, 4-H, and FFA started last January and scheduled for February 1950 has stimulated much interest among young men on our Illinois farms. There is a realization that co-ops are of vital concern to agriculture.

The statewide programs of the talk fest, skilled drivers, camping, Farm and Home Week, and the fall conference have all proven their value in influencing the growth of personality as expressed in leadership ability.

The regular monthly meeting is a test of the seriousness of purpose and the production of leaders for agriculture, home economics, and community life. Here action must be uppermost in the minds of the young people in positions of leadership. Here the leadership teams of education, recreation, community service, publicity, and hospitality can really go into action.

Rural Youthers, do you want growth of personality? If so, then go into action in your county. Look toward the wider experiences but focus them upon home problems.

Did Driver Melvin Reinders, Ogle county, stop car in given distance? Sgt. F. E. Piper and Rolf Vogen, Ogle, check.

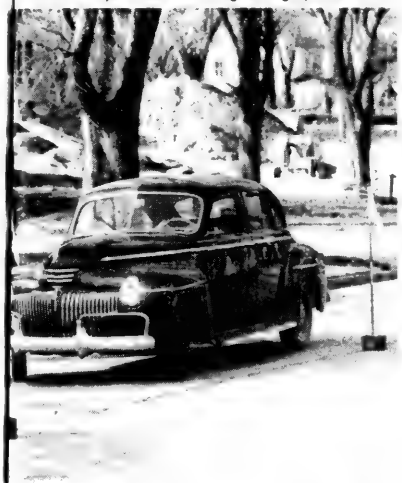
Sgt. F. E. Piper, left, and Sgt. Joe Simon flank Bob Walton, Bureau, district winner, and Millard Wells, Whiteside, second.

LEARNING *to Drive* *Safely*

Photographed here at the Oregon district competition are most of the tests in the skill section of the Rural Youth Skilled Drivers contest.

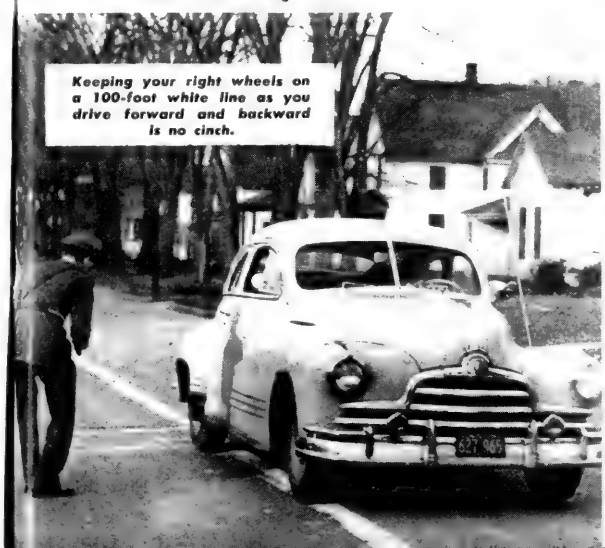
In addition to the skill tests, contestants are also checked on performance which includes proper hand signals, stopping and starting on hills, recognition of road signs and knowledge of traffic and highway laws.

Wonder how the oldsters would do on these tests?

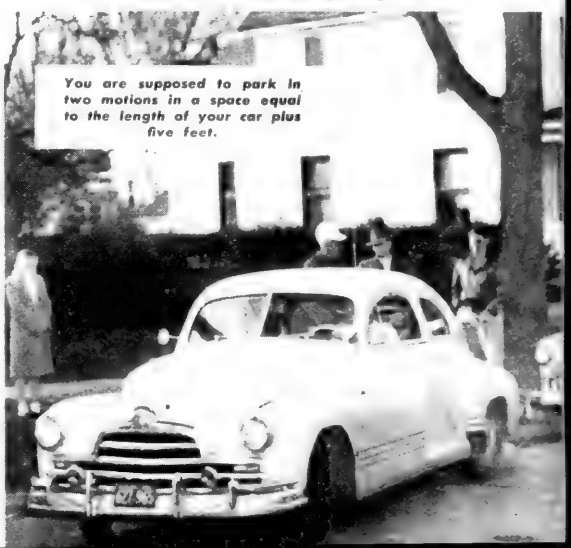


It's hard enough to drive between these flags spaced 24 feet apart, but you also have to back through them.

E. D. Lyon, IAA young people's director, and Sgt. F. E. Piper, find Bob Walton's car six inches from curb in parking test.



Keeping your right wheels on a 100-foot white line as you drive forward and backward is no cinch.



You are supposed to park in two motions in a space equal to the length of your car plus five feet.

You'd hate to meet this broad truck on a narrow country road if you valued your life. Yet roads this narrow are common through-

Crossing a weak bridge like this makes you hold your breath and heave a sigh of relief once you have crossed without

More Money Needed For Roads

FINDINGS BY IAA ROAD COMMITTEE SUBSTANTIATE NEED FOR MORE FUNDS

THE IAA Road Study Committee in its investigation and study of rural road problems found many facts and figures to substantiate its recommendation that more money must be raised if Illinois is to have an adequate system of all-weather highways.

The committee consulted with outstanding highway engineers, highway officials, and men qualified by training and experience to present important phases of the highway system. Township commissioners and men from the University of Illinois College of Engineering, State Highway Department, and County Highway Departments appeared before the group.

Although members of the study group were interested primarily in rural roads, the solution of problems pertaining to these roads and their relationship to those of the state, the county, and the city streets, could be considered only after a study of the problems facing each of the other parts of the entire highway system. Because they believe that the economy of the state depends to a great extent upon a complete system of highways.

According to the Illinois State Highway Commission total mileage of the highway system is 124,185 miles. Mileage of each division with the number of miles deficient for present needs is as follows: the primary or hard road system contains 12,239 miles of which 6,231 miles are deficient now; the state-aid or county system has 18,321 miles with 14,163 miles deficient; the rural road system contains 75,853 miles with 56,160 miles deficient and of this mileage 19,621 miles are unimproved earth; the city street system consists of 17,772 miles with 11,205 miles deficient.

The cost of correcting the total deficiencies of the entire system is estimated to be $6,892,261,638. This huge sum is given not as an amount which is thought can be raised but to point out the fact that a sizeable task is ahead of the people of Illinois if they are to have adequate highway transportation in the years ahead.

Since the major solution of the road problems lies in lack of sufficient revenue, the IAA Road Committee suggested that some of the money needed on the roads could be had through economies. One suggestion included consolidation of existing road districts into larger units by referendum upon petition. But even with the greatest economy thus effected, more money would have to be raised to get the job done. The Road Committee was of the opinion that the most equitable method of raising the additional funds was by increasing the tax on gasoline because this money would come from those who used the roads and would receive the greatest benefits therefrom. In view of the large amount of deficient highways and the cost thereof, the committee believes that it will be necessary to raise the state gasoline tax to get the job done.

The present tax of three cents per gallon on gasoline produced a net of over $51,000,000 in 1948. This sum is allocated to three parts of the highway system with the primary or hard road system receiving one-third, the county or state-aid system one-third, and the city or municipal street system one-third. The rural road system receives no part of the present tax. It did receive appropriations totaling $30,000,000 over a four year period, July 1945 to June 1949.

Money raised from present taxes is not adequate to meet demands made upon the roads. Road construction, reconstruction or resurfacing, and maintenance is a continuous process. A highway begins to deteriorate immediately after construction through the use that is made of it. Heavy traffic means faster deterioration. Traffic is on the increase on all parts of the highway system.

These facts convinced the Road Study Committee that it would take a higher

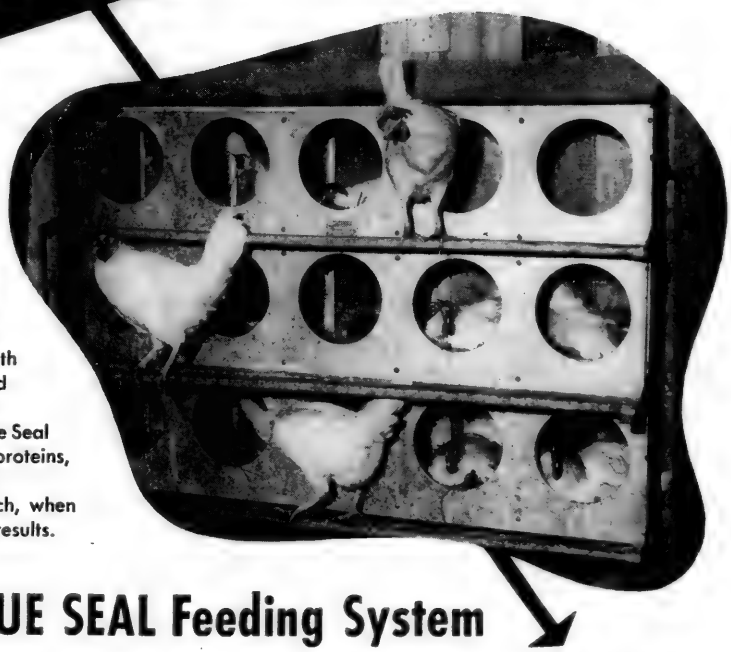
IAA Rural Road Improvement

Editor's Note: This article was written before the IAA annual meeting. By the time you read it, voting delegates to the Illinois Agricultural Association annual meeting will have acted upon the IAA Road Study Committee Report. Their action will be reported in the January issue of the RECORD. It is evident, however, from reasons set forth in this article that more funds will be needed to improve Illinois roads.

FOR MORE WINTER EGGS

Feed BLUE SEAL FEEDS



High egg production during the winter-time is highly desirable. More eggs per hen means more profit from the laying flock. And it's easy to maintain high egg production with our high-quality, farm tested and proved Blue Seal Poultry Feeds. Fed with home grown grains, Blue Seal feeds provide all of the needed proteins, vitamins and minerals for a well-balanced ration—a ration which, when fed day after day, will produce results.

Follow the BLUE SEAL Feeding System

POULTRY BALANCER

Feed Poultry Balancer "free-choice." Your hens will "balance" their own rations when Blue Seal Poultry Balancer, shelled corn, and whole oats are kept before them at all times. Provide oyster shell, grit, and fresh clean water.

Poultrymen like the "free-choice" method of feeding their farm grains and Blue Seal Poultry Balancer. It is not only convenient, but also saves time and labor.

LAY MASH

Feed Blue Seal Lay Mash with your own farm grown grains. Do this by keeping Lay Mash before the laying flock at all times. Hand-feed whole grains daily at the rate of 10 to 12 lbs. per 100 birds. Provide oyster shell, grit and fresh clean water.

Blue Seal Lay Mash is ideally suited for use with the grain-mash method of feeding the laying flock.

These feeds are also available in some counties as SERVICE BRAND Feed

See your Blue Seal or Service Brand Salesman

These feeds are distributed by

IAA Luncheon Opens Campaign To Promote Pork

IN AN effort to boost the sale of pork and help to keep hog prices above the government support level, the Illinois Agricultural Association sponsored a pork campaign luncheon Nov. 1 in Chicago attended by representatives of the packers, chain and independent groceries, meat retailers and distributors, newspapers and radio stations. Also represented at the meeting were the Illinois Chamber of Commerce and Illinois Chain Store Council, National Live Stock Producers Association, National Live Stock and Meat Board and American Meat Institute.

Charles B. Shuman, president of the Illinois Agricultural Association, addressing the luncheon said that the livestock producers of the state are asking the cooperation of the meat industry to push the sale of pork.

Shuman pointed out that farmers are worried about the hog price outlook and were concerned about the recent drops in the market. He pointed out that if prices drop too drastically, hog numbers will be reduced and in 18 months to two years there will be a scarcity. Such a scarcity, he said, will mean higher prices to the consumer. Therefore, Shuman said, it is in the interests of the consumer and producer if prices and production can be stabilized.

Shuman said that producers were endeavoring to do their part to avoid market gluts through a more orderly marketing of lighter weight hogs.

The IAA leader indicated that farmers prefer to produce abundantly and a fair price rather than to depend upon government for supports. He said that the government's experience in the support programs on eggs and potatoes had not been too successful.

As the IAA RECORD went to press plans were announced by four County Farm Bureaus to hold pork promotional luncheons for their respective areas. Cooperating in these four luncheons will be local units of the Illinois Chamber of Commerce and Illinois Chain Store Council. Producers, retailers, meat dealers, and all segments of the meat industry for the areas will be invited to attend the luncheons.

Tentative dates for the four luncheons are Winnebago County Farm Bureau, Rockford, Dec. 5; Knox County Farm Bureau, Galesburg, Dec. 6; Peoria County Farm Bureau, Peoria, Dec. 7, and McLean County Farm Bureau, Bloomington, Dec. 8.

These are the Morrow plots which have been under constant cultivation for the past 74 years and under close scrutiny since that time. They are shown looking north from the University of Illinois College of Agriculture.

Morrow Plots Give Different Result This Year

FOR THE first time in 74 years corn yields on the Morrow plots at the Illinois College of Agriculture turned out differently than expected this year.

The surprise came when the plot with a three-year rotation of corn-oats-clover treated with manure, lime and phosphate didn't produce the most corn. The plot with the best corn — 107 bushels an acre — was the one with corn-oats rotation and the same soil treatment.

The corn-oats-clover plot, leading producer until this year, grew 104-bushel corn during '49.

That's the report of F. C. Bauer, head of soil experiment work at the college. The Morrow plots are the oldest soil experiment field in America.

Two reasons were given for the lower yield on the treated corn-oats-clover plot. One was an insect, the grape colapsis, that feeds on corn roots in early summer and stunts the plant. The other was stalk rot.

Three rotations are used on the Morrow plots: continuous corn, corn-oats and corn-oats-clover. Each plot is divided equally and one half gets manure, lime and phosphate while the other half is left untreated. All six plots were planted in corn this year.

L. B. Miller, agronomist who checks yield data, reported the following 1949 yields: continuous corn without treatment, 20 bushels an acre; continuous corn with treatment, 64 bushels; corn-

LETTERS....

SINCE LAST summer, when you so generously sent me all available copies of the IAA RECORD in the series of historical and picturesque scenes in Illinois, I have made an effort to secure No. 3, April 1947, and No. 4, May 1947, which are the only copies missing.

A notice was inserted in the Farm Bureau page of our county newspaper, the Mt. Vernon Register-News which has a large circulation, to which no response was received.

Early in the fall I attended a series of DAR Division meetings from Harvey to Carmi at which I requested members of our society who reside in agricultural communities to try to locate these copies, but evidently they have been unsuccessful as no information has come to me.

At the Farm Bureau office in Mt. Vernon, it was suggested that I ask you to insert a brief request in a forthcoming issue of the RECORD.

I believe that this series of covers together with the descriptive sketches will be an outstanding feature of the historical scrap book that we intend to enter in national competition at Washington next April.

Thanking you for giving this matter your favorable attention.

Marie P. Carson
Waltonville, Ill.
Jefferson County

Editor's Note: Do any of our readers have copies of the April or May 1947 issues of the IAA RECORD? If you do please get in touch with Mrs. Carson. You will do her a great personal favor and we would be pleased to hear of it should she win the scrap book contest with the RECORD series of cover pictures.

Farm Bureau Folks in Pictures

PICTURE OF THE MONTH

LeRoy Steinkamp of Washington county wins the Picture of the Month $5 award for this picture of Eugene Wehmeyer giving his old jalopy a new paint job. This picture has human interest, clarity, and interesting action.

Alvin and Roger Bengston, sons of Mr. and Mrs. Ernst Bengston, Henry county, watch a train ferry at Mackinaw City, Mich., while on vacation with their parents. They were seeing a ship of this kind for the first time.

Nothing will tax your patience like taking a picture of a group of youngsters. Here Virgil Guttermann of St. Clair county tries to pose his son, Mark. Next to Mark is his cousin, Robert, then his sister, Patricia, and at far left another cousin, David.

Robert Reiff of Carroll county saw this bird's nest on a tall thistle in his pasture. When he went to take a picture it had fallen to the ground with its young. Daughters Joyce and Peggy want a close look.

EDITOR'S NOTE

Pictures for the Farm Bureau Folks in Pictures Page should be addressed to Picture Editor, Illinois Agricultural Association Record, 43 East Ohio Street, Chicago 11, Illinois. Entries are judged on originality, clearness, and interest. Please do not send negatives. Avoid shots of persons merely looking at the camera. Best picture receives $5, others published, $1. If you want photographs returned enclose a self-addressed stamped envelope.

Three on a horse—two are having a wonderful time but the third wants no part of a cowgirl role. They are the children of Mr. and Mrs. Burnette Isham of Grundy county. Left to right are Lela, Gene, and Diann.

Feeding Outlook For Next Year

(Continued from page 13)

er. Even after allowing for some further increase in the quantity of feed consumed by the increasing, livestock population, the carryover of feed grains at the close of the 1949-50 marketing year may be around one-fourth larger than the record carryover at the beginning. The corn carryover on Oct. 1, 1950, is expected to exceed one billion bushels for the first time in history.

"Supplies of oilseed cake and meal probably will again be near the record, and a little more animal protein feed is in prospect. The total supply of high-protein feed is expected to be a little larger than in 1948-49, although it may be a little smaller in relation to the increasing livestock numbers. Smaller supplies of wheat millfeed are in prospect, as less wheat is being milled into flour for export."

In prospect for 1950-51, he said, are: (1) Corn acreage allotments for the first time since the beginning of the war, (2) probably smaller corn production, especially if the 1950 season is more nearly normal, and (3) loans on 1950 corn again set at 90 per cent of parity.

Why Not Try Grass Farming?

(Continued from page 8)

Birdsfoot Trefoil — A perennial legume which will grow on land too poor for alfalfa. This plant will undoubtedly find excellent use as a permanent pasture legume in Illinois as soon as enough seed is available.

Kenland Red Clover — A recent introduction from Kentucky having greater resistance to southern anthracnose than Cumberland. Recommended for southern Illinois where southern anthracnose is likely to occur.

Midland Red Clover — Particularly adapted to the northern half of the state. Grows vigorously, is winter hardy and has some resistance to northern anthracnose.

Cumberland Red Clover — Recommended for southern Illinois and is somewhat resistant to southern anthracnose and crown rot.

Buffalo Alfalfa — A selection from Kansas common which is bacteria wilt resistant. It is well suited for growing where Kansas common is adapted.

Ranger Alfalfa — A synthetic variety highly resistant to bacteria wilt and primarily recommended for the northern part of the state.

The University of Illinois Extension Service in agriculture is launching an extensive legume-grass program in each county with the main objective of having Illinois farmers grow more and better legumes and grasses on their farms. It is a sound, permanent agricultural program which requires the cooperation of everyone in the state.

Edwin Bay, Sangamon county farm adviser, left, is the new vice-president of the National Association of County Agricultural Agents. Center is Rex Carter, Uniontown, Pa., new president, with J. H. Logan, Clearwater, Fla., past president.

More Money Needed For Illinois Roads

(Continued from page 18)

gasoline tax to meet the demands of traffic on the highways.

The estimated cost of conditioning the entire highway system was $6 3/4 billion over a 20 year period. It would take 10 years with a six cent gas tax to produce $1 1/4 billion. The present three cent tax is definitely inadequate to provide the funds with which to do the job that present traffic demands. We must determine whether or not we want all-weather roads and if we do, then we must pay for them. Either that or else get along with the present road conditions which no doubt will get worse instead of better.

We don't want to go backward so we must go forward. To do this we can effect greater economy through reorganization of township and road districts into larger units of administration and when that doesn't produce the needed funds, we will need to find other sources of revenue either in the form of a tax on gasoline or increase property taxes. Think it over.

Farm people should be aware of the fact that there are groups of people who are interested in particular divisions or parts of the highway system. These groups know that there is a definite need for more money for use on these roads and are selling the idea to other groups.

Farm roads are a part of the highway system and play an important role in the economy of the state. These roads should receive their just share of the tax on gasoline to help condition them for their part in the economy. Farm people will need to present a united front in their efforts to secure their share of any additional tax or funds levied for road use. These additional funds must be long-range and continuous and not merely stop-gap measures if the highway problems are to be solved with satisfaction.

Morrow Plots Give Different Results

(Continued from page 20)

oats without treatment, 32 bushels; corn-oats with treatment, 107 bushels; corn-oats-clover without treatment, 73 bushels; and corn-oats-clover with treatment, 104 bushels.

Proof of the value of the crop rotation plans and the use of fertilizers is shown by the fact that the plot producing only 20-bushel corn is less than 100 feet from the one yielding 107 bushels. There was also a big difference in quality — small, twisted ears compared with large, even, well-filled ears.

Records kept at the experimental field show a wide variation in yield between the various plots over several years. The all-time average for the plot with continuous corn without treatment is 20 bushels. The long-time yield from the corn-oats-clover plot with the soil treatment is 72 bushels, or more than three and a half times as high. Other yields vary in between these two extremes. Second highest average has been produced on the corn-oats plot with treatment. Yield here has averaged 65 bushels an acre.

Little or no corn borer damage at the Morrow plots was explained by clean plowing and planting late enough to avoid first-brood borers. The plants were not sprayed or dusted.

NEHRU VISITS ILLINOIS FARMS

(Continued from page 5)

Nehru, usually willing to cooperate with photographers, refused to pose while examining a corn picker. "I want to see how this thing works," he said.

The prime minister, a stranger to pickers, said after studying the husker a minute: "I notice this machine husks two rows at a time. Therefore, you must have to plant at least two rows at once."

The milker at the Mighell farm also attracted the attention of Nehru, who asked to see it in operation. He told the farmers he thought they were fortunate to receive the latest information on improvements in farming practices and other material that is made available to them.

Climax of the inspection trip was the "threshers' dinner" at the Mighell home, where Mrs. Mighell and her neighbors served a meal that included everything from roast chicken to apple pie with cheese.

The dinner ended Nehru's firsthand view of Illinois farm life. From most angles, it must have looked pretty good.

ACCLAIM WORK OF J. C. SPITLER

(Continued from page 9)

your mature judgment and experience.

"We are glad to know that you and Mrs. Spitler will continue to be a part of the University community, and we look forward to many years of happy association with both of you."

Mr. and Mrs. Spitler were presented with four pieces of matched tan leather luggage by their many friends, along with a set of garden tools, "so that 'J. C.' could do a better job as a member of the Twin City Garden club than just growing carrots in a window box." And Mrs. Spitler received a huge bouquet of roses. The luggage, it was explained, was to help them travel around the country to enjoy some of the sights and experiences they hadn't had time so far to enjoy.

"J. C." admitted in his response to several tributes that he was almost speechless for the second time in his life. The first time was better than 40 years ago as a student in the College of Agriculture when he "asked a certain young lady if she wanted to change her name." She "took the matter under advisement," Spitler relates, "and eventually agreed."

Spitler, now 67, graduated from the College of Agriculture in 1907 and then farmed for 10 years before helping set up an emergency food production program during World War I.

He joined the Illinois Extension Service on Sept. 1, 1919 as assistant state leader of farm advisers and was promoted to state leader in 1930. He has held that post ever since. In September 1937 he was also named assistant director of agricultural and home economics extension work, and rose to associate director in 1943.

The IAA honored Spitler about a year ago by awarding him the emblem of distinguished service to Illinois agriculture.

When "J. C." began in 1917, there were only 27 farm advisers and a mere handful of home advisers. Today all 102 counties are served by a farm adviser and all but four counties have a home adviser.

Feeding Outlook For Next Year

(Continued from page 13)

er. Even after allowing for some further increase in the quantity of feed consumed by the increasing livestock population, the carryover of feed grains at the close of the 1949-50 marketing year may be around one-fourth larger than the record carryover at the beginning. The corn carryover on Oct. 1, 1950, is expected to exceed one billion bushels for the first time in history.

"Supplies of oilseed cake and meal probably will again be near the record, and a little more animal protein feed is in prospect. The total supply of high-protein feed is expected to be a little larger than in 1948-49, although it may be a little smaller in relation to the increasing livestock numbers. Smaller supplies of wheat millfeed are in prospect, as less wheat is being milled into flour for export."

In prospect for 1950-51, he said, are: (1) Corn acreage allotments for the first time since the beginning of the war, (2) probably smaller corn production, especially if the 1950 season is more nearly normal, and (3) loans on 1950 corn again set at 90 per cent of parity.

Why Not Try Grass Farming?

(Continued from page 8)

Birdsfoot Trefoil — A perennial legume which will grow on land too poor for alfalfa. This plant will undoubtedly find excellent use as a permanent pasture legume in Illinois as soon as enough seed is available.

Kenland Red Clover — A recent introduction from Kentucky having greater resistance to southern anthracnose than Cumberland. Recommended for southern Illinois where southern anthracnose is likely to occur.

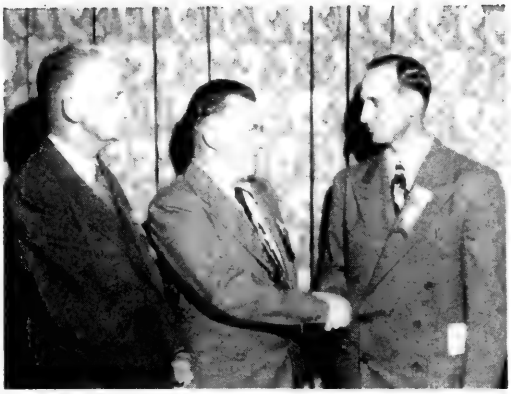
Midland Red Clover — Particularly adapted to the northern half of the state. Grows vigorously, is winter hardy and has some resistance to northern anthracnose.

Cumberland Red Clover — Recommended for southern Illinois and is somewhat resistant to southern anthracnose and crown rot.

Buffalo Alfalfa — A selection from Kansas common which is bacteria wilt resistant. It is well suited for growing where Kansas common is adapted.

Ranger Alfalfa — A synthetic variety highly resistant to bacteria wilt and primarily recommended for the northern part of the state.

The University of Illinois Extension Service in agriculture is launching an extensive legume-grass program in each county with the main objective of having Illinois farmers grow more and better legumes and grasses on their farms. It is a sound, permanent agricultural program which requires the cooperation of everyone in the state.



Edwin Bay, Sangamon county farm adviser, left, is the new vice-president of the National Association of County Agricultural Agents. Center is Rex Carter, Uniontown, Pa., new president, with J. H. Logan, Clearwater, Fla., past president.

More Money Needed For Illinois Roads

(Continued from page 18)

gasoline tax to meet the demands of traffic on the highways.

The estimated cost of conditioning the entire highway system was $6 3/4 billion over a 20 year period. It would take 10 years with a six cent gas tax to produce $1 1/4 billion. The present three cent tax is definitely inadequate to provide the funds with which to do the job that present traffic demands. We must determine whether or not we want all-weather roads and if we do, then we must pay for them. Either that or else get along with the present road conditions which no doubt will get worse instead of better.

We don't want to go backward so we must go forward. To do this we can effect greater economy through reorganization of township and road districts into larger units of administration and when that doesn't produce the needed funds, we will need to find other sources of revenue either in the form of a tax on gasoline or increase property taxes. Think it over.

Farm people should be aware of the fact that there are groups of people who are interested in particular divisions or parts of the highway system. These groups know that there is a definite need for more money for use on these roads and are selling the idea to other groups.

Farm roads are a part of the highway system and play an important role in the economy of the state. These roads should receive their just share of the tax on gasoline to help condition them for their part in the economy. Farm people will need to present a united front in their efforts to secure their share of any additional tax or funds levied for road use. These additional funds must be long-range and continuous and not merely stop-gap measures if the highway problems are to be solved with satisfaction.

Morrow Plots Give Different Results

(Continued from page 20)

oats without treatment, 32 bushels; corn-oats with treatment, 107 bushels; corn-oats-clover without treatment, 73 bushels; and corn-oats-clover with treatment, 104 bushels.

Proof of the value of the crop rotation plans and the use of fertilizers is shown by the fact that the plot producing only 20-bushel corn is less than 100 feet from the one yielding 107 bushels. There was also a big difference in quality — small, twisted ears compared with large, even, well-filled ears.

Records kept at the experimental field show a wide variation in yield between the various plots over several years. The all-time average for the plot with continuous corn without treatment is 20 bushels. The long-time yield from the corn-oats-clover plot with the soil treatment is 72 bushels, or more than three and a half times as high. Other yields vary in between these two extremes. Second highest average has been produced on the corn-oats plot with treatment. Yield here has averaged 65 bushels an acre.

Little or no corn borer damage at the Morrow plots was explained by clean plowing and planting late enough to avoid first-brood borers. The plants were not sprayed or dusted.

NEHRU VISITS ILLINOIS FARMS

(Continued from page 5)

Nehru, usually willing to cooperate with photographers, refused to pose while examining a corn picker. "I want to see how this thing works," he said.

The prime minister, a stranger to pickers, said after studying the husker a minute: "I notice this machine husks two rows at a time. Therefore, you must have to plant at least two rows at once."

NEWS and VIEWS

Some of the group of 86 Kendall County Home Bureau women who spent a day in Chicago recently are shown having lunch in the cafeteria of the Continental Illinois National Bank and Trust Company which they visited.

Associated Women Will Hear Indian Ambassador to U. S. Deliver Address During AFBF Convention

THE 15th annual convention of the Associated Women of the American Farm Bureau Federation will be held Dec. 11-12 in conjunction with the American Farm Bureau Federation annual meeting at the Stevens Hotel in Chicago.

One of the principal speakers to address the Associated Women will be Vijaya Lakshmi Pandit, the Ambassador of India. She will speak on "India and the United States" the evening of Dec. 12.

Wool Clothing is Best When it is Steam Pressed

WOOL IS at its best when steam-pressed. says Miss Helen Zwolanek. clothing specialist, University of Illinois College of Agriculture. A steam iron speeds the job and makes it easier to do. but an ordinary iron can be used satisfactorily.

Use two press cloths, one of wool material and the other of firm cotton or linen. Old fabrics can be used to good advantage, so take stock before you buy new materials.

Spread the wool press cloth over the wrong side of the material you are pressing. Over this lay the second cloth — cotton or linen. Dampen the second cloth with warm water. Set the iron down squarely on the top press cloth, lift it, set it down again, and repeat until you have pressed over the cloth.

After you have pressed over the material, remove both press cloths. Beat out the steam left in the wool, using the palms of your hands. Do not press all of the moisture out of the wool, or it will become shiny and limp looking. Hang the pressed garment carefully to dry. Do not wear it until it is completely dry.

CARDIGAN FOR HIM AND HER

Here is a set of matching cardigans you might want to make this winter. For free instructions, send a self-addressed stamped envelope to Women's Editor, The Record, Illinois Agricultural Association, 43 East Ohio Street, Chicago 11, Illinois.

Kendall County Women Spend Delightful Day on A Planned Tour of Chicago

EIGHTY-SIX Kendall County Home Bureau women spent a long but delightful day in Chicago Oct. 18. Their busses pulled up at the Board of Trade at 10 a.m., for a complete tour and explanation of the grain trading facilities.

Then they learned that the apparent complexities of a huge banking institute like the Continental Illinois National Bank and Trust Company are only the simple operations of their small home-town banks multiplied many, many times.

After touring the Stevens Hotel, the ladies decided their housekeeping problems are molehills compared to the mountainous task of keeping the world's largest hotel in livable order.

The next stop was the IAA home office, where they discussed current agricultural problems with President Charles B. Shuman.

The party dined on smorgasbord at Little Bit of Sweden, and climaxed the day with the stage-musical "Kiss Me, Kate."

Miss Marbry Fay, the Home Bureau adviser, and Roy Johnson, IAA director of special services, planned the holiday for the Kendall county women.

Check Books, Pamphlets If You Plan to Remodel

ARE YOU making plans for remodeling your house? Or even thinking of small repair jobs you want to do this winter?

Check pamphlets and books for information, and make the entire plan before you start the repair or remodeling work. "You'll avoid trouble and bigger problems later on if you do," says Miss Catherine M. Sullivan, home management specialist, University of Illinois College of Agriculture.

Your farm and home advisers have bulletins and other information that can give you help with your building or remodeling jobs. Ask your adviser for suggestions and ideas before you bump into a difficult problem.

FAVORITE RECIPES

DATE CAKE

FOR THE Christmas holidays you need a special recipe file, and this Date Cake should have a place of honor in this file. It is simple to make and yet perfect for holiday entertaining. Another excellent attribute of this cake is that it is equally good when served hot or cold. First serve it hot for the final touch of a festive dinner, and as a sauce to accompany it, we suggest lemon sauce. The next day, if you have any cake left (which we doubt) let it be a complement to coffee or tea. In any event, once you have date cake, you will find that it will become a regular order for your cake box.

Date Cake

2 eggs
1 cup sugar
¼ cup milk
3 cups Kellogg's Rice Krispies
1 teaspoon baking powder
1 cup chopped nutmeats
1 cup chopped dates

Beat eggs, add sugar and milk. Roll rice cereal into fine crumbs and mix with baking powder, nutmeats and dates. Add to first mixture. Pour into greased pan. Bake in moderately hot oven (400° F.) about 40 minutes. Serve hot or cold with whipped cream or sauce. Yield: 9 servings (8x8-inch pan).

APPLE FRITTERS

A TASTY and economical dish, the result of two plentifuls — apples and lard — can serve as dessert or meat-mate for your supper tonight.

Apple fritters — serve them piping hot with meat, or sprinkled with powdered sugar for dessert.

Miss Grace Armstrong, nutritionist, University of Illinois College of Agriculture, suggests that you use deep-fat frying often when lard is so easy on the budget. And apples are rolling into Illinois markets in huge amounts — team them up for tonight's supper.

Apple Fritters

2 large tart apples
1 c. sifted flour
1 t. baking powder
1/2 t. salt
2 T. sugar
1 egg, slightly beaten
1/2 c. milk
1 T. shortening, melted

Mix and sift dry ingredients. Combine egg, milk, and shortening; stir into dry ingredients. Pare, core, and cut apples crosswise into 1/4 inch slices, or cut into eighths. Dip each piece in batter and fry in deep fat (370°F.) for 3 to 4 minutes, or until golden brown. Drain on unglazed paper. Yield: 6 portions.

You can use the batter for other fruits — just increase the milk to three-fourths cup.

Strain the fat in a jar, keep it refrigerated, and use it over again, Miss Armstrong says.

PARTY SWEATER BLOUSE

Here's a dress-up sweater with figure flattery for everyone—a front-buttoned style with smooth short sleeves. Knitted of fine white wool and trimmed with floral motifs and pearl or jewel buttons. The sprays of blue morning glories and lime green leaves are knitted into each front. For free instructions, send a self-addressed stamped envelope to Women's Editor, The Record, Illinois Agricultural Association, 43 East Ohio Street, Chicago 11, Illinois.

STOCKING CAP VARIATION

Wool jersey goes to your head in this flattering version of the stocking cap. It's simply a tube of easy-to-drape jersey caught into a loop at the back by a ring of velvet ribbon. A matching band of ribbon frames the face. For free instructions, send a self-addressed stamped envelope to Women's Editor, The Record, Illinois Agricultural Association, 43 East Ohio Street, Chicago 11, Illinois.

Don't Set Up Any Fire Hazards This Christmas

THE FOURTH of July used to have the highest rating for holiday fire accidents. Because so many precautions have been enforced to make the Fourth of July safer, the accident quota for this summer holiday has dropped a-way down, and in comparison the Christmas day toll has gone up. By using similar caution on Dec. 25 the number of fire tragedies on this day also can be reduced. Here are a few do's and don't's for you to follow:

DON'T buy toys for your children which use alcohol, kerosene or gasoline to make them go.

DON'T place electrical trains around base of tree.

DON'T leave the tree lights burning when you are away from the house.

DON'T use candles.

DO inspect your wiring before attaching lights to Christmas tree.

DO be sure that all electrical toys you buy have the Underwriters' Laboratories Inc. markers on them.

DO be sure you have plenty of ashtrays around your house so stray ashes or cigarettes won't cause a fire.

DO use non-inflammable decorations on your tree.

DO call the fire department immediately upon detecting fire.

DO have emergency equipment easily available for controlling small fires.

Pruning of fruit trees should be done primarily to increase the bearing of quality fruit and to keep the tree in a healthy, vigorous state of growth.

"NOT AN *INSURANCE WORRY* IN THE WORLD"

— SAYS YOUR TYPICAL FARM BUREAU MEMBER

"Since we are talking about insurance, I'll say it sure pays me to be a Farm Bureau Member. I really did appreciate having our Farm Bureau Insurance Man go over my policies and fix them up for me the way they ought to be. Now I don't have an insurance worry in the world. I like that low cost, too."

Jim is a typical policy holder with Country Mutual Fire, Country Life and Country Mutual Casualty. He's a good farmer with sound ideas on investment. He is *sure* of the present and the future. Are you?

LIFE Jim's proud of his family. He backs up his hopes for them with eight Country Life policies including an Educational policy for his little girl, Nancy.

FIRE $20,000 fire and extended coverage insurance with Country Mutual Fire protects Jim's home and farm buildings. This year he had $6,400 crop hail insurance, too.

LIABILITY Fully aware of farm accident risks, Jim maintains employers liability insurance which protects his profits from costly damage suits up to $15,000 and $30,000.

AUTO The new 1949 Buick and the pick-up truck are fully protected by Country Mutual Casualty auto insurance. His two tractors are insured against fire, windstorm and lightning.
